April 28.—Orders received to send six more destroyers and *Melville* to home yards to prepare for distant service.

May 1.—Twenty-four additional destroyers and *Dixie* ordered to prepare for distant service.

May 4.—Destroyer division light arrived at Queenstown. The commander of this division had orders to communicate his orders and operations to Rear Admiral Sims at London and to be guided by such instructions that he might give.

May 15.—All destroyers attached to patrol force were detached from that force and ordered to the destroyer force.

May 18.—Nine converted yachts were ordered prepared for distant service.

Admiral Mayo, in his letter of June 13, 1917, which he read to this committee, said:

Practically all destroyers in the Atlantic Fleet, except destroyer division 1, had been ordered to home yards to fit out for distant service by April 30, 1917; the destroyer tenders *Melville* and *Dixie* had similar orders.

That is, by the end of April, about two weeks after Admiral Sims's first dispatch, urging the sending of destroyers, had been received, all but one division (6) in the entire Atlantic Fleet had been ordered to fit out for European service.

CRUISERS ORDERED FOR CONVOY DUTY.

Again quoting from Admiral Mayo:

July 4.—Orders were received to direct *Cleveland*, *Raleigh*, and *Albany* to proceed to New York without delay and prepare for convoy duty. Probable date of convoy sailing July 8. This was the beginning of a new policy—that of using United States cruisers to escort merchant convoys.

July 7.—A number of gunboats and small cruisers ordered to navy yards to prepare for distant service.

July 13.—Eleven yachts which were assigned to the patrol force were ordered to fit out for distant service and proceed singly to Gibraltar.

July 16.—The patrol force organization was practically abandoned except for the detachment operating from Key West and the Mexican patrol detachment. Most of the destroyers, yachts, and gunboats having been ordered on distant service. On this date all Coast Guard cutters, which had been assigned to the patrol force, were ordered to report to the commandants of naval districts.

July 20.—Squadron 2 of the cruiser force was assigned to escort duty.

ALL THE PRINCIPAL THINGS FISKE URGED WERE DONE.

Rear Admiral Fiske (retired) has told you how defective the Navy Department's organization was when I came into office; how important it was to establish a Chief of Naval Operations and put into effect the "administrative plan" of the General Board, and that, he told you, had for years been urged in vain. Whatever delays there may have been, the office of Chief of Naval Operations was established two years before we were at war; I did approve the "administrative plan," and it was put into effect in 1915; the fleet was increased, reorganized, and carried out war maneuvers; and the act of August 29, 1916, which Admiral Fiske says "made a new epoch possible for the Navy," authorized more vessels and more men than any board or officers, previous to the time he left the Navy Department, ever recommended or hoped to get. In a hearing before the House Naval Affairs Committee, March 24, 1916, Admiral Fiske said concerning the creation of a Chief of Naval Operations:

In the opinion of most naval officers this was the most important step toward the modernization of the United States Navy that has been taken since 1890, when the steel ships *Dolphin*, *Atlanta*, *Boston*, and the *Chicago* were authorized.

Though he admits that the Chief of Naval Operations was by law charged with the preparation and readiness of plans for the use of the fleet in war as well as for its operations, he points to the British Admiralty, and the German Navy with its general staff as having had superior organization.

NAVY DEPARTMENT'S ORGANIZATION SUPERIOR TO THAT OF BRITISH ADMIRALTY.

But Admiral Mayo, when he visited England in September, 1917, examined into conditions in the British Admiralty, and his report indicates that their working organization even then, after three years of war, was not as efficient as ours. He said:

GENERAL IMPRESSIONS REGARDING CONDITIONS IN BRITISH ADMIRALTY.

(a) There is little doubt that the British Admiralty is at a loss when asked for the history of the war to date. Reports of operations are so isolated and scattered and without system that there is not available any comprehensive record of original plans, the governing reasons therefor, and the degree of success or failure in each case. The inevitable inference is that the war has been carried on from day to day and not according to any comprehensive policy to serve as a guide to plans looking to the effective coordination and operation of effort against the enemy.

(b) It is apparent that, despite the so-called war-staff arrangements put to effect in the Admiralty during the past three years, until very recently there has been no planning section, nor was there any definite body of men charged with the function of looking ahead, or of looking back to see wherein lay the causes of success or failure, nor any means of furnishing the heads of the Admiralty with analyses and summaries of past operations in order that decisions as to continuing old operations or undertaking new ones might be reached with a due sense of "perspective," both as to past operations and as to the coordination of new operations in a general plan.

(c) The statement of present Admiralty policy, originally dated July, 1917, now revised to September 17, 1917, is not really a statement of policy, but rather a summary of current activities. That these activities are based on an underlying idea of the defensive may readily be inferred from the leading words in the subparagraphs of paragraph 1 of the paper referred to, namely, "protection," "prevention," "protection," "resistance."

BRITISH HAD NO ANTISUBMARINE PLANS THAT GAVE PROMISE OF SUCCESS, SIMS SAID.

Admiral Sims, describing in his magazine articles (*World's Work* for September, 1919, p. 493), his first interview on the submarine situation with Admiral Jellicoe, first sea lord, in April, 1917, says he was astounded at the record of sinkings, and he expressed his consternation to Jellicoe, and Admiral Sims thus recounts the conversations with the first sea lord:

"Yes," he said, as quietly as though he were discussing the weather, and not the future of the British Empire, "It is impossible for us to go on with the war losses like this continue."

"What are you going to do about it?" I asked.

"Everything that we can. We are increasing our antisubmarine forces in every possible way. We are using every possible craft we can find with which to fight submarines. We are building destroyers, trawlers, and other like craft as fast as we can. But the situation is very serious, and we shall need all of the assistance we can get."

"It looks as though the Germans were winning the war," I remarked.

"They will win unless we can stop these losses, and stop them soon," the Admiral replied.

"Is there no solution for the problem?" I asked.

"Absolutely none that we can see now," Jellicoe announced. He described the work of destroyers and other antisubmarine craft, but he showed no optimism over their ability to control the depredations of the U-boats.

So the British Admiralty, with all its staff, had no plans that gave any promise of overcoming the submarine menace, and even in September, 1917, as Admiral Mayo shows, they had no plans for an offensive against the enemy, and no real general policy. We did not have a general plan; we did have a fixed policy; and we proposed offensive projects, like the North Sea mine barrage, which were carried out, and which played an important part in curbing the submarine menace and ending the war.

The military as well as civil heads of the British Admiralty were changed time and again during the war. No change was found necessary either in the organization or the personnel of our Navy Department during our participation in the war.

Regarding the number of men needed in case of war, Admiral Fiske had very small ideas. The 19,600 or 20,000 men he talks so much about were not a drop in the bucket. The act of August 2, 1916, authorized an immediate increase of over 20,000 men, and more than 20,000 additional in case of emergency. But when we got into the war we didn't need 20,000 more men, but nearly half a million. And we got them.

FULLAM TOLD HOW OFFICERS ON PACIFIC WORKED TO GET ARMORED CRUISERS READY FOR WAR.

Rear Admiral Fullam (retired) has told you how energetically and constantly all our officers on the Pacific, in the reserve fleet at navy yards and on the ships, worked to get our armored cruisers and older vessels held in reserve, ready for active service in war. He said:

Every officer out there worked his heart out, night and day, under very discouraging circumstances, to get those ships ready for war.

He has told you what an important part those armored cruisers of the *Colorado*, *Maryland*, *Pittsburgh*, *South Dakota*, *West Virginia*, *Charleston*, *Milwaukee*, *Saratoga*, *St. Louis*, *Albany*, and *Oregon* played in the war, in escorting troop and cargo convoys, in patrolling the Caribbean and South American waters.

Admiral Fullam has recounted how, in 1915, he began his effort to get those cruisers in shape for war service; how he requested that for this work, he be allowed to utilize apprentices from training stations, and the Bureau of Navigation, on November 29, 1915, granted his request. He has told you he wrote to the Navy Department suggesting that "all ships of the Reserve Fleet be supplied with sufficient officers to enable them to move and join the commander in chief," and that "in a letter, February 10, 1916, the department encouraged me very much by approving my suggestions and asking me for a 'schedule of movements' to carry out the scheme." Why the scheme could not be carried out at the time is shown by the letter from the Bureau of Navigation, March 6, 1916, in which Capt. Dayton explains that the bureau could not furnish for the Reserve Fleet the officers and men Admiral Fullam asked for, as they would have to be taken from the battleships of the Atlantic Fleet; and besides in the

next six months crews had to be provided for the battleships *Nevada*, *Oklahoma*, and *Pennsylvania*, for a number of new destroyers, and a dozen submarines.

Admiral Fullam's letter of June 15, 1916, states that there was then a shortage of 403 men in the Reserve Fleet. Admiral Coontz's letter to him July 10, 1916, points out that certain repairs on these ships were delayed by lack of funds, which were appropriated in the act passed by Congress August 29. He quotes the letter of the Chief of the Bureau of Navigation, August 24, 1916, pointing out that the Reserve Fleet had an average of about five commissioned officers to the ships, the maximum that could be allowed at the time.

DEPARTMENT IN SEPTEMBER, 1916, ORDERED THAT ALL CRUISERS BE PUT IN READINESS FOR SEA SERVICE.

On September 30, 1916, Admiral Fullam told you, the Navy Department addressed a letter to all bureaus and commanding officers in the Pacific, on the subject of repairs to the Pacific reserve force, expressing the desire that all work on these reserve vessels be completed as early as practicable, so that "they will be in all respects ready for service at sea." He points out that this letter was prepared by Admiral McKean, chief of the Division of Material, officer of naval operations, and he took occasion to praise highly the work of Admiral McKean and other officers in the department.

Admiral Fullam told you how strenuously all the officers and men on the Pacific worked to get in readiness not only the cruisers, but the submarines and the vessels from the Asiatic station and Honolulu on their way to the Atlantic and the European war zone; and how, in spite of limited personnel, this was accomplished.

OFFICERS IN DEPARTMENT DID THEIR FULL DUTY.

Though Admiral Fullam criticized me rather severely, he said:

I do not believe that any officer of the Navy on duty at the Navy Department at any time has intentionally failed in or neglected his duty.

That organization of that office of naval operations is the only thing that saved the day for the Navy in this war. It was a splendid thing, and those officers did splendid work, all of them. Everyone of them did splendid work. I can not make it clearer than that.

When Chairman Hale inquired, "then you have no complaint to make about inertia or lack of cooperation on the part of any officer of the Navy or any department of the Navy in any plans for the government of the Navy that you came across during the war?" Admiral Fullam said he had not. He expressed the belief that the officers of the Navy did all they could do, and his only complaint was in regard to me; that I wouldn't let them do all they wanted to do. Admiral Fullam stated with great positiveness:

I do not believe that men in civil life in any profession take duty and obedience as naval officers do, and I do not believe they do their duty as well.

RODMAN SAYS BATTLESHIPS HE COMMANDED WERE EQUAL TO ANY IN THE GRAND FLEET.

Admiral Rodman, who during the war commanded the United States battleships that served with the British Grand Fleet, and is now commander in chief of the United States Pacific Fleet, told

you that he knew from experience, having been a member of the General Board just prior to the declaration of war, that "there were plans and policies in existence anticipating the possible advent of our entering the war," and that these plans were, he felt sure, modified to meet new conditions as they arose. Regarding the condition of the Atlantic Fleet, he said:

I wish to state from having been in the Atlantic Fleet from the time the United States declared war, that never in my 40-odd years of service, most of which I have spent at sea, and in the latter part in the North Atlantic Fleet, never have I seen such preparedness and efficiency as obtained in our battleship fleet as at the beginning of and during the war.

Referring to Admiral Sims's statement that the division of battleships he commanded for a year or so in the war zone was not prepared when we entered the war, and was not homogeneous, Admiral Rodman said:

I have not the slightest hesitancy in say that the ships of this division at the time mentioned, in particular, were in a very high state of efficiency, and while they were sent to our navy yards for a few days prior to sailing. It was only to put on the finishing touches while in dry dock and clean their bottoms so there would be nothing left undone to reach the maximum state of efficiency for the work in which they were about to engage.

The first knowledge to reach me that I was to command this division, composed of ships none of them under my command at the time (that was because a number of coal burners had to be selected), was while I was on board Admiral Mayo's flagship on a certain afternoon. Realizing that it necessitated shifting several flag officers and other details before leaving his flagship, by his permission, I immediately sent signals giving information and orders for movements, so that they might proceed to their home yards for docking, cleaning bottom, and a final grooming before their departure for the war zone.

Three weeks later we joined the British Grand Fleet, which had been in the war for three long years, at Scapa Flow, in the Orkney Islands, north of Scotland. It was a matter of pride that we were at once able to coordinate and cooperate with them intelligently, without the slightest hesitancy, friction, or misunderstanding; we adopted and could use their signals, radio, secret codes, and other communications (that is one of the hardest problems we have in the Navy), and could efficiently execute their tactics and maneuvers, and conform to their war plans. This was put to the test when within three days of our arrival a signal was made for all ships to be ready to proceed to sea in two hours for active service in the North Sea, and we reported when the time came that we were ready.

From that day to the end of the war we took part in every major operation in the North Sea and some independent smaller ones. There was never a time but that we were ready when called upon; we could always steam full speed, maintain our position, and received nothing but the highest praise, not only from the British admirals, officers, and men, but from those of our own Navy who visited us.

Let me truthfully add that, without taking the slightest credit to myself as the commanding officer, but giving it to the officers and men, where it belongs, and to the years of preparedness in the American Navy, that, put it as modestly as I can, the American squadron was fully equal to any of the grand fleet.

UNITED STATES FLEET COULD HAVE DEFEATED GERMANY'S, WILSON DECLARED.

Admiral Wilson, who until March, 1917, commanded the *Pennsylvania*, flagship of the Atlantic Fleet, then commanded the patrol force, later had charge of our forces at Gibraltar, and from November 1, 1917, to the end of hostilities was commander of the United States naval forces in France, and is now commander in chief of United States Atlantic Fleet, said in his statement to your committee:

I have no hesitation in saying that no nation upon the approach of war has had a force of battleships more nearly prepared for battle than was the force to

which I was attached and which spent the winter of 1916-17 in southern waters, and I feel sure that if this force had engaged an enemy on its cruise north in the spring of 1917 the victory would have been ours.

The *Pennsylvania* being the flagship of the commander in chief of the Atlantic Fleet, I was in a good position to form an opinion as to the efficiency of the fleet. Our work (and the results obtained) clearly indicated that the commander in chief was proceeding in accordance with a well-defined policy; the ships present with the flag were well organized and efficient, with the morale high, and the active fleet prepared for any emergency.

On March 28, 1917, I was detached from command of the *Pennsylvania* and ordered to Washington to organize a patrol force. This force had been created by the Navy Department for the purpose of protecting commerce to the seaward of areas guarded by naval district forces against enemy submarines and raiders. I believed at this time that the policy of establishing this force to combat enemy activity on the Atlantic coast of the United States was well conceived, in view of the information then available, and I can state that it was well organized and its efficiency developed as rapidly as could be expected. Having such a well-established force, it could be easily transferred to another zone of operations if it were found that the enemy did not come to our coast. This force, as planned, consisted of 13 cruisers, 34 destroyers, 6 Coast Guard cutters, and 8 gunboats.

Of the 55 vessels definitely assigned to the patrol force, 24 were on station by April 16. Thirteen more joined by April 20. On this latter date 18 had not reported; 5 of these were Coast Guard vessels being fitted out for service in the Navy, others were still on foreign stations, and some were undergoing extensive repairs.

Within a month of the organization of the patrol force vessels began to be detached by order of the Navy Department for service in European waters.

On April 26, 1917, four destroyers (*Cassin*, *Cummings*, *Benham*, and *Aylwin*) were detached.

On May 1, 1917, 24 destroyers were detached.

On May 16 all destroyers remaining with the patrol force were detached.

On May 30 the *Birmingham*, *Charleston*, and *St. Louis* were detached for convoy escort.

Yachts purchased were fitted out and assigned to the patrol force. At this time, May 30, 1917, the force consisted of 22 active vessels and 8 other ships undergoing repairs and being fitted out.

On July 4, 1917, the *Albany*, *Cleveland*, and *Raleigh* were ordered to fit out for convoy escort.

On July 7, 1917, the *Chester*, *Machias*, *Yankton*, *Daducuh*, *Des Moines*, *Castine*, *Sacramento*, *Wheeling*, *Marietta*, *Nashville*, and *Birmingham* were ordered to fit out for foreign service.

These latter vessels were to comprise a force which was to be based on Gibraltar under my immediate command.

UNITED STATES NAVAL FORCES AT GIBRALTAR.

On August 18, 1917, I arrived at Gibraltar on the U. S. S. *Birmingham*, and for about two months commanded our forces based on that port, where, under the senior allied commander, a British rear admiral, our vessels protected commerce in the western Mediterranean, in the approaches to the Straits of Gibraltar, and escorted convoys between the Mediterranean and Great Britain.

There were, in October, 1917, 21 United States vessels attached to the Gibraltar detachment. These vessels performed valuable and important service to the allied cause, as so expressed by the senior allied commander.

UNITED STATES NAVAL FORCES ON FRENCH COAST.

Admiral Wilson read you the memorandum he prepared for the member of the Naval Affairs Committee of the House who visited Brest in August, 1918, from which the following extracts are quoted:

On November 1, 1917, I assumed command of the United States patrol squadron based on the French coast. On January 14 all the activities of the Navy in France were placed under my command with the title of commander of United States naval forces in France, in which capacity I continued until January 30, 1919.

The first vessels of the United States Navy arrived in France on July 4, 1917, and consisted of eight yachts. Since then the force has progressively increased, and we now have 28 destroyers, 5 torpedo boats, 15 yachts, 9 mine sweepers, 3 repair ships (plus a considerable number of United States naval vessels carrying coal for the Army between Curdiff and ports on the west coast of France), 5 tugs, and 2 steam lighters.

There are (Aug. 29, 1918) 736 officers and 7,970 men attached to these forces, exclusive of aviation.

There has developed splendid cooperation between the American and French Navies. The French have shown every disposition to assist us to the extent of their ability, and there is no disposition on their part to hamper our work in any way. They have permitted us to take complete charge of the handling of the American troopships convoys and of most of the storeship convoys.

Admiral Wilson told you of the great work done by our Navy in French waters and French ports, of the hundreds of thousands of troops and immense amount of supplies landed in France; and how in that, as well as other areas, the operation of our vessels resulted in such a notable reduction in sinkings by submarines that he was able to state to the members of the House Naval Affairs Committee when they visited Brest in August, 1918, that—

There is no doubt but that the submarine situation can no longer affect the outcome of the war, and there is no doubt that the answer to the submarine has been found in the depth charge.

Admiral Wilson presented the following table showing the work of the United States naval forces in France in escorting American troop convoys:

United States troops transported direct to west coast of France.

Prior to Nov. 1, 1917 (the date I took command)-----	47, 931
Nov. 1, 1917, to December, 1918-----	1, 004, 826
Of the latter number—	
Queenstown forces furnished escort through submarine zone, assisted through pilot waters by naval forces in France, for---	175, 211
Queenstown forces, assisted by naval forces in France, furnished escort through submarine zone and further assisted through pilot waters for-----	122, 914
Naval forces in France furnished escort through submarine zone and through pilot waters for-----	667, 932

The naval forces in France, in addition, routed and escorted through the dangerous area the greater part of the storeships coming to the west coast of France with supplies.

In the case of convoys escorted by the naval forces in France the routing was accomplished in the following manner:

Through the London office we received information as to the time that convoys would pass through certain positions well to the westward of the zone of normal submarine activity. After the receipt of this information all routing and protecting, including the preparation and issuing of operation orders to insure destroyers meeting up with the convoys on the high seas to escort them clear of all other convoys, were handled directly and entirely by the forces under my command.

Practically all homeward bound troopships from the west coast of France (many of them carrying sick and wounded), and empty storeships, were routed and escorted through the dangerous area directly and entirely by the forces under my command.

From the date I assumed command, November 1, 1917, to the end of the war, the United States Navy in France, while it completely and in the most friendly way cooperated with the French Navy was, by full agreement with the senior allied naval commander, organized, operated, and handled as a distinct American naval force under the direct and immediate command of an American rear admiral, who most ably and loyally assisted by his staff and the personnel of the entire force, was responsible for the successful carrying out of the mission of the force, viz: (a) To safeguard United States troop and store ships; (b) to cooperate with the French naval forces.

Admiral Wilson presented to you the following conclusions regarding the preparedness of the Navy and its work during the war:

CONCLUSIONS.

(1) The active vessels of the fleet were better prepared for war than they had ever been before.

(2) Full and complete plans had been drawn up to meet the enemy in case he made our coast.

(3) That from the moment war was declared the entire Navy—the department as well as the fleet—entered into the prosecution of the war with the greatest energy, and its accomplishments deserve the commendation of the Nation.

(4) As soon after the declaration of war as practicable—in fact within four days—we were in conference with the accredited representatives of the British and French Admiralties, and as soon as we learned from the naval representatives of our associates the manner in which we could best cooperate, immediate and efficient steps were taken to send our available ships overseas.

(5) A great part of our Army was safely transported 3,000 miles across the sea by the Navy, and no soldier or passenger embarked on a Navy transport during the war was lost through the efforts of the enemy.

(6) Naturally “hindsight” may discover many things that might have been done better, but when we consider that the Navy expanded six times its former size in ships, and eight times in officers and men; when it accomplished so many things that seemed almost impossible when we consider what it did do; the things it did not do, the mistakes it made are so relatively unimportant that they are hardly worth considering in comparison. Results are what count.

(7) That our naval forces from the start cooperated in a most successful manner with the naval forces of our associates in many portions of the seas; and by their splendid and efficient work materially aided in shortening the war and in this manner saving untold life and property.

AS WELL PREPARED AS ANY OTHER NAVY, FLETCHER STATED.

Admiral Frank F. Fletcher, who from 1914 to 1916 was commander in chief of the Atlantic Fleet, and previous to and during war was a member of the General Board, told you:

From my knowledge of the condition of other navies, there is no question in my mind but that the Navy of the United States, notwithstanding its shortcomings when it entered the war, was just as well prepared as any other navy in the world when the Great War burst forth.

He told you that war plans had been prepared long before, stating that:

It may be of interest for the committee to know that nearly two years before our entry into the war the General Board prepared a comprehensive war plan for conducting war against a central power of Europe. This plan covered every phase of naval operations, under the assumed conditions of war. It deals with the mobilization, organization, and composition of the fleet, its disposition and employment, maps and strategic positions, employment of auxiliaries and submarines, protection of the coast, bases of supplies on our coast and the West Indies, routes across the Atlantic, enemy's force and probable course of action, etc. This war plan with its statistical data and modifications of details from time to time to bring it up to date comprises nearly 300 pages of typewriting.

Admiral Fletcher was a member of the War Industries Board, which comprised many of the leading business men and executives of the country, and he said:

In my association with these men of affairs and of business I heard from all sides the most complimentary references to the efficiency with which the officers of the Navy Department carried on their work from the business point of view. It was frequently remarked that the able officers at the head of the material bureaus of the Navy Department, Admirals Griffin, Taylor, Earle,

McGowan, Braisted, Gen. Barnett, and others, always knew what they wanted, how much they wanted, when they wanted it, and still more, how to get it. These bureau chiefs had their representatives on practically every industrial committee of the board and their assistants never lost a point in furthering the ends of their bureaus.

In reply to Chairman Hale's question:

To what extent did the organization of the department meet the situation resulting from the war?

Admiral Fletcher said:

I think it met it admirably well. The organization that we have to-day is far ahead of anything that we have had in the past; but while it may not be perfect, and in the opinion of some there might be useful changes made, still, on the whole, I think it conducted operations of war remarkably well, and I know of no serious mistakes that were made.

Chairman Hale asked him:

In general, do you think that our battle fleet at the beginning of the war, in April, 1917, would have been able to meet and overcome the German fleet that fought at the battle of Jutland, if they had met in mid-ocean?

Admiral Fletcher replied:

I think they would have, without difficulty. That is my opinion.

ADMIRAL NIBLACK TOLD OF NAVY'S WORK IN CONDUCTING CONVOY SYSTEM, AND SUCCESS OF POLICY OF ARMING MERCHANTMEN.

Admiral Niblack, director of Naval Intelligence, who just previous to the war was a member of the General Board; from April to October, 1917, commanded a battleship and later a squadron of the Atlantic Fleet, and from November, 1917, to the conclusion of the war commanded the United States Patrol Squadrons based on Gibraltar, which conducted 90 per cent of the merchant convoys between Gibraltar and England, testified that the General Board, of which Admiral Sims previous to his departure was a member, not only had a comprehensive general war plan, begun years previous and revised constantly in accordance with information of war developments and conditions, but also submitted, previous to the declaration of war, various special plans to meet conditions in war with Germany.

He called attention to the fact that, on February 4, 1917, the day after relations with Germany were broken off, the General Board submitted a special war plan entitled, "Steps to be taken to meet a possible condition of war with the Central European Powers"; that on March 6, 1916, the board recommended that our fleet be recalled from Cuba by March 15 and assembled in Chesapeake Bay, and that on April 5, the day before the war was declared, the General Board made a report on "Assistance the United States can give the Allies upon declaration of war." That these plans were given immediate consideration and most of the recommendations put into effect as soon as possible is proved by events.

Admiral Niblack told you of the great work of the fleet in training many thousands of men to man troopships, cargo transports, and patrol vessels, to serve as armed guards on merchant ships, as well as for naval vessels. He told you that by July 1, 1917—

We had over 30 destroyers operating from Queenstown as a base, and we had in active service in the Navy 4,594 regular officers and 3,344 reserves, with 126,260 enlisted men and 32,379 reserves, or a total of about 8,000 officers and 158,600 men.

That is, in three months after war was declared the personnel of the Navy had been more than doubled. We told you that before hostilities ended the Navy had grown to 506,996 men and 31,186 officers, and a total of—

One thousand four hundred and forty-one regularly commissioned naval vessels manned and operated by the Navy, not including yard craft and the various tenders to all the naval stations and naval bases on shore.

How the convoy system worked.—Pointing out that the patrol squadrons, which were originally at work on our coast, were, by reason of organization and training, better fitted than they would otherwise have been for duty “when the call came for ships to really inaugurate a convoy system,” Admiral Niblack said, regarding that system:

The escort of cargo convoys to and from the United States and to and from the United Kingdom and the Mediterranean, consisted usually of only one man-of-war, whose principal function was to regulate the radio communication and prevent the ships from straggling. It would have been futile to have regarded the escort as able to keep off a raider except where battleships were used. The great advantage of the convoy was that the ships arrived in the danger zone collectively and at a definite time, where an adequate danger-zone escort could be assembled, which was fitted with depth charges and was in such numbers as to make the chances of a submarine extremely small if it attempted to attack the convoy.

The point I wish to emphasize and elaborate is that, with the slow-moving cargo ships, the virtue of the convoy system was entirely dependent upon the efficiency of the danger-zone escort at one of the terminal ports, and not in the accompanying vessels during the voyage. This remark must be qualified when we speak of the Mediterranean, because the entire Mediterranean was a danger zone, and therefore the escort had to be as heavy as there were ships available to assign to this duty, generally only two-thirds of what was required.

Admiral Sims states that our failure to send all of our antisubmarine vessels to the war zone immediately on the outbreak of war resulted in prolonging the war four months. A study of the vast problem of protecting the cargo ships of the Allies will show that the number of protecting vessels which we might have sent and did not send to Europe at once was so small that the results could not have been materially different.

I think we are apt to exaggerate the effect of the convoy system in lessening the number of sinkings, because I think we should take into consideration, as Admiral Mayo also points out, the employment of new and offensive measures through the use of depth charges, mystery ships, airships, kite balloons, the laying of mine barrages, the firing of torpedoes from allied submarines, combined with the use of organized patrols fitted with listening devices and hunting the submarine systematically.

ARMED SHIPS SAILED SINGLY BETWEEN UNITED STATES AND GIBRALTAR.

Stating that of the hundreds of merchant vessels plying between the United States and Gibraltar, all but one group sailed singly and not in convoy, and showing the success of our policy of arming merchantmen, Admiral Niblack said:

There were 384 cargo ships of the American merchant marine during the war which had armed guards furnished from the enlisted personnel of the United States Navy, to man the two guns with which each ship was fitted. Of these ships 2 were sunk by gunfire of enemy submarines, 1 was sunk by bombs placed on board, and 33 were sunk by enemy torpedoes. I do not think that from this data we are justified in saying that it was futile to arm ships, because statistics show they drove off 113 submarine attacks by gunfire. Of course, the chances for such ships to use their guns when sailing in convoy were not good, and it was of more importance for the ships which went singly.

One very important phase of the discussion of the convoy system which has been entirely overlooked is that during the entire war only one escorted convoy crossed from the United States to Gibraltar, and this was the one escorted by the U. S. S. *New Orleans*. This convoy was dispersed by heavy weather and was not regarded as entirely successful, because the ships came into Gibraltar subsequently singly. All the rest of the million tons of shipping which crossed from the United States to Gibraltar went across as single ships, going "on their own," as it were. These ships depended on their armed guard gun crews, and were independent of the convoy system. They actually encountered submarines, but they relied on their guns for protection.

FAST ARMED SHIPS REGARDED AS SAFER SINGLY THAN IN CONVOY.

As practically all of the ships came across the Atlantic to Gibraltar unescorted, Admiral Niblack sent the following cablegram on May 24, 1918, to the several authorities concerned:

Strongly recommended American merchant ships carrying armed guards and sailing from United States for Italy be fitted with a few depth charges prior to sailing. Such ships capable of acting as escorts to slower convoys. Am representing to Malta, with cooperation of Admiral Grant and Italian liaison officer here, undesirability sending such ships in slow convoys in Mediterranean, where value of their speed is lost through not zigzagging. Sinking of *Tyler* good illustration. Malta fixes speed at 13 knots for sailing independently. My opinion ships which can make 11 knots much safer independently than with slow convoys unless utilized as escorts and allowed to zigzag.

This recommendation of his was not approved, he stated, but Vice Admiral Calthrop at Malta cabled him:

United States vessels of over 11 knots speed, when well armed, may be sailed independently without escort between Gibraltar and Genoa and Marseille.

United States vessels furnished 90 per cent of escort for convoys from Gibraltar to England.—Admiral Niblack told you:

When the convoy system was applied to the Mediterranean Gibraltar became the principal convoy port of the world, with about one-quarter of all the allied tonnage touching there to be formed up into convoys in every direction.

The date of the inauguration in the Mediterranean is when the British admiral, on July 22, 1917, telegraphed to Gibraltar to commence collecting British and allied cargo ships with speed of between 7 and 11 knots bound for ports in the United Kingdom with view to forming them into convoys, and on the 27th of July, 1917, the first regular convoy, consisting of 14 ships, with an ocean escort sailed from Gibraltar for the east coast of England, and thereafter these convoys sailed every four days from Gibraltar for ports on the east and west coasts of England alternately, and sailed from England for Gibraltar at regular periods from Falmouth and Milfordhaven.

As previously stated, the first American man-of-war for escort duty arrived in Gibraltar on August 6. As fast as our ships arrived they were assigned to duty with allied vessels as escorts to convoys and as danger-zone escorts. The American ships differed from other nationalities based on Gibraltar in that other nationalities were employed almost exclusively in Mediterranean escort work and Malta was the headquarters of the allied Mediterranean escort forces, whereas our forces undertook also practically all escort work in the Atlantic between Gibraltar and the United Kingdom. For instance, of the 22 convoys which sailed between Gibraltar and the United Kingdom during the entire war, 200 of them, or almost 90 per cent, totaling 4,269 ships and representing 12,000,000 gross tons, were escorted both ways solely by American escort ships from our forces based on Gibraltar. This point is important because it made my headquarters Gibraltar rather than Malta. There was a further reason for my being at Gibraltar, because of the enormous number of unescorted American merchant ships which arrived singly in Gibraltar from the United States. This has to do with the importance also of each ship having an armed guard on board, as this whole traffic was independent of the convoy system. The total number of ships convoyed in local Mediterranean traffic by American forces amounted to about 4,246 ships bound for Mediterranean and far eastern ports,

supplying the American Army through Marseille, French forces in North Africa, allied forces Salonika, British forces in Egypt and Palestine, and the entire supply of Italy.

* * * * *

Admiral Sims cabled the Navy Department on June 22, 1917, saying: "As previously reported, convoys are in successful operation from the Mediterranean and Hampton Roads."

I merely wish to point out historically—

Said Admiral Niblack—

that while it is true that on May 10, 1917, the first experimental convoy was dispatched from Gibraltar to England, the next convoy, which was the first regular one, was not dispatched until July 27. His [Sims's] cablegram of the previous date, June 21, 1917, is a lucid explanation of the situation. He says in it that "the convoy system is merely a plan that obliges a submarine to fight antisubmarine craft in order to attack merchantmen."

There is, however, an important point of view which is apt to be overlooked, and that is, with the slow-moving cargo ships in convoy and with escorts made up of yachts, gunboats, and a heterogeneous lot of vessels, the escort was powerless to prevent the sinking of at least one cargo ship, and what they could hope for was that if the submarine showed its presence by torpedoing the ship, the most the escort vessels could do was to drop depth charges and keep the submarine down, and therefore from sinking a second ship. No cargo vessel that could make 11 knots was put in convoy for this reason, as it slowed her down, and she was considered much safer, even in the Mediterranean, by going on her own and zigzagging; and, moreover, much of the success of the escorting of cargo vessels in the Mediterranean was due to the absence of submarine activity due to offensive measures taken to limit their activity.

MINE BARRAGES WOULD HAVE ENDED SUBMARINE MENACE, ADMIRAL
STRAUSS SAID.

Admiral Strauss, who was in command of our mine forces which laid the North Sea barrage, told you that when war was first declared in Europe he was Chief of the Bureau of Ordnance, which position he had held since December, 1913.

Upon taking over the work of the bureau—

He said (this was in 1913)—

I was apprised of the policy of department with respect to supply and reserve of ammunition, auxiliaries and their armament, reserve guns, supply and reserve of torpedoes, mines, etc. This policy had been recommended by the General Board and approved by the Secretary of the Navy, and the bureau was actually engaged in purchasing and manufacturing this material to the full extent of funds available. This was the part of preparedness for war that was assigned to the bureau of which I was the head—

And he said that, with the aid of an able staff of officers, the work was pursued vigorously; that at the end of 1915, in answer to an inquiry by the chairman of the House Naval Committee, he was able to write him a letter showing that conditions in regard to supply and production of ordnance were, on the whole, very satisfactory.

As the war in Europe progressed many new things were learned, and as fast as possible these lessons were taken to heart and our plans expanded accordingly—

Admiral Strauss said. He gave as an instance the difficulties found by the Allies in the production of small-caliber shell in quantities, which led him to ask for and obtain sufficient funds to procure all the refills of ammunition that were stipulated in the General Board

plans, and when he left the bureau, in December, 1916, these shell were being manufactured. He told you of our efforts to increase the production of 12 and 14 inch armor-piercing projectiles; the temporary difficulty caused by the failure of one firm to fulfill its contracts; and how three large steel plants were manufacturing them when he went to sea in 1916. He said:

We had at the end of 1916 batteries of 4 guns each for 169 auxiliary ships. These batteries were housed at navy yards, and the full supply of powder, shell, primers, etc., were all prepared and ready for these ships at the nearest ammunition depots, so that in the event of war the guns could be secured on the ships and the magazines and shell rooms supplied at once.

Questioned by the chairman, Admiral Strauss stated that he considered that at the outbreak of war we were thoroughly prepared so far as ammunition and guns were concerned, and had large stores of reserve ammunition, guns, and powder. From December, 1916, to February, 1918, Admiral Strauss was in command of the *Nevada*, which took part in the maneuvers of the fleet in Cuban waters in January, 1917, and came north in March; and he testified that—

The general feeling of the fleet was one of confidence inspired by the high morale and excellent condition of the ships and their personnel.

He said the fleet was thoroughly prepared, ready to fight, and, in his opinion could have defeated the German fleet.

He told you, in detail, of the great work done by the United States Navy in laying the North Sea mine barrage, and said:

I think it is due to the United States Navy under the existing circumstances to invite attention to the magnitude of this project and to the success achieved in accomplishing it. The barrier began to take toll of the enemy's submarines as early as July 9, 1918, when one was disabled on the barrier and compelled to return to Germany. From time to time after that, even in its uncompleted state, it succeeded in sinking one.

It is not known by us how many submarines were sunk or disabled in this mine field. It has been placed as high as 23. My own estimate based on known sinkings is 10, although I am inclined to think that that is a modest one.

Speaking of the importance and effectiveness of the barrage, Admiral Strauss said:

If the war had been continued and the barrage had been completed to the Orkneys and the barrier across the Straits of Dover had been properly completed, it would have ended the submarine menace, so far as submarines going from the North Sea into the broad Atlantic was concerned. Also the barrier that we were to build across the Adriatic and across the Aegean Sea, when completed, would have actually ended the submarine operations.

NAVY HAD COMPREHENSIVE WAR PLANS AND WAS WELL PREPARED AND ADMINISTERED, ADMIRAL BADGER TESTIFIED.

Admiral Badger, who was appointed by Secretary Meyer commander in chief of the Atlantic Fleet, in which capacity he served until 1914, since which time he has been a distinguished member of the General Board, succeeding the late Admiral Dewey as its chairman, has told you of the comprehensive war plans evolved by the General Board, and of the numerous special plans submitted to meet special conditions both previous to and after the declaration of war.

Admiral Badger entered an emphatic denial of the principal charges made by Admiral Sims, saying:

The gist of the criticism of the operations of the Navy Department and the Navy now under investigation is contained in the charges of unpreparedness

to enter the war; absence of war plans or policies at the commencement of the war; vacillating and hand-to-mouth policies at the commencement of the war; vacillating and hand-to-mouth policies and plans after war was declared, resulting in extending the duration of the war, and thereby enormously increasing the allied war losses in lives, ocean tonnage, and money.

To each and all of these I enter emphatic denial. I do not mean to say that we had attained to perfection in the Navy—we never shall; that no errors of judgment or mistakes were made—they will always occur; but I assert that the Navy when it entered the war was, as a whole, well prepared and administered.

Despite the adverse criticisms that have been recently widely circulated, it may confidently be maintained that the Navy met and efficiently stood the stress of a great war; it aided greatly the allied nations, and if success is any test of a military or any other organization, then the alleged shortcomings of the Navy and its directing heads can properly and justly be dismissed from serious consideration.

Always bearing in mind the difference in size and power between the British and German fleets and our own in 1914, I do not hesitate to say that we were as well prepared as to our Navy when we entered the war as were the other belligerents in 1914.

DEPARTMENT COORDINATED WAR PREPAREDNESS IN 1915.

The Navy Department always had in view the things necessary to be done in case we entered the war. I will read, with your permission, a letter from the General Board dated March 13, 1915, approved and put into effect immediately. It proved of great value in expediting and coordinating the department's preparations for war. As the reports came in, the General Board examined them, noted progress made or the reverse, and returned them with comments to the department.

SPECIAL PLANS PREPARED BEFORE WAR WAS DECLARED.

On February 4, 1917, the General Board forwarded a communication to the department, a plan of procedure to meet a possible condition of war with the Central European Powers. I will ask your forbearance while I read it in order to show that the department was neither neglectful nor ignorant of the critical situation, as has been charged.

On March 20, 1917, war being imminent but we being still neutral, precautionary measures for the protection of American shipping was recommended. Also on same date a paper on the subject of "Assistance that United States can give Allies upon declaration of war" was submitted.

DEPARTMENT HAD NO LACK OF INFORMATION.

Admiral Badger told you of the conferences with British and French officers and the agreement reached, a few days after war was declared, for cooperation with the Allies and the sending of forces to Europe, and told you:

From start to finish of the war the Navy Department suffered from no lack of accurate information as to the progress of the war from sources outside of our own information gatherers.

In fact, the department fully understood the situation at all times. The action that it took is now a matter under discussion. Before and after the war commenced the direction of the operations of the fleet was in the hands of some of the ablest officers in the service, who were in a position to obtain and did obtain a broader view and more complete information as to the whole situation (for the Navy Department was not the only one to be considered in the operations of the war) than was possible at any other place than the seat of Government. Since that direction and operation resulted in complete success, it seems to me to be a waste of time to discuss at this late date the differences of opinion as to what should or should not have been done in the early days of the war, particularly as from it I can see no possible good to the Navy or to the country.

CAPT. PRATT SAID DEPARTMENT GAVE FULLEST ASSISTANCE AND SUPPORT TO ALLIES.

Capt. Pratt, who was assistant chief of naval operations, and as aid to that officer, in general charge of plans, policy, and operations, answered specifically the charges and criticisms made in Admiral Sims's letter, paragraph by paragraph. He testified that every effort was made to cooperate heartily with the Allies and that—

This same spirit prevailed throughout the entire naval establishment. This policy was perfectly understood by everybody in the department and was accepted as standard doctrine.

From the Secretary down there was not, from the time I entered the office, the slightest doubt as to where the war was being waged. We knew it even before he (Sims) told us. Every plan, and there were many, every effort was directed toward throwing our effective forces there. The results were by no means as satisfactory as any of us desired, but the reinforcements demanded can not be created in a day and moved like pawns on a chess board. The difficulties confronting us could not have been fully appreciated or so sweeping a statement would not have been made.

He was referring to Admiral Sims's statements in paragraphs 21 and 22 of his letter, alleging that—

There was great delay and reluctance in accepting the indisputable fact that the critical area was in European waters in the so-called submarine war zone, and that this attitude in Washington greatly slowed the sending of the necessary assistance, and necessarily resulted in prolonging the war.

Answering paragraph 26, in which Admiral Sims states that if the department had promptly accepted his recommendations and sent at once all the destroyers and other craft that were sent in the next four or five months, our naval intervention would have been much more efficient, Capt. Pratt said:

The department did accept this information as indicating the true state of affairs, and it gave heed to the recommendations of Admiral Sims. From the date I entered the office I know that the accepted doctrine was "the war is over there." The forces did not go over as fast as any of us desired, but the reasons for it do not lie in the failure to accept the recommendations made. The failure to get into the war immediately, in full force, upon the declaration is not the fault of Operations or the failure to recognize the character of the war and where it was being waged, but was for the most part due to natural causes and to causes which antedated our entry into the war.

It was not possible to press a button and move ships, men, and supplies with the rapidity desired either by Sims or by the department. All of the destroyers were not ready to move instantly; navy yards and mercantile shipyards were not ready to undertake the vast amount of work thrown at them. Submarine chasers had to be built. Tugs had to be bought, refitted, and built. Yachts had to be bought, stripped, and made ready for service. The transports, which were the seized German ships, had to be repaired, manned, and put into service. Other transports and supply ships had to be built. Arrangements had to be made with the Army for the transport of its great military force to Europe. The reorganization and expansion of the office of Operations and of the bureaus had to be undertaken. The coordination of the bureaus with this office had to be developed; the methods of administration had to be divested of their prewar conservatism, the red tape abolished, and more authority given to subordinates in the matters of detail; habits of quick and accurate thinking and quick decision under the stress of war had to be developed. The personnel had to be expanded and trained; the task of creating sufficient reserves of war supplies had to be undertaken. The organization of the various bodies which acted as the cooperating agents between the Navy Department and all other departments and with the allied representatives on this side of the water had to be undertaken. Certain essential problems of home had to be undertaken.

Though we knew that the immediate and pressing problem was the suppression of the submarine menace and acted in accordance with this knowledge, we also knew that this problem had to be considered in connection with all the other problems I have outlined. Our country could not afford to make any disjointed effort nor to move forward along any one line of action without due consideration of all lines. We had to profit, if we could, by any previous mistakes of our allies, and we had to prepare for the contingency of a long war. The situation demanded of us that we should make a united powerful effort, and in this effort the Naval Establishment had to play its appointed rôle in harmony with every other effort our country was putting forth.

Every master of military warfare and naval warfare knows that the great general's first concern is with the reserves. The weight of the first blow is ultimately controlled by the strength and coordination of the reserves. To build up our reserves was one of our naval problems and had to be considered at the same instant we were called upon to strike at the front. All of these conditions were difficulties to surmount. They retarded the flow of ships and supplies to Admiral Sims, but the spirit was willing, and the principles he laid down were, in the main, accepted. He always had back of him the loyal support of the Office of Operations and of the bureaus.

Presenting fully lists of all ships in the Navy and of those sent to European waters, Capt. Pratt said:

Gentlemen, these lists speak for themselves. Of all the antisubmarine types which are the destroyers, the subchasers, yachts, gunboats, coast guard vessels, the destroyer of 750 tons and above is the only real efficient fighter. Of these craft you will note all except 9 or 10 were immediately sent over, or docked and put in war condition and sent over. The older destroyer of 400 tons, the coast guard ships, with a few exceptions, and the yachts in the Navy at the beginning of the war, were of the Spanish War vintage, and practically incapable of crossing the Atlantic, a 3,000-mile voyage. The gunboats, except the *Sacramento* and about four coast guard ships, were of the same age or older. They, however, were sent, and with the patrol of the coast, as soon as the agreement made with the British and French admirals on this coast (acting as representatives of their admiralities) was terminated. All of the submarine chasers which were sent had to be built. Yachts sent had to be the latest and best types with sufficient radius to cross the Atlantic, and they had to be commandeered and fitted after war was declared.

Gentlemen, every one of these antisubmarine types, except a few of the latest destroyers, are not built for cross-Atlantic work. Some of our destroyers, even, had a short 2,000 mile working radius, necessitating fuel oil bases at St. Johns, New Foundland, and the Azores, to help them across. When you consider the difficulties to be surmounted to get these antisubmarine craft across the Atlantic, some of them in midwinter, praise and not criticism should be given. No other nation in the world has ever done this before, and it speaks for the determined efforts made on this side of the water and of the personnel manning these boats that they ever got there at all.

Admiral Sims has presented his evidence against the department and particularly against the Office of Operations, with a great array of facts.

Said Capt. Pratt—

Facts are like bricks; properly assembled they form an imposing edifice, but if this structure is to be enduring these facts must be united by the cement of sound reason. In making any just estimate of the situation which confronted our Navy, both at its entry into and during the progress of the war, no one man's opinion, however important his post, can be given undue weight, but all the conditions and influences here and abroad which acted on our naval war problem as a whole must be put in the balance and weighed. This problem was never localized. Our total naval effort had to be so adjusted that its weight was thrown to greatest advantage against the enemy forces as a whole. To this end it was necessary that we coordinate both abroad and at home our efforts with those of all our allies and with our own military and civil forces. This the Navy did successfully, as its record shows.

ADMIRAL M'KEAN TOLD HOW PLANS WERE MADE AND WORK PUSHED ON SHIPS AND MATERIAL, FROM 1915 ON.

Admiral McKean, who was assistant for Material, Office of Naval Operations, from July 1, 1915, all through the war period and for a year subsequent, told you of the continuous efforts and many means adopted in 1915 and 1916 to get our ships, yards, and bases in condition, to enlarge our shipbuilding and repair facilities, to improve the organization of the Navy Department and the fleet; to accumulate materials and reserves; and of the measures taken prior to and after the declaration of war.

He told you that the General Board had long before formulated general war plans—

First submitted in 1913, brought up to date in 1915, and again, with the World War going on and our entrance therein probable, were again revised in February, 1917. They were the general basic plans with which we worked, and, taken with the base plan and the mobilization plan, were sufficient for the general guidance of all concerned at the dates they were issued—

Admiral McKean told you, though he pointed out, it was necessary, of course, to add to and modify these by detailed plans for operations from time to time.

He told you of various preparations of the fleet for war undertaken in the fall and winter of 1915; of the enlargement of navy yards, bases, and shore stations; of the increase in navy-yard employees from 29,000 on January 1, 1916, to about 75,000 on November 1, 1918. He told you of the difficulties, even before we entered the war, of securing materials and supplies and fuel, and how these were met successfully. The Navy's priority list in the war was led by "destroyers, aircraft for antisubmarine use, submarines for use in the war zone," he said:

I had no difficulty in securing the approval of the Chief of Naval Operations and the Secretary of the Navy to this list and presented it to the War Industries Board and Priority Board as the official Navy Department policy.

Regarding this policy and how consistently it was carried out Admiral McKean said:

I had many contentions before the board with the Army and the Shipping Board to hold these priorities, and as an illustration of the attitude of the department I met the claims of the Shipping Board for priority in securing of turbines for their ships over turbines for destroyers. Their plea was that the only way to defeat the submarine was to build tonnage faster than the enemy could sink it. I argued that this was a purely defensive measure, necessary to be sure, but that the Navy insisted on the offensive at all times, and that while there the Shipping Board's system was in effect a scheme to "feed the submarines to death," the Navy's was to "poison" them and be done with them once and for all, besides saving the goods and guns which would be lost by the Shipping Board's system. Our system would, in addition, decrease the enemy morale. We won and destroyer material, labor, power, fuel, transportation were given precedence over everything else for ourselves and everything else for our allies, except what was shown by them to be actually needed at the front to enable their troops to hold on until we could get into the game in sufficient numbers to be of assistance.

And I wish to say here that the same priority was given to the alterations and repairs of destroyers, yachts, chasers, etc., being fitted for duty overseas. This gave them precedence over capital ships of the fleet for repairs in the same way, and for the same reasons, that our whole building program was absolutely stopped, so that men, materials, etc., could be concentrated for building destroyers, tugs, mine planters, chasers, etc., for use overseas against enemy submarines.

I wish to accent "overseas" for, until this discussion came up, I never thought anyone had any doubt of the policy of the department that the war was in Europe, and that Operations intended to keep it there.

As to the extent of these demands, there is submitted herewith a list of all types of vessels, completed and authorized or building on April 6, 1917, and a corresponding list of the date November 1, 1918, which shows that at the beginning of the war, April 6, 1917, we had 344 vessels of all types completed; 204 authorized or building, making a total of 548; that we had completed on November 1, 1918, 1,504 vessels of all types; that we had authorized or building 656, making a total of 2,240 vessels on November 1, 1918; that of this total there were, on December 1, 1918, 463 vessels abroad; and in addition there were 100 other vessels traveling back and forth from Europe to the United States.

There is also submitted a memorandum of the head of the Division of Naval Districts, Rear Admiral Osterhaus, showing that we took over through commandeering, purchase, charter, or lease 1,110 private vessels, motor boats, yachts, tugs, steamers, lighters, trawlers, and fishing boats, schooners, tankers, ferry and house boats and barges; that in addition to this 1,110, we took over from other Government departments, Coast Guard, Lighthouse Service, Coast and Geodetic Survey, Immigration Service, Public Health Service, Bureau of Fisheries, Panama Canal, and borrowed from the Canadian Government a total of 135, making a grand total of vessels taken over, converted to Government use, and equipped for Government service, 1,245 craft of all types, sizes, and kinds.

That in addition to the above we converted to troop transports and the Navy operated for the Army a total of 140 transports. This includes 25 of the Navy's battleships and cruisers.

That, in addition to the above commencing in February, 1917, we remodeled for armed guards and for the carrying of Huns, 384 merchant vessels, including vessels for our Allies as well as our own.

That during the later part of the war, in addition to the fighting fleet and vessels given above, the Navy Department operated and maintained 378 vessels in the Naval Overseas Transportation Service.

Each and every one of these vessels referred to above required some alteration to adapt her to the new service. A great many required extensive repairs. All made demands on material and labor for maintenance throughout the time of their service. This was in addition to the building, repair, and maintenance of vessels of the Regular Navy, and these activities were carried on at the same time as the others, involving the building of new types and the repair of the main fleet units, but the work of the various classes was kept separate in so far as possible and placed in different yards, and when in the same yard priorities were given in the order of relative importance and the urgency for each type, and the highest priority was, as previously stated, always given to craft for overseas, and first of these craft to destroyers.

The admiral told you not only of immense work during the war in building and repairing ships, but of the large material required for the northern mine barrages, of the development of submarine detective devices, and the various measures we undertook, and said:

No one supposed that any one scheme in operation or contemplated would prove 100 per cent efficient, but we did expect that with destroyers, armed guards, mine barrages, air patrols, submarine chasers, etc., that we would reduce the submarine menace below the danger point, and we did hope these various methods combined, would, in the end, break the enemy's morale, or in slang, that we would "get the Hun's goat." We did, and the final smash of Hun morale started in Kiel, the home port of a large number of German submarines.

While there were and always will be delays, I do not believe that the sum total of all these delays prior to our entering the war, or after our entering into the war gives the slightest foundation for anyone to justly make the charge against the Navy Department, that it was responsible for delaying the end of the war four months.

Admiral McKean also said:

There has been great to do about our alleged delay in entering whole-heartedly into the war and sending immediately all our antisubmarine and other forces, even including battleships, overseas. As previously explained in this paper, there were many good, and to me, sufficient reasons why the immediate sending of all craft that afterwards were sent, was a physical impossibility and here

I wish to state that in my opinion, the stripping of our coast of all of its defensive vessels in the first weeks of the war, when we had a perfect right to except from the demonstration already made by the German, that he would send submarines to our coast to break up at their origin, off our ports, our supplies of food, munitions and troops, and while there has been a great to do about the war being all "over there," the submarine menace was all "over there," it could very readily and profitably, in my opinion, have been made "over here."

Imagine the result in the early stages, had the three submarines that came in 1918, arrived off our ports of New York and capes of Virginia in April, 1917. Public opinion and the Congress would not have permitted us, had we so desired, to strip the coast, and in my opinion, such an attack at that time would have so upset our plans, that we would not have been able to organize a sufficient convoy force for our troops, would not have been able to send any patrol ships abroad, as we did later, and the placing of 2,100,000 soldiers in France with 600,000 of them at the fighting front when the armistice was signed, would have been made impossible for at least a year after it was actually done as we worked it out.

It is my opinion that the retaining of the patrol force on our own coast, the organizing of our harbor defenses, mines, nets, etc., was an absolutely correct military step of itself, and besides, this permitted us to repair, equip, and dispatch different groups and different units in much better condition and much readier for effective service, than would any of these units have been, had we attempted to send them by telegraph as seems to have been suggested in Admiral Sims' testimony.

It is further my opinion that the method pursued was absolutely the correct one, that there was no delay which could be avoided in the repair and equipment of the vessels sent, that there was no delay that could be avoided in building additional vessels of the destroyer type, that there was no delay that could be avoided in the purchase and conversion of the yachts, the equipment of the coast guard vessels, or the building, training, and assignment of submarine chasers. I believe that the Navy Department in this respect did the absolutely correct thing from the military point of view, and that it should be complimented instead of cursed for the way it did it.

"Everything that the Navy had control of was prepared, and every possible step taken," Admiral Benson testified. Admiral Benson, who, from May, 1915, to September, 1919, was Chief of Naval Operations, told you that just after he became Chief of Operations, in May, 1915, all of the bureaus were ordered to report their readiness for war; he told you of the new fleet organization that was put into effect; of the survey of merchant vessels and privately owned craft that could be used as auxiliaries; of the organization of naval districts; of the creation of a new system of communications; of the joint boards that arranged complete plans for the working with the naval service of the Coast Guard, the Coast Survey, and other branches which would come automatically under the Navy Department in case of war; of the accumulation of extra supplies of powder and ammunitions, and of various other steps that were taken in 1915 and 1916 to put the Navy in a state of preparedness.

The following is quoted from his testimony (pp. 4460 to 4464) :

I immediately took steps to ascertain the conditions of the various bureaus of the department and their readiness for war. The General Board had already taken up the subject a short while before, and, I think, on the 28th of May the letter went out, the order to the bureau chiefs, to report at a certain time their readiness for war, and report any features in which they were not prepared for war, and periodically after that they had to make reports of progress made in getting their bureaus in shape.

An immediate study was begun with the General Board, of which I was a member, and at my request, to study and prepare a proper organization for the whole fleet. That was carried through and work finally completed, and after approval by the Secretary it was put into force. It was an organization that carried us through the war and proved successful in every particular.

The CHAIRMAN. When was that done?

Admiral BENSON. In 1915, soon after I assumed the office of Chief of Naval Operations.

In addition to that the inspection board was increased in number, so that all of the vessels that were suitable as auxiliaries, or for such purposes as they might be needed for in time of war, were carefully inspected; but before the inspections took place the General Board had very carefully studied out and we had outlined the exact requirements for each type of vessel, such as refrigerators, transports, colliers, and mine layers, or whatever we wanted to use them for. All the details were carefully worked out.

This list of requirements was given to the board of inspection. They inspected every vessel that we had, and each one, as it was inspected, after comparison with the requirements of that particular type, was assigned to that particular duty in case of war, the yard to which she would go to have the necessary alterations made was assigned, and a list of the equipment that would be necessary was made out and a copy furnished to the bureau concerned and to the yard concerned.

A statement of the changes that would be necessary to be made in the way of alterations was given to the bureaus concerned, and they were required to make the necessary plans and to have them at the navy yards, and as fast as the funds were available this various equipment was ordered to be gathered and collected at these various yards so that in case of war there would be no delay in putting these vessels into operation. That was carried out very successfully. There was not exactly a mining division, but an officer was assigned to take up the question of preparing mines and vessels to exercise and be prepared for mine work.

The naval districts were organized and an organization worked out for the naval districts, and the way in which these various districts would be handled in case of war and what would be necessary to do was also worked out.

In the system of communication, as I said just now, quite a careful study had been made in regard to communication, and this study was put in proper shape in the way of rules, and the general system was approved soon after I assumed the position of Chief of Naval Operations, and this was constantly improved and the facilities were increased, and I do not remember now whether it was in 1915 or 1916 we mobilized all the communication systems in the country. They gave us, I think it was, 30 hours in which they turned over the telegraph and everything to the Navy Department, and I was able in my office to communicate by telephone and otherwise immediately to every one of our stations on this coast and to one or two on the other; and the Secretary of the Navy was able to communicate by wireless radio with a ship at sea.

The leading men and experts of the various companies came to Washington, watched very carefully what was done, and gave us memoranda of what we should do in order to increase the equipments and be prepared in case we had to use them for war purposes. This equipment was all carefully catalogued, and the room in which it was to go was marked. The position it was to occupy was marked. By degrees the switchboards were increased in capacity and every means was taken to be prepared with the communications.

The law which required the other departments, such as the Coast Guard, Coast Survey, etc., that automatically came under the Navy Department in time of war, was passed. Joint boards were ordered, and every detail that could be worked out beforehand was worked out, to see that when war was declared they would move into the other, or that regulations would not conflict and there would be no delay in their taking up their duties at once.

The questions of hospitals and of prisons, even, and who should control prisoners, and everything of that kind was carefully worked out.

The question of the extra supply of powder, of ammunition, and torpedoes, and practically everything connected with the preparation of the Navy Department for war was carefully followed up, and everything was done that could be done with the means that we had at our disposal.

A small appropriation was gotten through in 1916, even anticipating the fact that we would want to put guns on those auxiliaries, and extra appropriations or allowances were made to meet the extra demands that had been made for the preparation of powder and torpedoes and various additional equipment that would be needed. That was carried, I believe, as far as was possible, so that everything that the Navy Department had control of at the time was prepared, and every possible step was taken, short of mobilization of the fleet, that could be taken to prepare the equipment that we had and to as far as pos-

sible prepare additional supplies—to get ready. That I considered to be my function, and it was accomplished, and as far as possible it was done without any unusual display and without any opposition from anybody.

In regard to the Secretary's recommendations to Congress, the record of Admiral Benson's testimony contains the following:

The CHAIRMAN. It is not your opinion that the Secretary could and should have presented to Congress the condition of the Navy in the years just before we entered the war in a different way from the way he did present it in order that Congress might be more fully and correctly informed as to the conditions in the Navy?

Admiral BENSON. My opinion is, Mr. Chairman, that he did remarkably well—very much better than had been done in the previous years—and he kept in close touch with the Naval Committees of the House and the Senate; and while he did not always ask what was recommended by the General Board and by others, I think he usually recommended and secured everything that he could possibly have secured from Congress.

Under cross-questioning, the admiral said in his opinion the question of personnel should have been presented more fully, but he could not conscientiously say the Secretary "should have made fuller recommendations in regard to material"; that the Secretary was "in close touch with the committees of Congress and was following a definite policy."

That the Navy Department's policy from the beginning was to cooperate closely with the Allies was stated by Admiral Benson:

The CHAIRMAN. Now, Admiral, what was the general policy governing the Navy Department in regard to participation in the war at the time of our entry into the war?

Admiral BENSON. It was to do everything we possibly could to assist the Allies.

The CHAIRMAN. That is, to cooperate with the Allies?

Admiral BENSON. To cooperate with the Allies to the fullest that our facilities would permit.

The admiral stated that as Chief of Operations and the naval advisor to the Secretary of the Navy he was responsible for the naval operations of the war; that they were carried out successfully, and the results speak for themselves. He gave his reasons for the various decisions made regarding operations, the sending of forces abroad, the adoption of the convoy system, the policy of maintaining the fleet in home waters, and various other criticisms. He said Admiral Sims sent the department all the information that was needed; that it had ample information from Sims and other sources upon which to base its decisions; and that, in his opinion, "Admiral Sims was given all the information that it was necessary for him to have to properly perform his duties." Regarding Admiral Sims's status, Admiral Benson said:

Admiral Sims at first, as has been stated, was sent over to obtain information upon which the committee could act. After that he was put in command of our forces over there; but at all times Admiral Sims was an assistant to the Chief of Naval Operations, with an office in London, simply coordinating and keeping a general supervision of the forces over there, seeing that the policies that the department decided on were properly executed, and as far as possible keeping in thorough touch with the whole situation and keeping the department informed, in order that it might be able to formulate policies and give proper instructions; but it was never intended nor did the situation permit of Admiral Sims occupying any such position as he felt that he should occupy and seems to indicate in his letter to the department that he did occupy.

I feel that as Chief of Naval Operations I was responsible for the policies carried out in all parts of the world, in Europe as well as elsewhere, and I

looked upon Admiral Sims as my representative to carry out those policies in European waters.

Describing how our destroyers at Queenstown were operating under Admiral Bayly, our forces in France under Admiral Wilson, etc., Admiral Benson said:

So that at all times Admiral Sims was, as a rule, except from time to time when he may have visited the various stations and went to Paris for consultation, living in London, and the forces were being operated in the field in a manner very similar to the way in which they were being operated by my orders through others from Washington.

Questioned regarding delays alleged by Admiral Sims, Admiral Benson said he did not think there were any delays that were material to the cause:

Senator PITTMAN. Admiral, do you know of any delay on your part or on the part of the Secretary of the Navy, whether justifiable or not justifiable, in acting upon any recommendation of Admiral Sims that affected the duration of the war?

Admiral BENSON. I do not think in the slightest, Senator; and I do not think there was any delay material to the cause practically in any way, either by the Secretary or by myself.

Senator PITTMAN. Yes.

Admiral BENSON. In assuming responsibility, as I did and have, for the naval operations I do not admit that there was any unnecessary delay or any improper compliance with the demands of the situation, but, on the contrary, I insist that the situation was met in the most efficient and thorough manner and as far as possible with the facilities we had and the situation permitted.

Gentlemen, you have had before you 11 high ranking officers of the Navy who during the war had charge of our most important activities. Ten of them in their testimony refute the charges made by Admiral Sims, the eleventh. The vote stands 10 to 1. If Admiral Gleaves, who is commander in chief of the Asiatic Fleet, could have been here to testify, I have no doubt the vote would have been 11 to 1 of the 12 officers who, under the Secretary of the Navy, had the places of chief responsibility during the World War. The officers who, upon minor details, made criticisms either were not in the war at all or held positions not comparable in responsibility to those intrusted with the 12, some holding positions so unimportant or subordinate as not to give them opportunity to know the great policies and activities of the Navy in the World War. You have heard their testimony, and you know that, besides the great record made by the Navy, the charges brought forward touch matters which had only the smallest bearing upon the Navy's great service. The really one serious charge—that the Navy Department by delays prolonged the war four months—has been so completely disproved that even the most ignorant or prejudiced can not give it credence. If all the delays alleged were true—and they are not—they would have had no appreciable effect upon the result.

The war was won, and that the Navy did its full share toward that great result has been thoroughly established. That it was 100 per cent perfect, that no mistakes were made, no one for a moment contends. But it has been established that fewer mistakes were made in plans, policy, or operations than were made by any other Navy, or by our own Navy in any previous war. The testimony proves that no department of our own or any other Government functioned more efficiently, made decisions more promptly, or put them into execution more swiftly or successfully.

Was any mistake made in the operation of our transports, their navigation, their escort, their protection? Not a single American transport was lost or torpedoed on the way to France, and not one soldier on a troopship manned by the Navy lost his life through enemy action. That achievement, the outstanding accomplishment of the war, made possible only by wise planning and capable, and often heroic, execution, made possible shortening the war by at least 8 or 10 months. The war ended in November, 1918, because the Navy made it possible to transport 2,000,000 troops to France, almost a year before military and civil authorities thought that big transportation job was possible. And, bear in mind, gentlemen, that the war was won in France by fighting soldiers, and that the rapid pouring of an almost inexhaustible number of American soldiers into France is what won the war. Other activities helped, but this was the decisive and determining factor, and the credit for that is due to the most hearty cooperation of the Army and Navy officials and the whole organization of both departments. That is in the testimony before this committee, and that will be the verdict of history.

Did we perform well the task of operating cargo transports, carrying munitions and supplies to Europe? Before hostilities ended we were operating the largest cargo fleet ever under a single management, 378 vessels of 3,800,000 dead-weight tonnage, and we transported over 6,000,000 tons of munitions, fuel, and supplies.

Did we give ample protection to American shipping? The Navy armed 384 merchant vessels, furnishing them with guns and gunners for protection against submarines, and furnished destroyers and other craft for escort through the danger zones. The total loss of American merchant tonnage did not equal the amount of shipping the German submarines sank in two weeks of the month we entered the war.

Did we cooperate promptly and whole-heartedly with the Allies? Admiral Sims was sent to London to get in close touch with the British Admiralty before war was declared. Immediately after the declaration of a state of war April 6, 1917, we got into communication with the British and French commanders in chief in the western Atlantic, four days later they were in conference with Admirals Benson, Mayo, and Wilson, in Hampton Roads, and the next day, April 11, came to Washington, where, in conference at the Navy Department, with the Secretary, the Assistant Secretary, and the General Board, arrangements were made for the fullest cooperation and their suggestions regarding the assistance we could render were immediately adopted. From beginning to end there was never any question as to our whole-hearted support of the Allies, and no navy in history ever so completely, cordially and harmoniously cooperated with other naval services as did our own with the navies of the Allies.

Did we sent promptly to Europe the vessels asked by the Allies? They requested, at the conference of April 11, that one or two destroyers be dispatched. Orders were given at once to send six. The Eighth Division proceeded to its home yard, fitted out for long and distance service, sailed from Boston April 24, made the voyage of 3,000 miles and arrived at Queenstown May 4. Admiral Sims is the only person I know who doesn't consider that pretty quick work.

Did we send over as many destroyers as the British requested? Admiral Sims informed us, in a cablegram dated April 24, that the

British Admiralty and war council had concluded that "twenty-odd" American destroyers "based on Queenstown would suppress the dangerous submarine activity in that area, and keep it suppressed." Within a month after that time there were either at Queenstown or on the way 28 destroyers, more than half the total number of modern type in our Navy.

Did we send to Europe as many ships and men as we should or could have sent? Before the end of hostilities the United States naval forces in European waters comprised more vessels and more officers and men than were in the entire Regular Navy when we entered the war—373 vessels present, 27 more assigned; 81,000 officers and men. The total forces operating either in European waters or manning troops or cargo transports reached 834 vessels and 175,000 officers and men, including armed guards on merchant vessels plying the war zone. When hostilities ended there were some 2,000 destroyers contracted for or under construction, hundreds of merchant ships building by the Shipping Board to be manned by the Navy, and about 200,000 men in training, nearly all for service either in Europe or on vessels sailing to and from Europe on war or supply service.

Did we delay the putting into effect of the convoy system? The allied admiralties had been considering it for three years before we entered the war, and at that time were following exactly the opposite policy, dispersion of shipping. The first small experimental convoy tried by the British arrived from Gibraltar May 20, but the next Gibraltar convoy was not dispatched until July 27, Admiral Niblack told you. In June several more experimental convoys were tried, from Hampton Roads and other ports. When its success was demonstrated, we adopted it. Our destroyers at Queenstown performed escort duty from practically the beginning of the experiment. Though some eminent naval authorities, both in America and England, doubted whether it could be made a success, the President and myself favored it from the beginning, and no one in the Navy Department, so far as I know, ever "resisted" the adoption of the system. We put it into effect soon after the British did, and joined with them in its operation. Admiral Sims himself says our vessels made it possible to put the convoy system into effect. Could that have been possible of we had "resisted" or sought, in any way, to prevent its adoption or obstruct its operation?

Did we do our part to make the convoy system a success? Admiral Sims and others have told you that the destroyer force at Queenstown, which was in the most critical area and furnished a large proportion of danger-zone escorts for the trans-Atlantic convoys, was from May, 1917, on "almost exclusively American." Admiral Niblack told you that the United States forces under his command furnished 90 per cent of the escorts for cargo convoys between Gibraltar and the United Kingdom. The forces under Admiral Wilson also furnished a substantial part of the escorts of convoys to and from French ports.

Did we adopt and carry out the principle of unity of command? The first destroyers that sailed had orders to report to the senior British naval officer at Queenstown, and all our destroyers at that base operated under the direction of Admiral Bayly, of the British Navy. Our battleships, under command of Admiral Rodman, formed a division of the British Grand Fleet commanded by Admiral Beatty. Our forces under command of the American admiral in France oper-

ated in the closest possible cooperation with the French forces, as our vessels at Gibraltar operated with the British, and those at Corfu with the British, French, and Italian forces in the Mediterranean.

Did we joint with the British, French, Italians, and Japanese in a body which would coordinate the naval activities of the Allies? Admiral Benson told you that it was he who suggested the formation of the allied naval council and took part in its organization; Admiral Sims, his subordinate, acting as his aid when he was present and representing him as a member of the council when Benson could not be present.

Did the Navy Department, as Admiral Sims charges, fail to give him its confidence and support? It did not. Though he was sent over first merely to get information and make recommendations and was all during the war in reality an assistant to the Chief of Naval Operations, stationed in London, he was given the rank, first, of vice admiral and later of admiral. Though he exercised no sea command, he was made force commander, with the title of "commander of United States naval forces operating in European waters," and orders to and reports from our various commanders in Europe were sent and received through him. We gave every consideration to his recommendations, and most, but not all, of them were adopted. Events proved that at times we placed more confidence in his recommendations and opinions than they deserved. He had a small staff at first, but eventually had the largest staff ever given an American or, I am informed, any other naval officer, comprising 200 officers and a thousand enlisted men and clerks. His headquarters in London, he told you in the medal-awards hearing, comprised 10 houses of 25 rooms each—250 rooms. That's more officers and rooms than we had in the entire Navy Department before the war.

But, Mr. Chairman, we did not permit him to become a member of the British Admiralty. We did not make him commander in chief. The Secretary of the Navy and the Chief of Naval Operations did not resign their functions to him. We did not, as he suggested, move bodily to London "the planning and directing end of our Navy Department," "leaving behind in Washington only the organization for insuring support and coordination of home material effort." I am quoting his exact words. We were charged with the administration of the United States Navy, not a Simsian navy. Congress had not authorized us to move the Navy Department from Washington to London, nor had it provided that it be made an appendage of Sims or a branch of the British Admiralty.

Not to have done so may have been grievous error that Sims can never understand or forgive. If so, we are prepared to take the blame for it, along with the decoration of honor which most Americans will confer for keeping the Navy always on an even all-American keel.

It has been charged that we did not send across the Atlantic ocean-going tugs as soon, or even as many, as Sims called for. We did not. I wish we had possessed or could have commandeered more tugs for the pressing use abroad and on this side of the Atlantic. They were sorely needed on both sides of the ocean and the number was distressingly small, and we built new ones as fast as facilities in America could construct them. The few tugs fitted for ocean service

handled the immense amount of shipping that poured into and sailed out of our ports, carrying soldiers, munitions, food, fuel, and supplies to Europe; that handled our large coastwise traffic; and aided in hauling coal and materials to our shipyards and munition factories. There were all too few of them for the pressing needs at home and abroad. It was these very tugs which in the terrible winter of 1917-18 hauled coal north and kept the munition plants, factories, and shipyards of New England going, so the soldiers on the firing line could be supplied. They were doing war work over here quite as much as if they had been at Queenstown. We did send all we possibly could, but nothing like as many as we desired to send, for Admiral Sims did not desire them sent across any more than did the Navy Department, which used every energy to hasten construction so as to increase the number that could be sent.

Did we, as Sims charges, decide to establish certain naval bases in Europe before he had proposed it? We did. After conference with the authorized and distinguished naval representatives of France and England, who were sent with the war missions to Washington, we decided early in May, 1917, to establish bases at Brest and Bordeaux, and notified Sims. There was every reason for doing this, and deciding upon it promptly, as troops and Army materials and supplies were soon to be sent to Europe, and it was important that we establish, as soon as possible, naval bases in the best ports that were available. Having an obsession, which our British Allies seemed to expect would materialize, that we should base all the overseas forces we sent over at Queenstown, Sims objected and complained he had not been consulted. We disregarded his protest and established bases at Brest and Bordeaux, at St. Nazaire. It was through these ports that American troops poured by the hundred thousand, and supplies and materials by millions of tons. It is a matter of regret that we could not have established the base at Brest sooner, and that the Army had not been sooner given the facilities which it utilized later as the greatest port of debarkation for our troops. After Brest was made the chief French port for American ships, the Army built barracks for many thousand soldiers who passed through Brest. This camp was under the direction of Col. Smedley D. Butler, of the Thirteenth Regiment of Marines (now Gen. Butler), and too much praise can not be given to the Army officers and to Gen. Butler for the great work done at that base. I visited it twice and wish to record my admiration for Gen. Helmuth of the Army, and Gen. Butler of the Naval Establishment, for the building of a camp from a small and uninviting barracks to one of the largest and best arranged and best conducted camps in the world. These bases, established without waiting for the recommendation of Admiral Sims, became the centers of our activities. It was much the same way in establishing the important bases at Gibraltar, the gateway to the Mediterranean, and at the Azores, the halfway point between Europe and America.

Sims devotes pages to his criticisms regarding the Azores and, it appears, makes the sending of a few vessels there for temporary duty the basis of his charge that forces were "dispersed from the critical area to meet diversions of the enemy." This is a matter that was handled by Operations, and the details were furnished you, I believe, by Capt. Pratt, but that was such a minor affair that even Sims

can hardly magnify it into a thing of any importance. If there was anything in which our wisdom was proved by events, it was the establishment of these bases. You would have thought that any officer who took a broad view of the situation would have recommended their establishment as soon as he reviewed the situation. But Sims didn't. His sole idea seemed to be to keep all our forces in British waters and concentrate them at Queenstown. He even resented the order to send out our own destroyers to protect our own transports when the first American troop convoy was sent over. He was never at Brest but one time while admiral Fletcher was there, which was up to the end of October, 1917, and that was when he went with Admiral Mayo to inspect the base, and then he remained only four or five hours. He never visited Gibraltar during the war, I am told.

Were there, as Admiral Sims would have you believe, no war plans worked out and no policy adopted before war was declared? Admiral Badger, head of the General Board, told you that the general plan had been matured years before, and constant changes kept pace with war developments and conditions. He told you that on February 4, 1917, the General Board submitted numerous recommendations of measures to be adopted in war with the Central European Powers. That was the day after this Government broke off relations with Germany. He told you of various other war plans submitted in February, March, and early April, all designed for the war we were to wage, and to meet the conditions we were facing. That these recommendations, with few exceptions, were approved and put into effect is shown by events. As they recommended, we brought the fleet north from Cuban waters and placed it, safe from submarines, in Chesapeake Bay. We armed American merchant ships for protection from submarine attack; we contracted for many more destroyers and 355 submarine chasers; we organized the patrol force to patrol our coasts; we prepared at once to mine our harbors and place nets across our channels. We began taking over such privately owned yachts and other craft suitable for auxiliaries as were tendered, and converting them to the types needed for patrol, mine laying, mine sweeping, and other uses, though most of such craft could not be secured until Congress later granted us the authority to commandeer vessels.

All this was in progress before Sims left for Europe. He was president of the War College and a member of the General Board. How could he have been totally ignorant of all these plans? The General Board, as did every official of the Navy, favored the closest cooperation with the Allies, in case of war, and sending to Europe such craft as would be of most assistance to them, and aiding them in every way we could. That was our fixed policy, adopted and thoroughly understood. How can Sims pretend that he didn't know it? Why, gentlemen, it was in pursuance of that very policy adopted by the department before Congress declared war, that Sims was sent to Europe, and he says so himself in paragraph 8 of his letter. There never was any doubt whatever about it.

Another one of our policies was to increase the Navy in ships and personnel, especially antisubmarine craft, as rapidly as possible. The President had, on March 24, 1917, authorized the increase in the

Navy to its full emergency strength. I had sent out the call for recruits; we had started a big recruiting campaign. This was published in every newspaper in America, as was also the fact that we were going to build many more destroyers and hundreds of submarine chasers. The papers contained lists of ship and boat owners whose craft had been offered to the Government, and of vessels and motor boats being taken over for conversion into naval craft. This was before Sims went to Europe. If he didn't know about it he was about the only man in America who was in ignorance of the active and efficient work and policy of the Navy Department.

Admiral Sims asserts that, "Not until July 10, 1917, did the Navy Department outline a policy as regards naval cooperation with the Allies." Yet he knew just after he reached London the details of the agreement reached at the conference with the British and French admirals at the Navy Department April 11, 1917. He knew in April that it was our policy to send over destroyers and patrol craft, for a division of destroyers sailed April 24, arrived May 4, and were followed by 22 more within a month. He was informed early in May that we were establishing bases on the French coast. He knew that in June we were sending troops over in convoys escorted by cruisers and destroyers; they sailed June 14, and he was ordered to send out destroyers to meet them. He knew before July 10 that we had adopted the convoy system, for we had not only notified him but were putting it into effect. He knew we favored an aggressive naval policy, for we had proposed various offensive plans, beginning in April, including the possible blockade of German ports and the North Sea mine barrage. He had received scores of cablegrams and letters in regard to various policies and plans. We were not merely proposing to cooperate with the Allies, we had been cooperating with them from the day we declared war.

Admiral Sims charges that we did not allow him to select flag officers who were to serve in Europe. That is correct; we did not. We had no idea of allowing him to determine which admirals should go to Europe and which should not. His attitude toward his fellow officers (of anywhere near his own rank) was and is notorious. We had no idea of allowing him to choose his personal favorites for important commands. The flag officers were sent to Europe, the men who had actual command of our ships and stations and carried out our operations were selected because of their peculiar fitness for the work to which they were assigned, and were chosen for their ability and energy. Their service amply demonstrated the wisdom of their choice. Rodman in command of the battleships, Wilson at Brest, Niblack at Gibraltar, Strauss in charge of laying the northern mine barrage, Dunn at the Azores, Rodgers at Bantry Bay—where could you find better officers or those who could have done the work with greater efficiency? No military rule was violated by the department in this, because Admiral Sims was not commander in chief, though he desired such position, and the department declined his request.

Your subcommittee has now been investigating for months "the matters referred to in the letter of Admiral Sims of January 7," and at one time or another has gone into many activities of the Navy not only during the war but for a number of years prior to it—indeed, practically since I became Secretary of the Navy on March 5, 1913.

The work of the Navy was stupendous and mistakes were unavoidable, but I feel sure that the testimony given before your committee has not only confirmed the general impression of the splendid work done by the Navy but has given an even clearer and more impressive exhibition of the efficiency with which the Navy did its work of preparation for war and operations during the war.

During the four years ending April 1, 1917, which immediately preceded our entry into the war, Congress showed more liberality and vision in allowing the Navy to expend in response to the urgings of the Navy Department than in any previous four-year period. During this period new ships were authorized of a total displacement tonnage of 1,047,462, as compared with a total tonnage of 1,056,560 built and building on April 1, 1913. This applies to fighting vessels built and building and is exclusive of fuel ships and other nonfighting auxiliaries. The figures for 1917, however, do not include vessels of the war program, some of which were already ordered on April 1, 1917. Provision was made for reserve munitions far beyond what had ever been done before. On April 1, 1913, the Bureau of Ordnance not only had no reserve projectiles (4-inch and up) but was 228,000 short of requirements. On April 1, 1917, there was a surplus or reserve of 112,000. The reserve of other munitions were: Torpedoes, nine and one-half times; smokeless powder, one and one-half times; mines, four and one-half times the reserves of April 1, 1913.

The CHAIRMAN. I asked you, as you will remember, back in the hearings, to give a list of those various articles, and how many we had on hand.

Secretary DANIELS. Yes.

The CHAIRMAN. Has that been done?

Secretary DANIELS. I will make a note of it and supply it.

As regards supplies and stores of all kinds, the records show the same thing, a great increase in April, 1917, over the amount in 1913.

As regards personnel, the story is the same. The total enlisted strength authorized by law on April 1, 1913, was 51,500; on April 1, 1917, 97,000 and during this period provision had been made by which the strength in commissioned officers would automatically keep pace with the enlisted strength. There was no provision for reserves in 1913, the small Naval Militia constituting the only reserve force. By 1917, adequate provision in the naval bills of 1914 and 1916, for reserves had been made upon the urgent solicitation of the Navy Department.

As to organization, I believe no officer who has touched on that point, however he may differ from others in some respects but has testified that, for the purposes of war, the organization of 1917 was far superior to that of 1913.

Such enormous undertakings were put through during the war that we are now apt to be little impressed by the accomplishments of the period preceding the war, and figures such as are given above are needed to remind us that the prewar achievements in the direction of preparation of war were also enormous compared with anything that had preceded them.

Coming to the war itself, your record of testimony shows the achievements of the Navy in such volume that it is difficult to sum-

marize them within a reasonable space. On the material side we had built or building during the war more than a thousand vessels of all kinds, in addition to taking over and converting some 1,547 more. For the northern mine barrage alone, more than 3,000 miles away, we built and laid four times as many mines as Great Britain whose mine building and laying facilities had been developed during nearly four years of war. Moreover, our American mines were admittedly better for the purpose. The record of what was done in a material way takes many pages of your record, and I will not undertake to summarize it.

As to personnel: Starting with a total enlisted force of 70,746 regulars and reserves on April 1, 1917, we reached a maximum of 500,000—and if you add the marines, it will be 600,000; and they ought to be added—when the American Navy had the greatest force ever reached by any navy in the history of the world. These did not come from seafaring people; they were drawn from the ranks of industry and agriculture, every one a volunteer and the finest raw material in the world, but after all “raw material.” But it was American raw material and in a phenomenally short time became efficient in the tasks to which they were assigned. Few officers, even in our Navy, and none in any other navy, would have admitted in 1917 that it would be possible to recruit, train, discipline, and operate in 1918 a force of 500,000, starting with what we had in 1917. Admiral Fiske, in the latter part of 1914, testified before the House Naval Committee that it would take five years to prepare the Navy we then had for war. But in 1917 there were no faint hearts in the Navy Department, and the expansion to 500,000 men was handled without a hitch. With the great expansion of temporary officers, there was always danger of political or other influence securing positions for people who were incompetent or worse. The Secretary of the Navy gave great personal attention to this matter, and because of vigilance in this matter I believe that the cases where just criticism could be made of the Navy being a haven for incompetents and draft dodgers are few indeed.

As regards the organization: The crucial test of war showed that the changes made in 1915 to better fit the Navy for operation in war were sound. The Office of Operations was short-handed in experienced officers, like the whole Navy when a manyfold expansion was undertaken, but it did a great work in a great way. No one who heard the illuminating testimony of the officers who were responsible for what was done by Operations during the war can have any doubt of that.

You have heard Admiral Benson and his assistants take full responsibility for the operations of the fleet during the war. Under the present law, both in peace and war, the Office of Operations is charged with that responsibility under the Secretary. You have heard that in exercising my responsibility I relied fully upon these able officers and did not hamper them in purely military matters. That did not relieve me of responsibility, and I mention the matter here simply because I want my statement to show clearly that Admiral Benson and his principal assistants are entitled to full credit for the great accomplishment of a great task. But the Office of Operations, important as it is, is not the whole of the Navy Department. I have given you some intimation as to what was accom-

plished by the other bureaus and offices of the department. During this investigation there has been no charge that these great bureaus, charged with enormous financial, industrial, and technical responsibilities, did not fully measure up to the standard of maximum efficiency. You have been told that during the war the expenditures of the Navy Department were measured by billions, being greater than the total expenditures in all the years before. The bureaus were mainly responsible for these expenditures, and they were made wisely, honestly, and efficiently. The whole country owes them a debt of gratitude for the manner in which they rose to the occasion and "delivered the goods." Apparently it is the idea of some officers who have testified before your committee that the bureaus of the Navy Department should be rewarded for the wonderful work they did during the war, by being shoved several notches down in the hierarchy of the Navy Department instead of being immediately under and in touch with the Secretary, as at present.

Viewed in their proper perspective against the work of the Navy during the war, as set forth in the record of the hearings of this committee, Admiral Sims's charges shrink indeed. He attempted in his testimony to justify his inexcusable breach of confidence with reference to a confidential remark ascribed by him to the Chief of Naval Operations by connecting up the remark with an alleged lack of "will to win." I think that your committee will not only explicitly exonerate Admiral Benson from any accusation, however indirect, of any lack of "will to win," but will properly characterize such an accusation.

The specific accusation that the American Navy or any portion of it was responsible for a four months' prolongation of the war has been fully refuted. Four Admirals of the American Navy, who actually exercised command of the American forces in the war zone, have definitely assured you it is unwarranted by the facts. Many other distinguished officers, with first-hand knowledge of what went on, have repudiated and resented this charge. The most superficial analysis of the charge itself and the reasoning by which it was attempted to be sustained shows its falsity. In the spring of 1917 the United States and the Allies, with whom we were associated, had a total of some 484 serviceable destroyers. Admiral Sims's contention, boiled down, is that we should have sent more abroad. We sent 40 out of these 50 in three months after war was declared.

In fact, if you include Russia, which was one of the Allies when we entered the war, and cooperated with them until the fall of 1917, the Allies possessed 497 destroyers, for Russia had 113, and the United States, as I said, had 50. Therefore, there were 547 destroyers available to the Allies, including those of the United States and Russia.

The table prepared by the Office of Naval Intelligence, dated January 1, 1917, shows the following number of destroyers in each navy at that time:

Great Britain.....	226
France.....	75
Russia.....	113
Japan.....	53
Italy.....	30
United States.....	49

If we had sent every one of our modern type destroyers we would have had over in July only 10 or 12 more. And yet Admiral Sims actually claims that with a total of 484 destroyers available to the United States and the Allies, with whom we were associated, the war was prolonged four months because the United States did not send 50 instead of 40 destroyers to Queenstown. If a few more destroyers at Queenstown would have shortened the war four months, it is ridiculous to suppose that with a total of 484 to draw on, exclusive of the United States, the Allies would not have spared 10 or 12 for this purpose; 10 not counting Russia, although it was then in the war. The simple fact that as our destroyers reached Queenstown, the British withdrew the few they had there, shows the situation as it appeared in 1917 more clearly than thousands of words.

The other charges of Admiral Sims need scarcely be mentioned here after the full discussion and complete refutation which your committee has listened to. Much discussion has been had of the alleged slowness of the United States in taking up the convoy system. The record shows that the speed with which the United States put into practice the convoy system compares very favorably with that of Great Britain.

The very first troop transports which went across under Admiral Gleaves in June were convoyed, and so were all our troop transports. Much has been said about the alleged lack of plans and policy of the United States Navy. Admiral Badger, Admiral Benson, Admiral McKean, and Capt. Pratt, all officers with first-hand knowledge of the question have effectually disposed of that allegation. The testimony of Admiral McKean and Capt. Pratt was not sensational—I wish to read this very slowly, gentlemen, so that it may have the impression that it deserves. The testimony of Admiral McKean and Capt. Pratt was not sensational and was of necessity too technical to be fully understood by laymen. Yet I do not hesitate to say that had this investigation been had by a board of naval officers, skilled in military and technical matters, the McKean and Pratt testimony alone would have been regarded as fully refuting all the Sims allegations as regards military shortcomings. They took up the case in detail and their testimony is irrefutable.

It is really remarkable that, with the well-known advantage of hindsight, Admiral Sims has been able to find so few alleged mistakes. It doubtless seems now the major error, in the eyes of Admiral Sims, that the Navy Department did not blindly turn over to him the conduct of the war, and content itself with carrying out his instructions. I trust this is a case of hindsight. I am loath to believe that Admiral Sims believed in 1917 that the department was making fundamental errors in the conduct of the war. Certainly he never came out openly and straightforwardly with any such opinion at the time, it is difficult even now to read by implication any such meaning into his numerous cablegrams and letters. Had he felt that way, it was his duty to bring his opinion clearly and sharply before his superior officers.

I hope I may be permitted one thought in conclusion. The Navy Department was in no way responsible for this investigation. Admiral Sims's letter of January 7 was given no publicity in any way by the Navy Department; it would have received proper considera-

tion from a suitable body of competent officers in due course. When Admiral Sims deliberately made this letter public, and your committee was authorized to investigate the charges made therein, the Navy Department, of course, temporarily suspended action on his letter. It has been the policy of the department to give the committee every fact it has asked for, and a good many it did not ask for, bearing upon the questions at issue. This has unavoidably resulted in making public a number of confidential matters which would have remained confidential so far as the Navy Department was concerned, had not your committee undertaken this public investigation. They were necessary for the complete understanding of the case, and that the committee should be completely informed as to the history of the transactions which it was considering.

And now, gentlemen, I have performed a solemn duty I owed to more than half a million men who served in the Navy during the World War and served with the ardor and efficiency of a noble patriotism. Most of them have returned to civil life, and they, with thousands of those still in the Navy, share a feeling of pride that in the greatest war in the world's history they were privileged to wear the uniform of the Navy and to have been a part of an organization which helped to save the liberties and rights of mankind. They came into the Navy, the Regulars and the Reserves, with an elation and a spirit of high emprise that glorified American youth. They served loyally and well. I can not find terms to express the sense of national gratitude to them. If the charges which shocked them when they were made, had been established, these youths would have felt humiliation instead of, as they feel they deserve to do, now that every charge has fallen to the ground, hold their heads high, feeling worthy to transmit to their children the rich legacy of what they did when their country in their young manhood called for men of valor. If I had neglected to furnish your committee with the most notable achievements of the service of which these young men were a large part, I could never have looked them in the face again. We were, and I say it with a sense of pride, in spirit and labor, comrades and shipmates in the world's greatest naval adventure. They have had no opportunity to tell the story of how they faced the hardships with good cheer, and peril unafraid. I rejoice for them that the Navy's record stands honorable, high, unimpeached, and unimpeachable.

Mr. Chairman and gentlemen, I have performed my sacred duty to the courageous young lads who lost their lives and gained immortality in the naval service. Yesterday I attended a memorial service in Brooklyn in honor of the dead heroes whose bodies were the first to be brought home to find sepulchre in the land that furnished them nourishment in their boyhood and for whose honor they gave all they were and all they hoped to be. They and the scores of other naval heroes—sailors, marines, aviators—who died across the sea, either in battle, or in ascent, or from disease, died with the assurance that the service which commanded their very life was appreciated and honored at home. If I had been silent when what these dead had done were assailed, I could not ever have stood with bared head over their graves without a sense that I had failed them and permitted unjust reflections to tarnish their fame.

I have performed my duty to the responsible officers of the Navy, who, charged with duties calling for initiative, ability, and resource-

fulness under great stress, more than measured up to the high expectations of the American people. As the Navy was prompt when war was declared and as it expanded and multiplied its activities as the call became greater and more insistent, the people of America felt, and justly so, that they could depend upon the Navy doing everything that foresight, courage, skill, and daring could accomplish. When victory came, the officers of the Navy held, and deservedly, a place in the grateful admiration of the American people higher than in any period of our history. They had won popular confidence by a great task greatly performed. This was true alike of the Chief of Operations and the commander in chief of the fleet and of the youngest lieutenant and ensign, for nowhere was there wanting readiness, determination, and the qualities which insured victory. I tested the mettle of these officers, Regular and Reserve. I know the stuff of which they were made. I saw them under stress. I followed them in their long vigils afloat and in their labors abroad and ashore. Their brains and devotion and leadership were the dependence of their country and they failed nowhere at any time.

If, when unjust accusations touching any of them had been broadcasted, I had not taken the time to record in these hearings the splendid performance of naval officers and naval personnel, I would have failed in a plain duty to officers whose contribution is beyond all praise and I would have been recreant to a duty that has been an honor. Some of these officers called before your committee have disproved every criticism, but few of them could be heard. As I am for the time being head of the Navy, it has been a pleasure and a privilege to point out to this committee some of the notable deeds of our naval officers, who, working with consideration, made a record so excellent that no criticisms or accusations have been able to leave a stain or even a speck upon that record.

Finally, I have performed my responsible and happy duty to the American people and to the nations with which we were associated in the World War by presenting with some degree of particularity the naval effort in the great struggle. The Navy was their reliance when world justice was imperiled. They knew that it was ready, fit, efficient, and the history I have been privileged to present your committee fully justifies their faith. Indeed, it crowns it.

During the World War the conduct of the Navy was under the calcium light, and a thorough examination of its preparation, readiness, and wise operation was made by a committee of the House of Representatives composed of members of both political parties. Concluding their elaborate and searching report into all naval activities with commendation the committee used these words: "Sirs, all is well with the fleet."

When the evidence presented before this committee is fairly appraised, the American people (using the word "fleet" as the House committee used it, to embrace the whole Navy) will declare with just American pride and satisfaction, "Sirs, when the testing time of war came, all was well with the American Navy."

I thank you, gentlemen.

The CHAIRMAN. The committee will stand adjourned until 10 o'clock to-morrow morning.

(Thereupon, at 3 o'clock p. m., the subcommittee adjourned until to-morrow, Friday, May 21, 1920, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

FRIDAY, MAY 21, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, in room 235 Senate Office Building, at 10 o'clock a. m., Senator Frederick Hale presiding.

Present, Senators Hale (chairman), Ball, Keyes, and Pittman.

TESTIMONY OF HON. JOSEPHUS DANIELS, SECRETARY OF THE NAVY—Resumed.

The CHAIRMAN. The committee will come to order. Mr. Secretary, this investigation is being held, as you know, to investigate certain criticisms made by Admiral Sims in his letter to you of January 7, 1920. In this letter he has made criticisms about the lack of preparedness of the country—the lack of preparedness of the Navy Department—

Secretary DANIELS. What did he say about that, Mr. Chairman?

The CHAIRMAN (continuing). Before the war.

Secretary DANIELS. I would like you to read into the record exactly what he said about it.

The CHAIRMAN. I will read his charges later on; and also about the conduct of the first six months of the war.

This committee is not in any way, as I have repeatedly said, interested in personal differences between officers of the Navy or between officers of the Navy and officials of the Navy Department. What we want to do, and what we hope to do, is to investigate the criticisms, and if mistakes have been made to make some plans for the future which will keep us out of future wars and which will enable us, if we do get into future wars, to meet them with perfect preparedness. We are not interested in any personal differences. We view with regret some of the personal antagonisms that have come out in the testimony of some of the witnesses. We do not believe that such antagonisms should have anything to do with the investigation. If any charges have been made—in my opinion personally, and I think in my opinion of a number of members of the committee—the charges have not been made in any way against the Navy itself, but against those who were ultimately responsible for the policies of the Navy.

Now I will read—

Secretary DANIELS. Mr. Chairman, one second. You stated in your preliminary remarks that this committee was investigating the charges of Admiral Sims.

The CHAIRMAN. The criticisms of Admiral Sims.

Secretary DANIELS. The criticisms of Admiral Sims, in which he referred particularly and specifically to the first six months of the conduct of the war. Will you please read from his original criticism whether he said anything about the first six months of the war? I would like to know his exact words and his original charge about that.

The CHAIRMAN. I will put in the record the summary made in paragraph 78 of Admiral Sims's letter, which covers these matters.

Secretary DANIELS. Did he use the term "six months," or any period?

The CHAIRMAN. I will read what he says. [Reading:]

78. The above brief account of the manner in which our naval operations were conducted clearly shows that the following grave errors were committed in violation of fundamental principles; and it is manifestly desirable that such violations should be avoided in future:

"(1) Although war with Germany had been imminent for many months prior to its declaration, there were nevertheless no mature plans developed or naval policy adopted in preparation for war in so far as its commander in Europe was informed.

"(2) The Navy Department did not announce a policy three months after war was declared—at least, not to its representatives and the commander of its forces in Europe.

"(3) The Navy Department did not enter whole-heartedly"—

Secretary DANIELS. I see, Mr. Chairman, that he does not mention six months. That is the only question. I remember his charges. He does not mention six months.

The CHAIRMAN. I will read the whole of this:

"(3) The Navy Department did not enter whole-heartedly into the campaign for many months after we declared war, thus putting a great strain upon the morale of the fighting forces in the war area by decreasing their confidence in their leaders.

"(4) The outbreak of hostilities found many important naval units widely dispersed and in need of repairs before they could be sent to the critical area.

"Destroyers arriving in the war zone had been cruising extensively off our seaboard and in the Caribbean, and when war was declared were rushed through a brief and inadequate preparation for distant service.

"(5) During the most critical months of the enemy submarine campaign against the allied lines of communication the department violated the fundamental strategical principle of concentration of maximum force in the critical area of the conflict.

"(6) The department's representative with the allied admiralities was not supported during the most critical months of the war either by the adequate personnel or by the adequate forces that could have been supplied.

"(7) The department's commander in the critical area of hostilities was never allowed to select his principal subordinates and was not even consulted as to their assignment. A fundamental principle of the art of command is here involved.

"(8) The Navy Department made and acted upon decisions concerning operations that were being conducted 3,000 miles away, when the conditions were such that full information could not have been in its possession, thus violating an essential precept of warfare that sound decisions necessarily depend upon complete information.

"(9) Instead of relying upon the judgment of those who had had actual war experience in this peculiar warfare the Navy Department, though lacking not only this experience but also lacking adequate information concerning it, insisted upon a number of plans that could not be carried out.

"(10) Many of the department's actions so strongly implied a conviction that it was the most competent to make decisions concerning operations in the war zone that the result was an impression that it lacked confidence in the judgment of its representative on the council of the Allies and its responsible commander in the 'field.'

"It is a fundamental principle that every action on the part of superior authorities should indicate confidence in subordinates. If such confidence is lacking, it should immediately be restored by ruthlessly changing the subordinate.

"(11) 'To interfere with the commander in the field or afloat is one of the most common temptations to the Government, and is generally disastrous.' (The Influence of Sea Power upon History. Mahan.)

"The Navy Department did not resist this temptation, and its frequent violation of this principle was the most dangerous error committed during the naval war."

The committee, as I say, takes the ground that these criticisms are made not of the Navy, but of the men in the Navy who had the ultimate responsibility about fixing the policies of the department. I think I can speak for every member of the committee when I say that we believe that the Navy itself throughout the war did magnificent service, and there is no reflection intended in any way on them, so far as the committee understands it, and there is no reflection on the Navy in the letter of Admiral Sims, as we understand it.

In your testimony yesterday, several times during your testimony, you spoke about the letter of Admiral Sims, and have taken the stand that it should not have been brought out. This letter was brought out at the hearing. I think on January 17, at the request of the chairman of the committee.

As to the propriety and intent of the letter I will quote from the testimony of Capt. Pratt, on page 3952 of the record:

The CHAIRMAN. Now, I want to take up the question of the sending of the letter by Admiral Sims. This letter was an official communication, was it not, from the Admiral to the Secretary of the Navy?

Capt. PRATT. You mean the letter——

The CHAIRMAN. The letter of January 7, 1920.

Capt. PRATT. I suppose it was.

The CHAIRMAN. I think there is no question about that.

Capt. PRATT. I think there is no question about it.

The CHAIRMAN. And it was brought out at the request of the subcommittee on naval awards.

Capt. PRATT. I believe that is true.

The CHAIRMAN. And was not made public by Admiral Sims, except at the request of the subcommittee?

Capt. PRATT. I understand that is so.

The CHAIRMAN. There is no criticism in the letter, so far as you know, of the Navy itself or any officer of the Navy?

Capt. PRATT. I have read it carefully, and I do not see any criticism.

The CHAIRMAN. But he does point out the magnificent achievements of the Navy during the war?

Capt. PRATT. Yes. I will correct that by saying no person by name; but of course there is a criticism of certain operations of the war which naturally reflect upon the officer in charge of operations; but no personal mention of anyone by name.

The CHAIRMAN. And he speaks specifically about the fine work that was done by the Navy after the department had organized and things were running along properly?

Capt. PRATT. Oh, yes; he speaks of that.

The CHAIRMAN. And what he finds fault with principally is with the faulty principle of organization in the Navy, the lack of preparation, the indecision and procrastination by the department which prevented officers from quickly using ships, men, and material against the enemy? I am simply asking you to see whether this is your idea of the letter?

Capt. PRATT. Yes; that is my idea.

The CHAIRMAN. And he did not indulge in personalities, as you say?

Capt. PRATT. No, sir; he did not.

The CHAIRMAN. And was not the purpose of the letter to insure a greater national security by preventing a future repetition of the errors and delays of 1916?

Capt. PRATT. I have always accepted that myself as being the reason of the letter.

The CHAIRMAN. Do you not think that the admiral had the right to address such a letter to the Secretary of the Navy?

Capt. PRATT. I think he had a perfect right to address it to the Secretary of the Navy.

The CHAIRMAN. Is the Navy Department the Navy?

Capt. PRATT. No, sir; the Navy Department is the controlling head of the Navy.

The CHAIRMAN. Do you think it is possible to criticize the department without criticizing the Navy?

Capt. PRATT. Oh, yes.

The CHAIRMAN. Might not the Navy Department or the Secretary of the Navy who rules the policies of the department, prevent preparedness and prevent quick action in time of war, if he saw fit to do so?

Capt. PRATT. I think, under the present system, it would be possible.

The CHAIRMAN. Might not a criticism of the Navy Department and its policies be a defense of the Navy, and the defense of its officers, against the possible charge of neglect on their part to prepare and act promptly?

Capt. PRATT. I suppose it could be looked at in that way.

The CHAIRMAN. Then, where can you find any justification in the charge that has been made by certain of the witnesses who have come before us, that Admiral Sims had attacked the good name of the Navy or reflected upon its officers, when he merely points out the defects and errors of organization and administration of the Navy Department?

Capt. PRATT. Of course, this is my opinion only.

The CHAIRMAN. Yes; that is what I want.

Capt. PRATT. I feel that had he omitted that accusation which I pointed out as a grave one that the Navy was responsible for the loss of so many ships and so many lives there would not have been so much feeling aroused in the service. I can not help feeling that that was a loose statement.

The CHAIRMAN. If he had said "the Navy Department," would that have changed that, in your opinion?

Capt. PRATT. No, sir; because, after all, we can not draw a line between the Navy Department and the rest of the Navy. We want to be one big service and we want to work thoroughly as a band of brothers; so that if you are going to draw a line of demarkation between the Navy Department and the Navy proper, there will always be lack of harmony.

The CHAIRMAN. But might the Navy not be itself all on tenterhooks, ready to do anything that they could, and the department hold them back?

Capt. PRATT. Of course, that is true.

The CHAIRMAN. In which case the men of the Navy who were ready would not be to blame, but the department, who controlled its policy and held them back, would be responsible?

Capt. PRATT. Yes; if the department held them back that state of affairs would be true, naturally.

The CHAIRMAN. And you yourselves have condemned the department's organization as it was at the beginning of the war.

Capt. PRATT. Yes; I do not think it is a good one.

You have heard Capt. Pratt's testimony, Mr. Secretary. What have you to say as to that?

Secretary DANIELS. I think Capt. Pratt spoke words of wisdom when he said, "You can not draw a line between the Navy Department and the Navy." I do not think wiser words were ever spoken. You never can have any great service in the Navy, or in the Army, or civilian, unless the directing power of that service is in harmony with the service. As Capt. Pratt says, you can not make a criticism of the Navy Department without making a criticism of the Navy. Will you let me see that testimony, Mr. Chairman?

The CHAIRMAN. Yes; but I shall want it.

Secretary DANIELS. You say, Mr. Chairman, that this criticism of Admiral Sims was impersonal, that it brought in no personalities and attacked no individual. That is not the opinion that the people put upon that letter. That is not the statement that Admiral Sims made when he came before your committee. That letter, as Admiral McCain said, and I think with force—Admiral Sims's letter was like something thrown at the Secretary that missed him and hit the whole operating department of the Navy.

Now, I have gone very fully into the testimony about that letter of Admiral Sims.

Under the regulations of the Navy Department every naval officer is not only authorized but invited to make any suggestions through Navy channels for anything that he thinks can improve the Navy service, its operations, its organizations, its matériel; and in so far as Admiral Sims's letter dealt with that he was entirely within his rights, and not only within his rights but within his duty; but the same regulations which call for that require two things: First that in his reflections upon what has been done he shall propose a better plan. Up to this hour Admiral Sims has proposed nothing that would improve those conditions which he criticizes.

It is a well-known tradition and policy of the Navy that in writing such letters no officer shall reflect upon other officers. Now, Mr. Chairman, if ever any letter was written that contained a grave and serious and outrageous reflection upon officers, it was the reflection which Admiral Sims made upon the Chief of Operations in that letter. The substance of that charge, as he expanded it in his hearing before your committee, was that Admiral Benson had what he called idiosyncracies, that he was anti-British, and he used the exact words before your committee that Admiral Benson lacked the will to win.

Admiral Sims's charge in that letter is that the Chief of Operations—and as the Chief of Operations was assisted and supported by able officers in operation, who together made the plans which he objected to—that they lacked the will to win.

The CHAIRMAN. I think he never included anybody else at all in such an accusation.

Secretary DANIELS. What is that?

The CHAIRMAN. I think he never included any of the officers who worked in operations.

Secretary DANIELS. Whom did he mean?

The CHAIRMAN. I think he meant the men who had the ultimate responsibility for the Navy.

Secretary DANIELS. Whom did he mean?

The CHAIRMAN. I should say indirectly the Chief of Operations and directly the Secretary of the Navy.

Secretary DANIELS. Then you say that he had no personalities?

The CHAIRMAN. No personalities.

Secretary DANIELS. And he made no charges?

The CHAIRMAN. He made criticisms.

Secretary DANIELS. And he made no criticisms—

The CHAIRMAN. I say he made criticisms.

Secretary DANIELS. And he made criticisms of what?

The CHAIRMAN. He made criticisms of certain things that were done and made them to the head of the Navy.

Secretary DANIELS. Mr. Chairman, he made the criticism that because of the remarks that Admiral Benson was alleged to have made to him, a statement which he afterward said he had forgotten until it was called to his attention by his secretary—he made the grave and infamous charge that Admiral Benson lacked the will to win.

Now, I say to you, there is no charge so grave as to declare that an officer of the American Navy, charged with the responsibility for directing the operations of ships in war, lacked the will to win.

The CHAIRMAN. If he did lack the will to win, that should certainly be brought out, should it not?

Secretary DANIELS. Absolutely; and he has come here and told you that Admiral Benson lacked the will to win. I say it is a charge——

The CHAIRMAN. Will you please quote from his letter that statement about the will to win?

Secretary DANIELS. I can quote Admiral Sims's testimony in which he said that Admiral Benson lacked the will to win. I will quote his exact words.

The CHAIRMAN. I want it for my information.

Secretary DANIELS. He says that that was the reason he incorporated that in the letter, or words to that effect. But let me quote the exact words. I wish to quote him exactly as he said it. I have not Admiral Sims's testimony, Mr. Chairman.

The CHAIRMAN. I have the letter here. You say it was in his letter——

Secretary DANIELS. It was in his cross-examination.

The CHAIRMAN. Oh, it was not in the letter?

Secretary DANIELS. I said in his examination. I said the charge of what Admiral Benson is alleged to have said to him was in his letter, but in his cross-examination he said that he lacked the will to win.

The CHAIRMAN. That is unquestioned. It was brought out in his cross-examination.

Secretary DANIELS. Does it make any difference whether a man charges another man with a lack of will to win, in a letter or in a cross-examination?

The CHAIRMAN. Why, in a cross-examination he is obliged to answer questions.

Secretary DANIELS. It is as grave a crime in one place as in the other.

The CHAIRMAN. Mr. Secretary, he is obliged to answer any questions asked him, or to bring out any information he has. He is on oath to do so.

Secretary DANIELS. Then did he swear that Admiral Benson lacked the will to win?

The CHAIRMAN. I should like to see the place in the testimony.

Secretary DANIELS. Your secretary can find it. It is in his cross-examination.

The CHAIRMAN. If he had that opinion, of course he should have brought it out if necessary in the testimony.

Secretary DANIELS. Mr. Chairman, if he had that opinion when war was declared, what he ought to have done was to have written a letter to the Secretary of the Navy or the President of the United States, and he ought to have said, "When I left America the officer

charged by law with the responsibility of operating the fleet in war lacked the will to win. We can not carry on this war with such an officer "——

The CHAIRMAN. Might he not——

Secretary DANIELS. Let me finish; please, sir. Instead of that, nobody in the world ever heard that Admiral Sims had such an opinion until this letter came out.

The CHAIRMAN. But the letter does not say that he had that opinion.

Secretary DANIELS. But the letter charges that Admiral Benson made this statement, which in his cross-examination Admiral Sims tells your committee that he did it because it showed a lack of will to win.

The CHAIRMAN. But Admiral Benson never denied that he said the things quoted in that letter, did he?

Secretary DANIELS. Read Admiral Benson's testimony.

The CHAIRMAN. Yes, and he never denied it.

Secretary DANIELS. Admiral Benson denied indignantly——

The CHAIRMAN. Did he deny that he made the statement?

Secretary DANIELS. Admiral Benson denied indignantly any suggestion by anybody anywhere, at any time, that he lacked the will to win.

The CHAIRMAN. That is not the question, Mr. Secretary. The question is the charge that was made in the letter, and Admiral Benson denied that charge.

Secretary DANIELS. You are trying to confine this to the letter. This investigation begins with the letter and ends with this minute. I am speaking of Admiral Sims's testimony on cross-examination.

The CHAIRMAN. But, Mr. Secretary, I have quoted to you certain testimony of Capt. Pratt about the letter. I am asking you now about this letter, not about what came out on cross-examination.

Secretary DANIELS. Well, but I am telling you that the letter——

The CHAIRMAN. And I want the circumstances about the letter.

Secretary DANIELS. The letter and the interpretation of the letter go together, absolutely.

The CHAIRMAN. But you can not interpret anything into that letter that is not there. Now, the statement in the letter was never denied by Admiral Benson.

Secretary DANIELS. I do not wish to quote Admiral Benson, but you will find that in his testimony Admiral Benson virtually said that if he made any such statement, that if anybody had said he made it, he would not deny it, but that if he made it at all he made it to a brother officer, cautioning him at the time not to be proanything, but to be all American. Now, we will come to the letter.

The CHAIRMAN. Wait one second, Mr. Secretary. I never made any such statement as that made by Admiral Benson, and if anybody should ask me if I ever made such a statement, I would not be afraid to go on oath in saying that I never had made such a statement, no matter who said that I had. You suggest——

Secretary DANIELS. I was going on, Mr. Chairman, if you please.

The CHAIRMAN. Very well.

Secretary DANIELS. You raised the question about the publication of the letter. As I was saying, Admiral Sims had a right to send

to the Navy Department any statement or suggestion, accompanied by recommendations for improvement, but he had no right to reflect upon an officer.

When that letter came to the Navy Department it was handed to me directly. I read the first page or page and a half, and when I came down to the statement in which he alleges that Admiral Benson made this remark, a visitor was announced who had an appointment with me. I put the letter in my desk and locked it up. No individual except myself ever saw that letter until the Washington Post, two or three days later, printed not the words of the letter, but made a statement which showed that somebody had given out, not the text but the gist of the letter.

That letter was referred by me to the General Board, with all letters bearing upon the regulations which authorizes officers to make suggestions.

The CHAIRMAN. When?

Secretary DANIELS. I have forgotten the date.

The CHAIRMAN. Before—

Secretary DANIELS. I do not remember the date.

The CHAIRMAN. Before the matter was brought out here at the hearing?

Secretary DANIELS. I do not remember the date, but I can find it. The General Board has the date. And that letter had never been seen until this publication.

Now, of course when Admiral Sims came before your committee on medal awards, after discussing that at very great length, the chairman of this committee asked him the question, "Have you another letter, Admiral Sims, bearing on this question?" He had not, and if he had obeyed the traditions of the Navy and its regulations, he would have said to you, "Mr. Chairman, I have written a letter to the Secretary of the Navy bearing upon an entirely different matter in no way connected with medals or awards, and under the regulations that letter will receive attention through the ordinary methods of naval study of suggestions. Instead of that, with a theatrical show he laid it down; and if he had been looking a week, or a month, or a year for an ostentatious way of publishing the letter he could not have found a better one; and that is the history of the publication of the letter.

The CHAIRMAN. Mr. Secretary, previous to the reading of that letter before the committee had you ever spoken about it to anyone that such a letter had arrived?

Secretary DANIELS. Previous—

The CHAIRMAN. Previous to January 17, when this letter—

Secretary DANIELS. Mr. Chairman, I had done this: When the Washington Post had this headline about the letter on that morning, the newspaper correspondents who come in every morning at 10.30 to see me, asked me if I had received a letter from Admiral Sims. I said that I had. They asked me for the letter. I declined to discuss it or to give it to them.

The CHAIRMAN. And you made some statement about the letter, did you not?

Secretary DANIELS. Yes; I made some statement about it.

The CHAIRMAN. And that was before the committee met?

Secretary DANIELS. But I never made any statement about what the contents of the letter were.

The CHAIRMAN. But that was before the committee took the matter up, was it not?

Secretary DANIELS. Certainly it was: yes.

The CHAIRMAN. And therefore something having gotten out that there was such a letter—

Secretary DANIELS. No; I would like to change a word, Mr. Chairman—not something having gotten out, but something having been given out by somebody—that makes a very great difference.

The CHAIRMAN. Can you say where it was given out and how?

Secretary DANIELS. I have not the evidence.

The CHAIRMAN. I do not think it is a matter of the least importance, because I can tell you now that if the committee had known that there was such a letter, in my opinion it would have been the duty of the committee to ask for it, and that is exactly what happened. The committee were not familiar with the contents of the letter.

Secretary DANIELS. Mr. Chairman, it might have been the duty of the Senate or the Congress or the Naval Affairs Committee, but it could not have been the duty of a committee charged specifically with investigating medal awards.

The CHAIRMAN. If I recall the matter correctly, I asked Admiral Sims, when the matter of the letter came out, whether he had another letter, and whether it referred to the question of awards or to matters touching the morale of the Navy, I think it was.

Secretary DANIELS. I have your words here, Mr. Chairman.

The CHAIRMAN. Very well.

Secretary DANIELS. I read from page 4802 of the typewritten record:

The CHAIRMAN. Admiral Sims, I think, in connection with this matter—

That is the matter of the awards—

if you have had any further correspondence with the Secretary of the Navy about the question of awards and their effect on the morale of the service, it would be well for you to give that correspondence to us at the present time.

You see, you limited it to the question of awards.

Admiral SIMS. It does not bear particularly upon the question of the awards, but it does bear upon the question of the morale of the service.

The CHAIRMAN. As it does.

Secretary DANIELS. I read the resolution of the Senate Naval Affairs Committee authorizing this committee to act, and I found nowhere in it any delegation of power to this committee except on the question of awards. I find no delegation of powers to discuss the morale of the Navy. It raised no question about that. You went on to say—I quote from the record—

The CHAIRMAN. Then I think it is decidedly germane to this issue.

And then Admiral Sims produced the letter.

The CHAIRMAN. Of course, he had to produce the letter. Then I understand you to find fault with me as chairman of the committee for asking for the letter?

Secretary DANIELS. Mr. Chairman, I am not finding fault with anybody. You brought up the question about its publication, and I

answered your question. I am not criticizing anybody. I am stating facts.

The CHAIRMAN. But clearly Admiral Sims could not have helped producing the letter when I ordered him to do it.

Secretary DANIELS. You asked him if he had a letter referring to medal awards.

The CHAIRMAN. Yes; and he replied that it did not refer directly to medal awards, but that it did refer to the morale of the Navy. Then I may have gone beyond my powers in asking him to produce it, but he certainly had to produce it.

Secretary DANIELS. It is not a matter of importance——

The CHAIRMAN. I do not think it is a matter of great importance——

Secretary DANIELS. Except to get the facts clearly before the public—the facts as to how it came out—that is all. As far as I am concerned I am very happy that it came out. I am very happy that the country has been enabled to have a complete and full and conclusive answer to all the unsubstantiated charges.

The CHAIRMAN. The question whether the charges are substantiated or not does not lie with any witness.

Secretary DANIELS. It lies with everybody as a matter of individual opinion.

The CHAIRMAN. The committee will decide in their own minds about the question of substantiation.

Secretary DANIELS. I was stating my opinion, which is entitled to just as much consideration as that of anybody else, and no more.

The CHAIRMAN. Certainly the committee will give it and the testimony of all the witnesses every consideration, as I think they should. Now, I do not think you have any question about the powers of the committee at the present time under the further authority given it?

Secretary DANIELS. Oh, I am raising no question at all about that, Mr. Chairman. I was merely stating the history of it, but raising no question about power.

The CHAIRMAN. Senator Keyes thinks you do not understand clearly the different powers which the committee now has.

Secretary DANIELS. I do understand it thoroughly——

The CHAIRMAN. Different from what it had at the beginning, as to the question of awards.

Secretary DANIELS. I was speaking entirely of the powers of the committee at the time the letter was produced. After that your committee went before the full Naval Affairs Committee and as I understand it were given larger powers.

Senator KEYES. Was the letter produced at the medal hearings or at this hearing?

The CHAIRMAN. Produced at the medal hearing.

Senator KEYES. It was produced at the medal hearing?

Secretary DANIELS. I raise no question of the power of the committee, of course. I have only been giving the history as it took place.

The CHAIRMAN. You feel, Mr. Secretary, that Admiral Sims was entirely justified in writing the letter of January 17 to you, do you not?

Secretary DANIELS. Under the regulations any naval officer is not only permitted but invited to write a letter, without personalities,

without reflection on other officers, suggesting any improvement that he thinks can be made in naval conduct; and he is also told in the same regulation that he should not do this unless he proposes plans for improvement. That is the substance of the regulation.

The CHAIRMAN. Mr. Secretary, if in his criticism the admiral states that the Navy Department did not announce a policy until three months after war was declared, would not that suggest inferentially that they should have done it earlier than three months after war was declared?

Secretary DANIELS. If he stated that, he stated what is not correct.

The CHAIRMAN. I know, but you are accusing him of not offering anything constructive. Now, I say that that very charge implies a constructive criticism.

Secretary DANIELS. I say his statement was made in ignorance of what the Navy Department had done.

The CHAIRMAN. Yes; but that has nothing to do with the case.

Secretary DANIELS. It has everything to do with the case.

The CHAIRMAN. He might make a mistake, of course; but at least he is suggesting something constructive.

Secretary DANIELS. He had the right——

The CHAIRMAN (interposing). He had the right to criticize and was entitled to make suggestions.

Secretary DANIELS. He had a right to make any constructive suggestion that he thought would improve. So has every other officer. But if he made a statement that the Navy Department had no policy or had announced no policy or put in effect no policy, or intimated any such thing, for three months after the war, he showed that he was woefully ignorant.

The CHAIRMAN. But even so, it is a constructive statement, is it not? It implies, if they did not do it in that time, that they should have done it earlier than they did. That is constructive, is it not?

Secretary DANIELS. If he had said, "In my judgment, the Navy Department ought every day, or every week, or every month, to write out in full the policy that it is going to pursue in the future," that would have been a constructive suggestion. But to have said that the war went on three months before the Navy Department had any policy, or to have intimated that, showed his ignorance of what the department was doing.

The CHAIRMAN. But even if he showed his ignorance it shows that he found fault with their waiting those three months, and it is constructive criticism to suggest that in the future they do not delay three months?

Secretary DANIELS. But they did not wait three months, and his facts are all wrong.

The CHAIRMAN. But that has nothing to do with that being a constructive suggestion.

Secretary DANIELS. It is the duty of a naval officer in making suggestions not to reflect upon the department, but to inform himself of what they are doing.

The CHAIRMAN. But I do not see how he can give the facts without reflecting on some one, if a mistake has been made.

Secretary DANIELS. But a mistake had not been made, and therefore he had no right to say it.

The CHAIRMAN. But that is a matter, Mr. Secretary, that we are going to determine in this committee.

Secretary DANIELS. That is a matter which Capt. Pratt and Admiral Benson and Admiral McKean and Admiral Badger testified about.

The CHAIRMAN. But others have testified in a different way. It may be that we will find that there was a mistake. It may be we will find that there was not. I simply use that as one illustration. Now, here is another illustration. Admiral Sims says:

Although war with Germany had been imminent for many months prior to its declaration, there were nevertheless no mature plans developed or naval policy adopted in preparation for war in so far as its commander in Europe was informed.

That certainly is a constructive criticism, that in the future the commander should be informed.

Secretary DANIELS. Well, as a matter of fact he was——

The CHAIRMAN. We are not going into the merits of this at this time.

Secretary DANIELS. Well, Mr. Chairman, I am not going to answer yes or no. I am going to give you the facts. Admiral Sims had a right to propose plans and suggestions and improvements; but he had no right to reflect upon brother officers. That statement reflects upon the General Board of the Navy; it reflects upon Admiral Benson and Capt. Pratt, and every man charged with those responsibilities. It had plans; it carried out plans; it carried them out successfully.

The CHAIRMAN. But you are not in any way denying that he was proposing something that should be considered constructive in his letter?

Secretary DANIELS. It was not constructive at all, because it was taking a man of straw and knocking him down.

The CHAIRMAN. That might be, but that is not what we are settling now; at least, it was an attempt to do something constructive. It was an attempt, was it not?

Secretary DANIELS. I think it was an attempt to be destructive, and to reflect upon his brother officers.

The CHAIRMAN. I said constructive.

Secretary DANIELS. But I said destructive.

The CHAIRMAN. You have not answered my question.

Secretary DANIELS. I say it was not constructive; it was destructive, based upon a false premise.

The CHAIRMAN. You do not see the point, that when he makes these points about things that were done wrong, there is a suggestion that in the future they be not done in that way?

Secretary DANIELS. But you put your question on the ground that they were done wrong. I deny that, and I deny it upon the evidence of every responsible officer who has been before your committee.

The CHAIRMAN. That is not the point, of course, Mr. Secretary. If he thought they had been done wrong, it was his duty to bring it before the department?

Secretary DANIELS. If he thought he had a plan; but it was his duty to state the facts.

The CHAIRMAN. Mr. Secretary, if I state that nothing has been done in three months, the point I suggest is that they should be done

before three months; and that is implied; and it is certainly very clear in the charge.

Secretary DANIELS. But if you state that when it is not true, you do not come within the regulations of the Navy.

The CHAIRMAN. That has nothing to do with it, if that is in my mind, when I make the statement.

Secretary DANIELS. It has everything to do with the statement.

The CHAIRMAN. I fail to follow you, Mr. Secretary.

Secretary DANIELS. I am very sorry. It is very clear to me.

The CHAIRMAN. Now, any criticism of anything in the Navy would be a criticism of some officer or of the department, would it not?

Secretary DANIELS. How is that—any criticism?

The CHAIRMAN. Any criticism of anything done in the Navy must be a criticism of an officer or of the department itself?

Secretary DANIELS. Any criticism made ought to be made of the person responsible.

The CHAIRMAN. Ought to be made of what?

Secretary DANIELS. Of the person responsible for what is alleged to have been wrong.

The CHAIRMAN. I do not understand exactly what you mean by that. Do you mean he should specify a man by name?

Secretary DANIELS. He should specify the man, the bureau, the person, that he thinks has made the mistake.

The CHAIRMAN. But in this case, he particularly criticizes the policies of the department; and do you not think that is very clear?

Secretary DANIELS. He particularly criticizes what are not the policies of the department.

The CHAIRMAN. What he alleges are the policies of the department.

Secretary DANIELS. Yes; what he alleges.

The CHAIRMAN. Is not that specific enough, that those who are ultimately responsible would be the ones criticized?

Secretary DANIELS. Of course, those ultimately responsible for the policies of the department must bear the responsibility—

The CHAIRMAN. And the—

Secretary DANIELS. Let me finish.

The CHAIRMAN. Yes.

Secretary DANIELS (continuing). Those who are responsible ultimately for the policies must bear all responsibility and receive all the rewards. They go together.

The CHAIRMAN. You would not say that the Navy Department was the Navy, would you?

Secretary DANIELS. I would say what Capt. Pratt said, that you can not separate them. I will say that I would say what Capt. Pratt said. Let us see what he said. Here is his language:

Because, after all, we can not draw a line between the Navy Department and the rest of the Navy.

I think that Capt. Pratt was absolutely right in that statement.

The CHAIRMAN. In which statement, the one you have just read?

Secretary DANIELS. Yes.

The CHAIRMAN. Now, I will read you his former statement. I asked him:

Is the Navy Department the Navy?

Capt. Pratt said:

No, sir; the Navy Department is the controlling head of the Navy.

The CHAIRMAN. Do you think it is possible to criticize the department without criticizing the Navy?

Capt. PRATT. Oh, yes.

Secretary DANIELS. Well, if you would ask me if the battleship *Wyoming* was the Navy, I would say no; but I would say that it was a very important part of it; and if you whack the *Wyoming*, you hit the Navy. All parts of the Navy go to make the Navy.

The CHAIRMAN. Then you think there is no way of criticizing the Secretary of the Navy without insulting the rest of the Navy?

Secretary DANIELS. Not at all, Mr. Chairman.

The CHAIRMAN (continuing). Or without criticizing the rest of the Navy; is that so?

Secretary DANIELS. Not at all; but I think this, that no organization can function well unless that organization at the head functions well.

The CHAIRMAN. Do you not think that if the organization at the head has made mistakes, it is a pretty good idea to bring those mistakes out?

Secretary DANIELS. Absolutely.

The CHAIRMAN. And in doing so you are not affecting the rest of the Navy, are you?

Secretary DANIELS. All my regulations—the regulations of the Navy authorize and invite criticism.

The CHAIRMAN. But do you think that is attacking the rest of the Navy, when you are criticized?

Secretary DANIELS. I think Admiral Sims' letter was a very severe and very serious attack, first upon Operations, and then upon the Navy.

The CHAIRMAN. Upon the Navy?

Secretary DANIELS. Upon the Navy.

The CHAIRMAN. You do not think it reflected upon you, at all?

Secretary DANIELS. In so far as I am a part of the Navy, certainly.

The CHAIRMAN. But not any more than anybody else in the Navy?

Secretary DANIELS. His letter, if you will read it, reflected on one thing, the operation of the Navy?

The CHAIRMAN. And the policies of the Navy?

Secretary DANIELS. And Operations assigns ships, and it has the operation; and Operations is so integral a part of the Navy, if you tear down Operations you attack the whole Navy.

The CHAIRMAN. You say that he is reflecting only upon Operations. Do you not think he said anything about the plans.

Secretary DANIELS. As I said just now, he has reflected upon the General Board of the Navy, who made plans, elaborate, full, year after year, month after month.

The CHAIRMAN. But do you not think you were obviously responsible in the case of a number of these plans, and in the case of a number of operations that were followed out or that were not followed out?

Secretary DANIELS. The Secretary of the Navy is responsible for the conduct of the Navy, ultimately. Under the law Congress passed

in 1915, certain responsible duties were assigned to the Office of Operations.

The CHAIRMAN. And certain responsible duties were not assigned to the office of Operations?

Secretary DANIELS. And the larger responsibilities——

The CHAIRMAN. I will take that up later.

Secretary DANIELS. The final say rests with the Secretary of the Navy, and the say above that rests with the Commander in Chief of the Army and Navy.

The CHAIRMAN. So that, in regard to any of these criticisms of Admiral Sims, unless you can show that certain officers in Operations or in other departments of the Navy were directly responsible, where they deal with policies or plans or matters that come under your jurisdiction, would you not say that you yourself were responsible?

Secretary DANIELS. The Congress of the United States has given very ample and very large and very full instructions as to the responsibilities of various officers. For example, the moneys appropriated for certain bureaus are expended under the direction of those bureaus. The Congress of the United States undertook to place the operations of the fleet under the Office of Operations, and that, of course——

The CHAIRMAN. Under the Secretary?

Secretary DANIELS. And that, of course, is under the Secretary of the Navy, as it should be; but as a matter of fact the Chief of Operations and the office of Operations from the beginning of the war, and before the war, had the direct responsibility and charge of the operations and allotments of the ships that served in the American Navy; and the signing of an order for any ship to go anywhere, by the Chief of Operations, had the full force and effect—I am quoting the law—as if it had been signed by the Secretary of the Navy.

The CHAIRMAN. But, Mr. Secretary, in the case of the charges of the specific matters referred to by Admiral Sims——

Secretary DANIELS. What specific charges?

The CHAIRMAN. As to convoys; as to personnel sent over for his staff; as to destroyers being sent over; as to tugs being sent over; as to the North Sea mine barrage; as to the sending over of the battle-ships, and other things. Did you not yourself have something to do with the matter in each case, and something to do with the decision about whether these very ships were to be sent over?

Secretary DANIELS. I will answer that very fully. You first spoke of the convoys. In my direct testimony I have given you a very full account of the convoy.

The CHAIRMAN. Well, Mr. Secretary, I want to take up these questions in detail later on, under the conduct of the war. I want to simply get the policy question settled now.

Secretary DANIELS. On these I shall illustrate the policy by the action. In the matter of the convoy, the policy of the Government in that matter was left to Operations. I had the power to have directed Operations to pursue a certain policy. My attitude toward the convoy is very well known. I always believed it ought to be employed; but the British Navy for three years took the opposite position, and after Admiral Sims reached Europe he sent a cablegram in which he said that the British Admiralty believed that the policy of dispersion was

the best. Admiral Benson did not believe, in the first instance, that the convoy was the best method, and therefore he stated so in a telegram which he sent to Admiral Sims, a telegram, by the way, which Admiral Sims presented to your committee and which he said was signed "Daniels," and which I never signed.

But, though that was my opinion and though I stated it to Operations, I gave the responsibility as to whether we should depend upon armed guards or convoys to Operations to carry out, because under the law, and because it was wisest, Operations determined that policy; and in determining that policy it established the convoy, and never a troopship left America without a convoy.

The CHAIRMAN. I asked you if you did not have something to do with all of these matters recommended by Admiral Sims.

Secretary DANIELS. I had the right to the final say.

The CHAIRMAN. Yes.

Secretary DANIELS. I was in touch with the Chief of Operations, and I gave him a responsibility for the operations of the fleet, which he fully exercised; and if you will read his testimony you will see that he stated he had the full responsibility for it.

The CHAIRMAN. But at any time you could have held them up, could you not, if you had seen fit to do so?

Secretary DANIELS. Oh, of course; the Secretary of the Navy has the absolute power, and must have it, in the fixing of policies. When policies are fixed, however, in the Navy, then the Secretary of the Navy leaves the carrying out of those policies to the Office of Operations.

The CHAIRMAN. And at any time——

Secretary DANIELS. For example, Mr. Chairman, on April 10, 1917, Vice Admiral Browning, of the British Navy, and Rear Admiral Grasset, of the French Navy, arrived at Hampton Roads and held a conference with Admirals Mayo, Benson, and Wilson.

On May 11 these admirals from Great Britain and France, who were in charge of all British and French operations on this side of the Atlantic, and who for some time had kept up the patrol on this side of the Atlantic—because you must bear in mind there never was a time when the British did not patrol the coast outside of the 3-mile limit—they came to Washington and had a conference with the General Board, the Secretary of the Navy, the Assistant Secretary of the Navy, Admirals Benson, Mayo, and Wilson, and at that conference we laid down this policy, upon the request of the French admiral and the British admiral: We agreed to take over the entire coast from Halifax to Brazil and to furnish the patrols; and at that conference it was decided to order a division of destroyers to Great Britain, and those destroyers were that very day ordered to fit out for service, and the policy there was fixed that the Chief of Operations should send our ships into the area where they could best serve the cause.

The CHAIRMAN. Then, did you have nothing further to do with the sending over of any destroyers to the other side?

Secretary DANIELS. As to the sending over of the other destroyers, they were sent by Operations in the regular course, with full responsibility.

The CHAIRMAN. But never after consultation with you?

Secretary DANIELS. I gave no further orders except to send our ships where they could do the most good.

The CHAIRMAN. You did not O. K. any orders?

Secretary DANIELS. I signed the order—I was to put in the record, Mr. Chairman, the first order given for any naval or Army or any forces of America to go abroad, and I sent this order, prepared in Operations, to the first division of destroyers to go abroad. As to the destroyers that went, from these destroyers to the end of the war the matter of where the destroyers should go, and when, was determined by the Office of Operations. As Admiral Benson has told you, I was in frequent consultation, but my direction was to him and to the office to do everything possible to make all bold and audacious plans possible for the fullest use of everything America had to win the war.

The CHAIRMAN. Then, after these first six destroyers were sent over, you had nothing whatever to do with the sending over of destroyers; and if there was any delay in sending them over, Operations was responsible and not yourself; is that correct?

Secretary DANIELS. Every destroyer and every ship ordered to any place, from the minute we met on April 11 until the war was over, was settled by the Office of Operations.

The CHAIRMAN. And you had nothing to do with it?

Secretary DANIELS. I left that entirely to them.

The CHAIRMAN. So that if there was any delay in sending them over, Operations was to blame, and not yourself?

Secretary DANIELS. I left it entirely to Operations to assign the ships where they could serve American interests best. Both Admiral Benson and Capt. Pratt have made that statement very full and clear.

The CHAIRMAN. I am asking you the question now.

Secretary DANIELS. I understand; and I am answering it.

The CHAIRMAN. And before the sending over of these six ships were you then responsible in any way for the sending of any destroyers or anything of that sort?

Secretary DANIELS. Mr. Chairman, I was responsible for everything in the Navy, in the ultimate analysis; but as to the allocation of ships, as to the orders of ships, those orders were left to the Office of Operations, to send them where they could best contribute the greatest power of American force in the war.

The CHAIRMAN. And so you would say that if there was any delay or fault of any kind about sending them over, you would say that you would shake your skirts of any responsibility—I do not mean to be offensive in anyway—that you would have no responsibility?

Secretary DANIELS. I can not answer your question as to my shaking my skirts.

The CHAIRMAN. I mean, you would have no responsibility?

Secretary DANIELS. I assume the entire and full responsibility, and wish I could take with it the credit of the great things the Navy did. But under the plans we worked upon, I laid down the policy in consultation with the ablest officers of the Navy, and when that policy was laid down it was carried out by Admiral Mayo and his fleet under Operations, by the ships, and the orders that they made, which they thought would give the maximum of strength and American efficiency in the war were made by Operations.

The CHAIRMAN. Now, I asked you if before those six destroyers were sent over, you were in anyway responsible for their lack of preparedness or anything of the sort.

Secretary DANIELS. There was no lack of preparedness.

The CHAIRMAN. That is, all of the destroyers were ready when we entered the war in April, 1917?

Secretary DANIELS. I will give you the answer. In a telegram or a letter of May 11, 1917, Admiral Sims says:

6. Our ships made no demands of consequence upon the navy-yard facilities after arriving, in spite of the length of their passage under adverse conditions. The commander of the division, when questioned by the vice admiral as to when his vessels would be ready for duty reported that he should be ready that night, as soon as the ships were refueled. * * *

7. The vessels themselves caused a great deal of complimentary comment, and, contrary to expectations, were found to be well equipped for their prospective duty, with the single exception of depth charges.

The sixth division arrived on the evening of the 24th of May in excellent condition, no repairs being required.

Report of June 2, 1917, states that the Admiralty desired him to report "officially that the United States destroyer forces which are working in the Atlantic approaches are rendering most excellent and valuable services."

Report, undated, received in the Bureau of Steam Engineering, June 18, 1917:

1. It is gratifying to be able to report that the operation of our forces in these waters is proving not only very satisfactory but also of marked value to the Allies in overcoming the submarine menace. The equipment and construction of our ships has proved adequate and efficient.

The CHAIRMAN. But you are not answering the question I am asking you. What I am trying to find out is whether there was any distinction between you and the Navy; whether it is proper to criticize you and not at the same time criticize the Navy.

Secretary DANIELS. Mr. Chairman, it is perfectly proper to criticize me; in some quarters it is very fashionable.

The CHAIRMAN. And it was perfectly proper for Admiral Sims to criticize you in a letter to yourself?

Secretary DANIELS. In a letter to myself it was perfectly proper for him to make any recommendations he thought would improve conditions in the Navy. It was not proper for him to reflect upon any person in making his recommendations.

The CHAIRMAN. It was entirely proper for him to criticize things that he thought were not properly done, was it not?

Secretary DANIELS. If he stated the facts and proposed a remedy.

The CHAIRMAN. Yes. Well, I have already stated that to my way of thinking he did suggest a remedy. You may not agree about that.

Now, so far as the necessity of bringing out any mistakes that were made, if they were made, I will quote from Admiral Benson, at page 4744 of the typewritten record, as follows:

The CHAIRMAN. Do you feel that it is a reflection on the Navy and 500,000 young men that served in it that persons who were ultimately responsible for the conduct and the policies of the Navy during the war had not in all respects done what they should have done?

Admiral BENSON. I think it would be; yes.

The CHAIRMAN. That is, a reflection on you or a reflection on the Secretary of the Navy would be a reflection on all these men?

Admiral BENSON. It would reflect on the whole service.

The CHAIRMAN. You do not make any difference between a reflection upon the Navy as a body of men and upon the Navy Department?

Admiral BENSON. I think the whole service would be included, sir. But I do not admit—and the statement is not borne out in fact—if it were a true state-

ment and bore anything on its face that could be substantiated, and, coming as it does, a statement of that kind I consider most decidedly——

The CHAIRMAN. That is because you do not think it was based on facts. Now, I say, if it was based on facts, do you not think it is probably proper that it should be made?

Admiral BENSON. If it is based on facts, it should be made.

The CHAIRMAN. It should be made if it is based on facts?

Admiral BENSON. It should be made if it is based on facts.

The CHAIRMAN. Therefore, if anyone had the opinion that the Secretary of the Navy or the Chief of Operations had not performed their duties as they should, it is essentially important that that fact should be brought out, is it not?

Admiral BENSON. If any such fact existed, it certainly should be brought out.

The CHAIRMAN. And in bringing it out it is no reflection on the rest of the Navy?

Admiral BENSON. I think, in a way, the fact that anyone in the Navy had been negligent would reflect on the balance of the service.

The CHAIRMAN. Then you think that, in order not to reflect on the service, the actions of those responsible should be covered up?

Admiral BENSON. Certainly not.

The CHAIRMAN. Then, if it is not to be covered up, you do think it is perfectly proper that it should be brought out?

Admiral BENSON. Should be brought out, absolutely.

Now, that I think indicates that Admiral Benson thought, at least, that anything that had been done or left undone, or should have been done, should be brought out.

Secretary DANIELS. Yes. If Admiral Sims thought, as he stated in cross-examination, that any responsible officer in the Navy lacked the will to win in the early part of 1917, he should have communicated his suspicion or belief to the Secretary of the Navy or to the President of the United States, the Commander in Chief of the Army and Navy.

Now, Mr. Chairman, the regulations of the Navy are worded so as to prevent unfounded and insubordinate criticism. If an officer makes statements which are not supported by the facts and improperly reflect upon those in authority, he commits a breach of discipline in the military organization.

The CHAIRMAN. But, Mr. Secretary, in so far as facts go into the matter, you will admit that there is some discrepancy about them, is there not—discrepancy of viewpoint?

Secretary DANIELS. Discrepancy in what?

The CHAIRMAN. Discrepancy in viewpoint as to whether they were facts or not?

Secretary DANIELS. I would like you to define the word "discrepancy."

The CHAIRMAN. Differences of opinion as to what the facts were.

Secretary DANIELS. There can be no difference of opinion about facts. There can be a difference of opinion about things that are not facts. But when a man states as facts what are not facts, there is no warrant for his assertion.

The CHAIRMAN. And when another man finds fault with things that have been stated as facts, when he is stating what is so, he has no warrant for making the statement, has he?

Secretary DANIELS. I do not understand you.

The CHAIRMAN. I say if a witness has stated certain things as facts, and another man questions the matter, as to whether they are facts or not, he should not do so, should he?

Secretary DANIELS. You mean that the witness should not state as facts things that are not so.

The CHAIRMAN. I mean to say, things here have been testified to on both sides.

Secretary DANIELS. What do you refer to that has been testified to on both sides.

The CHAIRMAN. Admiral Sims has made certain statements, and certain other witnesses have borne him out. Then other witnesses have come along and have not borne him out.

Secretary DANIELS. What statements do you refer to now, in which witnesses have borne him out?

The CHAIRMAN. That is a rather large matter, to go over the whole of the testimony.

Secretary DANIELS. I will give you the regulations, for the record, which cover the whole situation.

The CHAIRMAN. Admiral Sims, for instance, stated that there were no proper plans when we went in, and he has produced facts about that, that he states are facts. Other witnesses have testified differently.

Secretary DANIELS. Yes; I am glad that you have changed that; you said that he produced facts. They were not facts.

The CHAIRMAN. I dare say some of the things he produced were facts, were they not?

Secretary DANIELS. Not anything he said about lack of plans.

The CHAIRMAN. That is a matter entirely to be looked into by the committee.

Secretary DANIELS. That is a matter that is already settled. That has been settled by the testimony before your committee.

The CHAIRMAN. In your opinion it has been settled; but you are not the one to decide that.

Secretary DANIELS. In the preponderance of the testimony.

The CHAIRMAN. What?

Secretary DANIELS. In the preponderance of the testimony.

The CHAIRMAN. The preponderance of the testimony? What do you mean?

Secretary DANIELS. I mean, the only people who could know about plans would be the General Board—I mean, to know specifically—the Operations, and the Secretary of the Navy. They have all been before you, and Admiral Badger, the chairman of the General Board, has given you not only the fact that they had plans, but has given you statements as to when the plans were made, and what they were.

Capt. Pratt has told you there were many plans. So when a man writes a letter to the department—if that had gone to the General Board and they had investigated it and gone through it as the General Board does about questions of that kind, they would have found, as a fact, that when Admiral Sims stated that they were lacking plans, he had not investigated and did not know.

The CHAIRMAN. I am going to ask you some questions a little later about plans. I will be very glad if you can clarify the matter of plans, because it has not been made clear as yet to me, and I think to some of the rest of the committee, and I hope you can clear the matter up entirely to our satisfaction.

Now, Mr. Secretary, what is your idea of the reasons why a Navy should be maintained by the people of the United States?

Secretary DANIELS. But one reason in the world.

The CHAIRMAN. What is that?

Secretary DANIELS. Ready to fight.

The CHAIRMAN. Ready to fight?

Secretary DANIELS. Yes.

The CHAIRMAN. For what cause?

Secretary DANIELS. For whatever cause the American Congress and the Commander in Chief orders them to fight.

The CHAIRMAN. That is, for matters in general?

Secretary DANIELS. Matters that Congress—when Congress declares war, the business of the Army and the Navy is to carry out the decrees established by the authorized powers of Government. That is the only excuse for the Navy. That is the only reason for the Navy. That is the justification.

The CHAIRMAN. That is, to carry out the foreign policies of the country?

Secretary DANIELS. The business of the Navy is to be the strong first arm of defense of our Republic, and to do whatever the authorized authorities order it to do. It has no power of initiative.

The CHAIRMAN. That is, in the internal affairs of the country, do you mean?

Secretary DANIELS. In its internal affairs so far as the Congress gives it power.

The CHAIRMAN. But Congress very rarely gives it any particular authority in its internal affairs, does it? It is mainly to carry out the foreign policies of the Government, is it not?

Secretary DANIELS. It is mainly to carry out whatever policies the Government orders it to carry out.

The CHAIRMAN. And in general that means the foreign policies, does it not?

Secretary DANIELS. Well, no; it may mean many things.

The CHAIRMAN. What other policies?

Secretary DANIELS. The Navy, for instance, does a good deal of surveying down in the Caribbean and over in Alaska. The Navy is employed in so many duties. Any duty that Congress imposes upon it that it can perform it must carry out; but its main purpose is to defend the American interests and the American rights as declared by Congress or directed by the Commander in Chief.

The CHAIRMAN. Yes; but in the main it is American interests as regards foreign nations, is it not?

Secretary DANIELS. In the main it is to carry out the policies that Congress orders it to carry out. It is not my business as Secretary of the Navy to determine what the Navy shall do in any crisis.

The CHAIRMAN. Do you mean that it is not your business to prepare for any crisis?

Secretary DANIELS. It is my business to have the Navy prepared to the fullest extent that Congress appropriates the money for any purpose.

The CHAIRMAN. And you are not to know anything beforehand or to plan beforehand in any way what is to be done with the Navy in any crisis?

Secretary DANIELS. Of course, we plan all the time for any possible crisis. If you will take the plans of the General Board; they have

made plans and have plans for patrol, for war with almost any country with which we might be involved in war, and that is far ahead of any suggestion of congressional action, because Congress appropriates the money and says, "Now, this Navy is to carry out whatever Congress orders it to carry out." Now, to the extent of the money that they give to the Navy, we must have the Navy strong and fit, and its mission must be to carry out the decree of Congress and the Commander in Chief.

The CHAIRMAN. I asked you what its principal mission was, and you have stated that it has a lot of missions, such as surveying——

Secretary DANIELS. That is incidental.

The CHAIRMAN. And matters of that sort.

Secretary DANIELS. The Navy exists to be ready for war. The Navy exists to defend American policies and American rights, and when Congress needs it, it is to carry out the decrees of the country.

The CHAIRMAN. When you say "ready for war and to defend American rights" you mean against some foreign country, do you not?

Secretary DANIELS. Well, I take it that Congress——

The CHAIRMAN. These minor matters, such as surveying and all that would be details?

Secretary DANIELS. Of course.

The CHAIRMAN. It is in general to protect against foreign nations and to carry out our foreign policies, is it not?

Secretary DANIELS. Why, the Navy is a war machine.

The CHAIRMAN. A war machine, and war means conflict with some other country?

Secretary DANIELS. When Congress orders it.

The CHAIRMAN. And one of its duties would be to protect us against attack from any foreign countries, would it not, or from any combination of foreign countries?

Secretary DANIELS. Its duty is to carry out the decrees of Congress and the Commander in Chief anywhere.

The CHAIRMAN. And in peace times one of its principal duties would be to maintain our honor with foreign nations, would it not?

Secretary DANIELS. In peace times its business is to keep itself fit and ready, and to preserve as it may the best relations with foreign countries, to be ready always to protect American rights.

The CHAIRMAN. And American honor?

Secretary DANIELS. And American honor.

The CHAIRMAN. With other countries.

Secretary DANIELS. If Congress so declares and when Congress so declares.

The CHAIRMAN. Do you mean that it has got to have a special act of Congress before it will defend American honor in other countries?

Secretary DANIELS. No; I do not. There are conditions under which the Commander in Chief may order the Navy, but no conditions except that. The Navy is not an institution that works on its own initiative. It is governed by the law. The Commander in Chief of the Army and Navy directs the Army and Navy. Very nearly every act that I perform or that the Secretary of War performs is by direction of the President. He is the Commander in Chief.

The CHAIRMAN. And you act under the President and of course in touch with him at all times?

Secretary DANIELS. Upon all great policies.

The CHAIRMAN. And the Commander in Chief—when you refer to the Commander in Chief you refer to the President as Commander in Chief, or do you refer to the actual force commander?

Secretary DANIELS. Of course I refer to the President.

The CHAIRMAN. And you act under the President?

Secretary DANIELS. I act under the President.

The CHAIRMAN. And you are kept in touch, then, by the President with his policy?

Secretary DANIELS. On all great policies which he wishes the Navy to execute.

The CHAIRMAN. Now, we have certain outstanding policies that we are supposed to keep up, and one of those is the Monroe doctrine, is it not?

Secretary DANIELS. It is a very pillar of cloud by day and a fire by night of American policies.

The CHAIRMAN. Another is the protection of the Panama Canal, is it not?

Secretary DANIELS. That is under the control of the Army.

The CHAIRMAN. But the Navy has to do a good deal toward protecting it, has it not? It has plans for the protection of the canal?

Secretary DANIELS. We have by inference, but the whole control, government and protection of the Panama Canal is under the control of the Army; but the Navy assists when it is called upon.

The CHAIRMAN. If the Panama Canal were ever attacked the Navy would be a part of its defense?

Secretary DANIELS. Outside, before they reached the canal; yes.

The CHAIRMAN. The Navy would be called upon if the canal were ever threatened?

Secretary DANIELS. The plans of the General Board are that in case of any serious apprehension as to the Panama Canal the Navy would protect its approaches.

The CHAIRMAN. Another would be the open-door policy. That is one of our policies, is it not?

Secretary DANIELS. As to how that should be carried out would be a matter entirely for the Commander in Chief or Congress to give authorization about; and even in carrying out the Monroe doctrine the Navy would not be free of itself to initiate a method of enforcing that doctrine.

The CHAIRMAN. Should not the building program of the Navy and all of its war plans and organization be drawn up in relation to these outstanding policies that we have always had.

Secretary DANIELS. They are.

The CHAIRMAN. They are?

Secretary DANIELS. Of course; always.

The CHAIRMAN. And the size of the Navy and everything of that sort would depend largely upon these outstanding policies that we have?

Secretary DANIELS. It ought to do so, but unfortunately Congress has not taken that view.

The CHAIRMAN. Have you recommended to Congress that it should take that view?

Secretary DANIELS. No; I mean this, that for many years, up to 1913, Congress gave a very small appropriation to our Navy, and

in 1909 we sunk from second place to third place, and it has been with very great difficulty that past Congresses—I do not speak of the Congresses since 1914 or 1915—past Congresses have been very slow to appropriate enough money.

For example, in the year 1912, though all these doctrines you speak of were just as vital as they are now, Congress appropriated money for only one dreadnaught, and previous Congresses had made very small appropriations; so that in 1913, when I became Secretary of the Navy, we found it necessary to increase by threefold, in the first Congress after I became Secretary, the number of dreadnaughts authorized, in order to begin the large expansion of the Navy, which came about and which gave us such efficiency in the World War.

The CHAIRMAN. So I take it that if Congress is to give you appropriations enough to keep up these policies that I have spoken about, in each case you make it clear to Congress that those policies will be jeopardized if they do not appropriate a sufficient sum of money to take care of them, do you not?

Secretary DANIELS. In the first place it is the function of the State Department to communicate to the President any foreign policy that should receive the attention of the country. The Navy Department is the policeman, and wherever the State Department recommends to the Commander in Chief, and he orders us, we undertake any duty. It is not my duty to come to Congress and say, "Gentlemen, Mr. Monroe enunciated a great doctrine. I tell you what to do about it." That is for the State Department; but when the President says, "In pursuance of the Monroe doctrine I wish the Navy to go to a certain place and do a certain thing," we go there.

The CHAIRMAN. Does the Secretary of State ever come before the Congress and recommend an increase in naval appropriations?

Secretary DANIELS. He does not. It is not his function.

The CHAIRMAN. Then the President would be the one to bring it before Congress, would he not?

Secretary DANIELS. Matters of great national policy.

The CHAIRMAN. Matters of the expansion or contraction of the Navy Department on account of national policies.

Secretary DANIELS. You asked me just now, Mr. Chairman, about the fact that the Navy ought to be ready to defend these policies, and I answered you that the Navy ought to be ready and is ready so far as Congress authorizes the money; but previous to 1914 or 1913 the appropriations had been very small, so small that our Navy had sunk from second to third place. Now, for example, let us go back, because a navy is not built in a day. It takes a long time to do it.

In 1898, in the Spanish-American War, the appropriations were \$144,000,000. They sunk in the years 1899 to \$57,000,000; in 1900, to \$66,000,000; in 1901, to \$83,000,000.

Now, it is manifest that you could not build a very great navy on that appropriation.

In 1902 the appropriations for the Navy were \$85,000,000; in 1903, \$84,000,000; in 1904, \$103,000,000; in 1905, \$118,000,000; in 1906, they went down to \$105,000,000; in 1907, \$100,000,000.

In 1908 the appropriations for the Navy went up to \$130,000,000; in 1909, \$140,000,000; in 1910 they went down to \$133,000,000; in

1911, still further down, to \$127,000,000; in 1912, \$129,000,000; in 1913, \$142,000,000.

In 1914, which was the first year I was Secretary of the Navy, it went up to \$148,000,000; in 1915, \$151,000,000; in 1916, \$313,000,000.

Now, let me illustrate the situation, because we want to get it clear in our minds, Mr. Chairman, as to the attitude of our country toward preparedness.

The first year I was Secretary of the Navy I recommended to Congress as high above everything else it should do was to appropriate the money to build two dreadnaughts. The year before that they had appropriated money to build only one dreadnaught. We secured that money after a very hard fight. Shortly thereafter we were enabled to sell the old *Idaho* and *Mississippi*, which were always misfits, ships that ought never to have been built, and which were built over the protest of the best naval constructors. We had an opportunity to sell those ships for enough money to build a modern dreadnaught, and so that year we secured three great dreadnaughts as against one in the previous bill.

In 1914 I again recommended two dreadnaughts, and there was a great fight against it.

I call attention to the fact that after that proposition had received the approval of the Naval Affairs Committee and went before the House, on February 5, 1915, as appears by the Congressional Record, page 3438, Mr. Witherspoon moved to recommit the bill to the Committee on Naval Affairs with instructions to forthwith report it back to the House with an amendment to strike out the word "two" where it occurs in line 4, page 64, and insert the word "one" in place thereof. That is to say, to strike out two dreadnaughts and build only one, the same number that was built in 1912.

Now, Mr. Chairman, in view of the large appropriations of Congress in the last six or seven years we can hardly believe the state of the country at that time and the sentiment in Congress; but against that motion I hinged my whole fight. I made the hardest fight I have made since I have been in Washington to secure an appropriation for two dreadnaughts that year. When that motion was made by Mr. Witherspoon, which would have reduced the appropriation to the building of only one dreadnaught that year when two was the minimum we ought to have had, the vote on that proposition was 149 for one dreadnaught and 165 for two dreadnaughts. A change of 8 votes would have knocked out one of our dreadnaughts, which, in my opinion and the opinion of the General Board, by all odds the biggest and most important need of the Navy—two dreadnaughts. Only 8 votes would have changed the result, and I call attention to the fact that the leaders of both political parties in the House of Representatives, Mr. Mann, of Illinois, the leader of the Republican Party, and Mr. Underwood, of Alabama, the leader of the Democratic Party, voted for one dreadnaught. I am not criticizing those gentlemen. They are among the ablest and most patriotic men in Congress; but public opinion in America then was not what it has been since. Public opinion was very narrow on the line of giving the Navy large amounts of money. But we secured the two dreadnaughts by a margin of 8 votes, and I regard it as the most difficult and the most important of the things the Navy Department did in those years to strengthen the Navy.

The CHAIRMAN. What I am trying to get at is the attitude of the Navy in regard to our foreign policies. If those foreign policies are not given to Congress Congress can not be blamed for not appropriating the money to keep up those policies, if it knows nothing about them, or unless they are brought specifically to its attention. Now, what I want to know is whether these matters are customarily brought to the attention of committees of Congress when appropriations are asked for, or are you simply asking for an extra dreadnaught because you as Secretary of the Navy think we ought to have it. I want to know whether that has been done in the past during your administration.

Secretary DANIELS. I told you just now that the General Board makes plans for any possible war in which we might be engaged, and in doing so it takes into consideration all the possible dangers by the attack upon any of our foreign policies or any of our rights.

The CHAIRMAN. And are their reasons given to Congress?

Secretary DANIELS. Do you mean as to foreign matters?

The CHAIRMAN. Yes.

Secretary DANIELS. Never in public.

The CHAIRMAN. I have been on the Naval Affairs Committee for a number of years. I do not recall, until very recently, having any matter connected with foreign policy brought up before that committee, and that was when Admiral Rodman spoke to us the other day.

Secretary DANIELS. As a matter of fact, the Naval Affairs Committee always has every information about it. As a rule, the Senate committee has not held elaborate hearings or gone into very large policies. The House has very long hearings and the hearings of the House committee are printed, and, of course, the Senate has access to them. I would not go before any Naval Affairs Committee in public and speak of what ought to be the American foreign policy. It would be out of my province.

The CHAIRMAN. At least you could speak to the committee about these outstanding policies that I have spoken about, could you not?

Secretary DANIELS. I speak to the Naval Affairs Committee. I might say, Mr. Chairman, that in the recent months I have been before the committees of the House and Senate and discussed at very great length matters of foreign policy which might affect the Navy, and made certain requests based upon those conditions, but I did not publish them and neither did the committee.

The CHAIRMAN. Were you yourself kept in thorough touch, during your administration as Secretary of the Navy, with the foreign policies of the administration?

Secretary DANIELS. All foreign policies that touched the Navy, or where the Navy was expected to function, and in the large—yes.

The CHAIRMAN. From March, 1913, to April, 1917, did the President or the Secretary of State keep you actively informed of the President's changing foreign policies, so that you could keep the Navy prepared in all respects with reference to those policies instantly?

Secretary DANIELS. Mr. Chairman, I never repeat to any committee or any individual, anywhere, any communication between the President and the Secretary of the Navy.

The CHAIRMAN. I am not asking you to repeat them. I am asking you if you were kept informed.

Secretary DANIELS. I knew of the policies that the President felt for the Secretary of the Navy—I knew the policies in the large.

The CHAIRMAN. Enough to give you a basis for recommendations about the Navy?

Secretary DANIELS. I was in very close touch with the President always, and his attitude toward the Navy was always far in advance of any appropriations that Congress would give.

The CHAIRMAN. And were you kept posted as to what sudden demands the President's foreign policies might make on the Navy?

Secretary DANIELS. I answer that by saying that I can not disclose any communications I had with the President.

The CHAIRMAN. I did not ask you to. I asked you if there were.

Secretary DANIELS. You asked me the same thing. The discussions of the Cabinet and the discussions between the President and his Cabinet officers are such matters that I have not the liberty to disclose. I say this, that in the large I knew the policies of the administration.

The CHAIRMAN. Enough so that you could go ahead and adequately prepare the Navy for any action that might be necessary under these policies?

Secretary DANIELS. You spoke of 1913, did you not?

The CHAIRMAN. From 1913 to 1917.

Secretary DANIELS. In 1913 I became Secretary of the Navy. On the 5th day of March I found that the previous Congress had authorized only one dreadnaught; that the personnel of the Navy was about four or five thousand short; that the attitude of nearly one-half of the Congress was not in favor of a very large expansion of the Navy, and it was my duty to present to that Congress and procure, for the strengthening of the Navy, such additions as could be secured.

The CHAIRMAN. That is, for any specific plans or for just the general welfare of the Navy?

Secretary DANIELS. Why, we always had specific plans.

The CHAIRMAN. And your recommendations were based on these specific plans?

Secretary DANIELS. Always based on strengthening the Navy for the service it would be called upon to perform.

The CHAIRMAN. And you knew what that service would be? You were kept posted?

Secretary DANIELS. Well, if I had known, Mr. Chairman, in 1913 what possible service should be ahead of the Navy, or the world, I would have been ten times a prophet. I went before Congress, a Congress that had varying opinions, and secured from that Congress the largest appropriations for increase of the Navy that had ever been secured before in time of peace, and it was no easy task, because, while in that Congress there were many men like Chairman Padgett then and Chairman Butler now, and Chairman Tillman then and Mr. Lodge, and those gentlemen, if you will go back to those days of 1912, why, in 1912, Mr. Chairman, they had a fight here all summer whether they should have one dreadnaught or two. I was not Secretary of the Navy; I was a private citizen; I had no responsibility about it; but I worked with every Member from my State, and a

dozen others that I knew, urging them to vote for the two-battleship program.

The CHAIRMAN. That was the two-year program——

Secretary DANIELS. That was in 1912.

The CHAIRMAN. What you were referring to before—the great increase in the Navy—was in 1913?

Secretary DANIELS. No; the program I recommended in December, 1913, was the biggest appropriation of money for the Navy ever enacted except in time of war.

The CHAIRMAN. And was that so recommended to carry out any specific foreign policies of the administration with which you were familiar?

Secretary DANIELS. It was recommended to make the Navy fit, so far as Congress would give the money, for carrying out any policy which the General Board had worked out in its plans of battle.

The CHAIRMAN. But no specific policy?

Secretary DANIELS. Do you think, Mr. Chairman—I forgot; I must not ask you questions.

The CHAIRMAN. I am not on the witness stand.

Secretary DANIELS. No; you are not on the witness stand. In 1913 there was only the necessity for strengthening the Navy. But specific plans had been made for war with Germany; I can speak of that now; and specific plans for war with any country. They were all full. I examined them carefully. I had not been in office but a few days before I went over to the General Board, and Admiral Dewey and his assistants showed me the plans drawn up for a war with Germany, if need be, or war with any other country with which we might be engaged; and I knew all the time that that board of naval statesmen, who were charged with large responsibilities, were performing them with great ability——

The CHAIRMAN. Were they kept posted on the President's foreign policies by you?

Secretary DANIELS. I posted them with the general policies so far as related to the Navy.

The CHAIRMAN. And from 1913 to 1917 did you keep them thoroughly posted about these shifting foreign policies?

Secretary DANIELS. Well, they were always posted. When you say, Did I keep them thoroughly posted——

The CHAIRMAN. They had no access to the President, I suppose?

Secretary DANIELS. No; but I was always in close touch with them.

The CHAIRMAN. But you had not yet told me whether you yourself were kept sufficiently posted by the administration on these foreign policies to make definite plans.

Secretary DANIELS. I have told you very clearly that in the large I was familiar with them.

The CHAIRMAN. In the large?

Secretary DANIELS. In the large and in general; with any and every thing that touched the Navy, fully.

The CHAIRMAN. But were you sufficiently posted as to follow the logical procedure of having detailed base plans and operative plans worked out to fit each major contingency of the President's policies?

Secretary DANIELS. The General Board had plans worked out for war with any country.

The CHAIRMAN. No; I asked you if you, yourself, were sufficiently posted to do this?

Secretary DANIELS. I was in touch with the General Board and knew they were doing——

The CHAIRMAN. No, no; were you sufficiently posted by the administration so that you would know definitely what to go ahead on?

Secretary DANIELS. I do not understand you.

The CHAIRMAN. I asked you if you were sufficiently posted so as to follow the logical procedure of having detailed base plans and operative plans worked out to fit each major contingency of the President's policies; if you, yourself, were sufficiently posted by the administration to do that, so that you could go ahead and make plans?

Secretary DANIELS. Well, I have told you, Mr. Hale, that in the large I knew of the foreign policies; and in everything that concerned the Navy I knew them and communicated with the General Board, who worked out all plans that would be ready for any emergency.

The CHAIRMAN. And as these policies shifted you were informed of them if the Navy was in any way concerned?

Secretary DANIELS. I was fully acquainted with them wherever the Navy was touched, certainly.

The CHAIRMAN. And you were informed at once when any change was made in these policies?

Secretary DANIELS. I was at a Cabinet meeting twice in every week, and in anything particular I was in touch with the President also; and his interest in the Navy, in its strengthening, its readiness, was always far in excess of that of any other man who talked about the Navy.

The CHAIRMAN. Then did you have detailed base plans and operative plans worked out to support the Monroe doctrine, for instance?

Secretary DANIELS. Mr. Chairman, I have told you that we had plans worked out for war with any nation in the world.

The CHAIRMAN. That is, specific plans, docketed, for each nation?

Secretary DANIELS. For any nation that we might be at war with; yes.

The CHAIRMAN. That is, for war with Germany?

Secretary DANIELS. I have said so; for war with Germany.

The CHAIRMAN. For war with England?

Secretary DANIELS. I decline to state what plans we had worked out for war with any other nation but Germany, because I can not discuss any nations with which we were friendly.

The CHAIRMAN. But is it customary that the Navy should have plans worked out for war in case we should get into war with other countries?

Secretary DANIELS. It is; and we had them.

The CHAIRMAN. With other countries?

Secretary DANIELS. Yes.

The CHAIRMAN. Besides Germany?

Secretary DANIELS. With any possible enemies?

The CHAIRMAN. With all possible enemies?

Secretary DANIELS. With any possible enemies.

The CHAIRMAN. And that means any nation; might mean any nation?

Secretary DANIELS. It might mean any nation. They are distinguished by colors, you know; you have a yellow plan and a green plan and a blue plan. Of course, each color means a country.

The CHAIRMAN. You did not have any specific plan, so far as the Monroe doctrine was concerned or so far as the open-door policy was concerned or so far as the Panama Canal was concerned, did you?

Secretary DANIELS. Well, those doctrines could only be maintained by a specific plan for war with some country, and we had them.

The CHAIRMAN. You did have specific plans for each individual country as related to those particular policies?

Secretary DANIELS. With any country with which we might be at war.

The CHAIRMAN. And that, you say, might be any country.

Secretary DANIELS. That might be any country that attacks our rights.

The CHAIRMAN. Did you have those plans for half a dozen countries, say?

Secretary DANIELS. We had plans for every country that had power enough to make it possible they could give us trouble.

The CHAIRMAN. And kept right up to date?

Secretary DANIELS. Always up to date.

The CHAIRMAN. And those plans are on file in the department now?

Secretary DANIELS. Those plans are worked up to date, in the General Board.

The CHAIRMAN. And they were worked up-to-date on April 6, 1917?

Secretary DANIELS. Worked up-to-date all the time.

The CHAIRMAN. Specific, detailed, basic, and operational plans?

Secretary DANIELS. Plans that the General Board worked out carefully and thoroughly and fully.

The CHAIRMAN. I think there has been some conflict of testimony about that.

Secretary DANIELS. Well, I will refer you to the testimony of Admiral Badger with reference to the General Board's plans.

The CHAIRMAN. On what specific basis did you make recommendations to Congress for the building program? Was it on these specific plans that you had worked out?

Secretary DANIELS. What years?

The CHAIRMAN. While you were Secretary.

Secretary DANIELS. All the years?

The CHAIRMAN. Yes.

Secretary DANIELS. In the first year, 1913, I was confronted with a situation in which the previous Congress had declined to appropriate for one dreadnaught. The sentiment in the country was very much divided. I discussed with able naval advisors, among them Admiral Dewey, and we felt that the supreme thing that year, the very basis of the whole naval structure, was to secure more dreadnaughts, and so I made my recommendation on the basis of strengthening the Navy in the place where it would have the strongest power.

The CHAIRMAN. More dreadnaughts for what purpose; for what specific foreign policy?

Secretary DANIELS. Why, to fight an enemy.

The CHAIRMAN. For any particular enemy?

Secretary DANIELS. Any enemy that came.

The CHAIRMAN. That is, general preparation for the fleet; not for any specific occasion?

Secretary DANIELS. Why, I would not make a different kind of a dreadnaught to fight Germany—

The CHAIRMAN. You would if you knew we were going to fight Germany; you would need dreadnaughts of a certain type?

Secretary DANIELS (continuing). Or Dorenia or X, or Y, or Z.

The CHAIRMAN. If you knew we were going to fight them, you would want the best kind of dreadnaughts most adapted to fight them, would you not?

Secretary DANIELS. I would build a dreadnaught so powerful and so big that it would not make any difference whether it was Germany or Utopia, that we could have the strongest power with it. Of course, I did not sit down and say to the committee, "Gentlemen, build this kind of battleship for Germany; build this kind of battleship for A; build this kind of a battleship for B, and this kind for C." That would be folly. I said, "Build the best dreadnaught you can build, for anybody in the world"—that was the policy—"and build all you will."

The CHAIRMAN. The best general dreadnaught for any nation in the world would be the best for the majority of them, and not the best for the country with which we would specifically go to war; and if you knew that we were going to war you would naturally adopt that which was best adapted to fight that country with which we were going to war, would you not?

Secretary DANIELS. The dreadnaughts we secured authorization for then were the best possible fighting ships to fight any particular nation.

The CHAIRMAN. That may very well be, so that they would be the best for Germany or whatever country we were going to war with.

Secretary DANIELS. The best for Germany; and, of course, Mr. Chairman, in the type of dreadnaught we build, that was a matter for the technical experts of the Navy; and the method of determining what kind of ship you will build in the Navy—I can explain it to you. The General Board fixes the characteristics of ships, and in doing so it always has before it the Chief of Naval Construction, the Chief of Steam Engineering, the Chief of Ordnance, and the chief of every bureau that has anything to do with building that ship; and after they have gotten the opinions of all of them—after they have studied all their plans—they fix up the plan to build a ship.

The CHAIRMAN. Now, will you give the recommendations you made, giving the further years while you were Secretary, and tell me how they were based on foreign policies of the Government?

Secretary DANIELS. I have explained 1913.

The CHAIRMAN. You did not say anything about foreign policies.

Secretary DANIELS. Why, I did. I said I based them to fight any enemy that would contest with them.

The CHAIRMAN. That is the general reason.

Secretary DANIELS. Any nation that fought us.

The CHAIRMAN. Will you go ahead with the other years?

Secretary DANIELS. In 1914 I recommended two dreadnaughts—sold the *Mississippi* and *Idaho* after a very hard fight. There was a

great fight in the House. I asked Congress to let me sell those two ships, and that was everywhere indorsed; and then I said I wished this money appropriated to build a new dreadnaught—to sell these two old ships for a new one. That proposition we had a very hard fight on—lasting for days—and the contention was that two dreadnaughts were enough, and we ought not to build any more, and that this money we got from the *Idaho* and *Mississippi* ought to be covered into the Treasury for ordinary purposes. But we succeeded in getting three. That was my recommendation in 1914.

Let me get my figures for 1915. I will take up 1915. The act of March 3, 1915, created a Chief of Naval Operations and provided for the establishment of a Naval Reserve; provided for the building of 2 dreadnaughts, 6 destroyers, 2 seagoing submarines, and 16 smaller submarines; and, for the first time in the Navy, appropriated \$1,000,000 to begin aviation.

In addition, as I have said, we sold the *Idaho* and *Mississippi* and received the money to secure the building of a modern dreadnaught. I will give you the dates in 1915, because they come in very properly here. April 24, 1915, I had a letter from Dr. Garfield, the president of Williams College, asking about the condition of the Navy, and I wrote and told him there were fully commissioned 225 vessels, 36 more than when I became Secretary in 1913; 100 vessels of various types in reserve and in ordinary; 77 under construction, including 9 dreadnaughts, 23 destroyers, 38 submarines, and 7 auxiliaries, as compared with 54 on March 1, 1913; and the personnel, line and staff, had been increased 5,824 on April 28, 1913. The law having passed in March authorizing the creation of Naval Operations, I appointed William S. Benson, charged with the "operations of the fleet and with the preparations and readiness of plans for its use in war." That is the law.

On May 7, 1915, the *Lusitania* was sunk.

On May 11 Admiral Benson took office as Chief of Operations, with Capt. Volney Chase as senior aid and two other assistants.

On May 15, 1915, there was a review of the Atlantic Fleet at New York, at which I spoke and urged the building of a greater Navy. I have presented an extract from a newspaper, in my direct statement, stating this policy.

On May 28, 1915, I sent a letter to all chiefs of bureaus directing them to report on their preparedness for war, with a view to remedying all deficiencies.

On May 28, 1915, Rear Admiral Grant was placed in command of our entire submarine service, being given broad powers with the object of remedying any deficiencies.

On June 2, 1915, I started a new policy of making the commandant of the Marine Corps a member of the General Board.

On June 11, 1915, I held a conference with Admiral Benson and other naval authorities regarding the expansion of the Navy and plans for larger construction program.

June 19 I signed an order putting into effect a new accounting system for navy yards.

On June 28 I created the advisory council, composed of the Assistant Secretary, the Chief of Naval Operations, the chiefs of bureaus, and the commandant of the Marine Corps, and at its weekly meetings all phases of naval policy and preparedness were dis-

cussed; increased the inspection board and survey begun of all merchant vessels with a view to their utilization as naval auxiliaries in case of war.

Steps were taken to reorganize and improve the system of naval communication, including radio, telegraph, and telephone service.

In July, 1915, I directed the General Board to submit a program, "formulated in the most definite terms," for a consistent and progressive development of the Navy.

The CHAIRMAN. I am asking specifically, Mr. Secretary, about your recommendations?

Secretary DANIELS. I am coming to them.

July 30, 1915, the General Board reported that the United States Navy should ultimately be equal to the most powerful maintained by any other program for the next fiscal year in accordance with this policy.

July, 1915, I appointed the Naval Consulting Board, with Mr. Edison as its head, he consenting to become its president.

August, 1915, as in the preceding months, numerous discussions were held as to a larger continuous building program and general expansion of the Navy, including personnel as well as vessels, extension and improvement of navy yards and stations, and other measures of preparedness.

September, department and various bureaus were making up their estimates for the next fiscal year, which had to be submitted before October 15, and were to include estimates not only for many more ships and larger personnel, but yards, stations, etc., in readiness for emergency, and for accumulating reserves of munitions, supplies, materials, spare parts, etc.

Naval Consulting Board actively at work. Survey of the country's plants and factories, sources of supply, and materials for war purposes planned and soon begun.

October 7, 1915, Secretary directed the General Board to prepare "a building program for the Navy that will continue over a period of five years, with an expenditure of about \$100,000,000 each year for five years, on new construction only."

October 12, General Board submitted five-year continuous-building program, embracing 156 naval vessels; total cost (estimated), \$499,876,000.

October 15, Secretary submitted naval estimates to Secretary of the Treasury, including estimates for 55 vessels to be appropriated for in the next naval bill—the first year of the new building program.

December 1, 1915, Secretary, in annual report, recommended five-year building program and urged its adoption. Also recommended increase in personnel.

December 6, estimates submitted to Congress by the Secretary of the Treasury.

December 7, the President, in his annual message to Congress, urged the authorization of the continuous-building program recommended by the Secretary and the General Board.

That gives you the first three years.

The CHAIRMAN. I do not see therein any special recommendation of increases in the Navy on account of keeping up with the foreign policies of the Government. It seems to me it was just a general rounding out of the Navy.

Secretary DANIELS. Well, Mr. Chairman, I can not understand what you mean by my discussing general foreign policies. General foreign policies are not within the purview of the Navy; they are matters that come under the purview of the Secretary of State.

The CHAIRMAN. And they are discussed, I presume, in the Cabinet meetings, and the Secretary of the Navy is kept in touch with those foreign policies in order that he may know just how much increase he may need at any time in the Navy; is not that right?

Secretary DANIELS. You may assume what the Cabinet discusses, but I can not tell you what the Cabinet discusses.

The CHAIRMAN. I do not think you would be violating any confidence to tell me whether or not you were kept up with these policies so that you would know what to do.

Secretary DANIELS. I have told you several times that I knew, in the large, the foreign policies. In detail I knew such of them as concerned the Navy.

The CHAIRMAN. Now, you state that before we entered the war there were prepared comprehensive base and operative plans for war with Germany in cooperation with the Allies?

Secretary DANIELS. Admiral Badger gave you all the statement about plans.

The CHAIRMAN. Yes; but I want you to state this. You have stated that you had comprehensive plans for war with a number of countries, and Germany was one of them.

Secretary DANIELS. When it comes to the details of the plans, that is the duty that is committed to the General Board, and they assured me always—and I saw many of them—that they had a comprehensive plan.

The CHAIRMAN. As the responsible head of the Navy, I suppose that you would naturally be kept in touch with those plans more than anyone else, would you not?

Secretary DANIELS. I did not go into the detail of every plan.

The CHAIRMAN. Did you not know whether they were thoroughly up-to-date, detailed plans; and did you have such a one with Germany when war was declared?

Secretary DANIELS. They were thoroughly up to date.

The CHAIRMAN. When war was declared?

Secretary DANIELS. Thoroughly up to date.

The CHAIRMAN. And thoroughly up to date on February 2, when the German ambassador was given his papers?

Secretary DANIELS. Thoroughly up to date.

The CHAIRMAN. Can you give the committee the plan which touched war with Germany that was thoroughly up to date?

Secretary DANIELS. If the committee will visit the General Board office, Admiral Badger will give them, for their information, any information they desire, but I can not put in the record any plan as to any particular country, because the plans in general have a common basis, and you would give away to the world the result of the study of decades of able naval officers, which no nation ever makes public.

The CHAIRMAN. I will ask you to give us specifically, then, the plan for Germany which you had in the department and which you say was thoroughly up to date on April 6, 1917.

Secretary DANIELS. If your committee desires to see the plans we had with Germany, Admiral Badger will show them to the committee, but I can not put them in the record.

The CHAIRMAN. I will ask you to bring that plan here to-morrow.

Secretary DANIELS. I will confer with Admiral Badger about it and the General Board. All plans for war have basic policies.

The CHAIRMAN. But Admiral Badger submitted a number of memoranda and data which are referred to as plans. Now, I would like to concretely and definitely get the plans that we had for war with Germany when war was declared in April, 1917.

Secretary DANIELS. He submitted to you such data as the able naval statesmen believed should be printed. As to any other data, I will take that up with the General Board.

The CHAIRMAN. I have not been able yet to find any specific plan for war with Germany that has been shown or testified to before the committee, and I would like to have that matter cleared up.

Secretary DANIELS. I will take that up with the General Board.

The CHAIRMAN. And when you appear next before the committee—

Secretary DANIELS (interposing). I will answer your question.

The CHAIRMAN. You will answer the question?

Secretary DANIELS. Yes; I will either bring it or tell you why I can not?

The CHAIRMAN. Not this afternoon, but in the next day or two?

Secretary DANIELS. Yes; I will.

The CHAIRMAN. And if you can not give the plan specifically, will you post yourself on it so that you can tell us in general the nature of it?

Secretary DANIELS. I will confer with the General Board—

The CHAIRMAN (continuing). And not thereby violate any confidence?

Secretary DANIELS. I will confer with the General Board about it.

The CHAIRMAN. Very well. The committee will stand adjourned until 2 o'clock this afternoon.

(Thereupon, at 12.45 o'clock p. m., the subcommittee took a recess until 2 o'clock p. m.)

AFTERNOON SESSION.

The subcommittee reconvened, pursuant to the taking of the recess, at 2 o'clock p. m., Hon. Frederick Hale (chairman), presiding.

TESTIMONY OF HON. JOSEPHUS DANIELS, SECRETARY OF THE NAVY—Resumed.

The CHAIRMAN. The committee will come to order. Mr. Secretary, you stated this morning that the General Board had a detailed plan prepared for war with Germany, did you not, at the outbreak of the war?

Secretary DANIELS. Yes; we had plans for war with every nation in the Atlantic.

The CHAIRMAN. And especially one for war with Germany?

Secretary DANIELS. Yes. I would like to say, Mr. Chairman, that since the morning session I have had a conference with Admiral

Badger, chairman of the General Board, and he will be very happy, at the pleasure of the committee, at any time after to-day, to bring all the plans in executive session of the committee, so that you may see the plans. I would like to say, Mr. Chairman, that this morning, in response to a question which you asked me, I referred to a statement of Admiral Sims with reference to the fact that he had charged Admiral Benson with not having the will to win, and neither you nor I remembered exactly the place where that occurred, nor exactly what Admiral Sims had said. I find my recollection was very clear about it. I refer to pages 656 and 657 of your typewritten record, in Admiral Sims's cross-examination.

The CHAIRMAN. My recollection is that there was nothing of the kind in the letter. This is not in the letter?

Secretary DANIELS. No; I said it is in the cross-examination. He was explaining the letter. I wished to be very careful not to misquote Admiral Sims, so I looked back to see what his language was. Admiral Sims says on page 657 of the typewritten record:

Now, my reason for putting it in the letter may not be so clear to a civilian as it is to a military man, but the spiritual foundation of every war is the will to victory, and if any man, no matter how honest, has an invincible prejudice against the people that we are fighting alongside of, it is very probable that it has an unconscious influence upon him; and that is the reason that in submitting this letter for the consideration of the Navy Department I put that in there, as one of the most important things in the letter, that if ever we go into a war again we want to make sure that the spiritual foundation of our organization, the will to victory, is sound.

The CHAIRMAN. I do not think anyone can question that. That is good doctrine, is it not?

Secretary DANIELS. But when you charge the Chief of Operations with not having the will to win, you charge him with a grave crime.

The CHAIRMAN. I do not think it does charge him.

Secretary DANIELS. I think that would be the interpretation of it. I do not see any other interpretation of it.

The CHAIRMAN. He says that the "spiritual foundation of every war is the will to victory, and if any man, no matter how honest, has an invincible prejudice against the people that we are fighting alongside of, it is very probable that it has an unconscious influence upon him." Certainly that could not be disputed.

Secretary DANIELS. I wish to say that charge is a seriously grave one, inexcusable.

The CHAIRMAN. That statement you have just read?

Secretary DANIELS. The only inference from that statement is that the gentleman concerning whom he uttered that statement did not have the will to win.

The CHAIRMAN. I would like to put in at that same place the statement that Admiral Sims made just before making that on page 657. [Reading:]

I would also like to say that I have always had the best possible relations with Admiral Benson. I regard him as an upstanding and honest man who has exceedingly strong convictions, and who is very firm in adherence to these convictions. I believe everything he has done during the war has been done conscientiously and to get along with the war. I believe that it is due to Admiral Benson alone that I was given the opportunity to serve in this war as the commander of the forces abroad. In fact, he told me that his insistence upon my being put in command of those forces abroad had brought upon him the enmity of pretty much all the senior officers of the Navy, that being due to

the fact that when I was appointed I was the last name on the list of rear admirals in the naval register at that time. I state this in order to make it clear that there is nothing whatever personal about this.

Secretary DANIELS. When we adjourned this morning, Mr. Chairman, we were talking about plans. The ambassador from Germany was given his walking papers on February 3. On February 4 the General Board wrote to the Secretary of the Navy as follows:

[G. B. No. 425. Confidential. Serial No. 666.]

FEBRUARY 4, 1917.

From: Senior member present:

To: Secretary of the Navy.

Subject: Steps to be taken to meet a possible condition of war with the Central European Powers.

On account of existing conditions, the General Board recommends that the following steps be taken to meet a possible condition of war with the Central European Powers:

1. Complete complements and allowances of all kinds, first of the A and B fleet, then of the C fleet, and naval districts.

2. Mobilize the A fleet in the lower Chesapeake, and increase it immediately to the B fleet. (See Black plan.)

3. Dock and repair all ships in reserve and ordinary that will be used.

4. Arrange for the supply of fuel to the fleet and stock all fuel depots to capacity.

5. Establish additional recruiting stations and increase personnel of the Navy and Marine Corps to the total number required to supply complements for all the ships built, building, and authorized, and to maintain shore establishments and naval defense districts, including aviation service, with 10 per cent additional for casualties as follows:

Enlisted force: Navy, 150,000; marines, 30,000; officers in proportion prescribed by law.

6. Mobilize the naval districts, including the Coast Guard and Lighthouse Services, and put patrol vessels, mine sweepers, etc., of the Atlantic coast districts on their sweepers, etc., of the Atlantic coast districts, on their stations; no commercial vessels to be mobilized in the Pacific coast districts at present.

7. Prepare to the utmost detail for the employment of mines along our coast as may be necessary.

8. Prepare nets and other obstructions for submarines, ready for immediate use, at the Chesapeake Capes, Delaware Capes, entrance to New York Bay, eastern entrance to Long Island Sound, Narragansett Bay, Panama Canal, and Guantanamo.

The **CHAIRMAN.** What is this you are reading? Is this in reply to my question about a detailed plan?

Secretary DANIELS. This is in reply to your question about plans of the Navy.

The **CHAIRMAN.** But this has already gone into the record, has it not?

Secretary DANIELS. Yes; it is in Admiral Badger's testimony.

The **CHAIRMAN.** You see, you have already made your testimony, your direct statement, Mr. Secretary, and now I want to ask you some questions. It is no good to me if you do not answer my questions.

Secretary DANIELS. This is an answer to your question, because you raised the question of plans.

The **CHAIRMAN.** I am in hopes to get from you, before we get through, a statement of just what plans we had at the outbreak of the war, and on February 2; and if you are not at liberty to give them out because they are confidential, I want the plans to be mentioned, as confidential, as stated. This that you are reading has already been put in the record.

Secretary DANIELS. This is answering your question, and is exceedingly important. Here was the German ambassador sent home February 3. This communication is dated February 4. Here is what we did, and this is the detailed plan.

The CHAIRMAN. It has been put in already once, has it not?

Secretary DANIELS. It is in Admiral Badger's testimony. It does not come in in response to your questions to me.

The CHAIRMAN. I am not asking you about what was in the plan, but I am asking you about the plan, so that I can get it in my mind.

Secretary DANIELS. I am giving you the plan now.

The CHAIRMAN. So far I have been unable to.

Secretary DANIELS. I am giving you the plans now. [Continuing reading:]

12. For the present use the greater part of the destroyer flotillas as patrol for submarines in the vicinity of the principal ports or entrances leading to them.

13. Base the submarines at Canal, Guantanamo, and points along the coast in accordance with Black plan.

14. Rush to completion all naval vessels building or authorized; also build up the aviation service as rapidly as possible.

15. Guard all bays and harbors on the coast of Maine, to prevent their use as bases of supply. Patrol waters of Haiti, Santo Domingo, Porto Rico, and Danish West Indies; Cuban Coast Guard Service to assist in patrolling all bays and gulfs of the coast of Cuba.

Prepare to close entrances to all ports at night and discontinue or change such aids to navigation as may be necessary.

17. Organize a comprehensive system of intelligence service covering the whole theater of war in accordance with the plans of the Office of Naval Intelligence.

18. Take possession of all interned vessels of war of central powers, also take control of all commercial vessels of central powers now in United States waters.

19. Place under surveillance all citizens of the central powers in the Navy or in Government employ in naval establishments and remove them from positions in which they may do possible harm.

20. Arm our merchant ships for purposes of defense.

21. In accordance with Black plan, carry out the following:

(a) Issue proclamation prescribing defensive sea areas and put rules in regard to them in force.

(b) Issue proclamation prescribing press regulations and establishing censorship of cable and radio, including naval control of all commercial and private radio stations.

(c) Issue President's order in regard to visit and search, capture, etc.

22. And as most important—

Now, this is February 4, 1917—

arrange, as soon as possible, plans of cooperation with the naval forces of the Allies for the joint protection of trans-Atlantic commerce and for offensive naval operations against the common enemy.

CHAS. J. BADGER.

That was the day after the walking papers had been given to the German ambassador, showing that the General Board made a very comprehensive plan, with 22 specific directions.

The CHAIRMAN. That was approved by you when?

Secretary DANIELS. I have not the date here, but it was approved as soon as it came to me.

The CHAIRMAN. Does that appear on the plan?

Secretary DANIELS. It was approved by me, Mr. Chairman. I do not see in this testimony the actual official action.

The CHAIRMAN. Then what became of it after it was approved by you?

Secretary DANIELS. It went to Operations to carry out.

The CHAIRMAN. It went to Operations?

Secretary DANIELS. To carry out.

The CHAIRMAN. February 4. March 22, 1917, there is another letter from the senior member present to the Secretary of the Navy, war being imminent; protection of merchant shipping recommended; April 5—I am going to ask you some specific questions, Mr. Secretary, that will take in all these matters, and I suggest that you put them in following my questions, if you have no objection.

Did you state, Mr. Secretary, that there was a detailed plan, a base and operational plan, in the General Board as early as February 1, 1917?

Secretary DANIELS. There were plans not only on that date but previously, and continued up to date.

The CHAIRMAN. Was there a plan that was right up to date on February 1, 1917?

Secretary DANIELS. Yes; and has been always, from the time the General Board was organized up to this minute.

The CHAIRMAN. Which would cover a war with Germany?

Secretary DANIELS. Which would cover a war with the central Empire; yes, sir.

The CHAIRMAN. Which would cover a war with Germany?

Secretary DANIELS. Yes.

The CHAIRMAN. And that plan was in the possession of the General Board at that time—that is a plan which you say you can not show us now on account of its confidential matter and bearing?

Secretary DANIELS. No; I said I could not show you any basic plan, but that Admiral Badger would show your committee, in confidential session, any of the plans.

The CHAIRMAN. But do you not claim that these other matters you are putting in are a part of the basic plan?

Secretary DANIELS. No; these do not go into details. These are plans showing what will be done; and this plan is not in detail.

The CHAIRMAN. Are they operational plans?

Secretary DANIELS. They are plans of policy.

The CHAIRMAN. Plans of policy?

Secretary DANIELS. Yes.

The CHAIRMAN. Then you would say they were base plans—plans of policy and operational plans?

Secretary DANIELS. I would say they were plans of policy to be carried out in operations; but the detailed plans will be shown you by Admiral Badger.

The CHAIRMAN. Very well; then, you say on February 1 there was a detailed plan in the Office of Operations, and that can not be made public?

Secretary DANIELS. There was a detailed plan made by the General Board for a war against Germany or any power in the Atlantic Ocean.

The CHAIRMAN. Yes; but specifically against Germany? I ask you that.

Secretary DANIELS. The plans they made, Mr. Chairman, were of two characters; a plan for war in the Atlantic, a plan for war in the

Pacific; and those plans would operate against any nation in the Atlantic or the Pacific.

The CHAIRMAN. That would cover the whole world, would it?

Secretary DANIELS. It would cover any power that was big enough to fight us.

The CHAIRMAN. When you speak of the Atlantic, you mean that would cover the North Sea and all waters on the coast of Europe, would it?

Secretary DANIELS. It would cover a plan for a war with any nation big enough to fight us.

The CHAIRMAN. And it would cover those waters to which I referred, would it not?

Secretary DANIELS. I will let Admiral Badger go into that.

The CHAIRMAN. But I want to know now just what you had. Now, you said you had this plan in the General Board at that time?

Secretary DANIELS. I said we had plans in the General Board for war with any nation in the Atlantic.

The CHAIRMAN. And you have specifically included Germany in that?

Secretary DANIELS. Or in the Pacific.

The CHAIRMAN. But you have specifically included Germany. Therefore, the General Board had on February 1 that plan including a war with Germany?

Secretary DANIELS. They had plans for including war with Germany.

The CHAIRMAN. They had them worked out for a war with Germany?

Secretary DANIELS. They had the plans for including war with any and every nation.

The CHAIRMAN. What was the plan of the General Board between February 1 and April 6, 1917, so that we can have the plan worked out just as it was on April 6? You do not need to read the plans. They have already been put in the record. You can just give me the names, and I will add them to what we already have.

Secretary DANIELS. March 20, 1917, you will find here——

The CHAIRMAN. Were there not any before that?

Secretary DANIELS. There was, February——

The CHAIRMAN. You have already stated there was one February 4.

Secretary DANIELS. February 4.

The CHAIRMAN. Then you will include that with the other plan that you had, would you, as a part of it?

Secretary DANIELS. I am not certain about the date of the plan. There is a plan here of March 20, and there is a letter here.

The CHAIRMAN. The plan of March 20 dealing with what? The heading will probably give it. I would rather have them in chronological order, and if there were any before that I would like them first, and the others in order.

Secretary DANIELS. I have not the date. I have here Admiral Badger's testimony in which he gives March 20, 1917, and I have here a letter.

The CHAIRMAN. I think you gather from me what I want. The next time you come before us, will you have a schedule made out

showing exactly what plans there were in existence at the time of the war, and when they were adopted?

Secretary DANIELS. I will have Admiral Badger give you the information confidentially.

The CHAIRMAN. No; it is not confidential. These matters have all been put in the record. The only one that is confidential is the so-called "Black plan," unless I am mistaken.

Secretary DANIELS. All the plans are confidential, referred to by Operations.

The CHAIRMAN. But these plans have been put in the record.

Secretary DANIELS. All the plans in the record are here.

The CHAIRMAN. And I want a schedule made up showing just how those apply to the base plan, so that anyone can tell just what plans we had on April 6, 1917, a matter which I have not been able to find out yet.

Secretary DANIELS. Well, it is very hard if Admiral Badger has not been able to give you all the facts, because he goes into it very fully.

The CHAIRMAN. Well, you are the responsible head of the department, and I presume are responsible for it.

Secretary DANIELS. Absolutely; but in the matter of plans, you must understand, Mr. Chairman, and in the matter of plans for war, there are two agencies to which are committed the technical plans of the Navy—the General Board and Operations.

The CHAIRMAN. Very well, then; I want you in your schedule to give just which goes with each department.

Secretary DANIELS. You have it all here.

The CHAIRMAN. Yes; but I want you to work out another one so that we will have it perfectly clear to us. We have not got it clear yet.

Secretary DANIELS. If you will write down what you desire, I shall be very glad to furnish it.

In the meantime, while we are on the matter of plans, I wish to call attention on pages 3051 and 3052 of the hearings to the testimony of Capt. Pratt, in which he told you that he himself, as the war progressed, worked out something like 30 different plans.

The CHAIRMAN. Memoranda?

Secretary DANIELS. Plans.

The CHAIRMAN. I think he called them memoranda.

Secretary DANIELS. I do not know; he may have called them that, but they were worked out. Capt. Pratt worked the plans out in the line prescribed by the Naval War College, and if you will go over them carefully, you will see that all of them are the specific and technical methods of the War College—that is, first, forces involved; second, information; third, men; fourth, logistics; fifth, estimate of situation; and, sixth, decision.

The CHAIRMAN. What page is this?

Secretary DANIELS. If you will look on pages 3001 and 3002, and continuing.

The CHAIRMAN. Where was that list made that you just read—what page?

Secretary DANIELS. That is not there at all. This is my testimony. I am telling you these plans were worked out by Capt. Pratt and were

War College plans, and those methods that are in existence with all War College men, and on this page you will see Capt. Pratt says:

I will now proceed to the next phase in the testimony, which is the consideration of our plans in preparation for entry into the war, and during such time as I was a member of the small planning section which we had in the Office of Operations. To start in the very beginning, it is necessary to understand what a plan is, and the difference between base plans and operating plans.

Thus far in the testimony that I have seen there has been drawn no marked line of distinction between these two separate thoughts. It is the province of the General Board, and the province of any board who prepare a preliminary plan to outline a plan of preparation. That takes in the activities of every bureau. It sets us in a position so that when war is to be declared we enter the war with all of our basic industries, as far as we can so do it, and at least all of our naval forces, prepared to commit themselves to a first operation; and also the general scheme, that is the broad strategy of the situation, in so far as it is possible to do so must be outlined in this preliminary plan. The movement in a preliminary plan should not be committed beyond its conception of grand strategy, and the first movement in which the forces may be engaged. To do anything else is to commit an error, because it commits your commander in the field, or whoever may be the commander detailed to handle local operations, possibly to a movement to which he can not adjust himself well. Therefore a distinction must be drawn, as I said before, between the base plan which it is the province of the board to draw and the more detailed plans of operations, which must continually adjust themselves to local conditions as they occur; and also I wish at this time to make a comment upon Admiral Fiske's interpretation of what a general plan must be.

If we were to accept in tota all that Admiral Fiske has stated about a general plan, and the ability to put your hand in a drawer and pull out a plan which at once throws us into war, that is at once to accept the proposition that we are a military Nation, and having a man like von Moltke, he can put his hand in a drawer and commit himself to a movement at once, because that means that the aggressive nation can always take the initiative.

A nation on the defense has got to adjust itself to the initial movement that enemy plans against it, and that is why here must be a distinction made between the general plan, as Admiral Fiske has outlined it, and a general plan which a nation like the United States must make in order to prepare itself for war. There is a vast difference in the conception of the two ideas, and in the execution.

I submit herewith a list of plans of preparation.

And Capt. Pratt gives you here a very able technical, fine statement of the proposition he lays down, and you will observe on February 10, 1917, a letter which I wrote to the General Board:

Subject: Solution of problem.

The department desires the General Board—

now this is written by the Secretary of the Navy February 10, 1917.

The department desires the General Board to consider the following problem and submit its solution as soon as practicable.

General situation: Conditions as at present except that war with Germany is declared.

Special situation: The Allies do not desire our battleship force at present.

Required: Naval estimate of the situation.

1. As to the grand strategy demanded by the situation.
2. As to disposition of battleship force.
3. As to method of assisting in maintaining communications with Europe including scheme for cooperation with allies.

February 10, 1917, written by me.

The CHAIRMAN. That was your letter to the board?

Secretary DANIELS. To the General Board.

4. As to methods of driving submarine from the sea. Assume: Mobilization of all naval vessels and possibility of mobilizing merchant vessels as required.

That was signed February 10.

The CHAIRMAN. And what was done in reply to that letter?

Secretary DANIELS. Admiral Badger forwarded to operations a plan in accordance with that.

The CHAIRMAN. Have you that plan there?

Secretary DANIELS. I have not.

The CHAIRMAN. That is the plan that was lost, was it not?

Secretary DANIELS. That is the plan Admiral Badger was not able to find—he or Capt. Pratt.

The CHAIRMAN. So it was not used in the war as far as you know?

Secretary DANIELS. Capt. Pratt testified, if I remember correctly, that it was in operations, and I am not very clear about what his statement was, because he thought it was in operations. I have no doubt it was fully used and carried out.

The CHAIRMAN. Well, on page 3837 Capt. Pratt states that was afterwards lost and he did not see it.

Secretary DANIELS. Did he? I have forgotten about that. Well, at that time, Mr. Chairman, Capt. Volney Chase was the assistant for Operations and, as I said to you in my direct testimony, it is a matter of great regret on all lines that Capt. Chase gave his life in the first three months of the war by his strenuous services in Operations, and that plan was undoubtedly in the possession of Capt. Chase and was not able to be found after he died.

The CHAIRMAN. Well, Mr. Secretary, in view of the fact that from February 1 to April 1 Capt. Pratt was in the planning section of Operations and supposed to be working on plans and, therefore, would naturally have any plans that were there available for his use, would he probably not have seen that plan if it had been in use?

Secretary DANIELS. If he testified he did not see it, of course, it was correct.

The CHAIRMAN. That appears in the testimony to which I have referred.

Secretary DANIELS. But Capt. Chase was in charge of carrying out the plans. Capt. Pratt at that time was charged with working in the planning section. If you look on page 3146 of Capt. Pratt's testimony, you will see he says:

The next plan, which I have marked 7, was also before the war. It is as follows (pp. 3146-47; pp. 3148-49).

The CHAIRMAN. What date was this?

Secretary DANIELS. Capt. Pratt says before the war. He does not—

The CHAIRMAN. Are you running over new plans you are going to put in this statement I have asked you for?

Secretary DANIELS. I am referring to the plans that were made for use in the war.

The CHAIRMAN. Of course all of those will be grouped into one plan so we can look at it as one comprehensive plan.

Secretary DANIELS. I shall give you the information as to plans of the General Board and also plans for Operations.

The CHAIRMAN. Just what, in your mind, constitutes a plan, Mr. Secretary—a memorandum that has been agreed to or a memorandum that has simply been written or handed in, or what?

Secretary DANIELS. In Operations, after the war was on and conditions were changing, Operations changed conditions—the General Board laid down their large general plans.

The CHAIRMAN. This was after the war?

Secretary DANIELS. What did you say?

The CHAIRMAN. After the war commenced?

Secretary DANIELS. I think they did then, but Capt. Pratt, as assistant of Operations, says he made 30 plans, and he knows these other plans were approved, because he himself carried them out.

The CHAIRMAN. Certain ones he himself carried out?

Secretary DANIELS. Certain ones he himself carried out.

The CHAIRMAN. Is that what you mean by a department plan, that a man wrote down a memorandum and carried it out and nobody else saw it?

Secretary DANIELS. I should say any plan that Capt. Pratt wrote that was approved by the Chief of Operations, whether it was signed or not signed, was a plan.

The CHAIRMAN. Whether it was what?

Secretary DANIELS. Whether there was a signature or not.

The CHAIRMAN. How could you tell whether it was approved or not?

Secretary DANIELS. After the war began the Operations worked like this [slapping the hands]. Capt. Pratt made from day to day plans for meeting this and that emergency. He did not stop to write all around about it. He made the plan and he carried it out, and he has given in his testimony the 30 different plans he made out himself.

The CHAIRMAN. What I want is the plan we had before the war.

Secretary DANIELS. I told you he had typical plans, and Admiral Badger will give you all the operations.

The CHAIRMAN. And you will give a detailed statement when you come on next?

Secretary DANIELS. I will give the statement from Admiral Badger.

The CHAIRMAN. I want you to look over it and approve of it, so it will go in as your reply.

Secretary DANIELS. Certainly I will look over it.

The CHAIRMAN. Let me read you what Capt. Pratt says about plans, page 3835 of the testimony:

The CHAIRMAN. When you entered the planning section of the Office of Operations what general plan for naval warfare existed in the department?

Capt. PRATT. That I can not tell you, sir. I knew that there was a general plan in the General Board. From my studies of the general situation, made entirely independently, I had some idea of the situation. I had thought of it a great deal, had studied it, and then had come to the conclusion that Germany would not make the initial break until 1920, unless she were forced to do it by economic conditions.

I did not see the General Board's plan because it was a very general one. I realized, however, that whatever plans and conditions Operations would be forced to adopt would have to be made largely upon the various situations as they arose. A study of the original base plan would not have availed me so much as it would probably the bureau chiefs, because a general plan such as the General Board would prepare is very basic in character. It goes into those preparations which require money and material and must be prepared some time ahead.

The conditions which actually confronted us in the early part of February were quite different from those which we would have worked under in working

under the basic plan, because it is my impression—I do not know—that that basic plan was conceived with the idea that we might be forced to compete with Germany alone. We called it "black." That is the technical name we speak of.

The CHAIRMAN. I think some of the witnesses have testified that the idea of a basic plan was to have a general plan which from time to time was added to, and which was always viewed as the basic plan of the department.

Capt. PRATT. Yes.

The CHAIRMAN. Now, Capt. Pratt, you say you do not know—you did not see any such plan when you went into the department. Did you at any subsequent time run across, in the course of your duty, any such plan; that is, the basic plan that the General Board developed up to date?

Capt. PRATT. Well no; I do not think I needed it—

The CHAIRMAN. I know, but I want an answer to my question.

Capt. PRATT. No, sir; I did not. But I will just explain a little further. A base plan is not an operating plan.

Except for the first projected movement there is quite a line of demarkation drawn, or should be drawn, between this basic plan and the operating plan. The base plan makes a strategic review of the situation as they see it at the day the plan is laid down, and the additions that are placed into this plan are the additions which should be placed as the ideas change.

The CHAIRMAN. You have explained that very clearly in your testimony heretofore.

Capt. PRATT. Might I also put it in here, in order that I might not make any confusing answer. I want to state the thing as clearly as possible, if you do not object, sir.

The CHAIRMAN. Very well.

Capt. PRATT. So that any base plan which would contemplate projecting operations beyond the first movement, that basic plan must be absolutely sound in its strategic conception. If it is not, everything else goes wrong; and the leaders in the department and the leaders in the field are committed to a false strategy which no amount of brilliant tactics will ever overcome. That is, to my mind, my idea of the fault with the Germans' operations entirely, from base.

Therefore the work I had to do was to take into consideration the situation as it existed, the German submarine menace, which broke upon us very suddenly, and therefore it consisted in a series of moves to meet that situation, a series of plan moves, we will say.

The CHAIRMAN. Were there any definite plans in existence when you went into the Office of Operations, drawn up to meet the kind of warfare in which the Navy might be engaged?

Capt. PRATT. The one that I told you of, which was the one of February 10.

The CHAIRMAN. Which was afterwards lost?

Capt. PRATT. Which was afterwards lost; and I did not see it.

The CHAIRMAN. That was not a general basic plan, then?

Capt. PRATT. No.

The CHAIRMAN. It was an operational plan, was it?

Capt. PRATT. No; it was intended to modify the original base plan of the General Board to meet the situation that had arisen. But let me explain just a little bit further about that. Sometimes men who work a great deal on these particular subjects are like a little band of brothers united together in thoughts and in their studies, so that in a way they speak a common language. We were very fortunate in having in the plans section at that time Capt. Chase, who, although he was an administrator and was the aid for Operations, really was our guiding and directing head—

Secretary DANIELS. Read that again.

The CHAIRMAN (reading):

We were very fortunate in having in the plans section at that time Capt. Chase, who, although he was an administrator and was the aid for Operations, really was our guiding and directing head.

Secretary DANIELS. That is what I told you.

The CHAIRMAN (reading):

And associated with him, and with me, were Capt. Schofield and Capt. Scott. I was the third man. We had all been students of the Naval War College, as Admiral Sims was also; and so, in talking things over we had rather a definite idea of what we thought should be done.

The CHAIRMAN. You say, then, that the plan of February 10 is the only one you recollect which was drawn up to meet the plan of warfare in which the Navy might be engaged, and that was lost?

Now, did you make any effort to prepare plans for that purpose?

Capt. PRATT. Yes, sir.

The CHAIRMAN. I think your testimony shows that you did.

Capt. PRATT. Yes, sir; I think most of those that I submitted I wrote myself.

The CHAIRMAN. Those were definite plans?

Capt. PRATT. It is very difficult, sir, to quite draw the line where policy melts into plan and where plan passes from its general aspect into definite action. Those plans that I outlined looked behind, looked at the time we were in, and tried to look ahead; and a great many of them passed from the atmosphere of policy into definite action.

Secretary DANIELS. Mr. Chairman, I want to call your attention—

The CHAIRMAN. Now, I want to put in one or two other statements which were made on that subject.

Secretary DANIELS. All right.

The CHAIRMAN. Here is Capt. Palmer:

The CHAIRMAN. Now, captain, can you tell me what plan of operations was given you by the department, or by the Chief of Naval Operations, on which to base, in logical manner, your general future assignment of personnel to different forces?

Capt. PALMER. I did not quite understand the question.

The CHAIRMAN. What plan of operations, if any, was given to you by the department or the Chief of Naval Operations on which to base your assignments, your general future assignments of personnel, in a logical manner, to different forces?

Capt. PALMER. Oh, well, we had no plan. We had only a mobilization sheet, which was a sheet stating the vessels which would be required for mobilization. That was gotten up by the Office of Naval Operations; but we had no definite plan on which to base future assignments. I could not go on the plan that we were going to go into a battleship warfare or a submarine warfare, or anything of the kind. I could not look far enough ahead and specialize on those people both as regards numbers and duties; but I did receive from Operations from time to time—they said "We will have to take away 10 ships here probably within a month," or the next day it might be, "We must have trawlers"; probably had to have 20 or 40 trawlers. And another time it would be, "We are going to undertake this mine-force business now, and we want to have the vessels ready on a certain date." Of course the mine force is a very large organization, and the transport force was another that was a very large organization; the ships that we required to take over the Army, and later to bring the Army back. I must say they were a fine lot, too. The Navy takes off its hat to the Army on the kind of men they sent over there, and the way they looked, and the way they acted. They were splendid. We had various calls of that kind from time to time, and in each case, when I would say, "When are these to be ready," they would say, "Oh, we want them now, or just as soon as you can possibly get them; in fact, in a month or two months." Just ordinarily the training of any people, enrolling them, and so forth, and getting barracks ready for them, nothing can be done in two months to speak of.

The CHAIRMAN. But was there any general plan in the department under which all the bureaus could cooperate together, and which was to be followed out throughout?

Capt. PALMER. Not that I know of, sir. Not in my bureau. We did not get anything of that kind. In fact, we had simply that thing from the General Board which said that we should be prepared to furnish in a week after the order the personnel. Well, that was not any plan. I understood though that a plan was being prepared in Operations, and I went up and asked for it several times—that is, an estimate of the situation and what we were going to do, because it was very valuable for me to have such a plan, so that I could place the personnel in a logical way, and endeavor to train them; but I was told that there was a plan in process; that they were getting one at that

time. That was just before the war. And I heard again that it was being drawn up during the first months of the war. But I did not get that plan. I do not know whether it was actually gotten out or not; but I understood that the thing that affected personnel was some letter which I think was mentioned in Capt. Laning's hearing yesterday; some letter about personnel which showed the priorities of ships in July or August; that is, which ships were to have the call for personnel; that is, whether they were to be battleships or destroyers.

The CHAIRMAN. Did you get any orders about priority of ships?

Capt. PALMER. Not until that time.

The CHAIRMAN. What time was that?

Capt. PALMER. I do not remember what date that was. It was July or August.

The CHAIRMAN. 1918?

Capt. PALMER. No, sir; 1917.

The CHAIRMAN. 1917.

Capt. PALMER. Yes, sir. But of course that was not the kind of plan we could go on in personnel. We had already established our own priorities. Since I found that there was not any plan such as I expected them to have; that is, I had been led to believe from the War College course up there—which I have not had the opportunity to take yet, but I had been led to believe—that each thing would generally have a plan drawn up for the particular situation which existed at the time, and say what you are to do, "Each force is to prepare this and prepare that"; and so I thought there would be such a plan. But when I found that there was not, and we could not get a definite order of the kind, I went ahead and made my plan. To be sure, that is not a very good way to do, because I did not have the information which should have been had before you tried to work out any plan. I established my own priorities on vessels; but that really was a very small part of it, etc.

Secretary DANIELS. You were reading Capt. Palmer. Have you finished?

The CHAIRMAN. I was reading Capt. Palmer's testimony; yes.

Secretary DANIELS. Have you finished what he said?

The CHAIRMAN. No.

In fact, we established the priorities which the department got out in that letter, later on, of July and August. But I remember one particular point was I wanted to know enough about the war to decide whether I could make use of personnel on battleships to train other personnel. Of course we were short on personnel right at the start, and I asked Operations if they could give me any probable date before which our battleships would not be actively required in the war area for actual fighting, and I was told they could not.

Then I asked, "Can you give me six months?" "No." Just in general, they did not feel justified in saying, "Well, you can go on the plan that they will not go in action for six months, or one month." There was the cry always to have the battleships ready for anything; and of course if they were to be ready for anything, they could not of course take people off of them to train others; so I worked out in my own bureau a scheme for making use of the officers that we had, and in order to do that I had to establish some definite propositions, one of which was I made the assumption that the battleships of the active fleet would not be required to take active part in the actual operations of the war zone within six months, at least. Of course that was a decision which was made without adequate information. It just happened that they were not called in that time; but I had to adopt something, so that I took that plan and then decided to take off six officers from the 36 or 34 out of the actual battleships, and then put them in to train other people for the enormous expansion in the other activities. In fact, the battleships were training people all the time. Every ship afloat was a training ship, including the destroyers afterwards on the other side. But this thing of taking 10 officers off the battleships when they considered that they did not have enough officers, was a very important step, and I would not have been able to do it at all if I had not communicated with Admiral Mayo and gotten his cooperation. He took a remarkable view of the situation, and I think it shows just what type of man he is.

I explained to him what I thought were the probable duties and the great expansion we needed for forces everywhere, and he would have been perfectly

justified in saying, "Well, I am in command of the battleships of the Atlantic Fleet, and we are short of personnel, and I am going to keep them"; and I believe if he had taken that stand I could not have gotten them. But he sized up the whole situation from a broad viewpoint, and he said, "I hate to do it, but I think it is not best for me, for my battleships, but it is best for the way we have got to win this war." So that, off came the officers, one at a time, and the captains rightfully objected. I think I would have made a great deal more objection than any one of them did; and they did object, and persisted in their objections, but at the same time they went to the job. They said, "Well, it is in order, and we will deliver the goods"; and they did. Of course, that was a step that I had to take, on the assumption that we would not have them in the war for six months. If they had gone to war in two months—I mean if they had not gone to war, but had gone over on the other side and been put in battle in two months—my assumption would have been wrong, and I would then have gotten what I deserved.

The CHAIRMAN. Then you do not know of any definite plan of procedure in the conduct of this particular war, worked out and given to you, on which your bureau could make complete preparations to proceed logically with the personnel?

Capt. PALMER. I do not.

The CHAIRMAN. That is all.

That is the Chief of the Bureau of Navigation during the war.

Secretary DANIELS. My answer to that, Mr. Chairman, is—

The CHAIRMAN. Wait a minute. I have another to put in.

Secretary DANIELS. Is it from Palmer?

The CHAIRMAN. No; Capt. Laning.

Secretary DANIELS. I submit as you read a statement from one officer that you put into my cross-examination that I shall be permitted—

The CHAIRMAN. I am perfectly ready to have—

Secretary DANIELS (continuing). To make a statement.

The CHAIRMAN. I am perfectly ready to have you make any statement about the matter I have dealt with, but I simply want you to know I have some other matter to put in at the same time.

Secretary DANIELS. If Capt. Palmer did not have any plan, and a plan requiring the Bureau of Navigation to do certain important things, he was the only chief of a bureau that did not have it from the General Board, which had required in 1915 every bureau chief to carry out certain policies and be ready for war. Capt. Palmer testified in this record before your committee that there never was a time from the beginning of the war to the end when there was need for men and officers for a ship that he did not have the men and officers. The reports of Capt. Palmer—

The CHAIRMAN. Mr. Secretary, will you give me the place in the record where that can be found? That has been referred to several times, and I would like to find it in the record.

Secretary DANIELS. Yes; I will give that. Never any time in case of war when a ship was ready that we did not have the officers and the men. Now, Capt. Palmer estimated—when you are speaking about estimates—he estimated it would take 93,000 men to man the Navy in the war before it began. The General Board in March, 1917, when Congress was in recess, recommended to me it would take 150,000 men. We obtained over 500,000 men.

Mr. Chairman, there is a great deal of bunk about this plan business. The whole country has read about the fiction that when the Franco-Prussian War began von Moltke was asleep and he turned over in his bed and said "Look in a certain drawer and find the plan

and run the war," and that has persisted with military men and civilians ever since. It is about the biggest canard ever exploded. The Germans had a plan this last war "Made in Germany," the most perfect plan, in accordance with Prussian militarism, that could have been made, and it worked very well until the Battle of the Marne, and when that plan was exploded there they never found themselves again.

Men who make a fetich of a plan lose initiative, they lose resources, they lose victory.

General plans must be made in advance. Everything possible must be studied out. There is not a wise military leader in the world that supposes he is going to run a war after it is started upon plans worked out before.

The French ruined the German plan at the Marne.

You must have plans that are progressive. They change with changing conditions. Nine-tenths of the strategists who lay down plans presuppose that the enemy is going to come in a certain place and attack them, and that is a perfect plan for that campaign. But, as a matter of fact, the enemy does not always come where you expect him, and your plan is in the scrap heap.

Now, Capt. Pratt showed that very fully when he told you he made 30 different plans himself, looking before and looking all the time for the changing conditions. And the only military leader who ever wins a victory is the man who studies the plans before the war, changes them, makes them up to date for changed conditions.

Now, as to the plans for personnel, when Capt. Palmer made his estimate of 93,000 and the General Board made their estimate of 100,000, and I recommended to the Naval Committee 97,000, there is not an officer in the Navy who did not think that was enough men. In March the General Board thought 150,00 ought to be had, and I asked Congress for them. We did not then expect to man the merchant ships; we did not expect to man all ships, and do a hundred things we never did, and for anybody to sit down in March and tell the Bureau of Navigation that six months hence you have got to have men for this or that, when changing conditions of war brought new ships and new methods and new lines, was an impossibility.

Let us have wisdom about plans. Let us have great men, like Badger, to make plans, general plans and specific plans for certain wars, but do not let us ever fool ourselves. Any set of men that ever lived, even Von Moltke, could not do it. Hindenburg failed and Ludendorff failed. There is not a military man who ever lived who can sit down before the war and draw up all the plans and say do this and do that.

So that in navigation we had plans, absolutely the best plans that were possible with the contingencies. Our first plan was this, to ask Congress for enough men. In 1914 I asked Congress for a Naval Reserve. The Secretaries had been asking for it for 10 years and did not get it. Congress gave it to us. In the act of 1916 we changed that Naval Reserve, and that Naval Reserve saved our lives.

In January, 1917, although we had had an increase authorized by Congress from fifty-odd thousand to seventy-odd thousand, with 20,000 additional for emergency, when January 1 came we were 20,000 men behind, and I gave orders to Navigation to enlist the

regulars to the full. We enlisted them all the way through, and there never was a minute when the plan of Navigation did not have enough men for the job they had to do, and the Navy cooperated in every way, so that we never failed at any time to have men for any job, and the big jobs that were put upon us.

The CHAIRMAN. I have just read you, Mr. Secretary, the specific objections raised by the Chief of the Bureau of Navigation because he did not have——

Secretary DANIELS. And I am telling you the Chief of the Bureau of Navigation, if he did not have the plans——

The CHAIRMAN. Did not have anything.

Secretary DANIELS. Well, he had the General Board plans.

The CHAIRMAN. Which were very general and had nothing to do with this matter.

Secretary DANIELS. But he has these directions; he had the directions to enlist 97,000 men.

The CHAIRMAN. He states here that he had directions to get the men ready a week after they were called.

Secretary DANIELS. Wait until I get through. He had instructions to enroll 97,000 men from August until January and very few were enlisted. He had instructions to enroll every man possible and thousands were enrolled. Now, what did he complain of? That somebody did not sit down, when we had no idea of manning the merchant ships, when we had never thought of armed guards, when no nation on earth had planned the great things the Navy did—that somebody did not sit down and write a paper saying, six months hence you do this, and four months hence you do this, and five months hence you do that, when the war was a continually changing war? The answer is we had the plans, we had the men, we got the officers. There never was a ship from——

The CHAIRMAN. I do not see how you can say you had the plans when the Chief of Bureau says you did not have the plans.

Secretary DANIELS. I say the Chief of the Bureau's memory is not very good.

The CHAIRMAN. He knew about his own bureau.

Secretary DANIELS. His memory, when he was before the committee, showed he had a better forgettery than a memory.

The CHAIRMAN. You say that about his general statement?

Secretary DANIELS. A better forgettery.

The CHAIRMAN. Perhaps it would be better to specify why.

Secretary DANIELS. In my direct testimony I have.

The CHAIRMAN. You have specified perhaps one or two cases.

Secretary DANIELS. All right. He said he had no plan. The General Board sent a plan to every bureau. He told you in his testimony that I directed him to stop enrolling reserves in January.

The CHAIRMAN. He says:

We have simply that thing from the General Board, which says that we be prepared to furnish within a week after the order, the personnel.

Secretary DANIELS. He said "only that thing." Now, Mr. Chairman, I do not think it is very proper for an officer of the Navy to refer to a plan which the General Board worked out with great care as a "thing." It was a very definite and very able and very comprehensive and statesmanlike statement.

The CHAIRMAN. I do not think that is a very serious matter, Mr. Secretary.

Secretary DANIELS. I do not think it is very serious either, but you seem to think——

The CHAIRMAN. No; I am speaking about where——

Secretary DANIELS. You seem to be stressing the fact that the Chief of Navigation did not have any plans.

The CHAIRMAN. No plans?

Secretary DANIELS. Well, I say he did have plans but that he has forgotten them.

The CHAIRMAN. Except the General War Board's plan, which was of no particular value, apparently.

Secretary DANIELS. If he says it is of no particular value, that is his opinion.

The CHAIRMAN. I am saying that. I can not find from the testimony that it was of any great value.

Secretary DANIELS. Let me read you what Admiral Badger says, page 2621:

The gist of the criticism of the operations of the Navy Department and the Navy now under investigation is contained in the charges of unpreparedness to enter the war; absence of war plans or policies at the commencement of the war; vacillating and hand-to-mouth policies and plans after war was declared resulting in extending the duration of the war and thereby enormously increasing the allied war losses in lives, ocean tonnage, and money.

Now, Admiral Badger says:

To each and all of these I enter emphatic denial.

The CHAIRMAN. Would you not think the testimony of the Chief of the Bureau of Navigation would be of some value in matters connected with his bureau?

Secretary DANIELS. Yes; undoubtedly; but he is——

The CHAIRMAN. And he has shown the difficulties that he encountered because he did not have a plan.

Secretary DANIELS. Why, Mr. Chairman, there was not a minute from April 6 to November 10 when there were not difficulties everywhere, when there were not obstacles everywhere, where every man was not working under steam and pressure. Of course, he had difficulties. Of course, everybody had difficulties. But there are two kinds of officers: One officer is one where he sees an obstacle says: What is an obstacle? It is something to overcome.

The CHAIRMAN. That is exactly what Capt. Palmer did.

Secretary DANIELS. There were obstacles. They were overcome. What is the wisdom of saying there were obstacles?

The CHAIRMAN. So that the next time we shall have a proper plan.

Secretary DANIELS. Well, we had proper plans.

The CHAIRMAN. Not according to the testimony of the officers who were immediately interested.

Secretary DANIELS. Admiral Badger tells you so; Capt. Pratt tells you so; the evidence discloses it. But the question is: What is a plan?

The CHAIRMAN. Yes; that is what we have been trying to find out for some time.

Secretary DANIELS. I think, Mr. Chairman, if you will allow me to say so, that you and many of us who are civilians think that a plan is a fetich; that some men think they can come in a room and sit

down and take a pencil and a map and before war begins have drawn out exactly where it is going to be fought.

Take the Spanish-American War. When Admiral Dewey sailed away to Manila every ranking officer of the Navy nearly was anxious to get down to Cuba, wanting to get in the war zone, and all the maps and all the plans were going to have the fight in the Caribbean, and the world woke up to see the war zone was at Manila. And not one man in a thousand had thought about that being the war zone.

The CHAIRMAN. There was very little warning on that occasion. In this case, however, we had three years of warning.

Secretary DANIELS. And we had prepared for it.

The CHAIRMAN. That is what I want to find out. I do not believe you were prepared as far as personnel is concerned—as far as the plans for operating personnel are concerned.

Secretary DANIELS. When I tell you that there never was a minute during the whole war, with a demand five times as great as Capt. Palmer, the General Board, Operations, the Secretary, the Congress, ever dreamed of, and that we got these men, and there never was a ship ready, merchant ship, cargo ship, battleship, submarine, or destroyer, that we did not have the men for them, why it is a great—

The CHAIRMAN. How did you get the men? Capt. Palmer says here, "I had to adopt something, so that I took that plan and then decided to take off 6 officers from the 36 or 34 out of the actual battleships," and I understand they were already undermanned with officers, and he had to take them from one ship and transfer them to another. If a battleship had 1,000 men on it you could probably get enough men for 10 destroyers, but what would happen to the battleship?

Secretary DANIELS. We would put other men on it. We did this—and there was no other way to do it—we would take a ship that ought to have 1,000 men and we would put a certain number of men, experienced and trained men, on there, and we would take younger men and newer recruits and put them on there, and you would be astounded how fast they learned, how splendid they were.

The CHAIRMAN. But in the meanwhile the personnel of the battleship would suffer greatly by taking them off, just as Admiral Mayo testified happened to the fleet?

Secretary DANIELS. Well, of course, temporarily; but what would you have done? I asked the Congress for every man that the General Board and Operations and Navigation said we needed. We tried our best from August with a great recruiting campaign—from August 15 up to January—and we lacked 20,000 men of getting them. You can not compel a man to join the Navy in peace.

The CHAIRMAN. But if you had plans for personnel and had told the Chief of Navigation about it beforehand he could have made his arrangements for taking those men from places where they would not be greatly needed.

Secretary DANIELS. I told him when he first came into office:

I have just got a bill from Congress giving you 77,000 men at once, with 20,000 more in any emergency. Go ahead and enlist them.

What did he do? We opened stations, we sent out, we enlisted—bear this in mind—we enlisted in the Navy in 1915 every man we could get in.

The CHAIRMAN. That may all very well be, but that has nothing to do with the plan.

Secretary DANIELS. What do you say?

The CHAIRMAN. That may all very well be, but that has nothing to do with the plan that I am speaking about.

Secretary DANIELS. Well, my dear sir, the plan—you may have all the plans in the world and if you can not get the men——

The CHAIRMAN. But with properly worked out plans you can utilize the men you have to the best advantage, and Capt. Palmer states he was not informed of what action would be taken so that he could use them in such a way.

Secretary DANIELS. Well, I am telling you that plans were worked out. He was told this: "We wish you would have so many men on certain ships which are going into commission."

Now, to be sure, the refusal of young men to enlist in the Navy before the war gave us a shorter personnel than Congress authorized, but you could not compel them to come in. But from the beginning we had enough men and we trained them very rapidly.

I have very little patience with people who talk about great obstacles. There were great obstacles, but they were overcome, every one of them.

The CHAIRMAN. Now, Capt. Laning introduced a plan on March 13 to deal with submarines. On page 958 he states:

On or about March 14, 1917, that estimate and outline of plan was handed to Admiral Benson, who, after reading it, directed Capt. V. O. Chase, Capt. W. V. Pratt, and Capt. F. H. Schofield to examine it and draw up a more complete estimate and plan. I was never shown the results of their work, but was several times questioned by them as to certain features of my estimate, and Capt. Pratt told me that their decisions were practically the same that I had reached. Later I was told by Capt. Schofield that they had completed their estimate and plan, and that it had received the approval of Admiral Benson, but that they had been unable to get departmental approval to go ahead with it.

Had the department approved that plan, or even authorized Admiral Benson to go ahead with the plan, which must have been presented about the time war was declared, the various parts of the Navy Department would have been informed as to what their missions were and could have proceeded to carry them out. Without such a plan no one knew what to do. The Bureau of Ordnance not having any definite plan to provide guns and ammunition for, was forced to order them for all kinds of projects whether or not such projects might be feasible in the war as it was necessary to wage it. The Bureau of Supplies and Accounts had no information on which to base their purchase of supplies and was forced to buy not what actually would be needed, but what they guessed they might possibly be called on for. The Bureau of Navigation had no idea of what they should do as to providing personnel. Every bureau and every office was in a similar predicament. Such a plan was equally necessary to those at sea, for without it instructions could not be given them as to how to best direct their efforts. All of these faults would have at once disappeared had there been an approved plan on which the whole Navy could be concentrated.

I do not mean to infer that the Navy Department had no general plans whatsoever for war. As in all navies, we had a more or less well-prepared plan for the conduct of a war along the ordinary lines where all classes of ships are free to operate. What we did not have and what we needed at that time was a plan for waging war against an enemy that used only submarines. That such plans were not prepared long before is not remarkable, for until the Germans used their submarines as they did, no one conceived of such a war. However, at the time we entered the war submarine warfare was an established fact, and its methods were sufficiently well known for us to lay plans to combat it.

And this plan to which I refer was the plan to determine the best plan for utilizing those funds provided by Congress and was not simply a plan about submarines.

Secretary DANIELS. Well, Mr. Chairman, have you finished Laning?

The CHAIRMAN. Yes.

Secretary DANIELS. Well, Capt. Laning, if he made a plan, it is news to me. I suppose a thousand officers made plans. I brought before your committee suggestions of 300 or 400. Capt. Laning never brought any plan to me.

The CHAIRMAN. He brought it to the Chief of Operations.

Secretary DANIELS. I never heard of any plan Capt. Laning made, and with all due deference to Capt. Laning I do not think what he says is true, that if what he said had been adopted, everything would have been all right.

Now let me read you something about Capt. Laning. Capt. Laning, who read you a long and doleful statement of alleged shortcomings, referred to what he called the "personal characteristics" of the Secretary of the Navy. He really complained that I was the real Secretary of the Navy and not a rubber stamp. Hear this commendation of my zeal and determination to full the duties of the office in perilous days when the "God-savers" in the department each had a plan he had evolved and which he believed was the only plan that could win the war:

The personal interest taken by him [the Secretary] in all matters connected with the department absorbed so much of his time that he never had much left to give us on the more important affairs. It was my duty to endeavor to understand "all matters connected with the department."

That is news to everybody, that Capt. Laning's duty was to understand all matters connected with the department.

The CHAIRMAN. What was his position?

Secretary DANIELS. I think at that time he was under Benson; I think third man under Admiral Benson.

The CHAIRMAN. And later Acting Chief of Operations?

Secretary DANIELS. Later Chief of Navigation.

The CHAIRMAN. And never was Acting Chief of Operations?

Secretary DANIELS. He was transferred from Operations to Navigation as officer in charge of detail, and then Capt. Palmer went to sea and he became the Acting Chief of Operations——

The CHAIRMAN. Of Navigation?

Secretary DANIELS. Of Navigation.

It was my duty to endeavor to understand "all matters connected with the department," to support the officers intrusted with important duties, and to direct the policy of the Navy Department and to determine for myself and not leave to a subordinate to fix the naval policy. Capt. Laning thought what he recommended embraced "the more important affairs," but I did not agree with him. For example, he presents copies of letters drafted to the Secretary of the Treasury and the Secretary of War with reference to turning over all the German ships to the Navy Department. He evidently did not know—and I did not have the time to send for him and tell him about the "more important matters" that were engaging my attention—that the best method of utilizing the German ships had been under consideration between Cabinet officers before the letters were prepared for my signature. This was a governmental, not a departmental,

question. It was determined in personal conference by members of the Cabinet and high officers of the Navy and high officers of other departments and my recommendation made in person was adopted.

It is the height of vanity for a subordinate in a bureau to suppose the Secretary of the Navy, who was giving most of his time to inter-departmental plans, to pause to send for that officer and explain why he refused to adopt the policy of signing letters to other Cabinet officials when he was able to secure what was for the good of all by personal conferences. Not for a moment during the World War, though it was suggested now and then by a subordinate officer, was I guilty of the offense of "passing the buck." In naval circles that means to fix the record so as to show that you recommend everything possible and put the responsibility upon some other person or department. I recognized that other departments of Government were vitally concerned with the question of transporting troops to Europe, that whole-hearted teamwork was required, and that this could not be promoted by "passing the buck." I should have despised myself if I had at any time pursued such a course.

Capt. Laning also devotes much time in the vain attempt to prove that I exercised great delay in the great destroyer program. From the passage of the three-year program, in 1916, every shipbuilding plant in America that could construct a destroyer was busy, and in cooperation with the responsible officers I pressed through as early as it was possible to make new plants the great destroyer-building program. Out of the first emergency fund I placed orders for every destroyer every plant in America could undertake and then called upon Congress to build other great plants. This criticism, without the shadow of foundation, falls to the ground when all the facts are known, just as do all others.

Only one more reference is necessary to refute Capt. Laning's indictment that I did not sign every letter suggested to me on the very moment of its presentation. He furnished your committee with a statement which might convey the impression that my delay materially aided in losing the war because I did not immediately place orders for torpedoes and shells when the Bureau of Ordnance pointed out their need. Even in war times I had some regard for the prices that the Navy should pay for supplies and munitions; and except in case of great emergency before Congress gave authority to place "Navy orders," was diligent to secure a dollar's worth of naval efficiency for the expenditure of a dollar of public money. I did hold up the recommendation of the Bureau of Ordnance for torpedoes until I could see the manufacturers, and saved over \$5,000,000 by this negotiation in the purchase of torpedoes. I did not place the orders for shells until conferences with manufacturers, and saved about \$200,000 for shells. These negotiations were conducted jointly by me and the Chief of the Bureau of Ordnance, and nobody can say that the action taken affected the war by a hair's breadth, that we ever needed one torpedo when did not have hundreds, or that there was ever a need for shells when there was not an abundance.

Now, Mr. Chairman, I call your attention to a letter written by Admiral Palmer on October 10, 1916.

The CHAIRMAN. Does this appear in the record?

Secretary DANIELS. It is a part of my testimony.

The CHAIRMAN. Will you give me the page?

Secretary DANIELS. It is page 9 of my testimony on increase in personnel. I will just read a paragraph from it. I want to show you what Capt. Palmer thought officially as to the need of men in the Navy on October 10, 1916 [reading]:

Appreciation of the immediate needs of the service has been shown to be nation wide, and in the recent naval appropriation bill Congress carried out the wishes of the people by enacting legislation of far-reaching importance. This includes a provision for an immediate "authorized enlisted strength" of 68,700 men and 6,000 apprentice seamen, a total of 74,700. Preparation for the future was not neglected, and the same bill authorized the President, in emergency, to increase the "authorized enlisted strength" to 87,000. It is evident that Congress considered the present needs of the naval service in deciding on this number at this time, as the usual additional allowance of apprentice seamen—6,000—would provide for an actual enlisted strength of the Regular Navy of 93,000.

It is interesting to note that the above figure closely approximates the bureau's preliminary estimate of 93,957, which provides for the number of enlisted men (including average sick allowance) necessary to fill the billets in 1921, the year of completion of almost all of the present program.

He only wanted 93,000 up to 1921, the year almost of the completion of the present program. I will not read all of that. That was his opinion at that time.

The CHAIRMAN. So far as the three-year program was concerned, none of the ships that were provided for in that program were expected to be ready until the end of the three years, were they?

Secretary DANIELS. Mr. Chairman, we built, finished, and put in commission during the war 471 ships.

The CHAIRMAN. Under the three-year program?

Secretary DANIELS. Some of them under the three-year program.

The CHAIRMAN. Yes; but how many under the three-year program?

Secretary DANIELS. I will read you first the number we finished during the war, some of them under the three-year program:

Destroyers, 38; submarines, 10; Eagle boats, 3; subchasers, 408; mine sweepers, 17; motor boats, 471; built and completed and commissioned.

The CHAIRMAN. And how many of these were under the program?

Secretary DANIELS. I think practically all the destroyers, Mr. Chairman.

The CHAIRMAN. Work, I presume, was speeded up on them on account of the war?

Secretary DANIELS. The very day that the three-year program was signed by the President—I will give you the statement here:

Twenty destroyers appropriated for in the act of 1916 were contracted for at once, bids invited, plans and specifications issued, on the day the bill was approved. Fifteen more of the 50 authorized in the three-year program were provided for in the act of March, 1917. They were immediately contracted for.

Under the naval emergency fund appropriated by Congress March 4, 1917, to be expended at the discretion of the President, further orders were placed for 76 destroyers, some of them being contracted for in March and others as early as the contracts could be placed.

The CHAIRMAN. Those had nothing to do with the three-year program.

Secretary DANIELS. They followed that; so that by the middle of August, 1917, there were building or contracted for 111 destroyers.

The act of October 6, 1917, authorized the building of 150 more destroyers, and all of these were contracted for immediately, 70 on

October 9. Think of it! The act passed on October 6. We contracted for 70 on October 9, three days afterwards; for 40 on October 11, and for 40 on October 15. Thus we had contracted for 241 destroyers within six months after the war was declared, in addition to the 20 contracted for in the fall of 1916.

The CHAIRMAN. Do you recall how much we spent on these destroyers?

Secretary DANIELS. I think it was \$350,000,000.

The CHAIRMAN. How many of them did we use in the war?

Secretary DANIELS. I will get you the figures, Mr. Chairman. I have not the figures here.

The CHAIRMAN. Therefore, 20 of them were built under the three-year program, were they not?

Secretary DANIELS. Thirty-eight.

The CHAIRMAN. I thought you said 20.

Secretary DANIELS. Thirty-eight.

The CHAIRMAN. Thirty-eight?

Secretary DANIELS. Thirty-eight.

The CHAIRMAN. And you say Admiral Palmer estimated that he would need 93,000 men. Of course, that had nothing to do with anything that came about beyond the three-year program?

Secretary DANIELS. Well, that is the number of men he thought we would need in 1921.

The CHAIRMAN. When did he make his estimate?

Secretary DANIELS. October 10, 1916.

The CHAIRMAN. So that his estimates were based on the three-year program, which at that time was not expected to be finished for at least two to three years?

Secretary DANIELS. Based on that, and what he thought might possibly be the requirements if we went into war.

The CHAIRMAN. Where do you get that?

Secretary DANIELS. Where do I get that?

The CHAIRMAN. Yes; did he tell you in his estimate? Did he say he would specially provide for what we would need if we went into war?

Secretary DANIELS. Well, Mr. Chairman, the General Board, you know, had called on all the bureaus to be ready for war, and I take it that he had in mind enough men, if we should have such an emergency come. I will look up his letter and see.

The CHAIRMAN. And you say the 38 destroyers under the three-year program were used in the war, do you?

Secretary DANIELS. Thirty-eight.

The CHAIRMAN. They were ready and were used in the war?

Secretary DANIELS. I think that is correct. I will verify that by reference.

The CHAIRMAN. Where were they used? Were they used over in European waters, in the war zone?

Secretary DANIELS. If you will look in Admiral McKean's testimony or Capt. Pratt's testimony, you will see. I do not recall. They were sent wherever the Bureau of Operations thought they were most needed.

Mr. Chairman, you asked me if he had in view anything about the war. He says: "Preparation for the future was not neglected,

and the same bill authorized the President, in emergency," etc. That shows that he had in mind that some emergency might exist.

The CHAIRMAN. And that was what was done, was it not?

Secretary DANIELS. What?

The CHAIRMAN. On March 24 the President called for 93,000 men or 97,000 men, including 6,000 yeomen?

Secretary DANIELS. Yes; on March 24 the President issued his Executive order.

The CHAIRMAN. Therefore Admiral Palmer had called for those in 1916—

Secretary DANIELS. Oh, no.

The CHAIRMAN. Had made his estimates in 1916?

Secretary DANIELS. Wait and let us get the facts straight. In August, 1916, before Admiral Palmer came to the Bureau of Navigation, the Congress, upon my recommendation, authorized an increase to 83,000, with a provision in emergency—

The CHAIRMAN. Seventy-one thousand four hundred, was it not?

Secretary DANIELS. Yes; and adding apprentice seamen and hospital, and so on, it makes 83,000. You never count those. You say 71,000, and the percentage of the others. Under that bill Admiral Palmer, under the Bureau of Navigation, was authorized to have 71,700 places, making with the others eighty-odd thousand that was authorized by Congress.

The CHAIRMAN. Yes.

Secretary DANIELS. In that same bill the President was authorized to add about 20,000 more than that in emergency. And now, on October 10 that was done; that was accomplished; that was settled; that was law. But Admiral Palmer came on—

The CHAIRMAN. No; the emergency call did not come until March 24.

Secretary DANIELS. The emergency call came later; and in October Admiral Palmer recommended that if the Congress would give us 93,000 men that would be sufficient to fill all of our needs up to 1921. He undoubtedly had the same view that the General Board had, and all naval officers, that if we had a naval war the Navy would only man naval ships, not merchant ships, not convoys; that we would not send 50,000 men across the sea on aviation, and things of that kind. I am not criticizing him.

The CHAIRMAN. The fact that the President recommended it as an emergency question four or five months later shows that he took the same view when he made the emergency call, does it not?

Secretary DANIELS. Why, of course, the President called for these men the very minute; even before all the regulars authorized had been enlisted.

The CHAIRMAN. Yes.

Secretary DANIELS. Admiral Palmer, you know, as I said just now, his memory was not very good. He told your committee that the President did not issue this extra call for these men until May.

The CHAIRMAN. That may have been a mistake in the reporting. I do not know.

Secretary DANIELS. It is just a matter of memory. He did not intend to do it. But I told you it was before the President issued his call for these extra men.

The CHAIRMAN. But that has nothing to do with this other matter.

Secretary DANIELS. Nothing at all, except that the President issued the call before we had filled the quota of the extra men.

The CHAIRMAN. What I wanted to find out was whether his recommendation of October, 1916, was not a reasonable recommendation.

Secretary DANIELS. It was a reasonable recommendation.

The CHAIRMAN. And it was the same thing that the President in an emergency called for four or five months later?

Secretary DANIELS. Not at all. Here is the difference: In August, 1916, before Admiral Palmer came to the bureau, the Congress—

The CHAIRMAN. Oh, I understand that.

Secretary DANIELS. Well, let us get it straight. You did not seem to understand it. The Congress authorized a total in emergency of 97,000.

The CHAIRMAN. Yes.

Secretary DANIELS. That was law. All the President had to do was to issue a proclamation to get them, if they would enlist.

The CHAIRMAN. Admiral Palmer indorsed that not as an emergency, but for the Regular Navy.

Secretary DANIELS. October 10, 1916. When Admiral Palmer was required to make his usual estimates to Congress, to the Secretary of the Navy for Congress, taking everything into consideration, he recommended—he says that he recommended—93,000 men. That was in order to enable us to get along until 1921. The General Board then thought 100,000 would be sufficient. Congress had given us 97,000. In March the General Board recommended 150,000. I recommended it to Congress and Congress granted it.

The CHAIRMAN. I have here a list of the destroyers on November 1, 1918. There were at home, 29; Europe, 58. Those were oil burners. Coal burners there were 8 at home and in Europe 12. In Europe both oil burners and coal burners, there were 70.

Secretary DANIELS. Will you let me have those figures, Mr. Chairman? I would like to verify them.

The CHAIRMAN. They are taken from Capt. Pratt's statement [handing paper to the witness].

Secretary DANIELS. Yes; I would like to verify the statement as to numbers.

The CHAIRMAN. Yes. Now, I think we had in the latter months of the summer of 1917 something like 50 destroyers on the other side, did we not?

Secretary DANIELS. What month is that? I have forgotten the number, Mr. Chairman.

The CHAIRMAN. Fifty, during the summer of 1917.

Secretary DANIELS. On April 24, I think it was, 1917, Admiral Sims cabled us that the war council and the British Admiralty agreed that if we would send twenty-odd destroyers over that would defeat the submarines in the critical area and keep them down. We sent 28. I will get the figures about that. I do not carry figures in my head very well.

The CHAIRMAN. But we had substantially 50, or I will not say that we did not have more, on September 1, 1917; and at the close of the war, November 1, 1918, we only had 20 more.

Secretary DANIELS. Yes.

The CHAIRMAN. Now, you say we spent between three and four hundreds of millions of dollars on destroyers during the war, and out

of that we only increased the number that we had available over there by 20?

Secretary DANIELS. Mr. Chairman, up to August, 1916—up to January, 1917—no destroyer had ever been built in the world under 22 months. It generally took 24 months. We built every destroyer at the very top speed that any concern in America could build destroyers, and we built a plant at Squantum and built 104 more destroyers. Now, as to the figures of how many we had there at any given date—

The CHAIRMAN. I want to know what we got out of the three hundred and fifty or four hundred millions of dollars that we spent on destroyers.

Secretary DANIELS. We got them.

The CHAIRMAN. But did we get them during the war?

Secretary DANIELS. We got them as quick as any people in the world could build them; as quick as the Navy could get them.

The CHAIRMAN. But we did not get them during the war?

Secretary DANIELS. I will have the figures for you on that. I do not recall them. I do not carry in my head the number of ships or dates very well.

The CHAIRMAN. And at the same time, Mr. Secretary, I would like to have a list of all the ships that were in the 1916 program that were actually used during the war.

Secretary DANIELS. Yes.

The CHAIRMAN. That were eventually and actually used during the war.

Now, Mr. Secretary, I can not be here to-morrow for a hearing, and when we adjourn we will therefore adjourn until Monday morning, and at that time you will bring me a schedule showing the plans, will you not?

Secretary DANIELS. I will confer with Admiral Badger and bring you a statement.

The CHAIRMAN. Yes; but—

Secretary DANIELS. And whenever you wish, Admiral Badger—

The CHAIRMAN. If you can not bring the plans themselves—if you can not give the plan itself—I want a statement giving the date of the adoption of the plan, and the reasons why it can not be produced, and I want a list of all of the plans that were in the hands of the General Board that had to do with any possible war with Germany, from July 1 on, both basic and operational, so that we can put them all together, and know just what we had for plans at the date of the opening of the war, April 6, 1917.

Secretary DANIELS. Of course, they are all in the hearings; but I will see Admiral Badger.

The CHAIRMAN. Yes; you can get them from the hearings; and, if you will, have them put those together, and then get them from Operations.

Secretary DANIELS. I will see Admiral Badger about that.

The CHAIRMAN. Then, I will have some further questions about the plans at that time. The committee will stand adjourned until Monday morning at 10 o'clock.

(Thereupon, at 4 o'clock p. m., the subcommittee adjourned until Monday, May 24, 1920, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

MONDAY, MAY 24, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, in room 235, Senate Office Building, at 10 o'clock a. m., Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Keyes, and Trammell.

TESTIMONY OF HON. JOSEPHUS DANIELS, SECRETARY OF THE NAVY—Resumed.

The CHAIRMAN. The committee will come to order. Mr. Secretary, at the last meeting I asked you to bring a schedule showing the different plans of the General Board.

Secretary DANIELS. Yes; I have that. Mr. Chairman and gentlemen, at the close of the hearing on Friday you requested me to make a statement of all the plans made by the General Board that had to do with any possible war with Germany, from January 1, both basic and operational, so that we could put them all together and that you might know just what plans we had on the opening of the war, April 6, 1917.

In response to the question of your chairman, as I stated to your committee on Friday, there are certain basic plans disclosing the naval strategy and tactics which, if printed in these hearings, would be contrary to the naval policies of all countries; but, of course, these large and comprehensive plans, necessarily confidential, are open to the inspection of your committee, and Admiral Badger, chairman of the General Board, will be pleased in executive session to present them to your committee and to show in detail that the General Board, charged with the important duty of making plans for war in the Atlantic and the Pacific, did not neglect this duty imposed upon it.

The General Board, as testified by Admiral Badger, had with great care proceeded with a general study of plans covering the possible war with Germany—those prepared years ago and coming down to date—and the General Board had prepared plans according to the opinions of trained and expert naval officers. These officers, the members of the General Board, composed of some of the ablest naval officers in this or any other country, devoted themselves constantly to the change in conditions in Europe after the war began in 1914, and made numerous plans and studies of the different phases of this war. Different plans and studies were made to cover the various

operations that became necessary as soon as the nations began to take part in the war.

On February 4, 1917, the very day after the German ambassador was handed his passports by our Government, the General Board prepared a definite plan "as to steps to be taken to meet the possible conditions of war with the Central Powers." This was the plan of February 4, 1917, which concluded with these important recommendations, which were acted upon and which were carried out from the very first moment we entered the war until the end of it:

And, as most important, arrange as soon as possible plans of cooperation with the naval forces of the Allies for joint protection of trans-Atlantic commerce and for effective naval cooperation against the enemy.

That plan is as follows:

The CHAIRMAN. Is this the plan referred to on page 2617 of the typewritten record, in Admiral Badger's testimony, of February 4, 1917, "Steps taken to meet a possible condition of war with the Central European Powers"?

Secretary DANIELS. Yes.

The CHAIRMAN. General Board, 425?

Secretary DANIELS. Yes; E. D. 425. Can I read it all?

The CHAIRMAN. Yes.

Secretary DANIELS (reading):

[G. B. No. 425. Confidential. Serial No. 666.]

FEBRUARY 4, 1917.

From: Senior member present.

To: Secretary of the Navy.

Subject: Steps to be taken to meet a possible condition of war—

The CHAIRMAN. I think we have that in the record.

Secretary DANIELS. Yes; but you asked me to put them all together so that we could have them in one place. Shall I read it?

The CHAIRMAN. No; simply give us the plans.

Secretary DANIELS. Bear in mind, gentlemen, this comprehensive and definite recommendation was made on February 4, 1917, a month or two before war was declared, and the day after relations were broken off with Germany. It shows that neither the General Board nor the department were neglectful nor ignorant of the critical situation, as has been charged, or that they lacked the wisdom to take the action necessary to throw the maximum of naval efficiency into the war. Until Congress gave the authority, it was impossible for the Navy Department to commit an overt act or to do anything except to do everything possible to have the Navy and all contributing agencies as nearly perfect as possible, which was done. With reference to the concluding paragraph in these policies set forth by the General Board, and approved by the department and generally carried out, the General Board regarded "as most important of all to arrange, as soon as possible, plans for cooperation with the naval forces of the Allies." This was not an indefinite sort of cooperation, but it recommended two specific things to be done at once, first joint protection of trans-Atlantic commerce; second, offensive naval cooperation against the common enemy.

It is thus seen that even before we entered the war the idea of "offensive cooperation" was the dominating thought of the General

Board and the Navy Department. After we entered the war and in pursuance of coöperation, the General Board and the department considered the boldest and most audacious plans of naval warfare. In pursuance of this recommendation of the General Board in its plans of February 4, I recommended and obtained from Congress additional personnel for the Navy and Marine Corps and other operations and recommendations were carried out for the Navy's participation in the war were made as effective as it was possible for them to be made.

The CHAIRMAN. Was this recommendation directly in regard to something that was mentioned in the report of the board?

Secretary DANIELS. Yes; they recommended the increase of personnel of the Marine Corps.

The CHAIRMAN. And an increase in pay?

Secretary DANIELS. I do not remember whether the General Board made the increase in pay or not; but I did, and we secured it. I recommended and obtained from Congress additional personnel for the Navy and Marine Corps, and other operations and recommendations were carried out for the Navy's participation in the war were made as effective as it was possible for them to be made.

The CHAIRMAN. Yes; but that had nothing to do, you say, with the plans of the board. They did not say anything about additional pay; so that it was not in pursuance of their plans that you recommended it.

Senator DANIELS. Their plan was to secure additional enlisted force. They asked for 150,000 men for the Navy and 30,000 marines. I do not recall whether——

The CHAIRMAN. And did you in your recommendations ask for 150,000 enlisted men for the Navy and 30,000 marines?

Secretary DANIELS. Yes; and secured them, in March.

The CHAIRMAN. One hundred and fifty thousand men?

Secretary DANIELS. I think it was May 22.

The CHAIRMAN. It was not until May 22, then, that you took action on this?

Secretary DANIELS. Congress was not in session, you understand. Congress adjourned on the 4th of March, and Congress did not come back to Washington, my recollection is, until April 5, so that I could have made no recommendation to Congress in its absence.

The CHAIRMAN. But you could have made the recommendation——

Secretary DANIELS. In February; yes.

The CHAIRMAN. This was February, was it not?

Secretary DANIELS. Yes; in February. I will look into the facts about the date. I always like to refresh my memory by the record as to dates.

The CHAIRMAN. And you say that you recommended 150,000 men for the Navy in May?

Secretary DANIELS. I say that I will get the date for you. I recommended this number.

The CHAIRMAN. Very well.

Secretary DANIELS. I will get the exact date when the law was passed and when I recommended it. To be sure, neither the General Board nor the Navy Department had been furnished by any of the nations with which we were to later become allied with their plans of

cooperation. We were then a neutral Nation, and no matter how much the Navy Department or the General Board wished to secure close cooperation with the allied nations, it was manifest that they could do nothing as to securing war plans until Congress declared war. Our naval attachés were sending us such information as they had and we were getting much information through the State Department, but as Ambassador Page cabled, when he suggested that we should send an officer of high rank to Great Britain, the admiralty of that country would not give to the naval attaché or put in writing the most important of their operations against the enemy, even after we had broken off relations with Germany, except by personal conference with an admiral sent out by the American Government for the specific purpose of having conferences looking to the joint cooperation when Congress should declare war. Therefore the recommendation of the General Board in paragraph 22, in which they declared as "most important"—meaning securing cooperation with the naval forces of the Allies "as soon as possible"—was the wisest recommendation they could have made.

Indeed, it was the only plan to secure allied cooperation at that time and it was for the purpose of being ready on the instant that war was declared to cooperate with the Allies that Admiral Sims was sent to Great Britain. The General Board's plan of February 4, in the light of all that has happened, shows their wisdom and foresight and judgment and demonstrates that the department insisted on being prepared, and, as has been unfairly alleged, was not lacking in plans and lacking in foresight and lacking in readiness. The board was not only correct in its war plans immediately prior to the breaking off of relations with Germany, but was, after that, making ready for the emergency which came in April.

I have therefore given you, Mr. Chairman, the February 4 plan, for it was completed just one day after we broke off relations with Germany.

I will present to you now a letter which I sent to the General Board on November 26, 1915, which shows that we were making ready even before Congress had given us the three-year program, and the large increase of personnel and ships and other additions to the naval strength, which I had estimated for in October, 1915. It will be seen that I was calling for a study of plans necessary for participation of the fleet in the war. That letter is as follows:

[First Indorsement.]

NAVY DEPARTMENT, November 26, 1915.

From: Secretary of the Navy.

To: General Board.

Subject: Principal plans necessary for preparedness of the fleet for war.

1. Referred to the General Board for its information and consideration.

2. The principal plans necessary for the preparedness of the fleet for war and for its orderly conduct throughout a campaign are:

I. *Mobilization plan*.—A plan providing for the program of equipping and assembling all the naval forces and for placing on a war footing all naval shore stations and the Navy Department.

II. *Organization plan*.—A plan for grouping all naval forces as organs of the fleet, based on the tactics of types and of groups.

III. *Command plan*.—A plan giving the assignments of personnel to the organization plan to make the latter operative.

IV. *Strategic plan*.—A plan laying down the lines along which the naval operations should take direction.

V. *Base plan*.—A plan defining the area and locality upon which operations of the fleet must be based and supported, and giving the character and capacity of each base.

VI. *Advance base plan*.—A plan giving the location of temporary bases, a tactical study of each, material required, and extent of defensive works.

VII. *Logistic plan*.—A plan giving in detail all steps for equipping and supporting the fleet according to the strategic plan.

VIII. *Naval districts plan*.—A plan in detail for the local defense of coasts. 3. In order that the Navy may be thoroughly prepared for war, each of these plans for war in either ocean, or against any probable enemy, should be complete in great detail.

The CHAIRMAN. Mr. Secretary, one minute. Does this refer, now, to the plan of February 4. I want these matters to be put in chronologically.

Secretary DANIELS. I am putting in the plans showing that in advance we called upon the General Board, and I am showing that the General Board followed this out from the time I wrote to the General Board, specifically, in November, 1915, up to the time, as you asked, when we entered the war.

The CHAIRMAN. I understood you to say that on February 4, when we broke off relations with Germany, you had certain plans that were worked up to date at that time.

Secretary DANIELS. Which I have given to you.

The CHAIRMAN. Then, thereafter, you put in other plans to perfect them. Now, I want to get the list of the other plans that were put in to perfect them. This that you are reading now has to do with the original plans?

Secretary DANIELS. Yes.

The CHAIRMAN. I want the plans in chronological order, so that we can know what we are talking about.

Senator TRAMMELL. I think the Secretary has the right, and it is only fair to let the Secretary show that he had something to do with bringing about those plans.

The CHAIRMAN. That is all right; but I want to get it in chronological order.

Secretary DANIELS. I am giving it in chronological order.

The CHAIRMAN. You commenced with February 4, and now you are going back to something two or three years before.

Secretary DANIELS. I have given you the plan, and now I say to you, why was this plan worked up? This plan has been worked up consistently and constantly—

The CHAIRMAN. To get information.

Secretary DANIELS. No.

The CHAIRMAN. Yes; it was—

Secretary DANIELS. I do not mean by you; I do not mean by the members of this committee; but the charge has been made here continually that we had no plans; that if we had plans, the Secretary of the Navy did not have vision and foresight; and I have a right to show that in 1915, in a letter to the General Board, concretely I laid down the very lines on which I wished their action.

The CHAIRMAN. Now, do I understand that these plans of 1915—these suggestions of yours—all lead up to the plan of February 4, 1917?

Secretary DANIELS. They all lead up to the plan of having the Navy ready with plans for war when we entered the war.

The CHAIRMAN. Do they deal with the plan of February 4?

Secretary DANIELS. If you have read the plan and have listened to what I have said, you will see——

The CHAIRMAN. Then you are confining yourself to the plan of February 4, and later on you are going back to another plan?

Secretary DANIELS. I am confining myself to the plans made for war.

The CHAIRMAN. But I asked you to do it in a certain way.

Secretary DANIELS. But, Mr. Chairman, I insist that the certain way you ask me would leave out that I directed the General Board in 1915 to make these plans, and I will not permit witnesses to come here and tell your committee that I was negligent and I did not look ahead, and that I had nothing to do with this. I am going to show you, in this letter, that in 1915 I laid down identically the kind of plans we desired, and I am showing you that the General Board gave us these extensive plans, in accordance with the orders of the Secretary of the Navy.

The CHAIRMAN. If we do not get it chronologically, we shall have to go over the same thing again and again and again, until we do get it.

Secretary DANIELS. Now, Mr. Chairman, if you want it chronologically——

The CHAIRMAN. I do.

Secretary DANIELS. I will let your stenographer take this February 4 date and place it after the letter of mine.

The CHAIRMAN. That will mix the record up, because there will be a question——

Secretary DANIELS (continuing). After 1915. Whether this letter of mine of 1915 is essential——

The CHAIRMAN. There is no objection to having the whole thing in, but I want it in chronological order.

Senator TRAMMELL. I submit, Mr. Chairman, that in the preparation of testimony or a brief, you lay down your principal premise, and then support it with the authorities which bring about that result.

Secretary DANIELS. That is what I have asked him to do in regard to this particular plan, and he will not answer.

Senator TRAMMELL. He has cited an order, and now he is showing the basis on which this order was brought forth.

The CHAIRMAN. He was asked for a particular thing, and that particular thing I do not get.

Senator TRAMMELL. I think that in fairness the Secretary ought to be allowed to show what he had to do with the production of those plans, and he ought to be allowed to do it right in connection with the plans, and not a day or two later.

The CHAIRMAN. It is in connection with this plan. That is what I asked him, if it is in connection with this particular plan of February 4 that he is talking about.

Secretary DANIELS. I say to you this, that this plan is in compliance with my letter of November 26, and so are the other plans which I will read to you, carrying out my directions of November 26.

The CHAIRMAN. When you give a plan will you give anything you have to say about it in connection with that particular plan?

Secretary DANIELS. I am coming to that [continuing reading]:

In order that the Navy may be thoroughly prepared for war—

Now, this is 1915—

Each of these plans for war in either ocean, or against any probably enemy, should be complete in great detail, and should include all necessary orders drafted for carrying them into effect. It is not only necessary that each of the executive offices of the department should have defined the task which it must itself undertake, but each office should know the relation that its task bears to other tasks in the general scheme.

4. The eight plans enumerated are urgently needed, but the need for the first three is most pressing, and the department desires that the General Board submit for its approval, as early as practicable, complete detail plans for mobilization, organization, and command.

In compliance with this direction of the Secretary of the Navy the General Board made the plan of February 4, which is most complete.

The CHAIRMAN. This was two years before, and they did nothing in between?

Secretary DANIELS. Oh, on the contrary, I am showing you now what they had done in between. Here is a letter in which they review, on November 16, all that they have done in the year or 10 months [reading]:

In compliance with the directions of the Secretary of the Navy in the preceding indorsement, the plans requested were prepared and submitted by the General Board from time to time.

When completed the fact was so reported to the Secretary in the following indorsement of the General Board:

[Second indorsement.]

GENERAL BOARD,
September 8, 1916.

From: Senior member present.

To: Secretary of the Navy.

Subject: Principal plans necessary for preparedness of the fleet for war.

1. Returned.

2. Referring to the first indorsement, the General Board's action thereon has been as follows:

I. *Mobilization plan*.—This plan is contained in the Black plan, pages 70 to 118-F, inclusive, and Appendix A, pages 126-a to 144-g, inclusive.

II. *Organization plan*.—This plan was submitted to the Navy Department with G. B. letter No. 420, December 29, 1915, and was approved as revised and published in General Order No. 218, of June 5, 1916.

III. *Command plan*.—The details of this plan are being handled by the Bureau of Navigation and the portion of it relating to officers is kept revised to date as published monthly in the Navy and Marine Corps List and Directory.

IV. *Strategic plan*.—This plan is contained in the Black plan, pages 1 to 60-b, inclusive, and is being added to in accordance with Navy Department's letter of June 13, 1916, General Board Serial No. 553, covering special cases.

V. *Base plan*.—This plan was submitted to the Navy Department March 4, 1916, G. B. letter No. 404-A (serial No. 480) and approved by the Navy Department August 28, 1916, with the exception of the portion relating to a permanent repair and supply base in the Caribbean, on which decision is deferred for the present.

VI. *Advanced base plan*.—This plan was submitted to the Navy Department in General Board letter of June 16, 1916, and approved July 14, 1916, which approval directed certain additions which are now being prepared.

VII. *Logistic plan*.—The general logistic plan is contained in the Black plan—

That is for war with Germany——

The CHAIRMAN. That is the plan that can not be made public?

Secretary DANIELS. Yes. [Continues reading:]

The general logistic plan is contained in the Black plan, Appendix B, pages 145 to 150-a, inclusive. The detailed logistic plans are being handled by the bureaus having cognizance of the material concerned.

VIII. *Naval district plan.*—The general plan of organization of naval districts and assignment of naval vessels thereto is contained in the Black plan, Appendix A, pages 135-a to 140-d, inclusive. The details of the operation of naval districts are being handled by the officer in charge of naval districts in the office of the Chief of Operations.

3. In view of the foregoing, it is considered that the first indorsement, taken up by the General Board as serial No. 461, has been complied with in so far as is now practicable, and it has been removed from the list of papers under consideration by the General Board.

CHAS. J. BADGER.

To return to the matter in hand, immediately upon breaking off relations with Germany, I have given you the plans of February 4. One week later, or February 10, I addressed the following letter to the General Board:

FEBRUARY 10, 1917.

To: The General Board.

Subject: Solution of problem.

1. The department desires the General Board to consider the following problem and submit its solution as soon as practicable:

Problem: General situation—Conditions as at present except that war with Germany is declared.

The CHAIRMAN. Will you tell me again about that plan which was prepared on June 24, 1916?

Secretary DANIELS. Where is that?

The CHAIRMAN. The one you just read about.

Secretary DANIELS. I did not say June 24; I said June 13.

The CHAIRMAN. June 13?

Secretary DANIELS. Yes; General Board, serial No. 553.

The CHAIRMAN. And when did they take action on that?

Secretary DANIELS. This was a letter of Admiral Badger. He does not say when he took action on that. I will get that date. That may be or may not be a confidential plan. I will look into that. If it is a matter of strategy of war with Germany, it is confidential. If it is not, it can go in the record.

The CHAIRMAN. I have here a list given by Admiral Badger of the various acts of the board, and I do not find any such reference in the list.

Secretary DANIELS. Well, this is a letter from him which I am reading you, so that if he did not place it in here, why——

The CHAIRMAN. What is the date of the letter?

Secretary DANIELS. The date of the letter is September 8, 1916.

The CHAIRMAN. Oh, here is a letter of September 8, 1916.

Secretary DANIELS. Yes; this is his letter.

The CHAIRMAN. Apparently no action was taken on it.

Secretary DANIELS. Well, that is 1916.

The CHAIRMAN. Yes.

Secretary DANIELS. The plan of February 4 would have found that they had summed up in their actual working plan and basic plan

everything that was desired, and the subsequent plans that they sent, on up to April. [Reading:]

The general logistic plan is contained in the Black plan—that is, war with Germany—Appendix B, pages 145 to 150-a, inclusive. The detailed logistic plans are being handled by the bureaus having cognizance of the material concerned.

VIII. *Naval districts plan.*—The general plan of organization of naval districts and assignment of naval vessels thereto is contained in the Black plan, Appendix A, pages 135-a to 140-d, inclusive. The details of the operation of naval districts are being handled by the officer in charge of naval districts in the office of the Chief of Operations.

3. In view of the foregoing it is considered that the first indorsement, taken up by the General Board as serial No. 461, has been complied with, in so far as is now practicable, and it has been removed from the list of papers under consideration by the General Board.

CHAS. J. BADGER.

To return to the matter in hand, immediately upon breaking off relations with Germany, I have given you the plans of February 4. One week later, or February 10, I addressed the following letter to the General Board:

FEBRUARY 10, 1917.

To: The General Board.

Subject: Solution of problem.

1. The department desires the General Board to consider the following problem and submit its solution as soon as practicable.

Problem: General situation—Conditions as at present except that war with Germany is declared. Special situation—The Allies do not desire our battleship force at present. Required—Naval estimate of the situation—

We had that from Mr. Balfour, through the ambassador—

First. As to the grand strategy demanded by the situation.

Second. As to disposition of battleship force.

Third. As to method of assisting in maintaining communications with Europe, including scheme for cooperation with Allies.

Fourth. As to methods of driving submarine from the sea.

Assume: Mobilization of all naval vessels and possibility of mobilizing merchant vessels as required.

JOSEPHUS DANIELS.

On February 17 the General Board presented a report to the Secretary of the Navy, accompanied with the following letter:

GENERAL BOARD, NAVY DEPARTMENT,
Washington, February 17, 1917.

To: Secretary of the Navy.

Subject: Solution of problem—Black.

Reference: (a) Navy Department confidential letter of February 10, 1917.

1. In accordance with reference (2) the General Board submits herewith problem and solution based upon the general and special situations described in the Navy Department's instructions.

CHARLES J. BADGER.

The CHAIRMAN. That was what date—February, 1917?

Secretary DANIELS. February, 1917.

The CHAIRMAN. That was the plan that was lost?

Secretary DANIELS. That is the plan that they have not been able to find. This report was approved by the department and taken up by Operations.

The CHAIRMAN. What is that?

Secretary DANIELS. This report was approved by the department and taken up by Operations.

The CHAIRMAN. What, the plan that was lost?

Secretary DANIELS. Yes. When Admiral Badger came before your committee, and also Capt. Pratt, they said they were unable to find this report, which was an amplification of the report of February 4, and when approval of it was sent to the office of Operations it was undoubtedly acted upon by Operations for the carrying out of the first steps taken even before we entered the war and after we entered the war.

The CHAIRMAN. How could a report of that kind be lost, Mr. Secretary?

Secretary DANIELS. Search me! It was sent to the General Board by the Chief of Operations and returned to the Chief of Operations. I would say this, Mr. Chairman: Those confidential reports, when they were sent to Operations, were put in a safe, as a rule, and taken out either by the Chief of Operations or the Assistant Chief of Operations, and they were held as strictly confidential, and he gave out to other people such parts of them as he wished them to carry out. I told you the other day that it was a matter of very deep regret that Capt. Volney Chase could not be here. His death was a great loss to the Navy. He was assistant for Operations in the early days of the war. He gave his life, by his hard work day and night, in the Office of Operations.

Capt. Pratt made a diligent search for this, and so did Admiral Badger.

Under the rules a copy of this is never left in the Secretary's office. When it is sent by the General Board it is sent to the Chief of Operations, who brings it to the Secretary for his approval. Upon its approval he immediately takes it back and acts upon it. Now Admiral Badger, whose testimony, of course, will be accepted everywhere, says this report was sent as an amplification of the plan of February 4. Capt. Pratt tells you that he has made diligent search for it and he could not find it.

The CHAIRMAN. And you have no record of its being used, or anything like that?

Secretary DANIELS. There is no record in the Secretary's office. In Operations, whatever amplification of the plan of February 4 was contained in that plan undoubtedly was carried out.

The CHAIRMAN. But you do not know, specifically, about what happened in relation to the recommendations, and you do not know specifically what was in the plan?

Secretary DANIELS. As a matter of fact, that plan was an amplification of the plan of February 4, and the plan of February 4 outlined, as I have shown you, the plan on which the Navy Department should act. The amplification of it was undoubtedly carried out.

The CHAIRMAN. I would like to hear the plan of February 4 now.

Secretary DANIELS. You suggested that I need not read it.

The CHAIRMAN. Yes.

Secretary DANIELS. I will read it now [reading]:

Steps to be taken to meet a possible condition of war with the central European powers.

On account of existing conditions—

This was the day after the German ambassador had received his papers and went home—

the General Board recommends that the following steps be taken to meet a possible condition of war with central European powers:

1. Complete complements and allowances of all kinds, first of the A and B fleets, then of the C fleet, and naval districts.

These fleets that I refer to—A, B, and C—are in the Black plan, that is for war with Germany.

2. Mobilize the A fleet in the lower Chesapeake and increase it immediately to the B fleet. (See Black plan.)

3. Dock and repair all ships in reserve and ordinary that will be used.

4. Arrange for the supply of fuel to the fleet and stock all fuel depots to capacity.

5. Establish additional recruiting stations and increase personnel of the Navy and Marine Corps to the total number required to supply complements for all the ships built, building, and authorized, and to maintain shore establishments and naval defense districts, including aviation service, with 10 per cent additional for casualties, as follows: Enlisted force, Navy, 150,000; marines, 30,000; officers in the proportion prescribed by law.

6. Mobilize the naval districts, including the Coast Guard and Lighthouse Services, and put patrol vessels, mine sweepers, etc., of the Atlantic coast districts on their stations; no commercial vessels to be mobilized in the Pacific coast districts at present.

7. Prepare to the utmost detail for the employment of mines along our coast as may be necessary.

8. Prepare nets and other obstructions for submarines, ready for immediate use, at the Chesapeake Capes, Delaware Capes, entrance to New York Bay, eastern entrance to Long Island Sound Narragansett Bay, Panama Canal, and Guantanamo. Other places as their need becomes apparent. The General Board considers it of the utmost importance that net protection shall be immediately provided for the fleet during its mobilization in Chesapeake Bay.

9. Establish immediately the guards at all navy yards, magazines, radio stations, powder factories, munition plants, bases, shipbuilding yards, and naval shore utilities in accordance with the mobilization plans.

10. Reduce the force of marines in Haiti and Santo Domingo to the smallest number that can maintain order there; transferring these men to the United States to perform necessary guard duty at navy yards, magazines, radio stations, shipbuilding plants, and to form cadres for the organization of new regiments as recruits are obtained. Organize the advanced-base force and complete its equipment.

11. Leave in the Caribbean a sufficient number of light cruisers to keep a lookout for submarines in those waters and for the protection of our interests there. Protect the canal and Guantanamo, as far as possible, by the use of mines, and where possible by monitors, submarines, and nets.

12. For the present use the greater part of the destroyer flotillas as patrol for submarines in the vicinity of the principal ports or entrance leading to them.

13. Base the submarines at canal, Guantanamo, and points along the coast in accordance with the Black plan.

14. Rush to completion all naval vessels building or authorized; also build up the Aviation Service as rapidly as possible.

15. Guard all bays and harbors on the coast of Maine to prevent their use as bases of supply. Patrol waters of Haiti, Santo Domingo, Porto Rico, and Danish West Indies; Cuban Coast Guard service, to assist in patrolling all bays and gulfs of the coast of Cuba.

16. Prepare to close entrance to all ports at night and discontinue or change such aids to navigation as may be necessary.

17. Organize a comprehensive system of intelligence service covering the whole theater of war in accordance with the plans of the Office of Naval Intelligence.

18. Take possession of all interned vessels of war of Central Powers, also take control of all commercial vessels of Central Powers now in the United States waters.

19. Place under surveillance all citizens of the Central Powers in the Navy or in Government employ in naval establishments, and remove them from positions in which they may do possible harm.

20. Arm our merchant ships for the purpose of defense.

21. In accordance with Black plan carry out the following:

(a) Issue proclamation prescribing defensive sea areas and put rules in regard to them in force.

(b) Issue proclamation prescribing press regulations and establishing censorship of cable and radio, including naval control of all commercial and private radio stations.

(c) Issue President's order in regard to visit and search, capture, etc.

22. And, as most important, arrange, as soon as possible, plans of cooperation with the naval forces of the Allies for the joint protection of trans-Atlantic commerce and for offensive naval operations against the common enemy.

CHAS. J. BADGER.

The CHAIRMAN. Now, Mr. Secretary, you have already read me your letter of February 10, have you not, your letter to the board asking for further plans?

Secretary DANIELS. Yes; I read that.

The CHAIRMAN. Without putting it in the record now, will you read that again?

Secretary DANIELS. My letter of February 10?

The CHAIRMAN. Yes; your letter of February 10.

Secretary DANIELS. Yes.

(Secretary Daniels again read the letter of February 10.)

The CHAIRMAN. That is to be taken as an amplification of this plan of February 4?

Secretary DANIELS. Mr. Chairman, the letter of February 10 and the plan of February 4 indicate what the plan of February 17 was. It was made in response to my letter of February 10.

The CHAIRMAN. Yes; but you do not know what was in it. I say, that letter was written to get them to amplify that plan of February 4?

Secretary DANIELS. To carry out exactly what is said in the letter.

The CHAIRMAN. Very well.

Secretary DANIELS. Now, proceeding chronologically, the General Board was in continuous session making studies and plans. In February and March the General Board was studying every possible condition which the Navy might be called upon to meet. The February 4, 1917, plans, as I have shown you, dealt with the large operation and policies at home and abroad which should govern us in our conduct of the war abroad and at home, laying stress on the necessity of the immediate close cooperation with the Allies and offensive action to secure victory.

On March 17 the General Board having in mind the danger of an attack upon our metropolis, the city of New York, the great shipping port through which most of our troops and supplies went to Europe, presented the following study and plan:

GENERAL BOARD, DEPARTMENT OF THE NAVY,
Washington, D. C., March 17, 1917.

From: Senior member present.

To: Secretary of the Navy.

Subject: Estimate of the situation as to system of patrol and sweeping best adapted for protection of shipping off port of New York.

Inclosure: Chart.

Mission: To protect from submarine attack all shipping approaching or leaving New York.

1. According to shipping reports \$1,000,000,000 is a conservative estimate of the value of shipping and cargoes entering and leaving New York monthly,

from and to foreign ports. In 12 months this is \$12,000,000,000. One per cent of this is \$120,000,000. Thus the money needed to provide protection to shipping against submarine operations off New York will be a very small percentage of the value of the property to be protected.

2. *Enemy forces—Strength, disposition, probable intentions, etc.*—The number of enemy submarines which may appear off the harbor is uncertain, but in view of the number supposed to be available, the distance they have to come, and the lack of any known bases on this coast, it is probable they will appear in groups of two or more, possibly accompanied by submarine tenders, but in any case the number will be small. As the object of the enemy is to destroy as much merchant shipping as possible in order to stop or reduce the shipment of supplies to the Entente Allies, attacks will primarily be made on merchant vessels.

3. To accomplish this the submarines will use torpedoes, guns, or mines.

4. Guns will be effective against unarmed shipping and be the most economical of the three weapons, because with a given weight of ammunition the return will be greater.

5. Torpedoes may be fired by submarines from the surface or submerged, but the number carried by a single submarine is limited, and therefore the range at which it will be profitable to fire torpedoes must be short, especially when the submarine is submerged. Torpedoes will be used against the largest ships, as such ships will present the largest target and may be destroyed by a single torpedo.

6. Mines can be used in water not over 50 fathoms in depth, and if used, will be laid in the most probable tracks to be followed by shipping and as near the focus of those tracks off the port as possible. They may be laid from large submarine mine layers, and have been laid from neutral vessels fitted with secret compartments. A combination mine laying and supply submarine may be employed.

7. It is improbable that mines will be laid in the areas in which it is expected to employ submarines with torpedoes and guns. Consequently a combination mine laying-supply submarine may at first lay its mines as close in as possible, and then proceed to a determined rendezvous to supply the gun and torpedo type operating off shore. Presence of mines in an area before a port will indicate that such an area will not be a cruising ground for submarines using torpedoes and guns.

8. *Our own forces—Strength, disposition, and courses open to us.*—Destroyers, light cruisers, and gunboats are all we have available at present to use against submarines. There are not enough of these to meet the needs of the situation in general even if sufficient for a single port. It will be necessary to take over yachts, fishing vessels, and suitable commercial crafts to make up the numbers which will be needed. It remains, therefore, to determine approximately what those numbers will be and the armament and qualities they should possess.

9. To combat submarines and to deprive them of the advantages which the ability to submerge gives them:

(a) If they use the gun, guns of equal or greater power must be used against them.

(b) If they lay mines, waters where they can lay them, and which it may be necessary to use must be swept, and may be searched by aircraft.

(c) If they fire torpedoes when submerged by day or from the surface at night patrol of waters by surface craft or search by aircraft is necessary to locate and trap or force them to keep under the surface, and convoy of large vessels by small surface craft may also be necessary.

The CHAIRMAN. This is all on the plan of March 17, is it?

Secretary Daniels. It is all on the plan of March 17; yes; for the protection of the port of New York against submarine attacks.

Aircraft should be used to assist in the patrol of the approach to New York or other ports as necessary. In addition to shore bases hydroaerons might be employed as mobile bases for small aircraft.

(d) Steps must be taken to trap and destroy submarines when submerged. For this purpose trap nets may be anchored, drift nets used, and bombs provided for destroying submarines. Such bombs will be towed and exploded from towing vessels or thrown overboard from surface or aircraft, and fitted with firing mechanism set to explode at a determined depth.

PROTECTION AGAINST GUNS.

10. As submarines may suddenly appear in any direction, and carry one or two guns of 3 to 4-inch caliber, all merchant vessels should be provided with batteries of four guns (to obtain all around fire) of not less than 3-inch caliber, if practicable, but batteries of even six or three pounders will be of assistance to prevent submarines from closing in on the surface to short ranges.

11. Arming merchantment gives them a measure of protection which goes with them throughout a voyage. The greatest menace to shipping from submarines at present is in the prescribed zone of European waters; vessels proceeding through such zones should be armed first. Trained gun pointer groups will be needed for all guns.

PROTECTION AGAINST MINES.

12. While the menace from mines laid by enemy submarines on the United States coast is not believed to be great, provision should be made to meet it.

13. As New York harbor has been closed to submarines by nets placed at the Narrows, channels from that point to the lightships should be patrolled, and swept for mines if necessary. But as submarines can only enter these channels on the surface sweeping for mines outside the entrance channels to the 50-fathom curve will be the more important problem.

14. Due to distance which it is necessary to bring mines and the consequent limited number which will be available, the probability of repeated mine laying, under the present circumstances, is remote. If resorted to at all they will be laid as close in as possible to increase the chance of their being effective and at the same time not interfere with submarines using torpedoes. Under these conditions the continuous sweeping of an area approximately 8 miles wide and 15 miles long outside the channel entrances would probably be a good indication of the presence or absence of mines in the approaches to New York.

15. Assuming a pair of sweepers covers 400 yards and can sweep at 5 knots, the above area would require 10 pairs, or 20 sweepers, working 12 hours a day, or to sweep daily and allowing half-time on station, a total of 40 sweepers.

16. If mines are found in the above area, sweeping should be extended off-shore, possibly as far as the 50-fathoms curve. Sweeping should continue until it is demonstrated that no mines are present. The most direct route to deep water will require the fewest number of sweepers.

17. Off-shore sweeping may consist in:

(2) Sweeping a wide band in which mines may be laid in depths of 50 fathoms or less.

(b) Groups of sweepers to precede vessels proceeding singly or in groups.

(c) Continuous sweeping of a lane of definite width.

18. By the first method the area off New York would be over 5,000 square miles, and even if the vessels required were available the benefits obtained are not sufficient to warrant the adoption of this method.

19. By the second method, vessels singly or in groups could be conducted on any desirable course but only at the speed of the sweeping vessels (5 knots), and if mines were found the convoy would have to stop until the area was cleared. With a limited number of sweepers the number of vessels in a convoy group would necessarily be large. The large groups, slow speed, and possible necessity of stopping, all favor the attack by submarines. As the shortest distance from Ambrose Channel to the 50-fathom curve is more than 80 miles, vessels preceded by sweepers could cross this area in one daylight and must follow the sweepers at night or deploy over a possibly mined area. Therefore this method is rejected.

20. By the third method, given a large number of sweepers, a lane 10 to 20 miles wide could be kept swept and merchant vessels could proceed without further assistance at best speed at any hour across the area.

21. Allowing a distance of 400 yards per pair of sweepers and a speed of 5 knots, a lane 10 miles wide and 80 miles long would require 100 vessels and 16 hours, and to sweep the lane once per day and hold vessels one-half time on station, would require 200 sweepers. By reducing the lane in width the number of sweepers will be reduced proportionately, but the narrow lane must be well defined, as by a line of buoys, so that vessels keep in the swept area. This has the disadvantage of indicating the route to the enemy, but alternate

lines of buoys could be planted and the swept lanes shifted as deemed necessary.

22. The question then arises how wide a lane to sweep and what system would require the least number of sweepers.

23. Considering the question of a line of buoys spaced at 5 miles on a known bearing (say 130° from Ambrose Channel) merchant vessels should be able to keep within 1,000 yards of this line in average conditions of weather in daylight, outgoing vessels passing on one side (right) and incoming vessels on the other of the buoys. This will require a swept lane on each side of buoys, but if vessels going in both directions are on same side of buoys the outer vessels are more liable to get too far from line of buoys. The sweeping of this double lane can be done by:

(a) Assigning a group of sweepers to a section of so many miles.

(b) Sweepers proceeding out one side and in the other, groups to start from inner end at fixed intervals.

24. The latter method has the advantage that no vessels are required to proceed to distant stations, but all are usefully employed as soon as they start from inner limit.

25. Furthermore, no time is lost in turning at end of sections, sweepers are always proceeding in same direction, as traffic and overtaking vessels need only pass to opposite lane to pass a group of sweepers.

26. Reduced to a schedule this plan would work out as follows:

(a) Sweepers to work in groups of three pairs each; first and second pair to sweep in echelon, covering about 900 yards, and third pair to serve as guides and mine-destroying vessels, and to replace either of other pairs as necessary.

(b) Speed: Daylight (6 a. m. to 6 p. m.) 5 knots; night $2\frac{1}{2}$ knots.

(c) Group A leaves Ambrose Channel 6 a. m., first day; group B leaves Ambrose Channel noon, first day; group C leaves Ambrose Channel 6 p. m., first day; group D leaves Ambrose Channel 6 a. m., second day; group E leaves Ambrose Channel noon, second day; group F leaves Ambrose Channel 6 p. m., second day.

(d) Group A leave outer limit at 6 a. m. second day and other groups at correspondingly later hours.

(e) All sweepers return to starting point at 6 a. m., noon, or 6 p. m., and can be relieved there as necessary, after one or more round trips, 48 hours being required for each round trip.

(f) Allowing for reasonable delays, a distance of 75 miles will be swept; groups of sweepers will be 25 miles apart and every part of the lane will be swept twice during each day and once during each night.

(g) The number of sweepers required as outlined above would be 36, and, allowing only half time on station, a total of 72.

(h) If this number of sweepers is not available, a proportionately shorter distance, or less width of lane, could be swept by the same system, beginning at the inner end and extending as more sweepers become available.

27. The practicability of employing these vessels for sweeping as indicated is, however, problematical. Placing buoys to indicate a narrow lane and so restrict the area to be swept introduces an objectionable feature, because they indicate the track shipping will follow and assist the enemy in both mine laying and torpedo operations. A system of sweeping narrow lanes offshore marked by buoys is therefore not recommended.

PROTECTION AGAINST TORPEDOES.

28. If, under the circumstances, submarine operations are assumed to be practicable off New York, attack with torpedo seconded by the gun is more probable than by laying mines. Consequently, a protective patrol by armed surface craft should be maintained for the purpose of capturing, destroying, or driving submarines from the area patrolled. This surface patrol should be supplemented by aircraft.

29. The waters to be patrolled extend from the net obstruction at the Narrows to as far offshore as practicable with vessels available. For the part from the Narrows to the channel entrances, the smaller harbor craft can be used.

30. The vessels used for the outer patrol should have good seakeeping qualities and it is desirable that they be of not over 12 feet in draft. Speed to overtake a submarine on the surface is desirable, 18-20 knots.

31. With an unlimited number of vessels the entire area off New York should be patrolled, but with a limited number better results would be obtained by a more efficient patrol of a limited area, or lane, such lane to be shifted as considered desirable.

32. Any method of protection by patrol vessels must follow the areas swept to the outer limits and then may extend in any desired direction.

33. Protection of vessels passing through danger zones may be effected by patrol vessels:

(a) By convoy of individual vessels.

(b) By continuous patrol of lanes, or areas, vessels to be protected to proceed through them at their maximum speeds.

(c) By a combination of these methods.

34. If convoy is adopted vessels should as far as possible be convoyed individually to avoid a massed formation and to present a target of minimum density.

35. During the month of January, 1917, 393 merchant vessels cleared from New York for foreign ports, an average of 13 per day, although some days this number was probably considerably exceeded. Allowing four patrol vessels for each vessel convoyed, 52 vessels would be required, and, assuming that an equal number of vessels enter, a total of 104 vessels for convoy would be needed daily. If the speed of the vessels convoyed averaged 12 knots, they would be protected for 100 to 150 miles offshore, and convoying vessels return with incoming vessels the following day.

36. The average number of vessels leaving daily for domestic ports is reported to be about 12. Under war conditions all vessels proceeding in and out would be subject to attack and it is probable that no attempt would be made to differentiate between coastwise shipping and shipping bound for Europe. Therefore, if individual vessels were given protection an average of 200 patrol vessels would be required, without allowing for reliefs.

37. If the method of continuous patrol of lanes is adopted it could be maintained as follows:

(a) Assign individual vessels to a certain section or area.

(b) Have all vessels work in a circuit over the area to be patrolled.

(c) Combine methods (a) and (b).

38. The distance between patrol vessels will depend upon the distance at which periscopes can ordinarily be sighted.

39. Of the above methods the first method of dividing the patrolled area into circuits or stations will permit the employment of vessels at distances from their bases proportionate with their endurance and the least seaworthy craft can be placed close to the port entrance.

40. Submarines will probably not attack single ships under way with torpedoes at a range greater than 1,000 yards, but assuming the maximum range at which the torpedo will be fired from the submarine at a single vessel as 2,000 yards, a lane at least 4,000 yards wide should be patrolled.

41. If the distance at which periscopes showing on the surface can be made out under average daylight conditions is 1,000 yards, then two lines of patrol vessels will cover a width of 4,000 yards and a patrolled limit of 100 miles will require 200 patrol vessels.

42. From the foregoing, it appears that for the average number of arrivals and departures from the port of New York the number of patrol vessels is approximately the same by the convoy method or the lane-patrol method. Necessary relief vessels would increase the numbers given above.

43. A combination of the two methods would consist in the patrol of such lanes as are more or less continuously swept and convoy beyond such lanes.

44. At night the efficiency of patrol is greatly decreased, therefore vessels should pass through closely patrolled area or lanes lying in the immediate approaches to the port or be convoyed through them during daylight as far as possible. The sinking of the *Laconia* demonstrates the possibility of successful torpedo attack by submarines at night. Patrol vessels operating along lanes closely spaced will, in a measure, indicate by night or day the routes along which submarines will find their prey.

45. It is desirable that all patrol vessels have at least one 3-inch gun, but experience abroad shows that submarines do not operate on the surface in the presence of surface craft armed with a lighter battery. Lightly armed patrol craft, however, should be supported, if possible, by vessels with heavier batteries.

DECISION.

1. Arm merchant vessels as follows:

(a) Assign guns, first to vessels proceeding to European waters, and to other vessels according to liability of attack along the routes they are to follow.

(b) Batteries will consist of guns of not over 5 or 6 inch caliber, nor less than 3-inch if available, and according as it is practicable to mount them.

(c) Mount at least one gun aft and one forward, but number, caliber, and location will depend upon numbers on hand, the practicability of mounting and working them, and the arc of the horizon which the guns will command.

(d) If guns of different calibers are mounted on the same ship, place the heaviest guns aft.

2. Establish sweeping operations as follows:

(a) Sweep entrance channels to New York as necessary and an area approximately 8 miles wide and 15 miles long southeasterly from the channel entrance. Forty sweepers will be required. This will require one-half sweepers to be on station at the same time. (See accompanying chart A.)

(b) Should mines be found in this area or should indications point to their being placed farther offshore, extend sweeping operations offshore, sweeping about 130° true, eventually to the 50-fathom curve, maintaining a lane at least 5 miles wide. Twenty-five pairs of sweepers could go over such a lane commencing beyond the above area in 14 to 16 hours. Patrol vessels will be necessary as guides and to assist in the destruction of mines if found. Discontinue this sweeping when this area is apparently clear of mines.

(c) The total number of sweepers required to meet above conditions and sweep to the 50-fathom curve will be 100, allowing one-half time off station.

(d) Fit paravanes as practicable to bows of vessels as additional protection against mines.

3. Establish a patrol from the Ambrose Channel entrance as follows:

(a) Assign the patrol force in groups of three or four patrol vessels to convoy departing merchant vessels singly or in pairs approximately 100 miles offshore. Passage to be made through swept area and then over diverging routes as desired, and, as far as practicable, during daylight.

(b) The patrol vessels which have proceeded offshore will return with incoming merchant vessels and reverse the process followed when proceeding out.

(c) Limit of draft of patrol vessels to be not more than 12 feet, if possible. They should have a sustained speed of not less than 12 knots, a maximum of 18-20 knots is desirable, and their endurance under service conditions should be seven days, if possible, but not less than four days.

(d) Provide all patrol vessels with signal set, radio set, submarine microphone attachment, bombs, and paravanes for use against submarines.

(e) In addition to sweepers and convoy patrol vessels, organize a combined force of submarine hunters consisting of surface and aircraft. This force should consist of 50 patrol vessels and the necessary aircraft.

(f) For patrol duty provide 250 patrol vessels.

4. Offshore outer patrol:

(a) Organize an offshore or outer patrol to patrol routes beyond the positions where convoy of vessels ends outward or begins inward.

(b) Such patrol will consist of sea-keeping yachts, small gunboats, destroyers, suitable fishing or other craft. The routes patroled will diverge from or converge to positions where convoy ceases or begins, as may be desirable, and extend beyond those positions 100 to 150 miles.

(c) Provide 20 vessels for this purpose, one-half the vessels to be on station at one time.

(d) Lay down written instructions for systematic movement of these patrol vessels, which may be modified by radio; but use of radio by all patrol vessels to be limited as far as possible to reports of enemy movements or signals of distress.

5. The command of the patrol and sweeping force and control of the traffic to and from New York and its approaches shall be centered in one officer:

(a) He shall be furnished with information 24 hours in advance of the readiness of all vessels for leaving the port of New York. He will then arrange for their escort and will notify the agents or masters of the time they shall leave the lower bay.

(b) He shall also be given all information available of the sailing of ships bound for New York and the probable date of their arrival. These vessels are

expected to pick up patrol vessels at or near the outer limit of the patrolled area and receive directions by word of mouth or signal (not radio) as to their further procedure.

6. Provide special radio code by which patrol vessels may receive or forward important information, but radio to be reserved for emergencies.

7. Cooperate with the Allies as to instructions to be given ships as to the methods of making passage and approaching port.

CHAS. J. BADGER.

The CHAIRMAN. I find a memorandum here in Admiral Badger's list, stating that this plan was referred to the commandant of the third naval district on April 16, 1917, for information and return. Of course, it was not adopted before the war, and was not one of the plans for which I asked you.

Secretary DANIELS. I wish to show you the extreme importance of this very comprehensive study and plan made by the General Board for protecting the port of New York. Now, I read in the Washington Post this morning the following, showing the absolute necessity of protecting the port of New York.

BERLIN, May 23.—If you succeed in measurably restricting American deliveries of war materials to the Entente until the end of 1915, we will in all probability have won the war.

The CHAIRMAN. What is the date of this?

Secretary DANIELS. May 23; from Berlin; yesterday. I wish to show you from German testimony, as well as the testimony of Gen. Wood, the extreme importance of our protecting the port of New York. This dispatch reads as follows:

BERLIN, May 23.—If you succeed in measurably restricting American deliveries of war materials to the Entente until the end of 1915, we will in all probability have won the war.

Gen. von Falkenhayn, then chief of the German general staff, wrote thus to Capt. Franz von Papen, German military attaché at Washington, in the spring of that year. The statement, which comprised part of the evidence submitted by Von Papen in a recent hearing before a parliamentary commission, was amplified by him to the extent that he directed his efforts to this end.

Capt. von Papen at the time was secretly examined by the national assembly commission, which also heard Count von Bernstorff, the former German ambassador to the United States. His evidence is only now made public.

Von Papen declared that he was of the same opinion politically as Von Bernstorff, with respect to the American situation, and so informed Gen. von Falkenhayn when he returned after his recall from Washington.

"If you do not succeed in keeping the United States out of the enemy coalition you will have lost the war," Von Papen informed the chief of staff. He added that tremendous material and moral assets were at the disposal of America. "But," continued Von Papen, "these were so imperfectly appraised here I deemed it necessary to enlighten the German public opinion concerning them."

The military attaché obtained the consent of Von Jagow, foreign secretary, to appear before the German editors for the purpose of informing them on the German attitude, but Maj. Nicoll, chief of the press and espionage division of the general staff, opposed the plan.

After detailing the plans to secure a corner in war materials in the United States, control factories, divert labor, and prevent munitions

from reaching the Entente, Von Papen said that the theft of Dr. Albert's portfolio, containing outlines of the scheme brought the secret into the Entente's possession. In the course of further evidence Von Papen touched upon the alleged unneutral attitude of official quarters in Washington, the American courts, and political circles and declared that the British military attaché was permitted to operate unmolested and given the support of official quarters and the American secret service.

Von Papen testified:

Gen. Wood once asked me to call on him at Governors Island. He was very cordial, and smilingly told me: "Several persons have called on me and given me a detailed plan of a plot, which you, Captain, are supposed to have worked out. The scheme provides for the handling of German U boats at New York, which would then proceed to blow up the subway tunnels and the city's water mains. We have your complete plans; where you propose to place your explosives and what points you will attack. Complete evidence is in my possession; you may see it if you are interested."

We did not waste a single word over the matter. But the incident shows the methods used against us at the time.

This shows that the General Board was very wise in thus making the most careful plans to protect New York against submarines.

The CHAIRMAN. And this was referred on April 16 to the commandant of the naval district for information and return, so, of course, it was not adopted before that time.

Secretary DANIELS. The commandant of each naval district was under orders to protect the district over which he was the commandant.

I beg to call your attention to this plan as it evidences a thorough knowledge and foresight and prudent protection in every possible way that human wisdom could foresee and I invite your attention to the fact that this report, as well as the one of February 4, 1917, closes with the recommendation which was approved and carried out and lived up to during the entire war: "Cooperation with the allies."

The General Board was considering, in view of the imminence of war, precautionary measures for the protection of American shipping, and on March 20, 1917, sent the following report to the Secretary of the Navy:

MARCH 20, 1917.

From: Senior member present.

To: Secretary of the Navy.

Subject: Protection of American shipping.

Reference: Secretary of the Navy's confidential letter, March 20, 1917.

Of the measures advocated by the General Board in its letter of February 4, 1917 (G. B. No. 425, serial No. 666), especial attention is invited to the following, which bear directly upon the protection of our commerce in transit between the United States and Europe:

(a) Escort vessels to deep water from our ports and similarly from deep water to our ports.

(b) Arrange with British and French Governments for the convoy of our merchant ships through the barred zone.

The CHAIRMAN. What is the date of this?

Secretary DANIELS. March 20, 1917, for convoy purposes.

(c) Merchant vessels to proceed on high seas from points of leaving and receiving escorts, depending upon their guns for protection and upon changes of course to follow alternate routes.

(d) Arrange with British and French Governments a code of signals to be used in directing merchant ships as to routes to be followed and points of meeting escorts.

(e) Establish a patrol of the Atlantic coast.

(f) Recruit us to the limit allowed by law for emergencies in order to provide crews for patrols and auxiliaries and fill battleship complements which have been depleted to supply gun crews to merchant ships.

2. In order to obtain what the General Board regards as the greatest measure of protection to American lives and American shipping on the high seas, the General Board invites attention to its letter March 20, 1917 (G. B. No. 425, serial No. 688), and of its previous letters of February 6, 1917 (G. B. No. 425-1, serial No. 553-b); February 17, 1917 (G. B. No. 425-1, serial No. 672); March 17, 1917 (G. B. No. 425, serial No. 683), on the same subject.

CHAS. J. BADGER.

The CHAIRMAN. This has already been put in the record by Admiral Badger.

Secretary DANIELS. Yes; but you wished it in chronological order.

The CHAIRMAN. We have the report.

Secretary DANIELS. Here is the report.

The CHAIRMAN. We already have it. So it will not be necessary to read it.

Secretary DANIELS. All right.

The CHAIRMAN. Also, Admiral Badger noted that there was no record of action by the department.

Secretary DANIELS. The record of performance is the best record on earth, and these things were done.

Observe that this report logically follows the plan of February 4, and invites special attention to the necessity of "arranging with the British and French Governments for a convoy of our merchant ships through the barred zone." This was before Sims had been sent to Europe, and was while the British Admiralty was still declaring that it believed that dispersion was the best policy. The General Board and the Navy Department were, therefore, far in advance of the British Admiralty or any of the Allies in its belief that the best thing was to "arrange with the Allies for the convoy of merchant ships," which America was the first to propose in the report of the General Board, and in the carrying out of which we made possible later on, when the British Admiralty, after three years of rejection of the convoy system, finally adopted it and it was put into effect by all the Allies.

The CHAIRMAN. That is the convoy system?

Secretary DANIELS. Yes.

The CHAIRMAN. Capt. Pratt testifies that that was entirely British, except—

Secretary DANIELS. I am showing you by the acts of the General Board that on March 20 the General Board recommended it and we afterwards carried it out, so it was not entirely British.

The CHAIRMAN. Then Capt. Pratt was mistaken?

Secretary DANIELS. I have not seen his testimony.

The CHAIRMAN. I can show it to you.

Secretary DANIELS. I am giving you the official records of the General Board in which they proposed that on March 20.

Admiral Sims was a member of the General Board and, of course, knew that when he went to Europe the matter of convoy was under discussion, and had been recommended by the General Board, and when he advocated the convoy system he was carrying out the recommendations of the General Board and the policy of the department as stated in the plan of February 4, 1917. I wish to call particularly to

your attention, Mr. Chairman, this report of the General Board which was approved by the Navy Department and carried out in these words:

Arrange with British and French Governments for the convoy of our merchant ships through the barred zone.

It was in the plan of the General Board of the Navy, with the approval of the Navy Department, that the policy of the convoy system was thus laid down and Admiral Sims in advocating it in England was carrying out what he must have known was the recommendation of the General Board and the policy of the Navy Department and it was no discovery of any particular officer in the American Navy, but the General Board's policy approved before Congress declared war.

On this same day the General Board sent the following letter to the Secretary of the Navy, in response to an inquiry from the Chief of Operations asking for suggestions or recommendations so that the department might do everything possible to insure the safety of lives and property of the Nation's citizens. I call your attention to the fact that the General Board's plans here presented are quite in keeping with their basic plans for war with Germany and it will be observed these plans are based upon the report which says: "In accordance with the Black plan," which means war with Germany. I call attention again to the fact that the General Board always had in view, and so did the Department in approving the General Board's recommendations that our most effective policies and efforts must be "Offensive cooperation with the Allies," and this report, as the others, ends with the words, "and arrange for cooperation with the Allies." Observe that every time the General Board held on to this basic North Star of naval policy by which we navigated the Navy into victorious ports. The following is the second plan of the General Board of March 20, 1917, made before the United States entered the war: G. B. No. 425. (Serial No. 688.) Confidential.

DEPARTMENT OF THE NAVY,
GENERAL BOARD,
Washington, D. C., March 20, 1917.

From: Senior member present;

To: Secretary of the Navy.

Subject: Safety of lives and property of United States citizens on board American ships on high seas.

The question orally submitted to the General Board by the Chief of Operations on the afternoon of March 19, 1917, is in substance as follows:

Does the General Board think that under the present situation everything has been done that can be done to insure the safety of lives and property of United States citizens on board American ships on the high seas? If not, what does the General Board recommend be done in addition?

2. The General Board is of the opinion that everything possible under the circumstances for the protection of American lives and property on the high seas is not being done.

3. In its letter G. B. No. 425, Serial No. 666, February 4, 1917, the General Board made recommendations as follows looking to the protection of the lives and property of Americans on the high seas:

"On account of existing conditions, the General Board recommends that the following steps be taken to meet a possible condition of war with the Central European Powers:

"1. Complete complements and allowances of all kinds, first of the A and B fleet, then of the C fleet, and naval districts.

"2. Mobilize the A fleet in the lower Chesapeake and increase it immediately to the B fleet. (See Black plan.)

"3. Dock and repair all ships in reserve and ordinary that will be used.

"4. Arrange for the supply of fuel to the fleet and stock all fuel depots to capacity.

"5. Establish additional recruiting stations and increase personnel of the Navy and Marine Corps to the total number required to supply complements for all the ships built, building, and authorized, and to maintain shore establishments and naval-defense districts, including aviation service, with 10 per cent additional for casualties, as follows: Enlisted force: Navy, 150,000; marines, 30,000. Officers in the proportions prescribed by law.

"6. Mobilize the naval districts, including the Coast Guard and Lighthouse Services, and put patrol vessels, mine sweepers, etc., of the Atlantic coast districts on their stations; no commercial vessels to be mobilized in the Pacific coast districts at present.

"7. Prepare to the utmost detail for the employment of mines along our coast as may be necessary.

"8. Prepare nets and other obstruction for submarines, ready for immediate use, at the Chesapeake Capes, Delaware Capes, entrance to New York Bay, eastern entrance to Long Island Sound, Narragansett Bay, Panama Canal, and Guantanamo. Other places as their need becomes apparent. The General Board considers it of the utmost importance that net protection shall be immediately provided for the fleet during its mobilization in Chesapeake Bay.

"9. Establish immediately the guards at all navy yards, magazines, radio stations, powder factories, munition plants, bases, shipbuilding yards, and naval shore utilities in accordance with the mobilization plans.

"Reduce the force of marines in Haiti and Santo Domingo to the smallest number that can maintain order there, transferring these men to the United States to perform necessary guard duty at navy yards, magazines, radio stations, shipbuilding plants, and to form cadres for the organization of new regiments as recruits are obtained. Organize the advanced base force and complete its equipment.

11. Leave in the Caribbean a sufficient number of light cruisers to keep a lookout for submarines in those waters and for the protection of our interests there. Protect the Canal and Guantanamo as far as possible by the use of mines and where possible by monitors, submarines, and nets.

12. For the present use the greater part of the destroyer flotilla as patrol for submarines in the vicinity of the principal ports or entrances leading to them.

13. Base the submarines at Canal, Guantanamo, and points along the coast in accordance with the Black plan.

14. Rush to completion all naval vessels building or authorized; also build up the Aviation Service as rapidly as possible.

15. Guard all bays and harbors on the coast of Maine to prevent their use as bases of supply. Patrol waters of Haiti, Santo Domingo, Porto Rico, and Danish West Indies; Cuban Coast Guard Service to assist in patrolling all bays and gulfs of the coast of Cuba.

16. Prepare to close entrances to all ports at night and discontinue or change such aids to navigation as may be necessary.

17. Organize a comprehensive system of intelligence service covering the whole theater of war in accordance with the plans of the Office of Naval Intelligence.

18. Take possession of all interned vessels of war of Central Powers, also take control of all commercial vessels of Central Powers now in United States waters.

19. Place under surveillance all citizens of the Central Powers in the Navy or in Government employ in naval establishments and remove them from positions in which they may do possible harm.

20. Arm our merchant vessels for purposes of defense.

21. In accordance with Black plan carry out the following:

(a) Issue proclamation prescribing defensive sea areas and put rules in regard to them in force.

(b) Issue proclamation prescribing press regulations and establishing censorship of cable and radio, including naval control, of all commercial and private radio stations.

(c) Issue President's order in regard to visit and search, capture, etc.

22. And as most important, arrange, as soon as possible, plans of cooperation with the naval forces of the Allies for the joint protection of trans-Atlantic commerce and for offensive naval operations against the common enemy.

4. The General Board renews these recommendations believing as it does that they all have a pertinent bearing upon the protection of the lives and property of American citizens on the high seas, and that the illegal acts and claims of Germany on the high seas have created, in the opinion of the General Board, an emergency equivalent to a state of war. The General Board emphasizes as of first importance the mobilization of the naval forces, material, and personnel; the arming of merchant ships; and arranging for the cooperation with the allied powers, which must exist if our shipping is to be adequately protected in the "barred zones."

CHAS. J. BADGER.

The CHAIRMAN. Now, that plan of March 20, 1917, I find in Admiral Badger's list a minute that there is no record of action by the department.

Secretary DANIELS. I think this is not exactly the same that he has there, but I call your attention to the fact that it closes with the words—

and arranging for the cooperation with the allied powers, which must exist if our shipping is to be adequately protected in the barred zones.

The CHAIRMAN. This refers to safety of lives and property of Americans on the high seas?

Secretary DANIELS. If you will read it you will see what it does.

The CHAIRMAN. March 20—you have already read it?

Secretary DANIELS. Yes; but it refers in this letter, emphasizes it as the plan of February 4, 1917, this basic plan that I am telling you about.

The CHAIRMAN. There is no need of reading it again. It will go into the record.

Secretary DANIELS. There were two reports of March 20.

The CHAIRMAN. And on both of them there was a minute of no action.

Secretary DANIELS. I need not read this?

The CHAIRMAN. No.

Secretary DANIELS. The best record is the record of what was done, and these plans were carried out, nearly all of them. You will observe, Mr. Chairman, that they came in again with the proposition of 150,000 men and 30,000 marines. I will give you the exact date when Congress gave that authorization. The Congress declared that a state of war existed between this country and Germany on April 6. With its usual readiness and foresight of making plans the General Board on the day before Congress declared war forwarded to the Secretary of the Navy the following plan:

APRIL 5, 1917.

From: Senior Member Present.

To: Secretary of the Navy.

Subject: Assistance that United States can give Allies upon declaration of war.

Reference:

(a) General Board's letter, G. B. No. 425 (Serial No. 666), February 4, 1917; steps to be taken to meet a possible condition of war with the Central European Powers;

(b) General Board's letter, G. B. No. 425-1 (Serial No. 553-b), February 6, 1917; Black plan, Tactical Problem I;

(c) General Board's letter, G. B. No. 425-1 (Serial No. 672), February 17, 1917; solution of problem, Black;

(d) General Board's letter, G. B. No. 425 (serial No. 683), March 17, 1917; estimate of the situation as to system of patrol and sweeping best adapted for protection of shipping off port of New York;

(e) General Board's letter, G. B. No. 425 (serial No. 689), March 20, 1917; protection of American shipping.

•

The General Board believes that the mission of our Navy when war is declared against Germany will best be determined—

I wish to emphasize this—

will best be determined by arrangement with the allied powers now engaged in war with that country. We should immediately obtain from the allied powers their views as to how we can best be of assistance to them and as far as possible conform our preparations and acts to their present needs, always bearing in mind that should peace be made by the powers now at war we must also be prepared to meet our enemies single-handed. We should not depend upon the defensive, but prepare for and conduct a vigorous offensive.

2. This recommendation has already been made by the General Board, reference (a) and (e), and is as follows:

"And as most important, arrange as soon as possible plans of cooperation with the naval forces of the Allies for the joint protection of trans-Atlantic commerce and for offensive naval operations against the common enemy."

The General Board wishes to emphasize strongly the necessity of such preliminary arrangement in order that economy of effort and concentration of purpose may become effective as early as possible.

The General Board suggests that consideration be given to the following measures in anticipation of cooperation with Allies:

(a) Protect shipping proceeding to and from our ports from submarines or other attack.

(b) Prevent the use of unfrequented bays or harbors on our own coasts, in the Gulf of Mexico, and the Caribbean from use by submarines as bases.

(c) Take over as far as may be desired and practicable the patrol of trade routes in the western, north, and south Atlantic and eastern Pacific, and prevent the exit of enemy merchant ships now finding asylum in the South American ports.

(d) There is no doubt that, if desired by the Allies, sending immediately a number of destroyers to cooperate with the allied powers in the barred zones would greatly add to the moral effect at home and abroad of the participation of the United States in the war. The number of this type which may eventually be sent abroad will depend upon the development of a German offensive on this side of the Atlantic, our immediate needs, and the increase of this type in our Navy.

(e). Should United States troops be sent to Europe, it will be necessary to escort the transports from shore to shore.

The General Board had the first vision of all this work.

At present we are short of transports and convoying vessels, and cooperation in this duty with the Allies would be necessary.

(f) The transportation of supplies for the Entente Allies is of the first importance.

I call your attention to the fact, Mr. Chairman, that this was before war was declared. When the General Board recommended this and said that the transportation of supplies for the entente Allies is of the first importance, that was before we declared war. Now, after we were at war, when we were sending soldiers, while, of course, the sending of supplies was of very minor importance compared to the sending of troops.

The CHAIRMAN. Mr. Secretary, I find this minute in regard to this recommendation of April 5:

June 8, 1917: All recommendations acted upon favorably and the measures taken in accordance therewith, as far as practicable.

Secretary DANIELS. Yes.

The CHAIRMAN. That was adopted in June.

Secretary DANIELS. That was the record made by Capt. Schofield in June. He said in June that they had been carried out.

The CHAIRMAN. In June?

Secretary DANIELS. They had been carried out, but on April 5 it was taken up, and as soon as war was declared, we succeeded at once in doing these things.

The CHAIRMAN. He says, "Recommendations acted upon favorably," dated June 8.

Secretary DANIELS. Yes; that was the note of the fact that action had been taken.

The CHAIRMAN. When were they acted upon, if acted upon?

Secretary DANIELS. Why, at once.

The CHAIRMAN. Where is the record of that?

Secretary DANIELS. Mr. Chairman, I will go back to the early part of it:

The General Board believes that the mission of our Navy, when war is declared against Germany, will best be determined by arrangement with the allied powers now engaged in war with that country.

That is, April 5. On April 11, in the office of the General Board, we held a conference with Admiral Browning, of the British Navy; Admiral Grassy, of the French Navy; and Admirals Benson, Wilson, and Mayo, Assistant Secretary Roosevelt, and all the General Board, and we there carried out, on April 11, the program of this perfect cooperation.

The CHAIRMAN. It had nothing in particular to do with this plan. It was what was done at that particular meeting, was it not?

Secretary DANIELS. In accordance with this plan; yes.

The CHAIRMAN. Then, why was not the memorandum entered which showed that it was accepted before June 8?

Secretary DANIELS. Mr. Chairman, that memorandum of Capt. Schofield just shows that it had been carried out at that time, most of it.

The CHAIRMAN. Two months afterwards.

Secretary DANIELS. It had been; yes. In other words, I will show you dates. I have shown you on April 11 we carried out the first plan. In the office of the General Board, in conjunction with the Secretary and the admirals of the fleet, they carried out this proposition, and in pursuance of that, Admiral Sims had been sent to Europe to secure the plans with the British and the French, so that we could cooperate with them, which we did.

Now, let us go on a little further. "Arrange as soon as possible," which we did, on April 11, not June, but five days afterwards.

The CHAIRMAN. I can not understand why the date June 8, 1917, should be in here if it was adopted before that.

Secretary DANIELS. It is very easy. Capt. Schofield, writing by direction of the Secretary, should have made a memorandum that those things had been done. If he had said on April 11, "This has been approved," he could not have said anything was done, so he made the memorandum afterwards. I do not know why he made it of that date.

The CHAIRMAN. That is, they were not done until June 8.

Secretary DANIELS. On the contrary, I have told you that the most important thing was done on April 11.

The CHAIRMAN. But he could not have said that all the recommendations were adopted before June 8.

Secretary DANIELS. I am going to take them up seriatim. I have shown you that the first one, recommended on April 6, was carried out April 11.

The CHAIRMAN. What was that?

Secretary DANIELS. April 5 the General Board said:

To secure an arrangement with the allied powers now engaged in the war and mutually obtain from the allied powers their view as to how we can best be of assistance to them.

That was their recommendation on April 5. On April 11 the admiral from Great Britain and the admiral from France came to Washington upon our invitation.

The CHAIRMAN. When were they invited?

Secretary DANIELS. As soon as we declared war. They had a conference on April 10 at Hampton Roads with Admirals Mayo, Benson, and Wilson, and then came to Washington and held this further conference, and we there arranged, and in pursuance of that arrangement I gave directions to send the first destroyers over to Europe at once; so this was carried out five days after.

The CHAIRMAN. But it did not of necessity have anything to do with this plan.

Secretary DANIELS. Absolutely. That was in accordance with this plan.

The CHAIRMAN. When war was declared, would you not naturally get together with all the representatives of the allied powers who were near you, regardless of any plans beforehand?

Secretary DANIELS. We certainly should have carried out this plan. This plan arranged it, and we carried it out, and whether we would or not without the plan is a mere academic question.

The CHAIRMAN. What I am trying to find out is whether you were following any definite plan. I do not think that that is conclusive proof that you were.

Secretary DANIELS. It is conclusive proof of that for this reason: Ordinarily, when we discussed the situation with Admiral Grant and Admiral Grassy, and other French, Italian, and allied admirals, the discussions were held in my office or in Operations, but when these gentlemen came down we had our meeting at the office of the General Board, and we all went over there pursuant to this plan of April 5. On April 11 we carried out the first and most important recommendation.

The CHAIRMAN. Whether the meeting was held at your office or at the office of the General Board, you naturally would hold such a meeting immediately after the war was declared, with all the available representatives of the Allies.

Secretary DANIELS. I can not see what you are driving at.

The CHAIRMAN. I do not understand that date of June 8. That is what I am driving at.

Secretary DANIELS. I have explained that. Now read what Capt. Schofield says.

The CHAIRMAN. "June 8, 1917. All recommendations acted upon favorably and measures taken in accordance therewith so far as practicable."

Secretary DANIELS. Capt. Schofield says to you, in effect, by direction of the Secretary I am informing the General Board that all these have been acted upon favorably that were possible.

The CHAIRMAN. "So far as practicable." Therefore, until that date, they could not have been acted upon.

Secretary DANIELS. Why, Mr. Chairman—

The CHAIRMAN. Not all of your recommendations.

Secretary DANIELS. All that were practicable. Capt. Schofield wrote that on June 8. I do not know why on April 12 he did not write and say—which he could have done truthfully; if we had been keeping records for investigation committees we would have done—he could have written truthfully and said, "April 11. First recommendation under General Board's plan of April 5 has been carried

We have had a meeting with the allied representatives and have made arrangements with them—entered into perfect cooperation—and that is done."

He had been giving you a detailed statement he would have said

Then on another day in April he would have said that so many destroyers went abroad, and on another day in April so many things were done, and on another day in May so many things were carrying out the plan. He says, "It has been done." If he had written and said, "This is approved on June 5," I could see the reason, but he says frankly and plainly, "This has been done."

The CHAIRMAN. Then he might just as well have put it down June 8, or June 8, 1919, might he not?

Secretary DANIELS. If he were making a report. Undoubtedly he was writing this report to show that this had been already done, all that was practicable, up to that date. Capt. Schofield's statement is perfectly proper statement. Now, if he had known, or if I had known, that you wished me to show when these things were done, I would not have had Capt. Schofield, by direction of the Secretary, say "This has been done," but I would have had him say, "April 5, the General Board recommended this cooperation; April 11, meeting at which it was arranged. April so and so, they recommended this, and they did it." I would have had him put in the dates.

The CHAIRMAN. Clear up to June 8; this last thing?

Secretary DANIELS. Yes; June 8, said it had been done; a matter of fact.

The CHAIRMAN. But, presumably, as soon as the last things that were practicable had been done, this memorandum was put in, that all recommendations had been acted upon that were practicable?

Secretary DANIELS. I have shown you that the most important one was the primary one of all, cooperation with the Allies, was recommended April 5. It had been recommended before. Every plan of the General Board made said, "As soon as we enter the war this will be done." Now, April 5 specifically they made the plans, which were approved and carried out the beginning of on April 11, and Capt. Schofield has written a history.

The CHAIRMAN. Mr. Secretary, if there had been no recommendation of the General Board on April 5, would you not still have had a conference with representatives of the Allies, and would you not have done just what you did at the conference, and agreed to cooperate with the Allies? I can not see any relation between the two ways.

Secretary DANIELS. The organization of the department is and has been for many years, since Admiral Dewey was made president,

and the General Board was organized, that the General Board should prepare the plans of great operations, and the General Board had prepared the plan of April 5.

On April 11 we met in the office of the General Board and carried out the plan they had proposed. It was a very good plan. It was a very wise plan. It was a plan other people undoubtedly thought about, but it was carried out in pursuance of this actual plan.

The CHAIRMAN. I do not think there is any question about the General Board having made plans or memoranda. The question is whether those plans or memoranda were adopted by the department.

Secretary DANIELS. Capt. Schofield tells you the fact.

The CHAIRMAN. The fact that you did one thing that was mentioned in the report does not show that it had anything to do with that report.

Secretary DANIELS. I am going to show you that we not only did one thing, but we did everything practicable, and we did it before June 6, so that Capt. Schofield is not writing down there something that we are doing June 6. He is writing what has been done since April 6.

The CHAIRMAN. What I am getting at is, what plans were made before war was declared. This, of course, was the day before war was declared, which is practically the same thing and nothing was carried out there of course until after war was declared.

Secretary DANIELS. That recommendation was made on April 5, and on April 11 we carried out the first recommendation.

The CHAIRMAN. War was declared the day after the 5th.

Secretary DANIELS. Yes.

The CHAIRMAN. Then you could not carry out that plan until after war was declared. Now, that is the kind of plan that I am particularly discussing. What I am trying to get at now is the plans which were made by the General Board and were put into operation by the department before war was declared. This of course does not cover that subject at all.

Secretary DANIELS. Mr. Chairman, do you mean to say that the department could put any plan in operation against the Central Powers, in an overt act, before Congress declared war?

The CHAIRMAN. In the way of preparation, most assuredly.

Secretary DANIELS. In the way of preparation I assure you that we did everything that was humanly possible.

The CHAIRMAN. That is a question, Mr. Secretary.

Secretary DANIELS. I say I have shown you that. You may not accept that fully. That is a matter of opinion, but I have given you the record, I have given you the data, I have given you the facts.

The CHAIRMAN. This particular plan of course is not one of those, because this could not have been carried out until after war was declared.

Secretary DANIELS. This particular plan was made the day before war was declared, to be carried out if Congress would give the authority.

The CHAIRMAN. There was no question about Congress giving you the authority.

Secretary DANIELS. But could the Secretary of the Navy issue an order to send a ship out against the enemy until Congress actually declared war?

The CHAIRMAN. Certainly not.

Secretary DANIELS. But to show you the foresight we had, we knew as well as you do—

The CHAIRMAN. The foresight of April 5. War was declared April 5, and it was very well known for a number of weeks before that that immediately upon the meeting of Congress war was to be declared.

Secretary DANIELS. I have given you the statement in 1915—my letter to the General Board telling them to get ready for war—and have given you the statement of February 4, of an actual basic working plan, and I have invited you and your committee, in secret session, to take up with Admiral Badger the Black plan, composed hundreds of pages, with maps and everything, that will show you that the General Board lacked nothing in preparedness.

The CHAIRMAN. That is what I am looking for. That is what I want to get, but this is not in that category.

Secretary DANIELS. This is an open plan to make public, and you will see here, as I say, that on April 5 the General Board made a plan, and, properly telling, what you and I thought, that war would be declared. We did not know whether it would be declared April 5, April 7 or April 8. We did not know how quickly Congress would act. It acted immediately, and on April 6 we had the plan. And the plan made weeks ahead, and then, as the last immediate war we had the plan of April 5, which we carried out April 11.

CHAIRMAN. That was practically a war plan after war had been declared.

Secretary DANIELS. All these plans were war plans. I have not shown you a plan here that is not a war plan.

CHAIRMAN. But I want the plans before war was declared—show what you did before.

Secretary DANIELS. I have given you the plans. What are the plans you have given you except war plans, before the war?

CHAIRMAN. They were plans for preparedness, for getting to know what to do when war was declared.

Secretary DANIELS. Getting ready to fight.

CHAIRMAN. You could not get ready very much between April 5 and April 6.

Secretary DANIELS. With the other plans we had gotten ready. Our plans were "ready." The plan of April 5 was "Aim." The plan of April 11 was "Fire."

CHAIRMAN. Mr. Secretary, I am looking for certain information. I can tell you that as far as the information I am looking for, the plan has very little to do with it.

Secretary DANIELS. I do not know what information you are looking for. I have told you that we found—

TRAMMELL. I think the best way to settle the controversy is to stick to the facts, and the chairman can put his own conclusion what you did before, and others can put their construction whether they were war plans or peace plans or joy-ride plans. Just state the facts. That seems to be the best way. The chairman does not seem to think those plans had anything to

do with getting ready for war. That is all. He has expressed himself several times to that effect.

The CHAIRMAN. That is what I want.

Senator TRAMMELL. Some others might entertain different views. I understand you do not seem to think any of these plans that the Secretary has made reference to had any reference to preparation for war.

The CHAIRMAN. I have not made any such statement. I want to find out what plans had reference to preparation for war.

Secretary DANIELS. Mr. Chairman, if you will read the plans I have given you, all the plans I have read were war plans, gotten up by the war-making body of the Navy, and nothing else.

The CHAIRMAN. Now, Mr. Secretary—

Secretary DANIELS. I have not finished yet.

The CHAIRMAN. Very well; finish.

Secretary DANIELS. But I shall go back to this plan of April 5 to show you that it was carried out very promptly:

(a) Protect shipping proceeding to and from our ports from submarines or other attack.

That was done.

(b) Prevent the use of unfrequented bays or harbors on our own coasts, in the Gulf of Mexico, and the Caribbean from use by submarines as bases.

At the request of the British admiral and the French admiral, on April 11 we agreed to take over the patrol of this entire coast from Halifax to Brazil. Admiral Browning and Admiral Grassy said, "The biggest thing you can do in this war at once, and the thing we request you to do above all others—we have had to keep our ships out of the 3-mile limit here since 1914 to protect our shipping as it left the ports carrying munitions and supplies. Now, if you will release our ships, so that they can go back home into the war zone, if you will take over the patrol of this coast to protect this shipping, that is the important thing we wish you to do."

And at that conference, Mr. Chairman, we had upon the walls very large maps of the entire coast from Halifax to Brazil, showing where there were British ships, showing where there were French ships, and where they were protecting their shipping, and we agreed to take that all over as rapidly as they desired us, and let them send their ships back to France and England. So that was done at once, not in June but in April, and it was of the highest importance that we should prevent the use of unfrequented bays and harbors on our own coast, in the Gulf of Mexico, and the Caribbean for use by the submarines as bases. At that time, you will remember, submarines had already been over to this country. We knew they could come, and the fear on the part of the British, the French, the Italians, and ourselves was that in the unfrequented bays of Maine, in those little bays and harbors, they might make a submarine base, or that they might make it down in some part of Santo Domingo, or somewhere in the Caribbean waters, where there was a very sparse population, and we had organized the Coast Guard, with all their agencies—did it at once—all the way along the coast to watch out, to protect this coast, so we did it at once.

(c) Take over, as far as may be desired and practicable, the patrol of trade routes in the western, north, and south Atlantic and eastern Pacific, and prevent

the exit of enemy merchant ships now finding asylum in the South American ports.

We did that in April and May.

(d) There is no doubt that, if desired by the Allies, sending immediately a number of destroyers to cooperate with the allied powers in the barred zones would greatly add to the moral effect, at home and abroad, of the participation of the United States in the war. The number of this type which may eventually be sent abroad will depend upon the development of a German offensive on this side of the Atlantic, our immediate needs, and the increase of this type in our Navy.

At that meeting of April 11 we ordered a division to go over. On April 24, I think it was the date—I will make certain of the date—Admiral Sims telegraphed:

The war council of the British Admiralty say if you will send over twenty-odd destroyers we can put down the submarines in the critical area and keep them down.

We sent 28 destroyers.

(e) Should United States troops be sent to Europe it will be necessary to escort the transports from shore to shore.

When they started we escorted them from shore to shore.

(f) The transportation of supplies for the Entente Allies is of the first importance.

We gave protection to them. Next—

Requisition all enemy ships detained in our ports—

Which we did—

and seize enemy converted ships interned—

Which we did—

repair them and place them in service as transports or supply ships.

Which we did. Take the *Leviathan* alone. She carried over nearly 100,000 troops.

(g) Mobilize the shipbuilding industries, both commercial and governmental, so that the energies of the Nation be extended in the directions needed to provide vessels to combat submarines.

That was done. As a matter of fact, when the Shipping Board got into the fight pretty actively, Mr. Schwab and Mr. Hurley and the others in charge of it said that the reason they could not act more rapidly was that the Navy Department had commandeered 70 per cent of the shipbuilding facilities in America, as we had done, so we were prepared.

(h) Keep constantly in view the possibility of the United States being in the not distant future compelled to conduct a war single-handed against some of the present belligerents and steadily increase the strength of the fighting line, large as well as small vessels—doing this with as little interference with the rapid building of destroyers and other small craft for the Navy and cargo ships for the merchant marine as possible.

(i) Manufacture the number of medium-caliber guns which will be needed for merchant shipping and patrol craft.

That was all done, and nearly all of it was done in April and May, so that this plan—

The CHAIRMAN. April, May, and what?

Secretary DANIELS. April, May, and June, most of it in April and May; every policy in April and May actually carried out, most of

it, and Capt. Schofield very truly says on June 6 that this had been done. This plan was approved, and, like all the preceding plans, it says:

The General Board believes that after war is declared with Germany we should immediately obtain from the allied powers their views as to how we can be of best assistance.

The General Board laid special emphasis upon the American policies as outlined by the President of the United States in his letter to Admiral Sims, and in his speech to the fleet with reference to a bold and aggressive policy. The General Board said:

We should not depend upon the defensive, but prepare for and conduct a vigorous offensive.

That was April 5, 1917, before we entered the war. The General Board then had the vision which the Navy Department had, and held to and carried out from the beginning to the end of the war.

The CHAIRMAN. The day before war was declared?

Secretary DANIELS. Yes. If we went into war we should not depend upon the defensive, but prepare for and conduct a vigorous offensive.

Admiral Badger in his testimony before your committee states that he had a letter from Capt. F. H. Schofield, one of the assistants to the Chief of Operations, in which Capt. Schofield, "by direction of the Secretary," said:

All recommendations acted upon favorably and measures taken in accordance therewith so far as possible.

This plan of April 5, as will be observed, follows consistently along the previous lines, particularly along the line of the plan of February 4.

Of course, the General Board was busy, as was the planning section of Operations from this time on and made various other studies and plans, as was shown you by Admiral Badger in his very illuminating statement and list of the plans studied, the General Board going back particularly as far as July, 1914, when Austria-Hungary declared war on Serbia. This list of studies and plans alone made up eight pages of his testimony in the hearings, and if it is the desire of the committee Admiral Badger will be pleased to show you, in executive session, every one of these studies and plans of statement of policy, all of which were in addition to and in accordance with the basic plans, some of which I have presented to you, and others which are confidential, which will be shown you in executive session, and explained to you in detail by Admiral Badger.

Of course, the great plans, embodied in hundreds of pages, are secret and confidential, and you will not wish them embodied in the record, but Admiral Badger will show them to you and explain them to you at such time as will suit the pleasure of the committee.

Admiral Badger, in his testimony before your committee, referred to the frequent charges that have been made about the lack of scientific plans for the conduct of war, made the following statement, to be found on page 2621-f:

The gist of the criticism of the operations of the Navy Department and the Navy now under investigation is contained in the charges of unpreparedness to enter the war; absence of war plans or policies at the commencement

of the war; vacillating and hand-to-mouth policies and plans after war was declared, resulting in extending the duration of the war, and thereby enormously increasing the Allied war losses in lives, ocean tonnage, and money.

To each and all of these I enter emphatic denial. I do not mean to say that we had attained perfection in the Navy—we never shall; that no errors of judgment or mistakes were made—they will always occur, but I assert that the Navy when it entered the war was, as a whole, well prepared and administered.

Now, this is the statement of Admiral Badger, commander in chief of the Atlantic Fleet and head of the General Board.

In the statement having given you a very clear and very full statement showing that the General Board failed in nothing in the making of basic plans and policies recommended to the department, and the department failed in nothing in approving the carrying out of these basic plans which set forth the essential policies that governed the Navy Department in its conduct of the World War, I will now present to you the 13 plans which should be called "operative" plans, drawn up in the Office of Operations before Congress declared war. These plans were drawn up in what is known as the planning section of the Office of Operations, at the head of which in the days before the war was Capt. W. V. Pratt, whose clear and able testimony before your committee has shown conclusively that just as the General Board and the department were preparing exhaustive and wise basic plans and policies, the Office of Operations was quite as diligent in preparing operative plans in keeping with these policies. The plans which were prepared in Operations, most of which were under the direction of Capt. Pratt, and many drawn up by him personally, are as follows—

The CHAIRMAN. Capt. Pratt has put those plans in.

Secretary DANIELS. I am reading the preface to these plans.

In his testimony Capt. Pratt, answering fully and completely the widely advertised and incorrect statement that the department had no plans, said:

We were there doing the work and we know what we are talking about.

And Capt. Pratt, referring to the visionary statement of Admiral Fiske about plans, said:

There was a comment made by Admiral Fiske, in which he submitted the plan under which the Office of Operations was to be organized, and he rather inferred that we had no plan up to that time, and no real plans section in the Office of Operations up to that time, which he submits those papers, which as a practical war measure have no real value at all. He does not know anything about it. We were there, doing the work, and we know what we are talking about. (See pp. 3299-3300.)

I want to set at rest any doubt that may have arisen as to whether we had plans, as far as being capable of coping with the questions that came up.

Having given you the 13 plans prepared under the direction of Capt. Pratt in Operations before we entered the war, I will present here the operative plans prepared in the Office of Operations by direction of Capt. Pratt during the conduct of the war.

The CHAIRMAN. As these have already gone into the record, there is no need of putting them in again.

Secretary DANIELS. You might here instruct the stenographer to say that the Secretary at this point presented the 13 plans.

The CHAIRMAN. Yes.

Secretary DANIELS. Presented by Capt. Pratt in his testimony, which will be found on pages so and so.

The CHAIRMAN. Very well.

Secretary DANIELS. That will save printing them again.

The CHAIRMAN. Yes.

Secretary DANIELS. And the Secretary also presented the following plans after we entered the war, which were presented by Capt. Pratt in his testimony, to be found on the following pages.

I conclude with these words:

Most of these plans were made in the months of April, May, and June, and it will be observed that these plans met conditions as they arose from day to day with a vision and foresight which must have impressed your committee and the country that the planning section of the Office of Operations was fully able to cope with every situation as it arose and even to look ahead and be prepared for every possible contingency that human wisdom could foresee.

After a careful reading of these basic plans and policies, if the wise policies of Operations are not sufficient to convince the greatest doubting Thomas that the American Navy was prepared with plans, I will invite the committee to hold an executive session with the General Board, and Capt. Pratt will come again, if necessary, and fully explain the great work which was done in Operations in the making of operative plans necessary to meet the changing conditions and which aided in the resulting in victory over the enemy.

Mr. Chairman, just as the close of the hearing Saturday you asked me a question. I said in my testimony that Capt. Palmer had said that there never was a time when a vessel was ready that we did not have the officers and men ready for it. You asked me to present the testimony of Capt. Palmer, his exact words. Of course, you did not question my statement—

The CHAIRMAN. I simply wanted it for a reference.

Secretary DANIELS. You did not recall it. I have here the complete statement of the questions and answers, as found on pages 1142-1145 of the typewritten record, as follows:

Senator TRAMMELL. You had charge of the personnel. Did you provide the necessary men for manning the ships and destroyers and for other duties as they were required?

Capt. PALMER. I had the personnel actually ready at the seaports to be put on the vessels before the vessels were ready. We never had a delay of a vessel on account of not having the officers and men; but I will not say that they were very highly trained, because with a very short war such as we had, and with the ordinary idea that it takes about two years to train a recruit so that he will be an ordinary man-of-war's man, and 10 years to train officers, you can see that we did not have any more trained men than we had in the beginning.

Senator TRAMMELL. You provided them, and they had at least sufficient training to meet the situation?

Capt. PALMER. To get the ships going. I do not mean that they would meet the situation in the most efficient way, by any means; but they were the best under the circumstances, with the amount of time given for training. They trained them intensively at all these places, and they did very fine work.

Senator TRAMMELL. The point I wanted to get at was, were they sufficiently trained and equipped to get the desired results?

Capt. PALMER. It would be pretty hard to tell, Senator. I know that in the specific cases we had people—for instance, Admiral Sims said that a certain bunch he had on little yachts or trawlers, I have forgotten which, over on the French coast, were very inefficient; and I think he used the words, "Their inefficiency was deplorable." I have forgotten whether it was on yachts or

trawlers; some small vessels. But, at any rate, I would not be sure that he was not correct in that. I do not know about the actual adjectives in the case, but I think there were a good many cases where there was a good deal of inefficiency among the organizations; that is, I mean among the individuals in organizations.

Senator TRAMMELL. As a matter of fact, would not that apply to people in the Regular Navy? Would it not apply to some particular individual connected with any man's staff? Some particular individual connected with your bureau, for instance, would not measure up to the highest standard?

Capt. PALMER. I will agree with you on all except my bureau. [Laughter.]

Senator TRAMMELL. That is what I thought.

Capt. PALMER. Oh, yes—

Senator TRAMMELL. I did not mean to reflect on anybody, but human nature and the frailties of human nature and the accomplishments and achievements of human nature run throughout the Navy just as through any ordinary, everyday bunch of men; that is the point I am making.

Capt. PALMER. That is exactly right.

Senator TRAMMELL. But the broader point is, taking it as a whole, did not the men that you provided accomplish results?

Capt. PALMER. I should say that the results accomplished by the Navy were perfectly wonderful during this war. I would say they were accomplished in spite of the obstacle of not having people to start with, and having a short time to train, and their newness in the war. I think the results were wonderful.

Senator TRAMMELL. That is my opinion. I would not pick out some isolated case of some fellow that made a failure, and cite it as the precedent for the Navy or for the reserve forces.

Capt. PALMER. No, sir.

Senator TRAMMELL. I would take it into consideration as a whole.

Capt. PALMER. I know what a fine showing our battleships, for instance, and our destroyers, made. In fact, all the comments we have seen in the papers and in books, bear that out; and Admiral Sims, for instance speaks of the wonderful lot of men we had on our destroyers, and that they were ready for anything. Also Admiral Rodman says about his people in the battleship force in the North Sea; and I know we have occupied a very high position with the British grand fleet; I could mention also the mine forces; I could go on and name all the forces.

The CHAIRMAN. Is that all?

Secretary DANIELS. That is not all of Capt. Palmer's testimony, but it is all with reference to that.

The CHAIRMAN. Admiral Palmer testified that in order to get these men he had to the battleships and take six officers from a number of them, and that the men had to be taken off battleships also for armed-guard service, and that the efficiency of the existing Navy had to be cut down in order to get these men, but in spite of that he did get the men.

Secretary DANIELS. But you must bear in mind that Capt. Palmer and the Bureau of Navigation estimated that we would need 93,000 men in the war. As a matter of fact, Mr. Chairman, with all our great personnel in that war, only 107,000 men were engaged in what Capt. Palmer, or the General Board, or the Bureau of Navigation, or any other naval officer supposed they would be employed in, in war; 107,000 were all the men we employed on fighting naval ships. The balance were employed in the character of service which we never expected the Navy would be called upon to do.

The CHAIRMAN. Now, Mr. Secretary, we have taken a very long while to get what I asked for, and that is this schedule of plans.

Secretary DANIELS. I have given them to you very fully.

The CHAIRMAN. Very fully; and I take it, from the data that you have given, that the plans that the Navy had were the General Board plans which they had on February 1 and which you say were

brought up to date at that time, and, in addition thereto, the plan of February 4, the plan of—what was the one after that?

Secretary DANIELS. Well, we had one of February 4, one of February 10, and one of February 17.

The CHAIRMAN. No; one minute. We have here the one of February 17, which was the one asked for on February 10. Was there anything between February 4 and February 17?

Secretary DANIELS. We asked for it on the 4th and got it on the 17th of February.

The CHAIRMAN. Was there anything between February 4 and that?

Secretary DANIELS. I think not.

The CHAIRMAN. Then there was the plan of February 4——

Secretary DANIELS. Yes.

The CHAIRMAN. The plan asked for on February 10——

Secretary DANIELS. An amplification on the tenth.

The CHAIRMAN (continuing). And given to you on the tenth, which was an amplification, you say, of the plan of February 4, and which was lost?

Secretary DANIELS. Yes.

The CHAIRMAN. A plan of March 17, the two plans of March 20, and plan of April 5?

Secretary DANIELS. Yes, sir.

The CHAIRMAN. Those were the plans of the General Board that the department had?

Secretary DANIELS. And the Black plan, of a war with Germany.

The CHAIRMAN. That was included, was it not, in the plan that they had on February 1, when the ambassador was given his papers? That would be included with the plan that the board had at that time?

Secretary DANIELS. They only made reference to that. They had that plan.

The CHAIRMAN. They had that?

Secretary DANIELS. But also, which you can see in executive session, they had every possible plan for war in the Atlantic, in the Pacific, and in the Caribbean.

The CHAIRMAN. For a war with Germany?

Secretary DANIELS. Oh, I told you the other day that I could only speak of the war with Germany, because that is the only country that I would like to speak about; but for war with any nation which the Congress directed them to take part in.

The CHAIRMAN. But specifically for a war with Germany?

Secretary DANIELS. And specifically for a war with any other nation which might go to war with us.

The CHAIRMAN. Specifically Germany?

Secretary DANIELS. I said specifically, and specifically any nation which we might have war with in the Atlantic, in the Pacific, or the Caribbean.

The CHAIRMAN. And in addition to this there were the 13 operational plans you have put in this morning?

Secretary DANIELS. Yes.

The CHAIRMAN. And those, with the plans I have already enumerated, were the plans that the Navy Department had to go on, for war, before the war began.

Secretary DANIELS. Yes. I can not imagine, Mr. Chairman, looking back upon it, anything else that the General Board could have done. I look back upon it and marvel at their vision, and at the precision of their plans, and at the fact that they were humanly as perfect as it was possible for naval statesmen to make.

The CHAIRMAN. I do not think that the contention has been that the General Board did not prepare plans, but that the department did not use those plans.

Secretary DANIELS. I have shown you that they did use the plans.

The CHAIRMAN. That is also a matter of opinion.

Secretary DANIELS. I have given you the facts.

The CHAIRMAN. Other witnesses have testified in a conflicting way about it.

Secretary DANIELS. I have given you the facts, and I have not given you an opinion.

The CHAIRMAN. I say, that is a matter for the opinion of the committee.

Secretary DANIELS. Of course, you can pass upon it.

The CHAIRMAN. Now, do you say that between August, 1914, and January, 1917, you had plans for war with Germany, we being hypothetically in association with the Allies, and the war being the kind of a naval war that existed in 1916. ✓

Secretary DANIELS. I will refer you to the Black plan that we had, and the other confidential plans, when Admiral Badger comes before your committee giving all possible conditions and making ready for them. L

The CHAIRMAN. Yes; but would you say we had plans for war with Germany, we being hypothetically in association with the Allies, and the war being the kind of a naval war that existed in 1916?

Secretary DANIELS. I never answer a question when the word "hypothetically" is used, unless it is explained, because hypothetical—

The CHAIRMAN. That means, hypothetically, that we should have the Allies with us in the war.

Secretary DANIELS. You will observe, Mr. Chairman, that in every plan that I have read, from the General Board, whenever any reference is made to going into the war they state, most important of all, as soon as possible we should have arrangements made with the Allies to ascertain what their plans are, so that we might adjust our plans to work with them. Now, of course, before we entered the war, as Ambassador Page wrote—he said, for example, that the British Admiralty, after we broke relations with Germany, all of us thought that was the prelude to war; but he said even then the British would not give to our attachés their plans, and what they were doing; but if we would send over an officer, by word of mouth they would do so. We could not have made a plan to work with the Allies without consultation with the Allies and without perfect cooperation with them. ✓

The CHAIRMAN. I asked you, Mr. Secretary, whether in your opinion we had any plans for a war with Germany, which would include the cooperation of the Allies with us, and the war being the kind of naval war which existed in 1916. Yes or no will answer that.

Secretary DANIELS. I decline ever to answer yes or no in any investigation, Mr. Chairman. I remember the case of the man who

was asked the question whether he had stopped beating his wife, and was told to answer yes or no. I will not answer yes or no.

The CHAIRMAN. I do not think this is such a case.

Secretary DANIELS. I know it is not, but I was using that as an illustration.

The CHAIRMAN. This is a perfectly definite question.

Secretary DANIELS. Yes; and I will give you a perfectly definite answer, but you can not tell me to answer yes or no.

The CHAIRMAN. You can answer whether there were such plans, in your opinion.

Secretary DANIELS. I have a right to answer as I please. Ask me questions, and I will answer them all definitely and with fullness; but you can not say "Mr. Secretary, you answer yes or no," any more than I can tell you what questions to ask me.

The CHAIRMAN. You must answer them, Mr. Secretary, in a way to give me the information I ask for.

Secretary DANIELS. I am the Secretary of the Navy, and I shall answer you in accordance with the duty of my office, and fully; but you can not, Mr. Chairman, tell me to answer yes or no, and you can not intimate to me how I shall answer your questions.

The CHAIRMAN. Our powers are to summon witnesses——

Secretary DANIELS. And to ask them questions.

The CHAIRMAN (continuing). And to get information from them.

Secretary DANIELS. And my powers are equally plain, that I am to answer your questions in my own way.

The CHAIRMAN. And you must give the information asked for. You are on oath to do so.

Secretary DANIELS. I am on oath, and therefore I decline to let you tell me to answer yes or no.

The CHAIRMAN. I ask you questions, and I would not care if you would answer them so as to convey the information, but that you do not do. I would much prefer to have you answer them in that way.

Secretary DANIELS. And I would much prefer not to be told how to answer questions.

Senator TRAMMELL. I think if a witness is asked to answer questions vocally yes or no, he is not so likely to give a correct impression as he is by an explanatory answer; and the purpose of the committee, I presume, is to get at the facts.

The CHAIRMAN. Yes.

Senator TRAMMELL. And not to get some desired answer.

Secretary DANIELS. I will answer your question.

The CHAIRMAN. Yes.

Secretary DANIELS. The General Board had perfect and full plans for a war with Germany from the time the Germans—from the time the Austrians had trouble with Serbia. The General Board was studying all the naval matters with reference to that war. The General Board was preparing these data. They had full information, the fullest they could have imparted to them by the naval attachés in Europe. They made every plan possible for a war in which they might be employed, and in every report they made to me they said "As a matter of primary importance, when we enter this war we must consult with the Allies and cooperate with them."

The CHAIRMAN. There is a matter that calls us over to the Senate, now, Mr. Secretary, I will take up that matter this afternoon.

Secretary DANIELS. To what hour will you adjourn?

The CHAIRMAN. We will adjourn until 2 o'clock.

Secretary DANIELS. Very well.

(Thereupon, at 12 o'clock m., the subcommittee took a recess until 2 o'clock p. m.)

AFTERNOON SESSION.

The subcommittee reconvened, pursuant to the taking of the recess, at 2 o'clock p. m., Hon. Frederick Hale (chairman) presiding.

TESTIMONY OF HON. JOSEPHUS DANIELS, SECRETARY OF THE NAVY—Resumed.

The CHAIRMAN. Mr. Secretary, this morning before closing I asked you questions a number of times and I was about to ask the reporter to read the answer that was given just before we adjourned, but another reporter took it down and he has not the minutes with him. Can you give me substantially what your answer was?

Secretary DANIELS. Well—

The CHAIRMAN. Perhaps to explain the question I might say that the purpose of it was this: My understanding of the naval situation in 1916 was the following: After the Battle of Jutland the German fleet was cooped up by the more powerful surface fleet, and its ships could not come out; they were blockaded, but the submarines were coming out all the time and submarine warfare was being carried on in the war zone to a very great extent, and that was the principal phase of the naval warfare at that time. Now, you have told us that the plan of the department was in case we got into the war to assume an offensive. What I want to know is whether you had on the 1st day of February, 1917, or about that time, detailed plans all prepared so that the Navy could assume the offensive in submarine warfare and especially in areas where that submarine warfare would be carried on.

Secretary DANIELS. You are speaking, as I understand, of the Battle of Jutland—

The CHAIRMAN. Yes; but what I want information on is whether you had those plans up to the time Bernstorff was given his passports.

Secretary DANIELS. We had plans of a war with Germany in the "Black" plan, which Admiral Badger will take up with you.

The CHAIRMAN. And did these plans cover antisubmarine warfare?

Secretary DANIELS. They covered whatever warfare the General Board thought we would be likely to have to meet.

The CHAIRMAN. You do not know whether they covered antisubmarine warfare or not?

Secretary DANIELS. Those plans are confidential, and when you receive them in executive session you will see all phases that they covered.

The CHAIRMAN. I do not think there will be any question of breaking in on confidential plans for you to inform the committee whether

at that time we had plans which covered the warfare against the submarine.

Secretary DANIELS. We had plans covering any possible warfare in the Atlantic or Pacific.

The CHAIRMAN. Including plans against submarines?

Secretary DANIELS. And the General Board's plans will be presented to your committee.

The CHAIRMAN. I am asking you the question whether it included submarines, because I want to ask you some general questions about that.

Secretary DANIELS. Of course, the plans covered, as I told you this morning—every possible plan we had always said, "Consult immediately with the Allies with the view of securing the complete co-operation." You presume, in your question, that after May 1, 1916, the only possible method of warfare was the submarine warfare.

The CHAIRMAN. That was one principal kind of warfare.

Secretary DANIELS. Yes; and after the Battle of Jutland that was not then the opinion of the experts of Great Britain or the world. They were expecting and hoping for another battle, and also they were expecting always that the German cruisers would seek to come out, so that the General Board was making its plans upon the line of battleships, dreadnaughts, submarines—any kind of warfare that we might be engaged in.

The CHAIRMAN. And I asked you specifically if they did make plans for antisubmarine warfare.

Secretary DANIELS. Why, they had plans for antisubmarine warfare, dreadnaught warfare, cruiser warfare—any kind of warfare. I say.

The CHAIRMAN. Now, on page 2710 of the testimony appears the following question:

The CHAIRMAN. Was any plan drawn up to meet the case of a war in which the United States naval forces would be used almost exclusively against submarines?

Admiral BADGER. No, etc.

Secretary DANIELS. Used exclusively, you say?

The CHAIRMAN. Used almost exclusively against submarines.

Secretary DANIELS. Well, if Admiral Badger made you that statement, of course, that is correct.

The CHAIRMAN. It was practically all—

Secretary DANIELS. But the Navy warfare is never exclusive warfare. No wise man, making plans for a warfare, would be so foolish as to make an exclusive naval fight against a particular class of ships. If your enemy knew that you were exclusively making your plans to fight a submarine, why, of course, he would send something else.

The CHAIRMAN. What would he send?

Secretary DANIELS. He might make a dreadnaught fight.

The CHAIRMAN. What would he do in that particular case?

Secretary DANIELS. Well, I would say this about that, that I do not think that we can go very far in hypothetical cases of what an enemy would do if this or that happened. I do not belong to the order of ifers, but I say that our plans were to fight the Germans, and to get in cooperation at once with the Allies for the best possible

cooperation against any kind of naval warfare we should have to come up against.

The CHAIRMAN. Admiral Badger continued in his explanation—I simply read the “No” at the first of it, and then he explained afterwards. He said:

No; because it was believed that we should have to do what the people abroad were doing; to follow their lead. You understand that we entered the war under this handicap, that we came in to cooperate after the others had been at war three years, etc.

Now, from your answers am I to understand we were thoroughly prepared with plans for antisubmarine warfare or not, Mr. Secretary?

Secretary DANIELS. We were entirely prepared with plans for any kind the naval strategists could see.

The CHAIRMAN. For antisubmarine warfare?

Secretary DANIELS. Not specifically; any kind, or every kind.

The CHAIRMAN. Mr. Secretary, do you not think as a committee we have a right to get information on these matters? You have told us they had ample plans. Now, I want to know what those ample plans were.

Secretary DANIELS. Admiral Badger will present them whenever you send for them.

The CHAIRMAN. You are the witness on the stand to answer this.

Secretary DANIELS. But I am telling you the General Board had the black plan.

The CHAIRMAN. That does not mean anything. We have not seen the black plans. We want to find out what you did have.

Secretary DANIELS. I will have them here in five minutes or in the morning.

The CHAIRMAN. At a later period we intend to see them, but I want to get from you the information whether you had these plans we are asking for.

Secretary DANIELS. I know what you are asking me, but I know what I am answering you. You asked me if we had any plans. The dreadnaughts—

The CHAIRMAN. Is it not your purpose to assist the committee in this investigation?

Secretary DANIELS. It is my purpose to get the committee the fullest possible information.

The CHAIRMAN. Do you think we get the information when you do not answer our questions?

Secretary DANIELS. Absolutely. I tell you we had plans for any kind of warfare in the black plans.

The CHAIRMAN. It has been said there seems to be a good deal of smoke screen to keep from getting information. It seems to me you are not in a position where you want anything of that sort.

Secretary DANIELS. I have given—

The CHAIRMAN. Please let me finish.

Secretary DANIELS. I have given you this morning—

The CHAIRMAN. Please let me finish, Mr. Secretary. You have stated heretofore that none of these charges against the Navy was substantiated at all; that the Navy Department was clear in every respect of any of those criticisms. Now, that being the case, there

can be nothing to hide in any way. I am sure you would not want to hide anything. You are the very last one to want to do that.

Secretary DANIELS. I have shown you this morning we have everything open—everything open.

The CHAIRMAN. And it seems to me when we are asking for definite answers to questions that you should want to give them.

Secretary DANIELS. And I have answered them fully and given you all the plans.

The CHAIRMAN. But you do not answer them so we can get any information from your answers.

Secretary DANIELS. If you can not get any information from what I have answered you, I do not know where you will get it. It is very full and complete.

The CHAIRMAN. Your answers have little to do with the questions and you put in a lot of additional testimony.

Secretary DANIELS. I answer exactly your questions. You asked me if we had plans.

The CHAIRMAN. I do not think you do, Mr. Secretary.

Secretary DANIELS. That is a difference of opinion.

Senator TRAMMELL. I would like to get a little light. The Secretary has stated he would produce these plans. Unquestionably the best evidence is the plans themselves. If we are to have them before us why is it that the chairman desires to have a duplication of that and have a recital from the Secretary as to what they contain, when we are going to have them before us.

The CHAIRMAN. Because you were not here yesterday, Senator Trammell, and when these plans are introduced they will not be put in the record. They are to be introduced in executive session. Now, I want him to show what we have and what we have not.

Senator TRAMMELL. You want him to disclose the plans?

The CHAIRMAN. I do not want him to disclose the plans. I do not want him to disclose anything confidential, nor is it confidential for him to disclose whether we had plans to take care of the submarine situation in 1916.

Secretary DANIELS. My answer was very plain that the General Board had plans to meet any possible method of warfare on the seas that these naval statesmen could foresee, made since the General Board was established, kept up to date, from 1914 up to 1917.

The CHAIRMAN. Now, will you tell me, Mr. Secretary, why you are unwilling to tell me specifically whether they had antisubmarine plans?

Secretary DANIELS. I am not unwilling to tell you anything.

The CHAIRMAN. Then will you tell me whether they had anti-submarine plans?

Secretary DANIELS. I told you they had plans to meet all exigencies, and when that Black plan is brought here you will see it.

The CHAIRMAN. I want this for the record. The Black plan does not go into the record.

Secretary DANIELS. If you examine the plans you will see we had the plans. What you want me to say—

The CHAIRMAN. I do not want you to say one way or the other.

Secretary DANIELS. I know what you want me to say.

The CHAIRMAN. What? I do not.

Secretary DANIELS. You want me to say whether before we entered the war we had all the information from the Allies, and whether we

d proposed this thing in the North Sea or this thing in another

I tell you we had plans of the General Board——

The CHAIRMAN. I am not asking you about information from the files. I am asking you whether you had the plans.

Secretary DANIELS. Plans for what?

The CHAIRMAN. To cover the antisubmarine warfare adequately.

Secretary DANIELS. I have told you we had plans to handle dread-
ght, antisubmarine, cruiser, mines—any war that might come up.

The CHAIRMAN. Could you not answer anything more, including
something that might be helpful? Did you include submarines?

Secretary DANIELS. Everything, I said.

The CHAIRMAN. You do include submarines?

Secretary DANIELS. Everything that the General Board thought
could be called on for or needed.

The CHAIRMAN. Now, taking all of the so-called war plans filed in
con- nect with this committee, that you filed this morning, and the
which is not to be made public, do you consider that all those
prior to April 6, 1917, constitute an adequate base and operative
for war against Germany on that date?

Secretary DANIELS. Plus the plans——

The CHAIRMAN. Plus the plan that we have seen in executive ses-

Secretary DANIELS. Oh, no; plus the plans that have been pre-
sented to you by Capt. Pratt and plus the action of operations during
the war.

The CHAIRMAN. Plus what?

Secretary DANIELS. Plus the plans and operations carried out to
meet every exigency or change of war.

The CHAIRMAN. Yes; the 15 operative plans that you put in this
morning plus what came afterwards.

Secretary DANIELS. Yes; and the estimates of the situation made
before the war. Now, Mr. Chairman, you must understand a plan
estimate. A plan is no sacrosanct thing; it is the best estimate
that we can make beforehand. Now, I tell you the plans we had
before the war of the General Board, the plans that Capt. Pratt, of
course, made before the war plus the plans that Capt. Pratt
presented here and put in the record in the early days of the war,
changing estimates and plans put in operation during the
war, sufficient to win the victory which American naval strength
won.

The CHAIRMAN. Of course, that has nothing to do with my ques-

tion. Secretary DANIELS. It has everything to do with it.

The CHAIRMAN. But were the 15 plans Capt. Pratt put in not put
in before the war—the ones you gave me this morning?

Secretary DANIELS. The first 13 were and the other 17 were put in
after the war.

The CHAIRMAN. The first 13. Now, my question is, Do you con-
sider all of those plans made prior to April 6, 1917—that has
been presented to you with what came afterwards—constitute a basis of
plans for war against Germany on that date?

Secretary DANIELS. Plus the black plan——

The CHAIRMAN. You can not put in what comes after that.

Secretary DANIELS. Why, certainly.

The CHAIRMAN. I say what you had at that time.

Secretary DANIELS. Certainly; I must, because the very last word of every plan the General Board made was—most important of all—“Confer with the allied forces and cooperate with them.”

The CHAIRMAN. That is, without the plans that were made afterwards you do not consider that they constituted an adequate basis of operative plan?

Secretary DANIELS. I consider this, that they contained everything that was possible up to the time changing conditions caused Operations to make plans that every general and every manager of a war must make as conditions go on.

The CHAIRMAN. Which, of course, was not what I asked you.

Secretary DANIELS. Well, I have answered your question.

The CHAIRMAN. I asked you whether they constitute an adequate basis of operative plan.

Secretary DANIELS. I have answered your question. I consider they constitute as adequate, as full, as perfect as the genius and ability of naval strategists could make. They were full and complete and, of course, they were modified, they were changed, they were enlarged, they were improved to meet the changing conditions.

The CHAIRMAN. You think they were as full and complete as they could have been under the circumstances?

Secretary DANIELS. Oh, undoubtedly.

The CHAIRMAN. But you would not say that they in themselves are an adequate basis of operative plan?

Secretary DANIELS. As adequate as any naval strategist ever made in the history of naval warfare.

The CHAIRMAN. So you would say that on April 6 all planning and preparations were made and upon signal every vessel could go to its appointed task and every bureau was ready to cooperate with Operations—would you say that?

Secretary DANIELS. Admiral Mayo has told you that when war was declared all he had to do was to send one telegram, “Mobilize,” and the fleet was mobilized. Every officer that has been heard has told you it was like that [snapping the fingers]. Every bureau, every navy yard operated cooperatively immediately.

The CHAIRMAN. A good many officers have been called and told us some of the ships of the Navy were not prepared at all and could not be used, some of the very important ships of the Navy.

Secretary DANIELS. Well, you have heard very fully the testimony of Admiral McKean, who was Chief of Material.

The CHAIRMAN. Which I think bears that out.

Secretary DANIELS. You have heard the testimony of Admiral Mayo.

The CHAIRMAN. Who referred to the battleships and destroyers that were with his fleet.

Secretary DANIELS. Who was ready and anxious to go across the ocean at once with his fleet.

The CHAIRMAN. And who stated that we had certain types of vessels that ought to have been with the fleet and were not ready.

Secretary DANIELS. Well, Mr. Chairman, if you read Admiral Jellicoe's testimony that I have put in here, he told you that the British Navy would have been better off if they had had certain

types of ships. There never was a navy in the world, there never will be in which its commanding officers and leaders would not like to have additional other types of ships. When you speak of readiness you do not speak that you have everything you could possibly want on earth. Admiral Mayo's fleet was set and ready and he wanted to go across, but the British and the other Allies did not feel—Mr. Balfour sent word over here to that effect, and others, that at that time it was not wise, and did not request the fleet to go.

The CHAIRMAN. I do not think we have had any testimony, Mr. Secretary, that Admiral Mayo's fleet was ready except as to particular ships, such as battleships and destroyers, such as he had with him.

Secretary DANIELS. Admiral Mayo's fleet was the fleet he was in command of.

The CHAIRMAN. He never claimed it was ready as a fleet. He claimed the individual ships were that were with him.

Secretary DANIELS. He claimed it as a fleet.

The CHAIRMAN. Show me the testimony.

Secretary DANIELS. He claimed his fleet was ready to go.

The CHAIRMAN. Yes; the fleet with him.

Secretary DANIELS. He came to Washington to see me and wanted to go across with his fleet.

The CHAIRMAN. But he specifically stated it was lacking in ships that ought to go with his fleet, and those were ships we had but simply did not have them ready.

Secretary DANIELS. Did I not tell you neither our Navy or any navy that ever existed ever had every type of ship it wanted, and there never was a captain of a ship who was not always saying, "Well, I would like to have this addition to my ship, I would like to have this change in my ship, and this gun changed." That is naval.

The CHAIRMAN. But if you had them and had them ready you could have given them to him, would you not?

Secretary DANIELS. Given them to whom?

The CHAIRMAN. This illustration you are using—

Secretary DANIELS. Not at all. Mayo did not go across with his fleet, not because it was not ready, not because he lacked types of ships. He didn't go because—

The CHAIRMAN. Whether that was the reason he did not go or not, he did not have enough and so testified.

Secretary DANIELS. I think you will find Admiral Mayo said he was ready to go.

The CHAIRMAN. Yes; he was ready to go with what he had but was not adequate.

Secretary DANIELS. With what he had, yes.

The CHAIRMAN. Then what do you say—

Secretary DANIELS. And he said this, he said there never was a time virtually that the fleet was in such a fine condition as then.

The CHAIRMAN. Yes.

Secretary DANIELS. Yes; that is what he said.

The CHAIRMAN. Well, that does not show anything, does it?

Secretary DANIELS. It shows everything.

The CHAIRMAN. But he specifically testified he was lacking in personnel and lacking in ships.

Secretary DANIELS. A man who has been in the Navy many years, as long as Admiral Mayo, and tells you that the ships under his command were in better condition than he had every known them——

The CHAIRMAN. Precisely; but he did testify——

Secretary DANIELS. And another witness who was not seeking to make testimony for the department, Admiral Plunkett, tells you that the effectiveness of the ships in shooting was better than it had ever been, and Capt. Palmer tells you there never was a minute that the ships did not have the personnel. I think that is a complete answer.

The CHAIRMAN. All of them have testified that the ships that were there were in first rate condition, though they were going down hill a bit on account of taking men off for the armed guard.

Secretary DANIELS. They never testified those ships were going down hill any. On the contrary, they testified the ships were in admirable condition.

The CHAIRMAN. Yes; Admiral Mayo testified they were falling off because of taking men for the armed guard.

Secretary DANIELS. Mr. Chairman, when we were called upon to take the armed guard, of course, we took the best gunners on the ships.

The CHAIRMAN. And, of course, when you took the best gunners the fleet——

Secretary DANIELS. And what did we do? We immediately put in training other men who very shortly became excellent gunners, so that we were filling the need, filling the naval need.

The CHAIRMAN. Of course that hurt the efficiency of the fleet.

Secretary DANIELS. If you were on the stand I might ask you a question.

The CHAIRMAN. Well?

Secretary DANIELS. I would ask you what you would have done when the demand came for gunners to make the armed guard. I dare say you and every other man in America would have said, "Take the very best gunners we have got." And when it was decided that the fleet should not go over and the Allies joined in that decision, why it was a perfectly wise——

The CHAIRMAN. Absolutely necessary, no question about that.

Secretary DANIELS (continuing). Proper thing to do. Then we trained other men.

The CHAIRMAN. Precisely, but when you did take them off, of course, it hurt the efficiency of the fleet for the time being. No question about that.

Secretary DANIELS. The efficiency of the fleet was better than it ever was, but, of course, when you took those men off for a little while, until you put other men on, you had the fleet locked up in a safe deposit vault in the York River with nets and mines across it, training men, and such training as the men had there was most marvelous.

The CHAIRMAN. Now, to lock the fleet up with nets and mines to protect them in the York River is not a very bold and audacious policy, is it?

Secretary DANIELS. No; the bold and audacious policy was not in that line; because the Allies asked us not to send the dreadnaughts over there then. And why? The logistics of the situation.

The CHAIRMAN. I ask you, then, Mr. Secretary, if plans were completed so that on April 6, 1917, all planning and preparations were made and upon signal then every vessel was ready to go to its appointed task and every bureau was prepared to cooperate with the Bureau of Operations? Would you say yes or no—or, answer it in our own way.

Secretary DANIELS. Well, Mr. Chairman, in a great organization would not say that there was not some man that had rheumatism some man that had influenza and that could not have gone; and will not say that there was not a ship that did not have the men. will not say that there were not ships that had been sent to some yard for repairs. Of course, I will not say that, because there never been a day in the history of the American Navy when it could be said of every single ship and every single man.

The CHAIRMAN. You mean if there was a ship that was not ready to you could take a man from another ship so that it could be ready to go?

Secretary DANIELS. No; I mean that there never was a ship ready so that there were not officers and men ready to man it.

The CHAIRMAN. Officers and men ready?

Secretary DANIELS. Officers and men ready to be sent.

The CHAIRMAN. But it is a fact that Capt. Palmer testified, from Bureau of Navigation, that they did take men from other ships?

Secretary DANIELS. Oh, wait a minute. In the early days of the war the first thing we did was to call in 12,000 Naval Militia. They immediately went on these ships. Then we took over the Coast Guard. Then we took over the Coast and Geodetic Survey. Then we rolled in the naval reserve classes 1 and 2; we took over a number of merchant captains—class 3, I think it was; merchant seamen and men who were seagoing men. They were excellent and they knew the sea perfectly. They did not have the training of naval methods, but as far as manning the ships and navigating the ships was concerned, they were the most effective and able body of officers and men.

The CHAIRMAN. Now, the answer to my question; will you give

Secretary DANIELS. What is that?

The CHAIRMAN. I have asked you four times whether you completed the plans were completed so that on April 6, 1917, all preparations were made, and upon signal then every vessel went to its appointed task, and every bureau was ready to cooperate with the Bureau of Operations?

Secretary DANIELS. I have answered it four times.

The CHAIRMAN. I do not think so.

Secretary DANIELS. I have answered it four times, Mr. Chairman.

The CHAIRMAN. And each time differently; and I do not think—

Secretary DANIELS. And each time alike.

The CHAIRMAN. Then, what is the gist of your answer?

Secretary DANIELS. What is the particular part of the—

The CHAIRMAN. I do not know anything from your answers, as to whether they were ready or not.

Secretary DANIELS. I have told you that the fleet never was so fit as it was at that time that the ships were never in such good condition; and

now you ask me if every man in the Navy was perfectly well that day and able to do 100 per cent work, and I would not say that there were not a few who were not.

The CHAIRMAN. You know perfectly well, Mr. Secretary, that I have not asked you that.

Secretary DANIELS. You have asked me that. You asked me if every ship—

The CHAIRMAN. I asked you whether you would consider that every plan was completed so that on April 6, 1917, all planning preparations were made and everything was ready—

Secretary DANIELS. I told you ten times that every plan that naval ingenuity and naval statesmanship could make had been made.

The CHAIRMAN. Then, upon signal was every vessel ready to start?

Secretary DANIELS. Every vessel was ready to start that any human ingenuity could make ready to start. Admiral McKean has told you, and has given you a list of all the ships here.

The CHAIRMAN. And every bureau was ready to cooperate with the Bureau of Operations?

Secretary DANIELS. Immediately.

The CHAIRMAN. Under a given plan?

Secretary DANIELS. Immediately.

The CHAIRMAN. What was that plan?

Secretary DANIELS. The plans were made in 1915. They were required under the 1915 plans, every bureau, to have its preparations ready for war, and to be ready for war and to make reports every three months to the department of anything they needed.

The CHAIRMAN. Why did Admiral Palmer testify he had no plans for cooperation with the bureaus?

Secretary DANIELS. Well, if he did not have any plans, he had lost them.

The CHAIRMAN. He had lost them?

Secretary DANIELS. Or he—now, what he probably meant was this, Mr. Chairman, and any other officer that came before you would probably tell you that he did not have all the basic plans. I told you this morning it was the policy of Operations to keep the large plan very confidential and secret. In other words, they would not send to the Chief of the Bureau of Ordnance and say to him, "Here are the plans for repairing ships that the Construction and Repair Department is going to handle." They would give him all he needed to know about ordnance. And so through all the bureaus.

Now, Admiral Palmer had plans that the other bureaus had. Of course, what he probably meant was, as the war went on and we were called upon to man merchant ships, armed guards, and everything else, that he had not laid out before him, six months ahead, the "Following ships"—which had not been commandeered or had not then been built—"will go into commission on the 27th day of a certain month, and therefore should have certain men."

The CHAIRMAN. How about the ships that had been built and were in reserve?

Secretary DANIELS. They had the personnel on them.

The CHAIRMAN. The full personnel?

Secretary DANIELS. They had a certain personnel on them, in reserve. When I became Secretary of the Navy the reserve ships had

5 per cent crews. We increased it to 33½ per cent; we increased it to 50 per cent; we increased it to 50 per cent. We had enough men when we went into war to increase these, until within a few days every ship that Operations ordered out, we had enough men to go on and man them. Operations did not give them six months ahead of what they were going to do, but Operations said to Navigation, "We will send out a certain ship, needing a certain personnel, to-morrow, next week or next month"; and Capt. Palmer has told you that never failed to have the officers and men before the ship was ready to sail.

THE CHAIRMAN. And he has also told us that in order to get those officers and men he had to go and get them from other ships that were in commission, and to take them away from those ships.

SECRETARY DANIELS. Well, Mr. Chairman, what ships did he take away from?

THE CHAIRMAN. Battleships.

SECRETARY DANIELS. Ships that the Navy Department, in pursuance of an agreement with the Allies, had determined should not then be sent abroad.

THE CHAIRMAN. And ships that needed and should have had a full complement, should they not?

SECRETARY DANIELS. How is that?

THE CHAIRMAN. I say, and ships that needed and should have had a full complement, should they not?

SECRETARY DANIELS. Yes; and they got them so rapidly that we were in a little while, had more men than we ought to have had on board, training them.

THE CHAIRMAN. Green men, who were untrained, who knew nothing of their duties, and were on the ships for training?

SECRETARY DANIELS. We used the battleships like the *Indiana* and the *Wisconsin* and the *Massachusetts* and the *Iowa*—all those old battleships that are now put in the scrap-heap, we used them for training. That was their business.

THE CHAIRMAN. You say that—

SECRETARY DANIELS. Let me read you this statement from Admiral Sims about battleships.

THE CHAIRMAN. Is this from the testimony?

SECRETARY DANIELS. No; this is from an article in *World's Work*. Writing about why the battleships should not go over to Europe in the spring and summer of 1917. [Reading:]

"If we sent all our big ships to England we should have been obliged to keep them constantly stationed with them ready for a great sea action; this would have been completely fallen in with German plans, for then these destroyers would have been used against her submarines.

"We followed the policy that the British Navy, and the United States Navy Department, and Admiral Sims thought was best, of converting these old ships into training ships and permitting them to go across and do this offensive work.

THE CHAIRMAN. Now, Mr. Secretary, I will read your letter of July 1917, copy of which was cabled to Admiral Sims on July 9, 1917.

SECRETARY DANIELS. Is it in the testimony?

The CHAIRMAN. Is it in the testimony; yes. It was a cablegram sent on July 9. [Reading:]

Confidential.

NAVY DEPARTMENT,
Washington, July 3, 1917.

SIR: Referring to the cablegram from Ambassador Page in London, dated June 23, 1917 (copy attached). After careful consideration of the present naval situation, taken in connection with possible future situations which might arise, the Navy Department is prepared to announce as its policy in so far as it relates to the Allies—

(1) The heartiest cooperation with the Allies to meet the present submarine situation, in European or other waters, compatible with an adequate defense of our own home waters.

(2) The heartiest cooperation with the Allies to meet any future situation arising during the present war.

(3) A realization that while a successful termination of the present war must always be the first allied aim and will probably result in diminished tension throughout the world, the future position of the United States must in no way be jeopardized by any disintegration of our main fighting fleets.

(4) The conception that the present main military rôle of the United States naval forces lies in its safeguarding the lines of communication of the Allies. In pursuing this aim there will, generally speaking, be two classes of vessels engaged—minor craft and major craft—and two rôles of action; first offensive, second defensive.

(5) In pursuing the rôles set forth in paragraph (4), the Navy Department can not too strongly insist that in its opinion, the offensive must always be the dominant note in any general plans of strategy prepared. But, as the primary rôle in all offensive operations must perforce belong to allied powers, the Navy Department announces as its policy that, in general, it is willing to accept any joint plan of action of the Allies deemed necessary to meet immediate needs.

(6) Pursuant to the above general policy, the Navy Department announces as its general plan of action the following:

(a) Its willingness to send its minor fighting forces, comprised of destroyers, cruisers, submarine chasers, auxiliaries, in any number not incompatible with home needs, and to any field of action deemed expedient by the joint allied admiralities, which would not involve a violation of our present State policy.

(b) Its unwillingness, as a matter of policy, to separate any division from the main fleet for service abroad, although it is willing to send the entire battleship fleet abroad to act as a united but cooperating unit when, after joint consultation of all admiralities concerned, the emergency is deemed to warrant it, and the extra tension imposed upon the line of communications due to the increase in the number of fighting ships in European waters will stand the strain imposed upon it.

(c) Its willingness to discuss more fully plans for joint operations.

Sincerely, yours,

JOSEPHUS DANIELS.

Secretary DANIELS. Let me see that, Mr. Chairman, if you please. or a copy of it? That is a very admirable document. That was a formal statement—

The CHAIRMAN. I want to ask you some questions about it.

Secretary DANIELS. All right [examining paper].

The CHAIRMAN. I call your attention particularly to the fact that in the letter I have just read, on as late a date as July 3 you say, "the Navy Department is prepared to announce as its policy in so far as it relates to the Allies." If it took you three months before you were prepared to advise our State Department and our commander in the war zone, too, as to what our naval policy was to be, how is it that you were fully prepared before April, 1917, with detailed plans to carry out that policy? Policy usually precedes plans to carry it out.

Secretary DANIELS. The answer to that is very plain. The policies announced here had not only been announced to the Allies on the 9th of April but the bulk of them had been put into effect and

this was a mere formal statement of policies with which they had been familiar and which had been carried out in large measure. That letter, Mr. Chairman, is exactly along the same line as Capt. Schofield's letter of June 8, in which he declared in writing that the policies that the General Board approved on April 5 had been carried out. Here was a formal plan, officially drawn up, merely putting in formal phrase what had been already announced.

The CHAIRMAN. Why did you not do that for the commander of the forces in the war zone?

Secretary DANIELS. My recollection is that Capt. Pratt thought it was wise at the time to put on record what we had done, and to place a formal statement of policies which had, in the main, already been carried out. It in no sense meant that we had only made a policy at that date.

The CHAIRMAN. You said at that date, "The Navy Department is prepared to announce as its policy."

Secretary DANIELS. Exactly; we were announcing it to all the Allies, and anybody else.

The CHAIRMAN. But this is a confidential cable.

Secretary DANIELS. It was a confidential cable, but all confidential cables like that that Sims had were taken, of course, in total or in full—

The CHAIRMAN. Were all confidential cables that Sims had sent—

Secretary DANIELS. No; wait until I finish. They were taken in full or in part so that we could formulate in that way, of course, not in full, but largely. That is a formal statement made out by Capt. Pratt, who thought that it was well to place it in some official, formal way just what we had done and what we were willing to do.

The CHAIRMAN. No; I do not think it speaks of what had been done. It speaks about what we are ready to do.

Secretary DANIELS. Read it again, and you will find it applies to what has already been done.

The CHAIRMAN. It says:

The Navy Department is prepared to announce as its policy in so far as it relates to the Allies—

(1) The heartiest cooperation with the Allies to meet the present submarine situation—

Secretary DANIELS. We are prepared to announce that.

The CHAIRMAN. Yes.

Secretary DANIELS. On the 11th of April they had done that.

The CHAIRMAN. Yes; but they are announcing here plans for the future.

Secretary DANIELS. Announcing the policy that had been settled on the 11th of April. On the 11th of April we said to Admiral Browning and Admiral Gresset, "Now, our policy is, we shall fully cooperate with the allied forces." Now, here is a formal official statement, nearly all of which had been carried out long before that, back to the British Admiralty. Let me insert here in the hearing, to show you, the telegram sent by Admiral Browning on the 11th of April to the British Admiralty, announcing to them the formal arrangement made of the policy of cooperation between the Navy of the United States and the Allied navies. I would like to put that in the hearing if it can be found; and I would like also to put in the hearing to show you that on April 24, during 1917, this country

was visited by several war missions made up of representative men of the countries allied with the United States in the conflict with Germany. Now, long before this formal announcement—it need not have been made at all except for a formal declaration—we had dates of the arrivals of these bodies in Washington, were as follows. We had, as I say, made this arrangement with the British and French admirals on April 11, 1917. On April 24 the French mission came, of which the naval representative was Admiral Cocheprat. We had many discussions with him.

On April 21 the British mission, with distinguished naval officers, arrived.

On April 23 the Italian mission came.

Our arrangements were complete with these missions. The representatives of these missions outranked any service that any one admiral from Great Britain or France or our admiral abroad made, because they were composed of such men as Joffre, Viviani, and Balfour, and Drummond, men from all the departments of government, and with them we made all our arrangements complete; so that this was a mere formal announcement of what was already in being and already being carried out.

The CHAIRMAN. Why should they need to have these meetings with these commissions if their policy was all made out?

Secretary DANIELS. In this way: The policy of cooperation with the Allies was made out and the policy of sending destroyers was made out, and they wished the fullest cooperation, as the changing conditions of war brought about.

The CHAIRMAN. Now, you say that you were all ready to cooperate with England. Here is a report of the General Board of May 3, 1917, which begins at page 2657 of the typewritten record, from which I read as follows:

Confidential.

MAY 3, 1917.

From: Senior member present.

To: Secretary of the Navy.

Subject: Further recommendations as to the employment of patrol craft to meet submarines.

References: General Board letter, G. B. No. 425, of April 28, 1917, Serial No. 721; subject—immediate steps to be taken for efficient cooperation against submarines.

Since forwarding the above reference the General Board has obtained from the senior naval members of the British and French commissions now in this country additional specific information in regard to the submarine situation, the measures which the British and French are now taking, and suggestions as to the measures which the United States may best take to supplement British and French endeavor, which is now a probable maximum.

Then, on page 2658, the next page, the next page of the report, I read as follows:

3. The statements of the senior naval members of the British and French commissions before this board May 2 and 3 may be briefly summarized as follows:

(a) The number of patrol vessels, both British and French, now available or in prospect, is not sufficient to meet the submarine campaign waged by Germany.

(b) The present rate of destruction of food carriers to England and France, unless it can be reduced in the next two months, will result in starving both England and France.

(c) England will be starved out before France.

(d) The need for patrol craft is immediate; the critical period is now, and in the next two months the fate of England may be decided.

(e) Unless armed patrol craft, destroyers, and any surface craft able to keep the sea are dispatched in the next few weeks, they will be too late to prevent disaster to England, first, and to France, second.

(f) Fifty armed surface craft dispatched now would be "a real help." Two hundred sent now would do much to prevent the disaster which threatens England, especially.

(g) The vessels most desired are destroyers—

And so forth. Then in paragraph 8 of the same letter I find this:

8. The General Board wishes to reiterate with the utmost earnestness that it believes disaster to Great Britain can only be prevented by immediate action, as recommended above.

CHAS. J. BADGER.

Secretary DANIELS. What date is that?

The CHAIRMAN. That is May 3, 1917.

Secretary DANIELS. Yes.

The CHAIRMAN. You have referred several times in your testimony to a cable from the other side, saying that 20 destroyers would probably take care of the situation. I think the date of that cablegram was April 20.

Secretary DANIELS. April 24, I think.

The CHAIRMAN. April 24?

Secretary DANIELS. Yes.

The CHAIRMAN. This is barely a week after that, from the opinion that the General Board had been able to get from the British representatives, it was stated that unless their recommendations about sending vast quantities of antisubmarine boats were followed, England practically might be driven out of the war.

Now, you state here that this letter simply refers to the cooperation which already existed with England. Did it refer to that particular plan of the General Board?

Secretary DANIELS. You will bear in mind, Mr. Chairman—

The CHAIRMAN (continuing). And was that part of the cooperation that already existed?

Secretary DANIELS. You will bear in mind that I never have stated that we had enough destroyers or enough antisubmarine craft at any time to do the things which the General Board recommended and which we wished to do. If we had had, I should not have been coming to Congress, as I was, asking for emergency money to build other destroyers. We never did have enough destroyers during the whole war, and we sent our destroyers over. Last Friday, Mr. Chairman, you asked me a question which will bear upon this very well. I read from that testimony:

The CHAIRMAN. I have here a list of destroyers in November 1, 1918, that were in commission: At home, 29; in Europe, 58—oil burners; coal burners—at home, 8; Europe, 12. That is, in Europe both oil burners and coal burners, 70. In the latter months of the summer of 1917 we had something like 50 destroyers on the other side, did we not?

That is the question you asked me.

The CHAIRMAN. I was wrong in the number of destroyers. That should have been 39, I think.

Secretary DANIELS. That was the question you asked me?

The CHAIRMAN. Yes.

Secretary DANIELS. I think it is very material to answer that question—to give the status of the destroyers we did have, what destroyers

we did send, and when we sent them—so that we may see exactly the status, which is in answer to the question about all we sent across. I have here the information you desired as to the number we sent in 1917 as well as in regard to the figures you stated.

The reports of Operations show that 48 had sailed by the end of August, including 5 of the small coast torpedo vessels; and though these small ones had to sail 12,000 miles from Manila, all were there in September. Three more sailed in October and 3 additional in November.

I will insert here the sailing list of the 128 vessels dispatched to Europe during 1917. Six destroyers sailed April 24, 1917; 6 destroyers sailed May 7, 1917; the destroyer tender *Melville* sailed May 11, 1917; the *Benham* and 5 others sailed May 15, 1917; May 21, 1917, 6 more sailed; May 23, 1917, 2 more sailed; May 25, 1917, 2 more sailed; making up, on May 25, 1917, 28 destroyers that had sailed for the Queenstown district.

On May 31 we sent the *Dixie*.

On June 9, 1917, we sent five yachts.

On June 14, 1917, we sent four destroyers. They would have gone a few days sooner, but we held them to go with the first troops, so as to give full protection to them.

The CHAIRMAN. Do not these figures all appear in the record already?

Secretary DANIELS. Not from me—as to the dates.

The CHAIRMAN. They do from others.

Secretary DANIELS. They may from others. By June 14 we had sent 32 destroyers.

The CHAIRMAN. Is there any particular need, as long as they are in the record, of reading them?

Secretary DANIELS. Yes; this is tremendously interesting, to show how well we were sending the destroyers that we had. In other words, we had altogether 50 destroyers, and we had sent 35 up to June 17, 40 up to July 30, 45 up to August 1.

The CHAIRMAN. Forty-five up to August 1?

Secretary DANIELS. Including the 5 destroyers we got from Cavite, a small type of destroyers.

The CHAIRMAN. That is, we had them there?

Secretary DANIELS. Yes; they sailed from Cavite on August 1. They had to go 12,000 miles. We had sent them those out of 50 destroyers.

The CHAIRMAN. How did they go from Cavite?

Secretary DANIELS. They went around through the Suez Canal, I think.

The CHAIRMAN. When did they arrive?

Secretary DANIELS. In September, I think. So that we had, out of 50 destroyers, sent over to Great Britain 28 by May 25 out of a total of 50. That was out of a total of 50. By June 17 we had sent 35. I think that is an answer—that we were not sending all the destroyers across.

The CHAIRMAN. Why did we not send them all? Capt. Pratt said he would have sent all that we had.

Secretary DANIELS. Well, Capt. Pratt would not have agreed with Admiral Mayo and he would not have agreed with the Chief of Operations.

The CHAIRMAN. It was the vital thing to attend to, was it not?

Secretary DANIELS. Well, Mr. Chairman, if you will permit me to finish this statement, I will show you exactly the whole situation about destroyers.

(The table submitted by Secretary Daniels is here printed in the record in full, as follows:)

List of vessels which sailed for duty in European waters during 1917.

Name.	Type.	Date of sailing.	Name.	Type.	Date of sailing.
		1917.			1917.
1. Conyngham....	Destroyer....	Apr. 24	Corona.....	Yacht.....	Aug. 5.

Secretary DANIELS. In asking me on Friday a question with regard to destroyers you stated that on November 1, 1918, there were in commission: At home, 29; in Europe, 58 oil-burning destroyers; coal burners, at home 8, in Europe 12. I think I see the point you are driving at. But you must remember several points in that connection:

1. There was war "over here" as well as "over there" from May 25, 1918, for enemy submarines operated off our coasts almost continuously from May to the latter part of September, and were attacking vessels and menacing shipping from Nova Scotia to the North Carolina coast. We had to furnish destroyer escort to troop and cargo transports and merchant convoy, and this was just as necessary from New York and Boston and Hampton Roads as it was to and from Queenstown or Brest. This did not cause us to recall a single destroyer or patrol ship from Europe, nor did it prevent us from sending to Europe every one that was not absolutely essential to protect our troop and cargo transports and shipping from American ports. This was Allied shipping, as well as our own; and the few destroyers we kept in home waters were performing a service just as important as were the same number on the other side at that time. If we had followed Sims's advice, stripped our coasts entirely of seagoing protection and sent all our antisubmarine craft to Europe when the submarines began operating off our coasts, not a troop ship, not a supply or merchant vessel could have sailed in safety. Our troops transportation, which was then at its height, and was the most important thing in the world to the Allies, would have had to have been suspended until we recalled destroyers from Europe, and they had made the 3,000-mile voyage back home. This would not only have disrupted the splendid escort organization in Europe, of which our vessels were a vital part; it would have weakened the Allied armies which were depending on those American troops to keep up the offensive that drove the Germans to defeat. It would have been the severest blow to the Allied cause, and the greatest victory of the German submarine warfare.

There never was any policy of the entire warfare whose wisdom was more thoroughly proved by events than was this policy of keeping on our coasts enough antisubmarine craft to protect our troop and supply ships and keep open our lines of communication. But Sims urged us to send to Europe all our antisubmarine craft: said we could well afford to "strip our coasts entirely of seagoing protection," and pointed out that it would be a great thing for the cause if we could "entice" the U-boats from England and France to our own coasts. It seems almost incredible, even now, that Sims could have advised such a policy, but that he did you can see plainly from paragraphs 42 and 43 of his letter of January 7, in which he says he continuously urged that "everything be sent," destroyers, yachts, gunboats, tugs, etc.—"in fact, any craft that could steam across the ocean or be towed across," and that he "repeatedly explained that if we could actually entice the enemy into shifting his submarines to our coast it would be greatly to the advantage of the common cause." These are his words. We did not follow Sims's suggestions, for they would have resulted in disaster. We did send over to Europe all the antisubmarine craft we were not actually compelled to keep on our

own coasts for absolutely essential purposes. In fact, in our eagerness to do everything we could to help in the antisubmarine campaign, we sent more than we could really afford. At times we were below the danger line. We did take chances, chances that must be taken in war, and we were amply justified in so doing. But we were not justified in sending all our antisubmarine craft to Europe and stripping our coasts entirely of protection against submarines; and we did not do it.

If we had done such a thing we would have been condemned, and justly condemned, by the entire country. From the time war began there was always a possibility that the Germans might send their U-boats across the Atlantic; and this was a possibility we could, and did, never lose sight of. But we never allowed it to halt our policy of sending antisubmarine craft to Europe. Though we had, with submarine chasers, yachts, and other patrols, aircraft, and the few destroyers we retained, built up as good a system of defense as was possible, when the submarines did appear off our coasts the last of May, 1918, there was a barrage fire of criticism in Congress as well as the country. Senator Lodge and other Senators and a number of Congressmen visited the department. Admiral Benson showed them the exact conditions, and what we had done and were doing to meet the situation. They were thoroughly satisfied that the department had followed the wisest policy and was doing everything possible to protect our shipping and combat the submarines. Senator Lodge, in his speech in the Senate June 6, 1918—see page 8035, Congressional Record—told you—

The CHAIRMAN. This is all included in your statement heretofore?

Secretary DANIELS. I am only giving you one paragraph from it.

Senator Lodge said:

The Navy and the Navy Department have taken every precaution that human foresight could suggest, so far as I have been able to judge, and I have examined their preparations with such intelligence and care as I could give to the matter.

Mr. President, the Navy and the Navy Department have necessarily anticipated a submarine attack from the very beginning of the war. They have tried to make every preparation to meet it. I think they have.

In my judgment we are doing all that can be done. I have taken the pains to go to the department, where everything has been laid before the members of the Naval Affairs Committee who cared to investigate the subject, and I am entirely satisfied that they are doing everything that is possible. But the chase of the submarine is something like searching for the needle in the haystack. You can not tell in which particular wisp of hay it will come to the surface, but that the defense will be effective I have no sort of question.

The U-boats did manage to sink a number of small schooners and fishing craft and some steamers. But the Germans failed utterly in their two main purposes in sending over their submarines. They did not delay for a day the sailing of troop ships and cargo transports, because the Navy had enough small craft to escort them. And they did not succeed in inducing us to recall one destroyer or patrol ship from Europe.

If we had not retained a few destroyers and other patrol craft on this side, if we had sent all our antisubmarine craft to Europe, as Sims urged; if we had entirely stripped our coast of sea-going protection, we would have been compelled to have recalled a large part of our forces from Europe to escort troop ships and give protection to

our shipping, for the submarines continued their operations off our coasts until September.

2. The table given by Capt. Pratt shows clearly the large proportion of destroyers we sent to Europe and the small proportion retained on our own coast.

DESTROYERS AND COAST TORPEDO VESSELS IN HOME WATERS.

This table included, among the coal burners and coast torpedo vessels, the 16 small coast torpedo vessels, of 40 to 450 tons, not classed as destroyers.

Date.	Oil burners.	Coal burners.	Total.
Apr. 1, 1917.....	46	21	67
May 1, 1917.....	41	21	62
June 1, 1917.....	19	21	40
July 1, 1917.....	12	21	33
Aug. 1, 1917.....	12	11	23
Sept. 1, 1917.....	12	9	21
Oct. 1, 1917.....	12	9	21
Nov. 1, 1917.....	10	9	19
Dec. 1, 1917.....	11	9	20

Mar. 1, 1918.....	6	6	12
Apr. 1, 1918.....	6	6	12
May 1, 1918.....	9	6	15
June 1, 1918.....	9	6	15
July 1, 1918.....	11	6	17
Aug. 1, 1918.....	16	7	23
Sept. 1, 1918.....	21	8	29
Oct. 1, 1918.....	26	8	34
Nov. 1, 1918.....	28	8	36

Only five of those in the list of coal burners were classed as destroyers; these were sent over in July, so that from that date you can get the exact number of real effective destroyers, those of fair tonnage or modern type, in the list of oil burners.

The CHAIRMAN. Has all this been given in your testimony?

Secretary DANIELS. No; this is all fresh.

The CHAIRMAN. It has nothing in any way to do with my question.

Secretary DANIELS. It has everything to do with it. I am giving you a full statement of what we did with the destroyers during the war.

The CHAIRMAN. But my question was whether the vessels which I read you, and which were matters that were asked for by the British, were included in the cooperation that you speak of here.

Senator TRAMMELL. I understand the Secretary's answer is to show that they did cooperate so far as our facilities permitted.

Secretary DANIELS. I am showing what we did with our destroyers—a question you raised yourself on Friday—at home and abroad, and I am showing you that we cooperated very fully.

The CHAIRMAN. Why not just say that; that you did?

Secretary DANIELS. I have said that, but I did not want to say that and not give you—here was your memorandum, in which you discussed oil burners at home and in Europe, and coal burners at home and in Europe; so that it is essential to answer your question to give you a full statement.

Only five of those in the list of coal burners were classed as destroyers; these were sent over in July, so that from that date you can get the exact number of real effective destroyers, those of fair tonnage or modern type, in the list of oil burners.

Sixteen of the coal burners were small boats of 400 to 450 tons, classed at coast torpedo vessels, and not regarded as fit for heavy duty. Five of them were at Manila, but managed to make the 12,000-mile trip to Gibraltar, and did good service in that area. The numbers in Capt. Pratt's table include the vessels in yards under repairs as well as those in active service.

His tables show that on November 1, 1918, of the 28 oil burners in this country, 8 were at yards; 59 oil burners and 12 coal burners were in Europe and 1 en route there—total, 72.

3. Regarding your statement that on November 1, 1918, there were 29 oil-burning destroyers and 8 of the coal-burning type on this side of the Atlantic, I call your attention to the fact that the Germans ended their U-boat warfare and recalled their submarines in October, 1918, a month before the armistice was signed, though five or six vessels, including one of ours, the *Lucia*, were sunk after that time by U-boats on the way home. Admiral Strauss told you (p. 2579):

The submarine warfare ended on the 11th. by agreement, so that 112,000 tons (shipping losses in October) is only for 11 days.

Now, several of these new destroyers were commissioned after the submarine warfare was over, as the ship's data book shows:

1. *Breese*, commissioned October 23, 1918.
2. *Craven*, commissioned October 19, 1918.
3. *Landsdale*, commissioned October 26, 1918.
4. *Mahan*, commissioned October 24, 1918.
5. *Robinson*, commissioned October 19, 1918.

We sent over only two destroyers in October, the *Murray* and the *Fairfax*. New destroyers require a short period of trying out, both to test the vessel, so that any defects that develop may be remedied, and to get the new crew to working together properly. This was desirable even though we had trained the nucleus crews abroad, so the men who had served in the submarine zone could give those who had not the credit of their war experiences. It was particularly essential where each vessel had to make a voyage of 3,000 miles, and when it arrived be ready for heavy sea duty against submarines. This training period of these new destroyers was utilized for service off our coast, and they were thereby much better prepared for the European service for which they were destined. In the month or so previous to October 11 the following were commissioned:

1. *Boggs*, commissioned September 23, 1918.
2. *Dent*, commissioned September 9, 1918.
3. *Dorsey*, commissioned September 16, 1918.
4. *Israel*, commissioned September 13, 1918.
5. *Lea*, commissioned October 2, 1918.
6. *Luce*, commissioned September 11, 1918.
7. *McKee*, commissioned September 7, 1918.
8. *Radford*, commissioned September 30, 1918.
9. *Schley*, commissioned September 20, 1918.
10. *Woolsey*, commissioned September 30, 1918.

The statement of European Forces, made up by Admiral Sims's headquarters, stated that in addition to the 70 destroyers given in his table of November 11, 1918, four destroyers "technically based in European waters" were at that time in the United States undergoing repairs. This accounts, I believe, for 19 of the 28 oil burners Capt. Pratt listed as in home waters on November 1, 1918, and one other was, he stated, en route to Europe.

Gentlemen, when the German submarines came to our coasts, the submarine warfare was over here as well as "over there," and it was, in some respects, more difficult to combat the submarines here than it was there. We had hundreds of miles of coast to protect, and the submarines, which were of large type, ranged all the way from the Carolinas to Nova Scotia. In Europe they operated in narrow waters. They had, Admiral Sims told you, some 5,000 antisubmarine craft operating day and night around the British Isles; we had a few hundred, mostly submarine chasers and small converted yachts. It is not surprising that we did not succeed in sinking any of the half dozen submarines which came over here, when it is recalled how few the allied forces in Europe with their and our swift destroyers and thousands of other craft in the narrow waters where, Admiral Sims stated, an average of eight or nine German submarines operated. We had to use our available destroyers and many of our subchasers and yachts to escort troop ships, supply vessels, and merchant convoys bound for Europe as well as our own coastwise shipping. We kept our antisubmarine craft on patrol or escort duty constantly; they and our aircraft pursued the enemy U-boats diligently; and we did everything possible to protect the vessels on our coasts. But, as Senator Lodge said, it was "like hunting for a needle in a haystack." Admiral Sims says in one of his magazine articles that to have made the patrol system effective and kept down the U-boats would he required one destroyer to every square mile—25,000 destroyers in the Queenstown area alone. And we had on our coast many areas as large as Queenstown's. From May, 1918, on we had a "war zone" over here as well as in Europe, and the fact that our losses in vessels, outside of schooners and fishing craft, was not large as compared with those in European areas; the fact that we kept our troopships, supply, and merchant vessels going without any delay, and that not one under our escort was sunk proceeding from an American port is sufficient evidence of the success of our policy and operations.

Our destroyers in home waters, as well as abroad, did splendid service, the same sort of service they were doing in Europe. 1918 the American waters in which U-boats were operating were classed as a "war zone," and the Office of Naval Operations includes in its list of vessels that served in the war zone those which operated against the submarines in American as well as European waters. I would like to insert here the list made out by Operations and placed in the historical section of the destroyers and coast torpedo vessels—there were 101 in all—which were on duty in the war zones in Europe or America.

(The list referred to is here printed in the record, as follows:)

Destroyers and coast torpedo vessels on duty in war zones, Apr. 6, 1917, to Nov. 11, 1918.

[Coast torpedo vessels marked "CT."]

Here is another question you asked the other day, but I can give you that later.

Just now, Mr. Chairman, I called your attention to the fact when you were discussing announcement of policy, I did not remember the date. It was April 13.

Senator KEYES. Mr. Chairman, I would just like, in order that we may try to keep in mind what is taking place before us here, to know what question the Secretary is answering now.

Secretary DANIELS. I am answering as to our destroyers.

Senator KEYES. I wish the stenographer would find the question and read it. I would like to know just what the question is.

The CHAIRMAN. At the present rate, Mr. Secretary, we will be here all summer.

Secretary DANIELS. Well, I have my summer clothes.

The CHAIRMAN. You answer very few of the questions that are asked of you, but you put in a lot of matter into the record that is highly irrelevant to the questions asked.

Secretary DANIELS. I have not put in anything that is not relevant.

The CHAIRMAN. It may not be irrelevant to the investigation, but it is irrelevant to the questions.

Secretary DANIELS. It is absolutely relevant to the questions, and necessary to give a clear answer.

The CHAIRMAN. My idea was that when we examined you here we would get all the assistance that it was in your power to give in clearing up these matters and in clearing them up as briefly as possible.

Secretary DANIELS. That is what I am giving you.

The CHAIRMAN. We are going on at a very large expense to the Government, holding these hearings, and it seems to me if you will bring your answers down to reasonable length, and follow the lines we are trying to find out about, it would be very helpful and profitable.

Secretary DANIELS. This is the first time——

The CHAIRMAN. Nobody wants to hide anything or to suppress any information; but I think that you ought to cooperate with us.

Secretary DANIELS. I am cooperating with you. I have given you an abundance of information.

The CHAIRMAN. Of course, we have these questions to ask, and we are going to ask them, no matter how long it takes.

Secretary DANIELS. My dear sir, I shall answer them.

The CHAIRMAN. But you must have a great many other duties to perform besides coming up to these hearings.

Secretary DANIELS. Yes; I work all day and a part of the night: but when you ask me a question I shall exercise my right to answer the question.

The CHAIRMAN. But every question we ask, you come out with a long statement, taking up all sorts of other matters, and we never get anywhere.

Secretary DANIELS. I only answer your questions so as to give you full information. I can only give it to you "yes" or "no."

The CHAIRMAN. But we do not get any answer, "yes" or "no."

Secretary DANIELS. You have got a clear, concise, and full answer to every question that you have asked me.

The CHAIRMAN. You heard this question I asked you last. I have forgotten it long ago.

Secretary DANIELS. You asked me a question about the use of destroyers. If you will ask the question again, Mr. Chairman, I will try to answer it.

The CHAIRMAN. I read you a statement by the General Board showing what they found was needed by the British after conference with Admiral Browning and other representatives of the British Government, and also a statement that the General Board wished to reiterate with the utmost earnestness that disaster to Great Britain could only be prevented by the action as above; and I then asked you if that was in this letter where you speak of the heartiest cooperation with the Allies, and where you explained the cooperation that had already taken place, and I wanted to know whether that statement by the General Board was taken into consideration when you say that you already had the heartiest cooperation with the Allies, in regard to the submarine situation.

Secretary DANIELS. We always had the heartiest cooperation from the beginning; but, of course, that cooperation was made larger and larger as time went on. That recommendation of the General Board, as I recall it, was May 5, was it?

The CHAIRMAN. May 3.

Secretary DANIELS. May 3. By May 28 we had sent 28 destroyers over to Great Britain to give this hearty cooperation.

The CHAIRMAN. Section 6 of this letter says:

(6) Pursuant to the above general policy, the Navy Department announces as its general plan of action the following:

Now, that general plan of action was for the future, was it not?

Secretary DANIELS. No; it was the continuation of a general plan of action. It was only announcing what was done and what would continue to be done.

The CHAIRMAN. It announced—

Its willingness to send its minor fighting forces, comprised of destroyers, cruisers, submarine chasers, auxiliaries, in any number not incompatible with home needs.

There would be no point in announcing action that had already been taken.

Secretary DANIELS. As I said, Capt. Pratt felt that a formal statement ought to be made.

The CHAIRMAN. Was not this to tell Admiral Sims that you were going to send these vessels over in the future?

Secretary DANIELS. Admiral Sims already knew that.

The CHAIRMAN. How did he know it? He stated he had no information.

Secretary DANIELS. Did he say that?

The CHAIRMAN. As I recall, his testimony shows that the cable of July 3 was the first he received about any plans of the department.

Secretary DANIELS. I do not recall that, but I do know— Let us see, here is a telegram I sent to Admiral Sims on May 3, which shows. "Berehaven is suggested," it says, "by the British commission." This is about the time that the British commission was here. It says:

Berehaven is suggested by the British commission in Washington as a base for the destroyers operating with the Allies.

This is May 3; so that he must have known that before that formal announcement, because I said to him:

Ultimately there will be 36 destroyers sent, as well as the *Melville* and as well as the *Dixie*, should the latter be required.

There on May 3 is my telegram to Admiral Sims telling him he would get 38 destroyers out of the 50 we had.

The CHAIRMAN. That is about destroyers. This states—

Its willingness to send its minor fighting forces, comprised of destroyers, cruisers, submarine chasers, and auxiliaries in any numbers not incompatible with home needs.

Secretary DANIELS. We sent submarine chasers in addition to those destroyers.

The CHAIRMAN. But no statement of policy had been made to him, as I understand, prior to this time; and I think he so stated in his testimony. I read further in this letter that the department also stated—

Its unwillingness, as a matter of policy, to separate any division from the main fleet for service abroad, although it is willing to send the entire battleship fleet abroad to act as a united but cooperating unit when, after joint consultation of all admiralities concerned, the emergency is deemed to warrant it.

Is not that a plan for the future?

Secretary DANIELS. I say this was a formal announcement of plans, most of which we had already carried out, and which were known. Some of them, of course, referred to the future. Have you another copy of that letter, Mr. Chairman. I would like to see it.

The CHAIRMAN. It also states—

Its willingness to discuss more fully plans for joint operations.

I take it that is for the future?

Secretary DANIELS. That is more fully; yes. That shows we had already decided on general operations.

The CHAIRMAN. But "more fully."

Secretary DANIELS. But we wished to discuss it more fully as the war went on.

The CHAIRMAN. Yes.

Secretary DANIELS. We never closed the door as to new conditions.

The CHAIRMAN. So that this plan is for the future?

Secretary DANIELS. This plan announces in part the plan we had already put into effect, and announces also what we would continue to do.

The CHAIRMAN. Of course, you had been discussing policies at this meeting on April 11, and Sims had been discussing policies right along?

Secretary DANIELS. When? We were making arrangements—

The CHAIRMAN. You were discussing policies with the British at this meeting of April 11?

Secretary DANIELS. We settled the policies at that meeting.

The CHAIRMAN. Yes; you settled them, and Admiral Sims had also been discussing policies, which policies had probably been settled before, and it had been determined to go ahead.

Secretary DANIELS. No, Mr. Chairman; Admiral Sims could not settle policies.

The CHAIRMAN. I did not say he did. He had been consulting with them, and those plans had probably been settled, too. I did not say that he had settled them.

Then you would not say that the detailed plans and policies you had on April 6, 1917, were so comprehensive that it was not necessary to add to them?

Secretary DANIELS. Mr. Chairman, nothing in a war before the war begins, or any month after the war, is so fixed and adamant that changed conditions do not require other discussions and changed methods to meet changing conditions.

The CHAIRMAN. But you claim that this letter was simply additional to the plan of cooperation?

Secretary DANIELS. This letter was a formal statement, most of what we had already done, some of which was to state that we would more fully cooperate and more fully consider, and future policies also.

The CHAIRMAN. Although Admiral Sims states, I think, in his testimony that it was the first plan of cooperation that he had received?

Secretary DANIELS. It is a very singular thing.

The CHAIRMAN. And with which he was familiar?

Secretary DANIELS. But it is a very singular thing, when here on page 1470 of the typewritten record, on April 13, 1917, is a statement—I think that I had better read that to you. Here is a telegram, now, sent by Admiral Browning, of the British Admiralty, which, of course, Admiral Sims knew all about, saying:

Following points of agreement have been arrived at with United States Navy Department: French admiral sending telegram to Paris. Begins question raised by British Admiralty first. One squadron immediately ready to proceed from North Atlantic port on receipt of information of escape of raider.

At that time the French and British were very uneasy about raiders. [Continuing reading:]

Operations of ships of this squadron will be coordinated with those of allied squadrons. Area of operations, from the parallel of Cape Sable to the longitude 50, thence south to the parallel of 20 north.

Second. Second squadron on the east coast of South America will be provided as soon as possible in the near future. Area of operations from Brazilian coast along parallel 5 south to meridian 30 west, thence south to 15, then parallel with coast to the latitude of 35 south, then along that parallel to the coast.

Third. Six destroyers will be sent over in the immediate future. These will be based on British or French port, as may be considered most necessary.

Fourth. United States will look after west coast of North America from Canadian to Colombian boundaries.

Fifth. Relations with Chile excellent; United States armed Government nitrate vessels will maintain continuous service for the present which will be utilized.

Sixth. United States China squadron will be maintained for the present.

Seventh. United States will supervise Gulf of Mexico and Central America as far as Colombian boundary, thence east to west point of Jamaica, along west coast of Jamaica to the east point of Virgin Islands, thence north to the southeastern limit of area referred to in first.

Eight. If and when enemy submarines appear—

Now gentlemen, I call that to your attention. Here were the British and French admirals, April 13, 1917, stressing the point

of the danger of enemy submarines appearing on this coast, and we agreed—

If and when enemy submarines appear they will attempt to send several submarines to the Canadian coast, but this is only possible if a parent ship or accommodations of men on shore provided.

Following points raised by French minister of marine: First. Provision of small patrol for French coast not yet possible owing to requirements of home (? (defense) when available however they will be supplied, France escorting them over and manning if necessary. Every possible effort will be made immediately to supply these. Too much reliance should not be placed however in early success.

Second. Provision of armed naval transports for carrying railway material to France; one will be furnished immediately, a second and third as soon as possible.

Further message transmitted in another cipher:

I will remain at Washington until I know whether you have any further instructions and to complete conference upon details on which I have been requested to advise Navy Department.

Now, that was the agreement we made, and that was the agreement and the policy settled upon the Navy Department on April 13, 1917.

The CHAIRMAN. Which was at the outset of the war, when you had very little knowledge of conditions and did not in any way cover the scope which you afterwards carried out?

Secretary DANIELS. I would not say, Mr. Chairman, that we had very little knowledge, because we had a conference with Admiral Browning, of the British Navy, who was fully advised—

The CHAIRMAN. He could not have been very fully advised.

Secretary DANIELS (continuing). And with Admiral Grasset, of the French Navy, who was fully advised.

The CHAIRMAN. He could not have been very fully advised, when he said all they wanted was a couple of submarines over there for moral effect.

Secretary DANIELS. I never said that.

The CHAIRMAN. I say when Browning said that.

Secretary DANIELS. He never said that.

The CHAIRMAN. Yes; that appears in the testimony.

Secretary DANIELS. He said that the supreme thing was to patrol the coast from Halifax to Brazil and to release their ships so that they might go back and engage in this antisubmarine warfare; and this, Mr. Chairman, I think is a very material point. He said:

Could you send at once one or two destroyers over for the moral effect, to show your flag there.

And we did that. He said:

I know that it is asking you very much to separate the small number of destroyers that the American Navy has—any of the destroyers—from the fleet. We could not do it.

The CHAIRMAN. "Has" or "has ready"?

Secretary DANIELS. What?

The CHAIRMAN. Did he say "the small number of destroyers that the American Navy has," or "has ready"?

Secretary DANIELS. "Has." I will not quote his words. He says. "Your small number." It is a very serious thing—

The CHAIRMAN. Well, within a little more than two weeks from that the General Board comes out with a plan stating there is de-

mand for a tremendous number of antisubmarine craft, and stating the absolute criticalness of the situation if they are not sent.

Secretary DANIELS. We knew that, and we had sent 35 destroyers over and a lot of patrol boats.

The CHAIRMAN. Not by that time.

Secretary DANIELS. Not at that date. By July.

The CHAIRMAN. Paragraph 2 of this letter speaks of—

the heartiest cooperation with the Allies to meet any future situation arising during the present war.

That is for the future?

Secretary DANIELS. This was a formal announcement of the policy that we had carried out and we would continue to carry out. It was past, it was present, and it was future.

The CHAIRMAN. It was evidently necessary in some way to convey that news to the other side.

Secretary DANIELS. Well, I have read you the statement of the missions coming here, and I have read you the telegram I sent to Admiral Sims on May 13, 1917, telling him we would send 36 destroyers and the *Melville* and the *Dixie*.

The CHAIRMAN. That is simply a specific statement about specific ships. That is not a statement about an outlined policy.

Secretary DANIELS. The only outlined policy here is "we will send you all the small craft we can."

The CHAIRMAN. Under that supposition—

Secretary DANIELS (interposing). I mean with reference to the small craft.

The CHAIRMAN. No; this is with reference to battleships. It says that you are willing to send over battleships if they are not divided.

Secretary DANIELS. We made this statement of what we had done, what we are doing, and of what for the future we would do.

The CHAIRMAN. What bureau, office, or board was charged with the responsibility of making war plans prior to 1917?

Secretary DANIELS. The General Board; and then in Operations they had a planning section.

The CHAIRMAN. And how many officers were devoting their entire time to the planning section of Operations prior to April 1, 1917?

Secretary DANIELS. I will get that information for you. I would not like to say until I had looked into the record.

The CHAIRMAN. Were there half a dozen, do you know?

Secretary DANIELS. I will get the number for you.

The CHAIRMAN. Will you have that to-morrow morning?

Secretary DANIELS. To-morrow morning; yes, sir.

The CHAIRMAN. On Saturday, May 15, you stated that in March, 1915, after a study of the European War, Admiral Dewey forwarded to you a statement of preparations necessary to put the Navy Department in readiness for war by the addition of administrative plans to the General Board's war plans?

Secretary DANIELS. March 15? I would like to see what I said, Mr. Chairman.

The CHAIRMAN. It is page 5460.

Secretary DANIELS. What do you mean by administrative plans, Mr. Chairman?

The CHAIRMAN. Wait one minute until I find it.

Secretary DANIELS. Did you say March 13, 1915?

The CHAIRMAN. March 13, 1915.

Secretary DANIELS. Here it is.

The CHAIRMAN. Was this the war plan of the administrative section of the General Board?

Secretary DANIELS. This was the preparation necessary to be made by the Operations Office of the War Department to insure a state of preparedness for war. That is what it was.

The CHAIRMAN. On page 5461 the admiral refers to "the administrative section of the plan for war."

Secretary DANIELS. He refers to what?

The CHAIRMAN. The administrative section of the plan for war. That is in section 2 of the letter.

Secretary DANIELS. Yes; he points out there what the various bureaus should do.

The CHAIRMAN. What I want to know is whether this was the war plan of the administrative section of the General Board?

Secretary DANIELS. I do not know what you mean by the administrative section of the General Board.

The CHAIRMAN. The admiral refers to it in here.

Secretary DANIELS. My reports come to me always not from a section of the General Board, but from the General Board. I have never had a report saying that it came from any section. Their subdivisions into sections are within the General Board, not for the department.

The CHAIRMAN. This was a distinctly important war plan, was it not?

Secretary DANIELS. This was distinctly an important statement of the preparations necessary to be made by the bureaus and offices of the Navy Department to insure a state of preparedness for war.

The CHAIRMAN. Mr. Secretary, on page 579 of Admiral Fiske's autobiography, which has been put into the record as evidence, appears the statement that he handed you—

The new administrative section of the general war plan, prepared by G. B. with accompanying letter signed by Admiral Dewey.

Secretary DANIELS. What date did he say he did that?

The CHAIRMAN. March 18, 1915. Is that the document forwarded by Admiral Dewey, and to which you referred on Saturday the 15th of this month?

Secretary DANIELS. Where is Admiral Dewey's statement? I do not recollect Admiral Fiske ever handing me any such statement.

The CHAIRMAN. He states in his autobiography:

March 18. I took to Secretary and explained to him carefully the new administrative section of the general war plan, prepared by G. B., with accompanying letter signed by Admiral Dewey. He demurred a good deal in a general way, and finally declared he did not wish to take any action in the matter for the present. I then discussed with him two papers, prepared by myself, one called "Meditations on organization" and the other "Meditations on mobilization." He made little comment, but simply returned them to me.

Is this letter of Admiral Dewey's the one to which he refers?

Secretary DANIELS. I say I have a very clear recollection of his talking to me, not on particular dates; but his chief talk being about plans of organization, which he thought of chiefly, and he brought

them in periodically. I have no recollection if he brought it to me on March 18, 1913, as he was going out of office in a few days, and I knew that I was going to get another Chief of Operations and let him go. He says in his autobiography that he would have bet 10 to 1 I would not keep him, and he would have won the bet. He could have bet a million to one.

The CHAIRMAN. But that has nothing to do with this question.

Secretary DANIELS. Now, it may be, if he brought it to me—

The CHAIRMAN. I simply want to identify the letter.

Secretary DANIELS. I say I do not recollect his ever bringing that letter to me. If he did, knowing that he was going out of office, I may have not acted upon it that day or that week, or may have held it until I decided to have a new Chief of Operations.

The CHAIRMAN. The aid for Operations was the official channel for all communications from the General Board, was he not?

Secretary DANIELS. I do not recall his ever bringing me this.

The CHAIRMAN. I asked you a question, Mr. Secretary. The aid for Operations was the official channel for communications from the General Board?

Secretary DANIELS. Yes; he was.

The CHAIRMAN. And Admiral Fiske was the aid for Operations at that time?

Secretary DANIELS. He was.

The CHAIRMAN. In your statement of Saturday, May 15, you said that you signed the preparedness document at that time, on March 13, 1915, prepared by Admiral Dewey.

Admiral Benson declares you said to him that you would not take any action on it for the present.

Secretary DANIELS. As I said just now, that may be entirely true, because we had just secured new legislation by which the aid for Operations would cease to exist and we would have a Chief of Operations. Admiral Benson was going out, and if he presented it to me at all, I probably held it to act upon it when his successor came in.

The CHAIRMAN. On page 583 of his autobiography he states that he took the same paper to you on April 16 and that you said you would talk to him about it next week. That was at least a month, or about a month, after he had taken it to you first, was it not?

Secretary DANIELS. I say I do not recollect his ever bringing it to me.

The CHAIRMAN. You did not deny that he did bring it?

Secretary DANIELS. I do not deny it; but if he had brought it to me, I probably would have held it to act upon it, Mr. Chairman, when the Chief of Operations came in, because I was in daily consultation with all the bureau chiefs and knew that they were moving along on lines of preparedness.

The CHAIRMAN. On page 5462 of the typewritten record you state as follows:

To carry out the preparation recommended by the General Board, I sent a confidential letter to the head of every bureau and office similar to the following, which was sent to the Chief of the Bureau of Ordnance. That letter tells them to carry out the General Board's directions.

That was May 28, 1915.

Secretary DANIELS. May 28? The new Chief of Operations had then come in. Is that right?

The CHAIRMAN. Mr. Secretary, on page 578 of Admiral Fiske's autobiography appears the following:

During all the time that I had been aid for Operations I had been endeavoring to bring about a procedure whereby each bureau should make quarterly reports to the Navy Department as to its exact state of preparedness for war, including what had been done and what remained to be done. This idea was not original with me, for I had inherited that idea from my predecessor, Admiral Vreeland, who had inherited it from Admiral Wainwright. As there was considerable labor involved in the work, and as the matter was not very urgent, Wainwright and Vreeland had never finished the scheme or secured the signature of the Secretary to it. But shortly after I became aid for operations the possibility of war with Japan brought the necessity for such a scheme sharply to my attention. During all the two years that had elapsed since then I had kept the war plan committee of the General Board at work on the details of the plan, so that they kept it up to date, and I had urged the Secretary several times to sign it and let me get the procedure into operation. I explained to him that until the administrative section of the general war plan, which we usually called the "administrative plan," had been approved and signed by him the Navy Department could not be regarded as an efficient organization, and that if war broke out we should be caught absolutely unprepared; that we could not even begin to prepare until after that paper had been signed. On each occasion, also, I told him that I thought there was great probability of our getting into the present war.

On page 583—

Secretary DANIELS. Well, now, do you wish me to speak about that?

The CHAIRMAN. Yes; go ahead. Have you anything to say about that?

Secretary DANIELS. Well, I have this to say, that the bureaus were very hard at work. If Admiral Fiske ever mentioned an administrative plan to me, I do not recall it. If he did, he mentioned it—I do not recollect it. The chief conversation he had with me during all those months was not of preparation but of telling me that the Navy Department never could be prepared until we had a chief of Operations who would have complete and full power, and that really what we had to do was to organize our Navy on the German method. I did not take much stock in it; but, as he talked about it from week to week and from month to month, I finally said, "Admiral, prepare me a diagram showing me what you mean by all this business;" and so he came down and—

The CHAIRMAN. Mr. Secretary, I want to take that question up of the Operations, and its responsibility, at a later period.

Secretary DANIELS. Oh, but this comes in exactly with Admiral Fiske. I say everything he brought to me was always wound up and involved and included in his plan for the reorganization of the Navy Department on the Prussian plan, so that anything else he suggested always wound up with that.

The CHAIRMAN. But you do recall the letter of Admiral Dewey which you put here in your statement?

Secretary DANIELS. Yes.

The CHAIRMAN. And you do recall that it was presented to you, whether by Admiral Fiske or not?

Secretary DANIELS. Yes; and that letter was presented to me by the Chief of Operations and signed by me later.

The CHAIRMAN. That is your reply. I am talking about a letter of Admiral Dewey; that was presented to you shortly after it was written, was it not?

Secretary DANIELS. I say, if Admiral Fiske presented it to me, I do not recollect it.

The CHAIRMAN. You do not recollect his presenting it?

Secretary DANIELS. But I probably, inasmuch as it would have to do with Operations, held it until the new Chief of Operations came in.

The CHAIRMAN. But you have no question that you received it at the time?

Secretary DANIELS. If I did not, I ought to have done so.

The CHAIRMAN. You have no question about that, have you?

Secretary DANIELS. I do not recollect it at all.

The CHAIRMAN. On page 583 of Admiral Fiske's book appears this statement:

April 16 * * * I took to Secretary the administrative section of the General Board's war plan and pointed out that until he approved it the department had no war plan; because although the General Board had plans, they all depended on the department and the bureaus being ready, and they could not even begin to get ready until he approved the General Board's administrative plan, whereby the bureaus and officers reported to department every quarter their exact state of readiness. I fully expected that, after our talk yesterday, he would sign the General Board's paper at once! To my amazement he said he would talk to me about it next week! The same thing occurred about three or four weeks ago. The recommending letter was signed by Dewey March 13, 1915, and is similar to letter two years ago that also was not acted on.

Now, Mr. Secretary, apparently this matter had been kept before you for at least two years, and you delayed action on it not only two months, but two years.

Secretary DANIELS. Not at all. If Admiral Fiske ever presented that letter to me in 1915 it was the first time I ever heard of it; and if he presented it to me, I held it over until the selection of the new Chief of Operations, who would have power and who would have influence, and would be an efficient man; so that I certainly should never have taken up any important matter with him in that time.

The CHAIRMAN. That would not hold up your whole course—

Secretary DANIELS. Wait a minute. I was going to say that the question of the Bureau of Ordnance and the Bureau of Construction and Repair presenting quarterly reports is a very good one, but presenting reports is a very small thing. They were all doing the work. I was in daily touch with them. I was in daily touch with every bureau chief, and they were moving ahead along these lines of preparedness.

The CHAIRMAN. Do you state, then, that the statement in Admiral Fiske's book which has been put in testimony here and is a part of the testimony, "and is similar to letter two years ago, that also was not acted upon," is false?

Secretary DANIELS. No; I never make a statement that any man makes a false statement. I say that I never heard of it before.

The CHAIRMAN. And that you never heard of the matters that were suggested in this letter of Admiral Dewey's?

Secretary DANIELS. Of this Fiske book?

The CHAIRMAN. No; I say you never had the matters that were in Admiral Dewey's letter presented to you before that letter of March 13, 1915?

Secretary DANIELS. I have no recollection of ever hearing of it.

The CHAIRMAN. Of ever hearing the question brought up at all?
Secretary DANIELS. No.

The CHAIRMAN. But you would not say for sure that it had not been presented to you?

Secretary DANIELS. I approved every report that Admiral Dewey sent to me for preparedness, from the time I came into office.

The CHAIRMAN. There seems to be a conflict of testimony.

Secretary DANIELS. Yes; a conflict. I think Admiral Fiske is mistaken. Does he present a report of Admiral Dewey there in his testimony?

The CHAIRMAN. Does what?

Secretary DANIELS. Does he present a report of Admiral Dewey, two years before?

The CHAIRMAN. He refers to it.

Secretary DANIELS. Now the thing to do about that, Mr. Chairman, is I will see if Admiral Dewey wrote such a report.

The CHAIRMAN. But that is the report we already have, is it not?

Secretary DANIELS. You are speaking of two years before?

The CHAIRMAN. Oh, two years before, you mean?

Secretary DANIELS. Yes——

The CHAIRMAN. He says:

The same thing occurred about three or four weeks ago. The recommending letter was signed by Dewey, March 13, 1915, and is similar to letter two years ago, that also was not acted on.

Secretary DANIELS. I have no recollection of ever seeing that.

The CHAIRMAN. What improvements have you made in the planning division since 1916?

Secretary DANIELS. Since 1916?

The CHAIRMAN. Yes.

Secretary DANIELS. In the act of March 5, 1915, Congress established the office of Chief of Operations, and under the Chief of Operations there is a planning section which has had at all times able officers who have been devoting their time to making plans. Before that I think there were but very few.

The CHAIRMAN. That was established when?

Secretary DANIELS. I think March 5, 1915.

The CHAIRMAN. And what improvements have been made during the war, if any?

Secretary DANIELS. Oh, it was under the Chief of Operations—the planning section; and they had Capt. Pratt and Capt. Schofield and Capt. McNamee.

The CHAIRMAN. I think they stated that there were very few at the outbreak of the war. Capt. Pratt stated there were only three of them in it, and that they did not give all of their time to it.

Secretary DANIELS. That section was under the Chief of Operations and that was directly in his control and his management.

The CHAIRMAN. Does the same organization exist now that existed when it was started?

Secretary DANIELS. The same organization that existed——

The CHAIRMAN. The same organization for the planning section?

Secretary DANIELS. In 1915?

The CHAIRMAN. Yes.

Secretary DANIELS. The Chief of Operations has the same planning section now as he had then.

The CHAIRMAN. And there has been no change in the organization?

Secretary DANIELS. I would not say there was or was not.

The CHAIRMAN. How many are there now in the planning section?

Secretary DANIELS. I will have to ask the Chief of Operations. I always detail to that office the men recommended by the Chief of Operations.

The CHAIRMAN. There should be a fully equipped planning section, should there not?

Secretary DANIELS. Yes; and there is.

The CHAIRMAN. In Operations?

Secretary DANIELS. Yes; and there is.

The CHAIRMAN. There is? That is, you now have sufficient officers working on it.

Secretary DANIELS. I can get you the number. That planning matter and the number of officers is entirely under the direction of the Chief of Operations.

The CHAIRMAN. Have you any plans for any improvement in the planning section?

Secretary DANIELS. I think the planning section has shown its fitness and worth. Admiral Coontz has not suggested to me any improvements in the planning section.

The CHAIRMAN. You do not contemplate any improvement in that section?

Secretary DANIELS. If the Chief of Operations were to suggest them, I should be very happy to do so.

The CHAIRMAN. But you do not know of any now?

Secretary DANIELS. I leave that matter to work out of it, to the Chief of Operations.

The CHAIRMAN. The planning section is something that comes under the authority of Congress, does it not? It is provided for by Congress.

Secretary DANIELS. No; I do not think Congress has any provision for it.

The CHAIRMAN. There is no legislation affecting it?

Secretary DANIELS. No, sir; I think not.

The CHAIRMAN. Are you sure?

Secretary DANIELS. The Chief of Operations, it is provided, shall have under him not less than 25 officers, I think it is, or 15 officers. Wait until I get the law. The law will show, Mr. Chairman. Here it is. It reads as follows:

There shall be a Chief of Naval Operations, who shall be an officer on the active list of the Navy, appointed by the President, by and with the advice and consent of the Senate, from among the officers of the line of the Navy not below the grade of captain for a period of four years, who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation and readiness of plans for its use in war: *Provided*, That if an officer of the grade of captain be appointed Chief of Naval Operations, he shall have the rank, title, and emoluments of a rear admiral while holding that position.

Not only that, but it is provided:

During the temporary absence of the Secretary and the Assistant Secretary of the Navy the Chief of Naval Operations shall be next in succession to act as Secretary of the Navy.

Under that provision he has a planning section, and it is entirely under the direction of the Chief of Operations.

The CHAIRMAN. And there is nothing said in the law about a planning section?

Secretary DANIELS. Nothing; that is the whole law.

The CHAIRMAN. You have no suggestions as to legislation at all in regard to the planning section?

Secretary DANIELS. No; none at all. The Chief of Operations has full authority.

The CHAIRMAN. Before you had been appointed as Secretary of the Navy, had you been especially interested in, and did you have an intimate knowledge of, naval affairs?

Secretary DANIELS. I should not say that I had an intimate knowledge of naval affairs. I was interested, as every good American citizen is, in the Navy. I had had some touch with it. I had been to the Naval Academy several times. My wife's brother was an officer in the Navy, and he lost his life in the Spanish-American War, and I have a very earnest and intense interest in it. In 1912, when there was a fight in Congress as to whether the Navy should be increased or strengthened, I wrote to all the Members of Congress of my State urging them to vote for the larger program.

The CHAIRMAN. But you had no special knowledge of naval affairs?

Secretary DANIELS. I suppose I had the same knowledge of naval affairs that Secretary Chandler or Secretary Long or Secretary Meyer, or any former civilian had.

The CHAIRMAN. I am not casting any aspersions on you, at all.

Secretary DANIELS. No; I did not qualify as an expert statistician or constructor or ordnance man. I came into the Navy Department as a citizen who was interested in the Navy, without expert knowledge.

The CHAIRMAN. After you became Secretary did you make a study of Navy Department organization?

Secretary DANIELS. I have not studied anything else except navies for seven years.

The CHAIRMAN. Did you then, and do you now, consider the Navy the first line of the Nation's defense?

Secretary DANIELS. Certainly; I did then, and have always done so.

The CHAIRMAN. And is not the organization of the Navy Department and the method of coordinating of these agencies one of the most important elements in naval preparedness and efficiency?

Secretary DANIELS. And that is done; yes.

The CHAIRMAN. That is what?

Secretary DANIELS. Certainly; and that is done now?

The CHAIRMAN. Upon taking office, or at any time thereafter, did familiarize yourself with the subject of departmental organization?

Secretary DANIELS. I have devoted about an average of from 6 to 12 hours a day to that work.

The CHAIRMAN. And when you became Secretary were you familiar with the report of the Moody-Mahan commission on Navy Department organization?

Secretary DANIELS. Not when I became Secretary of the Navy. I have read, as any intelligent newspaper editor would do, something about that; but I can not say that I was familiar with the document.

The CHAIRMAN. Were you familiar with the work of the Swift Board on the same subject?

Secretary DANIELS. Not before I became Secretary of the Navy; no, sir.

The CHAIRMAN. Did you familiarize yourself with both of those reports after you became Secretary of the Navy?

Secretary DANIELS. Yes. Of course, I read these reports, and I may say all the various debates and suggestions, and we have had debates and discussions in the Navy Department for years on the various kinds of organizations of the department.

The CHAIRMAN. And the Swift Board report practically confirmed the other, did it not—the Mahan report?

Secretary DANIELS. I do not remember, Mr. Chairman, exactly the differentiation between those reports.

The CHAIRMAN. What was the organization of the aids to bureau chiefs when you became Secretary?

Secretary DANIELS. They had 4 aids, 1 for Operations, 1 for Material, 1 for Personnel, and 1 for Inspection. They were not authorized by law. When I first came into office some of the aids recommended that I ask for legislation to legalize these aids. I told them I wished to make a study of the organization before I made any recommendations at all.

The aid for personnel was a fifth wheel—not needed—and I soon failed to have an aid for Personnel, but depended on the chief of the Bureau of Navigation, and the Personnel aid was only a go-between. The duty of inspection was better performed by the Chief of Inspection, now the Chief of Material, and so I ran the department on an organization, until the Chief of Operations was established, of an aid for Material and an aid for Operations.

The CHAIRMAN. The system that held the department when you came in was that of Moody and Mahan, was it not?

Secretary DANIELS. No; I think it was a system put in by Secretary Meyer.

The CHAIRMAN. That was established on the strength of their report, was it not?

Secretary DANIELS. I do not think so, but I will not say.

The CHAIRMAN. The Moody-Mahan commission was made up of Justice Moody, Justice Dayton, Admiral Mahan, Admiral Folger, among others. Did you not state in a published article in *Hearst's Magazine* that when you went into the department you found it encumbered by a system of aids?

Secretary DANIELS. I do not think I did. I said the system was a very poor system. I may have done so. I thought so.

The CHAIRMAN. You did publish such an article in *Hearts's Magazine*?

Secretary DANIELS. I do not know; I have written so many articles. I did not think it was a good system.

The CHAIRMAN. You would say that now, that it was encumbered by a system of aids?

Secretary DANIELS. I say I think it was a bad system. It was not the effective system.

The CHAIRMAN. Was not this statement a reflection upon and repudiation of the ideas of the seven or eight other officers or civilians that composed this commission?

Secretary DANIELS. If I thought that a certain organization was better than somebody else's, I would not call it a repudiation. I would call it a system—

The CHAIRMAN. I think the article says you stated it was encumbered with a system of aids.

Secretary DANIELS. I think it was an encumbrance. We had two high ranking officers, who were not needed and could render service somewhere else.

The CHAIRMAN. And in throwing this aside did you have the advice of any board or commission to throw it aside?

Secretary DANIELS. I did not.

The CHAIRMAN. Just from your own knowledge and examination of the facts you made this provision yourself?

Secretary DANIELS. Mr. Meyer established it on his own initiative; I reduced it one-half on my own initiative.

The CHAIRMAN. Yes; but Mr. Meyer did it acting on the report of the Moody-Mahon Board, did he not?

Secretary DANIELS. I do not think that influenced him. I think he did it because he thought it was the best system.

The CHAIRMAN. Was it not the system advised by them in their report?

Secretary DANIELS. I do not recall that it was. At any rate, if you will remember my direct testimony, I gave a very elaborate extract from a hearing before the House Congressional Committee when the Moody so-called report was before it, in which I quoted at length from the testimony of Assistant Secretary Darling who opposed it very earnestly, and made what I thought was a very able and convincing argument against the system then proposed. It was not the same as Mr. Meyer's; and I said in my direct testimony, Secretary Darling was right; and the Congress refused at that time to put that system in operation.

The CHAIRMAN. At any rate, in the spring of 1915 you gave it up to a certain extent, did you not?

Secretary DANIELS. Before 1915; I gave it up, I think. I think I displaced it in 1914—maybe in 1913.

The CHAIRMAN. You gave up the aid for Personnel?

Secretary DANIELS. Yes.

The CHAIRMAN. And also the aid—

Secretary DANIELS. For Inspections.

The CHAIRMAN. For Inspections, and you appointed another aid for Education, did you not?

Secretary DANIELS. That was after we established all the schools in all the stations and ships.

The CHAIRMAN. What influenced you in the organization of the Navy Department to follow the aid system during the first term of your administration?

Secretary DANIELS. It was greatly improved by reducing the aids from four to two, and then later by creating the Office of Operations.

The CHAIRMAN. From four to three it would be, would it not, if you provided for an aid for Education?

Secretary DANIELS. The aid for Education had charge of the schools, and had charge of all of the morale work of the Navy.

The CHAIRMAN. Do you consider the present Office of Operations a useful or valuable element in departmental organization?

Secretary DANIELS. Certainly.

Chairman. Did it do good work in the war?

Secretary DANIELS. Excellent, before the war and since the war.

Chairman. What would have been the result if there had been an Office of Operations as that office is now constituted?

Secretary DANIELS. It was better with an Office of Operations; if we had had an aid for Operations and an aid for Material, they both were strong men and with able, strong officers, they would have gone on very well. I have no great admiration for organizations. After all, the best organizations in the world made of able, efficient men surrounded by enough able and intelligent subordinates to carry on the policy laid down. I do not think that the Office of Chief of Operations is essential. I think it is an improvement. If I had had an aid for Operations and had given him the same power that the Chief of Operations would have had, he would have carried on the war very well.

Chairman. Could you have done that?

Secretary DANIELS. I could have done that; certainly.

Chairman. The aid for Operations never did have the same power that the Chief of Operations had?

Secretary DANIELS. I said that the Secretary of the Navy could have given it to him.

Chairman. Without any legislation with reference to that?

Secretary DANIELS. Yes; certainly.

Chairman. Did you take the first step to create the position of Chief of Operations?

Secretary DANIELS. I will give you a little history about that. As far as I had been in office a short time I became convinced that the present system was not the most effective and efficient system, and I made a study of the best methods of administration of the Navy. As a matter of fact, if you had had an aid for Material and an aid for Operations and the Secretary had given them such power and authority, the Navy Department could be conducted very well, because there are many officers of the Navy of great ability who believe that there would be a better system than the system we have now, if it were utilized.

Chairman. From your question—some time in the winter of 1914 Ad-ams, who had been preaching Prussianizing the Navy ever since he had been in office—

Chairman. I do not think he was preaching it under that name, was he?

Secretary DANIELS. Yes; he told me frankly that the German or the German military system—was the one that we ought to adopt those words, and he said, furthermore, that the only military man who really was capable in the best way was a man whose father had been a military chieftain. His obsession as to efficiency and German excellence were so great that I told him I did not believe he could Prussianize the Navy.

Chairman. Well, he did not call it Prussianizing the Navy, but he said the German system was the best in the world, and the nearer we got to it the better for the purposes of the Navy. That was his opinion and his belief, and he preached it pretty continuously. It made a very deep impression on me. But I have learned since—

I did not know it then—that Admiral Benson in his book—I have not read his book, but I have learned that in his book—he said he had a secret meeting with officers of the Navy, and they decided to try to get through, without my knowing it, legislation.

The CHAIRMAN. Where is that?

Secretary DANIELS. In some part of his book; and they decided to try to get some legislation, acting with a Member of Congress, which would make an organization in the Navy that would give to the Chief of Operations such large powers that, in my judgment, it would practically make a Secretary of the Navy unnecessary.

The CHAIRMAN. Will you give me the page where that statement appears?

Secretary DANIELS. I will look it up.

The CHAIRMAN. And give it to me.

Secretary DANIELS. I will; and they were working on a plan which would have, as I say, made a Secretary of the Navy unnecessary: would have really made a chief like Von Tirpitz, with more power than he had, even. That matter was brought up by a member of the Naval Affairs Committee.

I had been studying organization, as to what would be the best method, and I proposed to the Naval Affairs Committee exactly the very words that are in this bill creating the Chief of Operations, and they adopted it and made it law, which gives power to the Chief of Operations for the operation of the fleet. What Admiral Fiske wanted, and the other gentlemen wanted, was that the Chief of Operations should control the Navy Department. They wanted him charged with responsibility for the conduct of the Navy, would have given them entire control of the Navy Department. I opposed that. I took the ground that the Secretary of the Navy must be in control of the Navy Department, and the Chief of Operations must be charged with the responsibility for plans and the efficiency of the fleet in battle; and upon that was the difference of opinion. I am not criticizing anybody for wanting to Prussianize the Navy. I am not criticizing any man for believing that a Von Tirpitz would be better than the American plan; but I opposed that policy, and the Congress adopted the plan we have in operation, and it has worked very well. I will not say it is perfect; I have never seen any system in my life of any organization that I have regarded as perfect.

The CHAIRMAN. Then it was upon your recommendation that the naval appropriation act of 1914 provided that there should be a Chief of Operations?

Secretary DANIELS. It was.

The CHAIRMAN. In Admiral Fiske's book, on pages 567 to 589—and this book is in evidence before this committee—in this part that is connected with operations and planning, it is categorically stated that Admiral Fiske initiated the act which almost immediately produced the office of Chief of Naval Operations.

Secretary DANIELS. My answer to that is as I have said, that Admiral Fiske and certain Members of Congress wished to have a change in the organization which would have made the Chief of Operations virtually the Secretary of the Navy. I opposed that and defeated it, and went before the committee and secured the adoption of the act as it reads, under which we are operating now.

The CHAIRMAN. You say that Admiral Fiske surreptitiously and secretly had conspired with Representative Hobson to enact legislation taking the actual control of the Navy Department out of the hands of the civilian Secretary and putting it into the hands of a naval officer?

Secretary DANIELS. That is in my testimony.

The CHAIRMAN. That is in your testimony.

Secretary DANIELS. Yes. I think, Mr. Chairman, that an aid for operations under a Secretary of the Navy is perfectly within his province when he, as Admiral Fiske did, talks to the Secretary and issues certain policies. But I think when without telling the Secretary of the Navy that he was seeking to get legislation, he did that, it was not a very loyal and proper procedure; and so of course I did not keep in office a man who lacked the first element of loyalty.

The CHAIRMAN. I have here House Report No. 1344. Sixty-third Congress, third session, dated February 2, 1915. This was unanimously made by the Naval Committee of the House, a majority of whom were Democratic. I will put that report in the record, and I read now one or two sections [reading]:

Committee on Naval Affairs, to whom was referred H. R. 21257, a bill to create the Office of Chief of Naval Operations, and for other purposes, reports the same favorably with the recommendation that the bill do pass. The bill provides for the creation of a new office in the Navy Department to be known as the Chief of Naval Operations. This office is to be filled by an officer of the Navy on the active list not below the grade of rear admiral and elected for a term of four years by the President, by and with the advice and consent of the Senate. This officer, under the Secretary of the Navy, is to be responsible for readiness of the Navy for war and in charge of its general direction.

Secretary DANIELS. I observe, Mr. Chairman, it says "in charge of general direction." That is not in the law, you know.

CHAIRMAN. No; I am reading the House report.

Secretary DANIELS. Hobson's report.

CHAIRMAN (continuing reading):

The officer, under the Secretary of the Navy, is to be held responsible for the readiness of the Navy for war and in charge of its general direction. He is to perform only such duties as shall be assigned to him by the Secretary of the Navy. All such duties shall be performed under the authority of the Secretary of the Navy, and is given the same authority regarding orders issued by him as is given under existing law to the chiefs of bureaus of the Navy Department.

I will skip a little and read further on:

It is to be noted that the Secretary of the Navy retains absolute control over the operations of the Navy and the Chief of Operations performs only such duties as are assigned to him by the Secretary, and the orders are issued under the authority of the Secretary of the Navy. The principal or civilian control of the Navy Department is not in any way affected by the provisions recommended. The tentative duties assigned to the Chief of Naval Operations and his assistants will be such that they may be conveniently divided among nine committees or sections. The list would probably be as follows, etc.

Secretary DANIELS. Have you got in the hearing the law?

CHAIRMAN. Yes.

Secretary DANIELS. In my hearing I just stated that that was the law. I thought to go in, to show what was proposed by Mr. Hobson when the Congress enacted.

(The extract from the law, referred to by Secretary Daniels, is as follows:)

There shall be a Chief of Naval Operations, who shall be an officer on the active list of the Navy, appointed by the President, by and with the advice and consent of the Senate, from among the officers of the line of the Navy not below the grade of captain, for a period of four years, who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet, and with the preparation and readiness of plans for its use in war: *Provided*, That if an officer of the grade of captain be appointed Chief of Naval Operations he shall have the rank, title, and emoluments of a rear admiral while holding that position.

During the temporary absence of the Secretary and the Assistant Secretary of the Navy, the Chief of Naval Operations shall be next in succession to act as Secretary of the Navy.

The CHAIRMAN. That is what you had in mind when you described the surreptitious and secret attempt of Admiral Fiske to Prussianize the Navy?

Secretary DANIELS. I do not know whether that was the exact organization they had in mind, but they were acting to make a change.

The CHAIRMAN. Yes; that is true. Your opposition to this initial move to create the Office of Naval Operations seems to make it evident that you did not make the first move looking to the establishment of that office.

Secretary DANIELS. No, I did not. I say I was studying the question of organization, and was considering what was the best plan to submit to Congress, when I learned purely by accident, that this legislation was being considered; and then I took up with responsible officers and members of the Naval Affairs Committee what was the plan of organization, and we worked out the law, which is now on the statute books.

The CHAIRMAN. It is substantially that same thing, with the responsibility taken away, is it not?

Secretary DANIELS. It is the difference between black and white. In other words, what you have read, while on its face it sounds as if it does not do so, puts the Chief of Operations in control of the Navy. It says "under the Secretary"; but as Secretary Darling pointed out in his testimony when he opposed a like measure, if you ever do that and put the Chief of Operations in control of the Navy Department and the direction of the Navy, then you must utterly waste your money, and you utterly waste everything by having a Secretary of the Navy at all: and, therefore, I strongly opposed: I vigorously opposed the provision that did that.

The CHAIRMAN. Yes, but you cut down the powers that were given to him under that.

Secretary DANIELS. I made a new law; I made a new proposition.

The CHAIRMAN. Does it improve, substantially, the mere cutting out of the provisions as to responsibility?

Secretary DANIELS. I say this—

The CHAIRMAN. Have you the law there?

Secretary DANIELS. I would like to read a letter I have here, Mr. Chairman.

The CHAIRMAN. Will you read the law first, and I will compare it with the House report?

Secretary DANIELS. Yes; here is the law. It reads:

There shall be a Chief of Naval Operations, who shall be an officer on the active list of the Navy, appointed by the President, by and with the advice and consent of the Senate, from among the officers of the line of the Navy not below the grade of captain, for a period of four years, who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet—

The operations of the fleet, bear in mind, not the Navy or the Navy Department—

and with the preparation and readiness of plans for its use in war: *Provided*, that if an officer of the grade of captain be appointed Chief of Naval Operations, he shall have the rank, title, and emoluments of a rear admiral while holding that position. During the temporary absence of the Secretary and Assistant Secretary of the Navy, the Chief of Naval Operations shall be in succession to act as Secretary of the Navy.

Now, the difference is vital. One is the original idea that Mr. Hobson proposed and Admiral Fiske advocated, which was that the Chief of Operations should have the Navy under his direction. This provides that he shall be charged with the operations of the fleet with the preparation and readiness of plans for its use in war. Now, the distinction is as wide as the ocean. Under the original idea the Chief of Operations would have dominated the whole department. There would have been no necessity for the Secretary of the Navy.

My theory of the Chief of Operations is—and I think it is a very important position—that he shall be the thinking man about plans, tactics, about strategy; that he shall have under his control, in his direction, people who are experts in the Navy. Under our relations the War College is under the Chief of Operations; the Naval Intelligence, giving us all the information as to naval affairs of the world, is under his direction; the Chief of Communications, controlling communications all over the world, is under his direction—and he has the planning and the operation of the fleet and things that are allied with it. He has nothing to do under this graph with the Ordnance Department except, under the regulation, once a week the Chief of Operations has a meeting with the other chiefs, and he is kept in touch with what is going on. But he has no direction or control over anything in the Navy except the planning, the planning, the operating. He can not expend a dollar. He has no authority to do that. He ought not to have. And when you make the Chief of Operations what Mr. Hobson and what Admiral Fiske wanted, whenever you make him responsible for the operation of the Navy, you will then make him an administrative and not a thinking and operating officer.

I know very truly that some of the ablest officers of the Navy ought to be done. I have great respect for their judgment, but it would be a great mistake, in my judgment, and I therefore am very earnest in this matter. I talked to all the members of the Affairs Committee about it. My recollection is that when it was brought about three-fourths of the House committee and all Senate committee favored the law as we had it and did not think that we ought to make a Chief of Operations as a Frankenstein head or controlling power of the Navy. Why, if you do not want any Secretary of the Navy; you do not want

any Assistant Secretary of the Navy; and you ought to abolish those two offices immediately. No man of ability, no man with a sense of responsibility, would be Secretary of the Navy if the Chief of Operations was going to conduct the whole Navy Department and establishment; so that you can therefore, if you wish to do that, if you wish to put a military man in control of the Navy Department. It is not done in any English-speaking navy in the world. Why, Mr. Chairman, in Great Britain a first sea lord, a second sea lord, no sea lord except the first lord of the Admiralty, has any power at all except such power as he derives from the first lord of the Admiralty. It is not so in any English-speaking nation in the world; and I will tell you this, that we need military men for military purposes; we ought never to have anybody but a naval officer for the Chief of Operations, or at the head of the War College, or at the head of Intelligence, or to control Ordnance; although we might have a very distinguished civilian who might run the ordnance production. But you do not want a military officer in control of the Navy Department. It is contrary to all the principles of American Government.

Now, the Hobson measure which I opposed and which Congress defeated—the Hobson measure camouflages military domination. It says that under the Secretary of the Navy the Chief of Operations shall direct the Navy; and, naturally, if he is to direct—

The CHAIRMAN. Where are the particularly objectionable words, the word "responsible" or the word "fleet" instead of Navy?

Secretary DANIELS. Let me read the words. The particular thing is that the one act makes a man responsible for plans and operating the fleet—that is the law, and that is a good law—while the other makes him responsible for the direction of the Navy. Under that law he would control the Bureau of Construction and Repair, he would control the Bureau of Operations, he would control the Bureau of Engineering, he would control everything in the department; and the idea is, and I heard a naval officer of ability, a man whom I have great respect for, say, "Why, here is the way the Navy ought to be organized." He said, "The Chief of Operations ought to be the only naval officer in the Navy that ever saw the Secretary. Every department, every bureau, every admiral who wants anything done, ought to go to the Chief of Operations, and then the Chief of Operations ought to present it to the Secretary. He should be the only means of communication and conduit pipe." I utterly disagree with that theory; and if you will read this act you will see what it means. Now, listen to this Hobson report:

This officer, under the Secretary of the Navy, is to be held responsible for readiness of the Navy for war and in charge of its general direction.

Now, I object to that. The Secretary of the Navy must be in charge of the general direction of the Navy. The Chief of Operations must be responsible—

The CHAIRMAN. That says "under the Secretary of the Navy"? Secretary DANIELS. Oh, I understand; but we all know what power is.

The CHAIRMAN. You do not think that he would be under the Secretary after a while?

Secretary DANIELS. Well, I think this: I think that if he had that power, the Secretary would either be a rubber stamp or he would soon get out. Now, therefore, what do you need a Secretary or? The business of the Secretary of the Navy is the direction of the Navy; otherwise you do not need him; and I think you make a military direction of the Navy when you want a civilian direction of the Navy. Now, I grant you that a military control of the Navy department in the matter of ordnance, in the matter of tactics, of tactical matters, is better than any civilian that you probably could get; but, Mr. Chairman, we have got that now. We have got naval officers who attend to all technical matters. I have never known a Secretary of the Navy who determined, himself, the caliber of his guns, or the speed of a ship, or who did not have officers who in technical matters were the men looked to.

Then there is another theory about it. After all is said and done, our Government the Congress has got to determine how big the Navy is, its personnel, its promotion, its direction, its control. Now, America, in any country that is free, they need to keep the military in its place. It has a very great place, a place of very great importance; but it is subordinate to the civil. The business of the Navy is not to declare war; it is to fight when Congress and the President say fight. It has no business with civil affairs. A Secretary of the Navy ought to be able to interpret the Navy's needs to the civilian Congressmen. You ought to have both points of view; you ought to have the naval point of view, taking the technical matter from trained men, and you ought to have the civilian point of view; he ought to be able to go and tell the Naval Affairs Committee what is needed. Here is what the naval force is; here is what the Army is. But, gentlemen, here is another aspect of it, and before you ought to have a civilian Secretary; and if he is going to have a civilian Secretary, for heaven's sake do not put a bill on him that says that somebody else is going to have the direction of the Navy because while you may say "under the Secretary" all you get is a camouflage, and in a little while any officer who takes office will say, "Well, I am responsible for the direction of the Navy. Congress has told me so, and here is my charge," and he is to use that power; and that is human nature, and if you had a man he could not do all these things. But think of it! What have we now? A Chief of Operations, who is responsible for the direction or the operation of the Navy, has a big job. That is a think-

It is a technical job, a strategical job. He must think about it and it was a great idea to have a man like that. But here we have Admiral Taylor, Chief of Construction and Repair, the man in his profession in the world. This would put Admiral Taylor and the whole Construction and Repair Department under the Chief of Operations. You take the Chief of Operations; take what we have done in the matter of this great new propulsion under Admiral Griffin, a great officer; think of the matters of propulsion and machinery, everything that came out of motive power would be under operations. The building of the ships we build, the buying of everything we buy would come under operations. You would have to have a superman to hold the reins. It would be a great mistake, I think, a fatal mistake, in America.

I therefore went to the Naval Affairs Committee when it was up and pointed out the difference, and I said, "Gentlemen, if you put these words in—that he shall have the direction of the Navy—you ought to abolish the bureau chiefs and you ought to abolish the Secretary of the Navy and the Assistant Secretary of the Navy, and ought not to let a civilian come into the department except on business, and you ought to make it a purely military organization. You will get effectiveness, military effectiveness, but you will not get an American organization.

I feel very deeply about that; I feel that it is the very crux of Americanism. I feel so deeply about it that while it does not concern me any more than any other citizen of America, it is fundamentally un-American. There is not an English-speaking nation in the world where it has ever been suggested seriously; and these words are camouflage; it is doing by indirection what Hobson and Fiske could not have done by direction; and the Naval Affairs Committee of the House and the Senate, I think almost unanimously, when the matter was discussed, said, "Of course, we will have this chief of operations, we will give him power with the fleet, we will give him power to think, we will give him power for strategy; but he is not an administrator, and we will take the word "responsible" from the bill.

The CHAIRMAN. And the responsibility that the House would have given him lies now not with the Chief of Operations, but with the Secretary of the Navy?

Secretary DANIELS. With the Secretary and with the bureau chiefs.

The CHAIRMAN. Well, the responsibility is, of course, ultimately with the Secretary.

Secretary DANIELS. Yes; the responsibility lies with Secretary.

(The House report above referred to is here printed in full in the record, as follows:)

[House Report No. 1344, Sixty-third Congress, third session.]

CHIEF OF NAVAL OPERATIONS.

The Committee on Naval Affairs, to whom was referred H. R. 21257, a bill to create the Office of Chief of Naval Operations, and for other purposes, report the same favorably with the recommendation that the bill do pass.

The bill provides for the creation of a new office in the Navy Department to be known as the Chief of Naval Operations. This office is to be filled by an officer of the Navy on the active list not below the grade of rear admiral and appointed for a term of four years by the President, by and with the advice and consent of the Senate. This officer, under the Secretary of the Navy, is to be held responsible for readiness of the Navy for war and in charge of its general direction. He is to perform only such duties as shall be assigned to him by the Secretary of the Navy and such duties shall be performed under the authority of the Secretary of the Navy, and is given the same authority regarding orders issued by him, as is now given under the existing law to the chiefs of bureaus of the Navy Department.

To assist this officer in preparing general and detail plans of war, 15 officers, of and above the rank of lieutenant commander of the Navy or major of the Marine Corps, are to be assigned for this exclusive duty.

At the present there exists a General Board and Naval War College, neither of which seems to be equipped for adequately performing this duty; nor have they sufficient officers under their jurisdiction to do this fundamental work for preparation of the plans of war. The demands upon the staff of the War College and the members of the General Board for other questions involving the efficiency of the personnel and material of the Navy are such that they have not had time and opportunity to fully prepare in detail and perfect this

work. It is the opinion of the committee that the necessity for such an office exists in the Naval Establishment.

It will be noted that the Secretary of the Navy retains absolute control over the office and the Chief of Operations performs only such duties as are assigned by the Secretary of the Navy. The principal or civilian control of the Navy Department is in no way affected by the provision recommended. The tentative duties of the proposed Chief of Naval Operations and his assistants will be such that the work may be conveniently divided among nine committees or sections. The sections would probably be as follows:

The historical section, which covers the study and analysis of past campaigns.

The policy section, which studies the inherent interests of all nations and the policies which logically follow.

The strategic section studies the theaters of possible wars from every aspect and the sources and means of supply for the military and naval forces.

The tactical section studies tactics, particularly in relation to strategy; determines and endeavors to insure that the tactics of the fleet are kept constantly up to date and conform to the character of the ships and weapons that will be used.

The logistic section studies the logistic aspects of the strategical and tactical plans, involving the requirements as to supplies at the beginning of the war, during the war, and the organization of transportation, and many other things incident to the auxiliary service, including the inspection of merchant vessels.

The organization section studies and devises plans of organization for war in order to secure the most efficient flow of authority, the best administrative and tactical grouping of the forces, detail of personnel for command, and the orders necessary for the execution of the various plans.

The mobilization section prepares and keeps always up to date plans for mobilizing for each of the various stations arising from conflict with possible enemies.

The training section studies methods for the training of the naval forces and devises strategical problems and tactical exercises involving combined maneuvers of battleships, auxiliaries, submarines, aircraft, and mining vessels.

The executive section sees that the plans devised are executed.

The importance of this work may be judged from the fact that Great Britain has a separate organization, called "the naval war staff," composed of 39 line officers, a few staff officers, and about 31 civilian assistants; in Germany, by the admiral staff, composed of 22 officers, with 13 officer assistants and a librarian; in Japan, by a general staff, which is immediately under the Emperor.

Such an agency as is hereby established in the Department of the Navy to coordinate and harmonize all parts of that establishment, prepare plans in detail, and supervise their execution, the committee believes is necessary for the effective or efficient accomplishment of the object for which the Navy exists to insure our country victory in war. The committee unanimously recommends that the bill do pass.

The subjoined statements of Rear Admiral A. M. Knight, United States Navy, in an address before the Efficiency Society of New York, sets forth the importance of this legislation:

"The War College considers that every effort of the fleet, and every effort of the department in connection with the fleet, should have for its sole aim the war efficiency of the fleet.

"There is much about the Navy which is splendidly efficient but as a whole it is far less efficient than it can and ought to be. Our ships are fine. Our officers are capable, industrious, and ambitious. Our enlisted men are the equals of those in other navies. But efficient ships and officers and men do not alone make an efficient Navy. They must be welded into an efficient whole by a unity of organization and administration and purpose which coordinates their capabilities and directs their efforts toward a common end, wisely selected, and very clearly seen. Here is the first point at which we are lacking.

"I come now to what is, perhaps, the most important part of my subject—the organization of the Navy Department, viewed from the standpoint of efficiency. There can be no question that the existing organization is inadequate and would break down under the strain of war. The administration starts from too many sources and flows through too many channels. It lacks the unity of purpose which would come from recognition of the facts that a navy has one excuse for existing, and only one—that it shall always be ready to strike on the minute

and with every element of power concentrated behind its blow for the defense of the country.

"Do not misunderstand me. I am not telling you that our organization is wholly bad. I am telling you that it is inadequate. In many cases it works rather surprisingly well. But if you analyze these cases you will find that in so far as the results are good, they are so in spite of the system and because of some personal factor which has compelled efficiency. Moreover, and this is the crux of the whole matter, the cases with which we can deal at the present time are illustrations of peace efficiency, whereas the efficiency upon which our attention should be fixed unwavering is war efficiency; not because we are going to have war, but because we may have it, and because the one supreme duty of the Navy is to be ready for it if it comes.

"I suppose this relation of the Navy to war, whether possible war or actual war, has always been understood more or less clearly. But it is a singular fact that the organization of the Navy Department takes no account of it. War is the one thing for which no arrangement is made. There are seven bureaus in the department, each with clearly defined duties; but in all the elaborate legislation creating these bureaus and defining their duties there is not a word about the duty of keeping the Navy in readiness for war or preparing plans for war or conducting war after it begins. There would be a certain element of comedy in this if there were not so many elements of possible tragedy. There is a bureau in the department charged with the construction and repair of ships, one with the design of machinery, one with the preparation of ordnance, one with the direction of personnel, and so on; but nowhere is it said 'this bureau shall be responsible for the readiness of the fleet for war, for the preparation of war plans, and for the conduct of war.'

"This, then, is the last and great defect in the efficiency of the Navy. How shall it be remedied? The answer is, I think, by the creation in the Navy Department of a division of strategy and operations, preferably not coequal with the present bureaus, but superior to them and standing between them and the Secretary. This arrangement would be recognition of the fact that all the activities of the present bureaus should lead up to the Secretary through a channel which coordinates them all and directs them toward war efficiency.

"I have explained that the defects in the organization of the Navy Department are a lack of coordination of authority, as a result of which the administration starts from too many sources and flows through too many channels, and a total lack of provision for planning and carrying forward the operations of war. It must not be supposed that these defects have escaped recognition or that no efforts have been made to correct them. The most successful of the efforts to secure coordination between the bureaus was the adoption during the last administration of a system of aids to the Secretary, who coordinated the work of the various bureaus, and who, when important questions were under consideration, formed a council upon which he could call for advice. The weak point about this system was, and is, that the aids have never been legalized by Congress, and therefore have no permanent status whatever. In spite of this, they are in a position to do much toward improving the administration of the department.

"The General Board was called into existence in 1900 by an order of the Secretary of the Navy to provide a body for the consideration of war plans and allied subjects. It has performed and is performing work of the very highest importance, but it, like the council of aids, lacks legislative sanction, although Congress has for many years past shown great interest in its work and not a little deference to its views.

"Another and a very important agency to which the Navy Department looks for a contribution to its work in strategy and other matters connected with preparation for war and the conduct of war is the Navy War College at Newport. The War College has been in existence since 1884 and has been an important factor in the education of officers from the very beginning. For some reason, however, it has failed until very recently to command the full recognition which it has deserved from the Navy Department or even from the officers of the Navy. The present Secretary of the Navy visited the college shortly after coming into office and, with an insight of which many naval officers have shown themselves incapable, recognized its possibilities for usefulness and pronounced himself its friend. Since that time he has done everything to forward this work which could be dictated by the most thorough comprehension of its mission and its needs, and as a result of this generous support, both moral and material, the college has taken its proper place as an institution for the training of officers

for high command and for the development of the art of naval warfare. Thus the college is enabled to contribute something toward making good the lack of a strategic division in the Navy Department itself.

"You will see, therefore, that although no law takes cognizance of the necessity for keeping the Navy ready for war, there are many agencies which cooperate toward that end—the council of aids, to which the Secretary would naturally turn in an emergency, the General Board, and the War College. These agencies are so closely in sympathy that they are able to cooperate harmoniously with each other and with the fleet, and this cooperation is having important and very valuable results. This does not change the fact that there should be—that indeed there must be—in the Navy Department itself and close to the Secretary a coordinating office to bring the efforts of these and other agencies to an administrative focus bearing directly upon the efficiency of war. Such a coordinating office I have already sketched as a division of strategy and operations immediately below the Secretary of the Navy in authority.

"The creation of this office would provide a policy for the Navy, so far as the activities of the Navy itself are concerned, insuring unity of effort and shaping plans toward the end which we have recognized to-night as the proper end of all our efforts—preparedness for war."

The CHAIRMAN. Now, Mr. Secretary, you stated about recommending this office yourself. Were not the facts that your recommendation came after the plan had been started by Fiske and Hobson—

Secretary DANIELS. Now, Mr. Chairman, you said—

The CHAIRMAN (continuing). And then it was adopted with the changes that you suggested? You did not originally care particularly about having a Chief of Operations at all yourself, did you?

Secretary DANIELS. I told you just now that I was studying the best plan for organization.

The CHAIRMAN. Yes.

Secretary DANIELS. And that in the meantime, while I was taking that up, this proposition came up, and I opposed it. Now, I would not like for you to say that this plan that was turned down and the plan adopted were anything at all alike.

The CHAIRMAN. No, no; but the plan that was adopted was framed on this and cut down so that it would conform to your idea?

Secretary DANIELS. It is immaterial what was done. We saved the American system and destroyed this Von Tirpitz system.

The CHAIRMAN. But you have stated that the system of two aids could have taken care of it just as well.

Secretary DANIELS. What is that?

The CHAIRMAN. You have stated that under the system of having two aids you could have taken care of it as well as with even the Chief of Operations.

Secretary DANIELS. I say it could have been done.

The CHAIRMAN. And had no legislation been started at that time you would not have advocated a Chief of Operations?

Secretary DANIELS. Oh, no; I should have made a change in organization, because we had aids, and we had no law for it.

The CHAIRMAN. But you were not specifically providing for a Chief of Operations or planning to provide for one.

Secretary DANIELS. I had not drawn an act, but I was considering the best way to have an act.

The CHAIRMAN. To be known as Chief of Operations?

Secretary DANIELS. I had not gone that far.

The CHAIRMAN. You had not gone that far with it?

Secretary DANIELS. No, sir; I had not drawn the act. I wish to call attention to the law of February 19, 1915. While matters were

pending in organization I wrote the following letter to the chairman of the Senate Naval Affairs Committee:

FEBRUARY 19, 1915.

MY DEAR MR. CHAIRMAN: There is attached hereto a draft of a proposed amendment to the pending naval appropriation act, with my earnest recommendation that it be inserted in lieu of the words on the same subject contained in the bill as reported by the House Naval Affairs Committee. (See p. 4, lines 13 to 18, H. R. 20975, as reported Jan. 18, 1915.)

The suggested amendment provided for the creation of a new office in the Navy Department, that of Chief of Naval Operations. This office is to be filled by a line officer not below the grade of captain, who is to be appointed for a period of four years by the President, by and with the advice and consent of the Senate. He will be charged, under the direction of the Secretary of the Navy with operations of the fleet, and with the preparation and readiness of plans for its use in time of war.

You will first notice that the principle of civilian control of the Navy Department is not violated. It will be the duty of the officer who, by the nature of his position, will be thoroughly conversant with existing conditions in the fleet, to recommend to the Secretary such changes as may, in his opinion, be necessary to develop the maximum efficiency of the Navy.

Faithfully, yours,

JOSEPHUS DANIELS.

The CHAIRMAN, COMMITTEE ON NAVAL AFFAIRS,
United States Senate.

That is the letter I wrote, and here is the inclosure. [Reading:]

Amendment recommended by the Navy Department to the bill H. R. 20975, naval appropriation act.

There shall be a Chief of Naval Operations who shall be an officer on the active list of the Navy appointed by the President, by and with the advice and consent of the Senate from among the officers of the line of the Navy not below the grade of captain for a period of four years, who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet, and with the preparation and readiness of plans for its use in war.

During the temporary absence of the Secretary and the Assistant Secretary of the Navy, the Chief of Naval Operations shall be, next in succession to act as Secretary of the Navy.

I think there is a profound principle involved in this matter. That is why I speak so earnestly. Several of you gentlemen were not here when I made my direct statement in which I quoted from the statement made by President Roosevelt to Congress in which he very wisely declared that as between civilian and military control of the Navy, the Navy ought to be under civilians.

The CHAIRMAN. We will adjourn until to-morrow morning at 10 o'clock.

(Thereupon, at 5.20 o'clock p. m., the subcommittee adjourned until to-morrow, Tuesday, May 25, 1920, at 10 o'clock.)

NAVAL INVESTIGATION.

TUESDAY, MAY 25, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 o'clock a. m., in room 235, Senate Office Building, Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Keyes, and Trammell.

TESTIMONY OF HON. JOSEPHUS DANIELS, SECRETARY OF THE NAVY—Resumed.

The CHAIRMAN. The committee will come to order.

Secretary DANIELS. Mr. Chairman, you inquired yesterday where it was stated, as I remarked, that certain officers of the Navy held secret meetings, acting with a Member of Congress, in attempting to get through the legislation giving the Chief of Naval Operations power over the Navy as well as the fleet. You will find it stated in Admiral Fiske's book, and in the testimony of Admirals Fiske and Fullam.

Admiral Fiske says as follows in his book (pp. 567 to 569):

Midshipman to rear admiral:

The entries in my diary during the remainder of December refer mainly to the congratulatory letters and messages that I continued to receive regarding my testimony, and also to my efforts to establish a general staff.

"December 27, Sunday: Called on Hobson in p. m. and explained why a general staff is absolutely essential, if one is to have a Navy of maximum effectiveness; though it is not necessary if one is to have merely a Navy.

"January 3, Sunday: Had long interview in p. m. with Hobson at his residence in regard to general staff, etc. I took many documents with me, and Hobson became thoroughly interested. We concluded that it might be better not to attempt to get through legislation for any modification of aid system, because Secretary would say present aid system is adequate and that it might be better to propose a new scheme, whereby an addition would be made to present system and additional means be provided to accomplish preparation for war. So I asked Capts. H. S. Knapp, Hood, and Oliver, and Lieut. Commanders Cronan, Madison, and Knox to be at Hobson's at 8.30 p. m. We all met there in Hobson's study, and sat till after 11 p. m., when we adjourned. We agreed on program whereby Chief of Naval Operations is to be legislated for and to have 15 assistants."

The entries under head of December 27 and January 3 give the outlines of a good deal of work that Hobson and I did on those days and in the intervening week. The plan which we drew up was drawn up in the light of my knowledge of strategical requirements and Hobson's knowledge of congressional requirements. When the six officers arrived that evening, they came secretly, because they were engaged on an exceedingly dangerous mission. I had expected more or less objection on the part of some of them to certain features of the bill as drawn, but I found that every one of them was enthusiastically in favor

of it. We eight men went over the whole subject very carefully, and when we finally came to an agreement, the original memorandum that Hobson and I had planned had been changed but little.

During the discussion that evening it happened occasionally that some one would speak of the power and authority which I would have if that bill should pass. Whenever anybody made such a remark as that I told him that, if Congress should authorize a chief of naval operations, I was absolutely certain that I would not be the chief of naval operations. I told them that I was positive that the Secretary wanted to get rid of me—

And in that, Mr. Chairman, he was entirely right. I had intended to get rid of him, because I could not stand him any longer—

but could see no opportunity or give any reason for it, because he knew that I was performing my duties to the satisfaction of the Navy, including Admiral Dewey: but that if a new office was established by Congress, the Secretary then would be perfectly free to appoint any one whom he wished. I told the company that I was like the well-known gentleman who sawed off a branch of a tree at a point between himself and the branch, except that that man did not realize what he was doing, and I did.

I will interpolate, Mr. Chairman, that it did not make any difference with me whether we had a Chief of Operations or an Aid for Operations; Admiral Fiske was going to go. I had been bored by him long enough.

"January 4. The six officers who met at Hobson's last night met in my office at 8.30 a. m. and we drew up on neat typewritten page the proposition agreed on. Hobson came to my office at 10.15 and took up the matter with Secretary. Hobson told me later that Secretary declared that if the bill went through he would 'go home.' How foolish! Now he has the chance to back it up and get back into good opinion of the country."

This is all from Fiske's diary.

Hobson came to our apartment at 2.20 and told me subcommittee—of which Padgett is chairman—passed the proposition unanimously! Hobson asked me to get him a brief with which to argue matter before full committee January 5. So Madison, Cronan, Dudley Know, and I met in my office from 9 p. m. till 11.15 p. m. and drew up brief, which Knox will leave at Hobson's house at 9 a. m. to-morrow.

"January 5. Papers give large space and headlines to action of subcommittee! Dewey is delighted, and told me I might tell Hobson, which I did at 10.30 a. m., by telephone.

"January 6. Hobson telephoned me at 1 p. m. that full House Naval Committee agreed unanimously on incorporating in naval appropriation bill the provision for a Chief of Naval Operations!"

With the exception of Admiral Dewey, Hobson, and the six other officers, nobody knew that I, or any other naval officer, had any connection with this measure.

"January 7. Evening papers last night and morning papers to-day confirm news that House Naval Committee unanimously agreed to incorporate in naval appropriation bill the provision, 'There shall be a Chief of Naval Operations' * * * New York papers give great space and comment (sympathetic) to establishment—Bureau of Operations. New York Tribune is especially favorable, and the World, the leading Democratic newspaper, gives the project its first page headed 'Fixed naval policy assured.' It must hurt Mr. Daniels very much indeed to see the World taking a stand so antagonistic to him."

When the naval appropriation bill came up before the House the provision for a Chief of Naval Operations was stricken out on a point of order on the motion of Mr. Mann.

That is, Mr. Mann, Republican leader from Illinois.

This did not surprise me because Hobson had said at the start that it was liable to this fate, being new legislation added to an appropriation bill. Hobson said that he thought he could get the Senate Naval Committee to put it back in the bill; he added, however, that this would give an opportunity for the

Secretary to modify the provision by recommending certain changes in it, though he thought that the Secretary would not oppose a provision that had been agreed to by the full House committee.

Hobson's prediction was verified in toto. The provision, as finally incorporated in the bill by the Senate Naval Committee, was made to conform to the suggestions of the Secretary. In its amended form it was passed by both Houses.

Admiral Fullam said (pp. 2069 to 2070) in speaking of the efforts of Admiral Fiske and others to "put over" that legislation:

Hobson told me that they had to meet at his house in secret, and to call officers, like Admiral Knapp, up there to meet them, so as not to let the Secretary know anything about it.

I must confess, Mr. Chairman, when I read this diary and this testimony of high-ranking officers of the Navy to the effect that they were meeting in secret and not letting the Secretary know what they were doing, when under every regulation and tradition of honor of the Navy, in such an important matter, they were under every consideration bound in honor to take it up with him. [Continuing reading:]

Admiral Fiske in his testimony (pp. 1797-1798) includes his hearings before the House Naval Affairs Committee, March 24, 1916. Referring to Representative Britten's statement, "The officers say Admiral Fiske drew it up in his own handwriting," Admiral Fiske said:

"I feel it necessary to explain something that Mr. Britten said. I do not want to seem to give assent to a remark that he made, which was to the effect that the provision for Chief of Naval Operations, as originally reported by this committee, was drawn up in my own handwriting. It was drawn up at my suggestion, and Mr. Hobson and I had several conferences while drawing it up; and, finally, in framing the phraseology in which it was presented to you, Hobson and I had the assistance of six other officers."

I call your attention to the fact that in his testimony, Admiral Fiske says:

Dewey is delighted.

Now, I wish to call attention, Mr. Chairman, to an interview with Admiral Dewey, published in the New York World of Sunday, August 20, 1916, which I will insert in full in the record, in which the interviewer says as follows:

"Tell me, Admiral Dewey," I ventured another leading question, "what is all this clamor about the Navy needing a General Staff?"

He laughed.

"I don't know," he said. "I've tried to pin them down, but not one has even been able to make clear just what it was that he wanted. Down in their hearts I suppose they want a small, select body to have entire charge of the Navy. Well, they'll never get it, and they shouldn't get it."

"You believe, then, that the Secretary of the Navy should be a civilian?"

"Absolutely. He represents the people, and the closer he is to the people the better. Same thing with the powers of Congress. I can conceive of no greater madness than to put the Navy in the power of a naval group, or the Army in the hands of soldiers alone. As a matter of course, we would look at things from our own professional point of view. The whole democratic balance would be destroyed."

Now, that is an interview with Admiral Dewey about the Navy on August 20, 1916, in which he declares, in conversation:

What I want the people of the United States to know is that it is all right with the Navy. There is no demoralization, no lack of discipline, no absence of enthusiasm. The Navy has never failed America. It will not fail.

I suppose I need not read all of this.

The CHAIRMAN. That is the complete letter is it?

Secretary DANIELS. This is the complete interview; yes. A photostat copy.

The CHAIRMAN. Will you put the whole article in the record?

Secretary DANIELS. The whole matter; yes. It is an interview. (The editorial referred to is here printed in full, as follows:)

ADMIRAL DEWEY VIGOROUSLY DEFENDS THE NAVY.

[By George Creel.]

For two years and more the United States Navy has been the subject of discussion as bitter as it is confused. The disputes between pacifists and militarists, between Democrats and Republicans, have resulted in a Babel, and out of it all have come prejudices that do not care to bother with facts.

The people of the United States are entitled to the truth, the whole truth, and nothing but the truth. What is slander and what is fact? Is the Navy, as it stands to-day, an asset or a liability? Is the Navy bill honest and adequate or a dose of "eye wash"? Has Secretary Daniels "demoralized"? Is he a faithful public servant, worthy of support, or a joke?

One man only has the authority and possesses the exact knowledge to answer dispassionately these questions. That man is Admiral George Dewey. He has been in the United States Navy since 1854, serving through two wars. Since 1903 he has been head of the General Board, passing upon naval defects, naval needs, and naval plans. No administration has power to hurt him. By law he is exempted from the usual retirement provisions, and if he does decide to retire, it will be of his own volition and at full pay. No partisan quarrel has ever had power to drag him from his height.

INDIGNANT OVER SLANDEROUS CRITICISMS.

Aside from these qualifications he is loved of the American people as few men have ever been loved. In a day when there is much talk of Americanism he stands as one who has risked his life for it and who has devoted that life to giving richer, finer meanings to the word.

I found him in Atlantic City in a great, wind-swept room that looked out over the sea. His hair was whitened, but otherwise he is but little changed by the years that have passed since the wonderful day he returned from Manila to hear the shouts of a nation. The same clear, steadfast eyes, the same tremendous simplicity, the same faith in America.

Speaking slowly, but never hesitatingly, for three long hours, he considered the United States Navy, past, present, and future, world war, world peace, national ideals, and national destiny. Only in his first answers, when an evident indignation gripped him, did he depart from the tone of one trying to pick his words in the interest of understanding.

"The attacks that have been made upon the Navy," he said, "are as false as many of them are shameful. It is not a junk heap. There is no demoralization. Both in material and personnel we are more efficient to-day than ever before. Our ships are as good as any, our officers are as good as any, and our enlisted men are the finest in the world.

"It is true that we have not enough ships or enough men. But navies are not built in a day. It was between 1906 and 1909 that Germany passed us and that we commenced to lose rank as a naval power. This is in no sense a criticism of administrations. Congress, after all, expresses public sentiment in large degree, and the reason we dropped was because the people wanted the drop. The recommendations of the General Board went unheeded because they were not backed up by public opinion. Until 1914 people were thinking in terms of world peace. It is different to-day, and it is to-day that should concern us."

He walked over to his desk, and taking up a copy of the Senate Navy bill spread it out before him. For a moment, as if to measure his words, he tapped it with a big, brown forefinger, and then he said:

"This is the best bill ever passed by either House of any Congress. It takes the five-year program of the General Board and changes it into a three-year program. If passed, it will restore us to second place and enable the United States to meet on equal terms any power in the world, save one."

ANALYSIS OF NEW NAVY BILL.

I asked him then for a consideration of the bill, or, rather, some such analysis as would permit a civilian to do a little thinking for himself. Patiently he went over each item:

"Four battleships at once and six more within three years." Now that he was firmly on his own ground his words came like bullets. "The great clash at the mouth of the Skagerrack gave a test to every theory. As a result naval authorities are now agreed that the battleship is still the principal reliance of navies. As never before, it is proved that victory or defeat rests with the dreadnaught.

"Four battle cruisers at once and two more within three years. This will remedy one of our chief weaknesses. The Skagerrack proves conclusively, however, that the battle cruiser can not give and take with dreadnaughts.

"Scout cruisers, four, and six more to come. More eyes for the fleet. Absolutely necessary."

"Like the battle cruiser," he said, "the submarine has been permitted to gain a very exaggerated value. It is, of course, a most useful auxiliary, whose importance will do doubt increase, but at present there is no evidence that it will become supreme. The bill provides for 9 fleet submarines: 3 coast submarines, 800-ton type; and 55 submarines, smaller type, provisions that are in line with the recommendation of the General Board.

"A feature of the Skagerrack engagement," he continued, "was the convincing demonstration of the usefulness of the destroyer. These tiny ships, primarily designed to serve the purpose of a screen, to be outriders for the big ships, have been regarded as incapable of attacking first-class ships in the daytime. The German destroyers descended upon the British Fleet in broad daylight, and the destroyers of both fleets played an important part in the fighting. We feel that the bill's provision for 50 destroyers is amply justified. So"—he turned in the chair and clapped his hands together—"it is a bill that gives us strength and, best of all, a bill that gives us balance."

WHY WE NEED A GREAT NAVY.

"Granting all that," I said, "but what about the need of it?" As carefully and fairly as possible I presented the feeling of many people in many Western and Middle States—a feeling that this expenditure of millions on the Navy was a departure from American traditions, a hysterical surrender to the madness that has had hold on kings. His fine head nodded appreciation of every point, but at the end he spread wide his hands in a sweeping gesture of dissent.

"I know that I am not a militarist," he said. "Those who have never seen war or who have only played at war may talk in terms of jingoism, but men who know what war is and what war does are the last in the world to approach it in any swashbuckling fashion. I hope the day will come when peace and justice rule the world, but that day is not yet here. Not all our idealism can brush away facts. If we are to dwell in peace we must be able to protect that peace." He walked to the open window and pointed to the shining stretches of the sea.

"Look at our coast line: From Maine to the Canal, from the Canal to Alaska. Russia has had to maintain two distinct fleets, one in the Baltic, one in the Black Sea. Our problem is much the same. We can not be said to have met our defensive needs until we are able to maintain a fleet in the Pacific Ocean as well as in the Atlantic. Our geography, the immensity of our coast line, join to make the Senate Navy bill a minimum requirement. No, no," he exclaimed. "We must accept conditions as we find them, although we are not to give up hope of changing the conditions."

"Given this increase," he declared, "given the ships and men that this bill provides, and the United States, as never before, will be a peace power, able at all times to protect and to advance its standards. Every cent appropriated by this bill is payment on an insurance policy."

"How about men?"

"We now have 55,000, and the bill authorized 74,500."

"Can you get them?"

"I don't think there is a doubt of it. The Navy to-day offers as fine a chance for the American youth to fit himself for life as any other department of endeavor."

IN DEFENSE OF SECRETARY DANIELS.

"Tell me, Admiral Dewey," and I braced myself for the momentous question, "has Secretary Daniels demoralized the Navy?"

"Bosh!" The exclamation was one of disgust and indignation. "Facts and figures tell their own story. The Navy was 5,000 short of the number of enlisted men allowed by law. Over 6,000 have been added, although more rigid examinations have forced the rejection of five out of every six. Only 52 per cent of honorably discharged seamen were reenlisting. For more than a year about 90 per cent have reenlisted. Desertions have been cut in half and discipline has been improved to an extent that has permitted the restoration of a prison ship and a disciplinary barracks to normal uses. No, sir; the Navy is not demoralized, and those who make the charge are guilty of falsehood and misrepresentation."

"Did Secretary Daniels ever issue an order for officers and men to mess together, only withdrawing the order when informed that it might bring whites and blacks to the same table?"

"Slanderous! No such order was ever heard of."

It had been my purpose to take up with Admiral Dewey every one of the small things alleged against Secretary Daniels—every one of the petty charges that press and magazines have used to prejudice people against the Navy head. It proved impossible. It would have been like talking gutter gossip with St. Paul.

"How about officers?" I asked.

"Officers, like navies, are not made in a day." I could see his relief at getting away from mud. "When the present administration took charge it found that the law providing for the appointment of two midshipmen at Annapolis by each Member of Congress had been permitted to lapse. This law was extended, and the present Congress, upon the recommendation of the Secretary, has provided for three additional midshipmen to each Congressman. This makes 531 additional appointments immediately available. There is also the law that opens the Naval Academy to 15 enlisted men each year, provided, of course, they measure up to the mental, moral, and physical standards."

"Is that a good idea?"

PROMOTION OPEN TO ENLISTED MEN.

"It is more than a good idea." For a second I saw Admiral Dewey as he must have looked on the bridge in Manila Bay. "It is democracy. Eighteen years ago, when this matter first came up, I took a stand that has never changed. I said then that the Navy could not afford to be the one department of American activity in which a boy could not rise from the bottom to the top. I say it now. This is the United States, not an Old World monarchy.

"The same thing goes for the ship schools," he continued, emphatically. "Education is our solid rock. Not only do the schools make better citizens but they make better sailors. We want our youngsters trained in intelligence as well as in hands, so that if officers go the ship can still be fought. No, sir," he exclaimed. "Opening the door of promotion to the enlisted man, giving him an elementary, technical, or industrial education, as may be deemed fittest, are American policies."

"What about the famous drinking order?"

"A good thing." His answer was instant. "There was some feeling about it at first, because the papers made fun of it, and there was also an attempt to make it appear that Secretary Daniels was charging officers with intemperance. I think that the feeling has disappeared completely. Every railroad, every great corporation, has long had an ironclad rule forbidding men to drink while on duty. Isn't a ship as important as a locomotive? Practically every European power has copied the order, by the way."

"And marksmanship? Is it true that our gunners can't hit the side of a barn?"

Before answering he pawed over some papers on his desk, and pulled out a report of some kind.

PROFESSIONAL-CONTROL MADNESS.

"Here are some facts," he smiled. "From 1909 on we did go down, owing to the discontinuance of elementary practice. But we have pulled up. Admiral Fletcher, reporting on the 1915 target practice, says this: 'It is believed that

the scores recorded are higher than ever before in the open sea.' The recent battles were held at ranges of 16,000, 17,000, and 18,000 yards, which are even longer than the longest ranges at which firing has occurred in the European war. About 10 out of 20 shots would have hit an enemy ship at 18,000 yards. 'You know,' he said, almost confidentially, 'I believe our boys are the best gunners in the world.'

'Tell me, Admiral Dewey,' I ventured another leading question, 'what is this clamor about the Navy needing a general staff?'

He laughed. 'I don't know,' he said. 'I have tried to pin them down, but not one has been able to make clear just what it was that he wanted. Down in their ranks, I suppose they want a small, select body to have entire charge of the navy. Well, they will never get it, and they should not get it.'

'You believe, then, that the Secretary of the Navy should be a civilian?'

Absolutely. He represents the people, and the closer he is to the people the better. Same thing with the powers of Congress. I can conceive of no greater power than to put the Navy in the power of a naval group, or the Army in the hands of soldiers alone. As a matter of course we would look at things only from our own professional point of view. The whole democratic balance would be destroyed.'

'Here!' his eye caught a clipping tucked away under some papers on the table. 'This thing was in the back of my head all the time we were talking about the alleged demoralization of the Navy. Put that in.'

What he handed me was an article by Hector Bywater, the famous English naval expert, written for a British journal after a careful study of the American Navy. I glanced it over and saw this paragraph marked:

'Need hardly be said that the political head of the United States Navy possesses infinitely more power than the civilian First Lord in Great Britain. And it is every indication that Mr. Daniels has been using his power to the detriment of the navy. His friends say he has accomplished wonders; his enemies, who are many, declare that his personal fads and prejudices have undermined the efficiency of the naval personnel and made the service a laughing stock. But this is not borne out by the evidence. Those best qualified to speak assert that in the last four years have witnessed a remarkable all-around improvement in the quality of the personnel. Thanks to the Secretary's drastic order shortly after he came into office, intemperance has disappeared from the Navy, and with the drink prohibition excited ridicule and bitter opposition at the time, the majority of naval officers now agree that it has had a most beneficial effect on efficiency and discipline.'

'You stand for that?' I asked, looking up after reading the paragraph.

'It could be dishonest if I didn't,' he answered gravely. 'As I told you, I have been in the Navy since 1854. Against the slanders that have been heaped upon the service that I love I want to say again that never in my knowledge has the material and personnel been so efficient. The last few years have been wonderful years for the United States Navy.'

'It is more than I have talked for years,' he said at last, rising to his feet and holding out his hand. 'But I want the people of the United States to know that it is all right with the Navy. There is no demoralization, no lack of discipline, no absence of enthusiasm. The Navy has never failed America. It will not fall.'

Admiral Fiske says in his book, page 549:

'In the German Navy the navy department was divided into three parts, each headed over by its appropriate chief. Of these chiefs the chief of staff was the chief of planning; the chief of the naval cabinet issued the orders to the officers, and the minister of marine provided the material in shape of ships. These three officials reported to the Kaiser direct, and received orders direct. The Kaiser was the commander in chief of the navy and the emperor of our President. In Germany there was no intermediary between the commander in chief and the forces which he commanded. The German system worked very well.'

Admiral Fiske adds:

'We had it.

AIRMAN. On what page is that?

Secretary DANIELS. Page 549—

I wish we had it.

As I said yesterday, he was obsessed by the thought that we ought to pattern everything we did by the German military organization. In the light of the events of the war, Mr. Chairman, I rather think that I was very wise in turning a deaf ear to Admiral Fiske's insistent recommendations that I try to Germanize and Prussianize the American Navy.

Admiral Fiske in his testimony and in the hearings before the House committee he quoted shows that the Prussian general staff was his ideal. You will find that on page after page. See pages 1745, 1746, 1747, 1772, 1792, 1793, 1794, 1884, 1885, etc.

I will not stop to read those, but I will make reference to them.

Admiral Fiske, on pages 1885 and 1886, says:

I suppose you have heard the story—I do not know whether it is true or not—but when France declared war against Germany in 1870 the news came to Berlin where Moltke was asleep, and they awakened him with the news, and he said, "You will find the plan in the top drawer," and then turned over and went to sleep.

"That is what we wanted," said Admiral Fiske, "something like that."

That is, Admiral Fiske says what we wanted was a Chief of Operations or a commander in chief of the fleet who, when he heard that war had broken out would say, "Look in Drawer A and find the plans," and then go to sleep.

Now, I assure you, Mr. Chairman, that when a Chief of Operations gave me that kind of advice I was so disgusted that I paid very little attention to anything he said about organization; and I wish to say this: In the whole time he bored me with his insistent operation ideas, he never suggested to me anything about increasing the strength of the Navy or the power of the Navy that was not absolutely based and conditioned upon a reorganization of the Navy Department on Prussian methods. It was his whole story. He acted as if he believed that the Navy would be a tremendously efficient and great factor if it had nothing but a Chief of Operations with a Von Tirpitz power. But if you ask me, did I read everything he brought me. I will tell you that in the early days I did; but he used to bring me in paper after paper that he had written, all beginning or all ending, the warp and woof of it, in effect "take out civilian control except by name; give me, or whoever is Chief of Operations, the power to control the Navy—not the fleet," and he worried me to the point of exhaustion, so that when he began to send me in these long screeds, repetition, repetition, making him the big thing, I saw that he was a monumental egotist. Read his book. There has never been a man in the world written a book of such shallow knowledge, of such monumental egotism.

Von Moltke may be Admiral Fiske's ideal, but he is not ours. I hope we will never have in our Navy a Chief of Naval Operations who will pull out a plan from a top drawer and then turn over and go to sleep. That may be Fiske's ideal, it may be yours, but it is not mine. We want our men in charge of plans and operations to be wide awake, ready to change their plans at a moment's notice to meet conditions. The German Navy in this war had all kinds of plans.

and they got licked soundly and their fleet had to sail up to Scapa Flow and surrender. Submarine warfare was their main dependence, yet when the European war began they did not have but 27 effective submarines. Capt. Persius and other able German naval officers declare that Von Tirpitz and his gang of this wonderful German staff not only failed in U-boat warfare but "torpedoed Germany." If there ever was a dismal failure, it was the "war lords" Germany with their general staff.

The British Navy has not been defeated in centuries. The American Navy never was defeated. And neither one ever had any Von Tirpitz in supreme control to rule over them.

Hardly a naval encounter of the World War occurred the way it planned by either side. Read the story of Jutland. Neither Jellison or Von Scheer, or any of the other commanders, ever dreamed fleets would come together in the way they did or the outcome would be what it was. The German Army had to change their plans completely after the Battle of the Marne. And so it was all through the war. If there ever was a dismal failure, it was the war lords of Germany with their general staff, which Admiral Fiske says we ought to have adopted in America. And he also said that the Navy Department of the United States was the only military organization in the world that had not been framed on the German plan. Well, I think God, if Admiral Fiske is telling the truth. I think he is.

I think he is mistaken, but I thank God that we had one organization in America that was not organized on the German plan and that made good.

Now, Mr. Chairman, to call attention to pages 1745 and 1746 of the typewritten record of your hearings, where appears Admiral Fiske's letter which he says he wrote to me in August, when he was in the summer in Newport, while the rest of us were here hard

CHAIRMAN. Was he on duty at Newport?

Secretary DANIELS. Yes; on duty at Newport. It was much easier on duty at Newport than it was here.

CHAIRMAN. I suppose he was where he was sent.

Secretary DANIELS. He was where he asked to go. He was not there, except on his own initiative, and I confess very frankly I am glad to get rid of him for a while. If he had asked me to send him to Kamchatka I would have sent him there with great pleasure.

CHAIRMAN. What was his position?

Secretary DANIELS. He was aid for Operations, or, rather, I ought to say an obstacle to Operations.

CHAIRMAN. You could not very well send your aid for Operations out of the country, could you?

Secretary DANIELS. The farther he was away from Washington the better the country.

CHAIRMAN. Mr. Secretary, I think in view of these accusations being made against Admiral Fiske, the committee will probably want to come here and make a statement about the question of the Navy.

Secretary DANIELS. I am reading what he said.

CHAIRMAN. You agree with me that it is fair to let him have his say in this matter?

Secretary DANIELS. Mr. Chairman, I agree with you that it is absolutely fair, if your committee decides that everybody wishes to have a hearing, and I will come back, but it would be very unjust and very unfair to have hearings and call men back without my coming back again, so that I shall demand or request that I be allowed to come back again if he is called. But I am not saying anything that Admiral Fiske has not said himself.

The CHAIRMAN. That will be a matter for the committee, of course.

Secretary DANIELS. It is a matter for the committee, but I shall insist on it as a matter of justice, of course. But I am saying nothing except what Admiral Fiske has said, quoting his book, which he introduced, and his own letter. Now, here is what he says in paragraph 6 of that letter:

The whole German Army had been made into a vast machine. All its parts were fabricated, finished, and in place. Steam was up in the throttle, and as soon as war was declared the throttle was opened and the whole engine began to move with perfect precision, without friction and without noise.

But it did not win.

In paragraph 7 he says:

The triumph of the German organization—

That is, in the war of 1870—

was so splendid and complete that all the military nations of the world took the lesson to heart at once, with the result that to-day every military nation in the world has its army and navy organized on German principles.

Farther on in the letter he says—now listen:

The only organization belonging to the national defense of any great country which is not organized on the German plan, or on a plan similar to it, is the United States Navy. Why the United States Navy has lagged behind all other organizations of a similar kind is not difficult to understand when one realizes that the United States is a nonmilitary country, and that while a farsighted statesman, with the aid of a Congress in political sympathy with him, was able to place our Army on a basis of military readiness, no similar combination has yet been found to do the same thing for our Navy.

Now, Mr. Chairman, our Army did a tremendously fine piece of work during the war, but I submit to you and to the world that the Navy was not behind the Army, and according to Admiral Fiske we have the only organization that was not on the German basis.

So I might read to you for half an hour what Admiral Fiske says about the Navy being based upon Prussian plans.

I have not made a statement about Admiral Fiske's ideas about making our Navy patterned on German plans except from his own book and his own testimony, which I did not present or introduce, but which he either brought up himself or which you asked me to read—extracts from his book.

In this whole testimony, Mr. Chairman, I wish to make this very clear: I have not brought up any matter before this committee touching any individual at present or formerly connected with the Navy except in rebuttal. I have made no statements about any officer or any man connected with the Navy since I have been here except in answer to criticisms or charges. I have injected no personal element into this discussion. I have only answered charges made by officers who have appeared before your committee or in answer to questions.

The CHAIRMAN. Are you ready now to go ahead and answer questions?

Secretary DANIELS. One second. You asked me yesterday a question which I am not certain that I understood. You asked me about my approval of the administrative section of the plan for war in the Atlantic, which Admiral Fiske said he presented to me in March, 1915, and which I did not sign while he was aid for Operations; and I told you that if he presented it that I probably told him, or if I did not I ought to have told him, that I would not act upon it then, because he was going out of office and I was going to organize the Office of Operations with a new Chief of Operations, and I could properly and wisely have left to the new Chief of Operations the organization of the administrative plan. But you also asked me a question as to which I wish to be clear whether I understood you or not. I understood you to say that two years before that Admiral Fiske had presented me with a similar paper from the General Board which I had not signed. Was that the question you asked me? The CHAIRMAN. I referred to Admiral Fiske's book, on page 583. Admiral Fiske's diary he says:

The same thing occurred about three or four weeks ago. A recommendation was sent of date March 3, 1915—

Secretary DANIELS. That is the one.

The CHAIRMAN (continuing reading):

It is similar to a letter of two years ago that also was not acted upon.

Secretary DANIELS. Not a letter from Admiral Dewey?

The CHAIRMAN. No; from Admiral Fiske.

Secretary DANIELS. As I said yesterday—and I sent to the General Board this morning—the General Board presented no such letter two years before. He evidently refers to his letter here about the reorganization of the Navy Department, which he sent to me on August 20, 1913, from Newport—a letter which he wrote me from Newport.

The CHAIRMAN. Does that letter appear in his book?

Secretary DANIELS. In his hearing.

CHAIRMAN. What page?

Secretary DANIELS. Pages 1734 to 1744 of the typewritten record. That evidently is the letter which he referred to as to which I took no action. It was not a matter at all to take action

It was chiefly concerned with the organization of the Navy Department, and, as I told you before, I had determined not to order the Navy Department upon Admiral Fiske's recommendation.

CHAIRMAN. So you did not take action on that letter?

Secretary DANIELS. I did not approve it. There was no necessity for action on it.

CHAIRMAN. Nor did you disapprove it. You simply took no action on it?

Secretary DANIELS. It was a letter he wrote me giving me some advice which called for no action.

CHAIRMAN. Then his statement that that also was not acted upon would be correct?

Secretary DANIELS. It did not call for any action. It was in the line with another letter that Admiral Fiske wrote. From first

to last I do not know how many he wrote, about wanting the Navy Department organized on the Prussian plan.

The CHAIRMAN. You say "Prussian plan." He did not state in his letter that he wanted to Prussianize it?

Secretary DANIELS. Yes; he did. That is exactly what he said. Let me read to you. I got very tired of the Prussian plan. He said in this very letter—

The CHAIRMAN. You need not read the whole letter. Just refer to it.

Secretary DANIELS. It is found on page 1746 of the typewritten record. Speaking of the Franco-Prussian war and how the armies of France were defeated, he says:

The reason was simply that the Germans, under the direction of Von Moltke, had organized a general staff which had made such perfect plans of mobilization and subsequent operations that, on the outbreak of the war, the German Army was ready immediately. The whole German Army had been made into a vast machine. All its parts were fabricated, finished, and in place. Steam was up in the throttle, and as soon as war was declared the throttle was opened, and the whole engine began to move with perfect precision, without friction and without noise.

And he advocated that we adopt the Prussian plan.

The CHAIRMAN. The point is he did not use the words "Prussianize the Navy."

Secretary DANIELS. He said, "on the German plan—the Von Moltke plan."

The CHAIRMAN. That is, he said we could get points from the German plan?

Secretary DANIELS. He said we ought to adopt their plan. And then he said in another place that our Navy was the only organization in the world that had not adopted it, and that we ought to adopt it, and that we would have better efficiency if we did. Now, I am frank to say that I did not think any more then of following blindly the German plan than I do now, and I became very wearied of Admiral Fiske's continual dinning into my ears that the only people on earth who knew anything were the Prussians. We did not follow them then. We did not follow them during the war, and we won the victory upon American ideals.

The CHAIRMAN. My point is simply that he did not use the word "Prussianize." He may have referred to a German plan that would be good to put into operation, but he did not speak of Prussianizing. That is not important, however.

Secretary DANIELS. His whole argument—listen—

The German organization was so splendid—

The CHAIRMAN. Are you going to show me the word "Prussianize"?

Secretary DANIELS. He said, "German," but as the time came on, "German" and "Prussianize" meant about the same thing. As to exact words, I will admit that he did not use the word "Prussianize."

The CHAIRMAN. Or "Germanize." He simply referred to the advantage under the German system?

Secretary DANIELS. He simply said we ought to adopt in the Navy the system adopted in Germany, with which I did not agree

then, with which I do not agree now, and while it was a very powerful machine, and while plans under a military machine look very well on paper, I do not want any Chief of Operations in this country who when war is declared runs his hand into a drawer and says, "Get out the plans," and then goes to sleep. That was the Fiske suggestion, that we should adopt that kind of a plan, and I did not follow it, and Congress refused to follow it.

The CHAIRMAN. Mr. Secretary, I also asked you to give me the number of officers who were in the Planning Division.

Secretary DANIELS. I am having that prepared. I will give it to you in a moment.

The CHAIRMAN. Now, Mr. Secretary, you have previously outlined the aid and bureau chief organization of the Navy Department as it was when you became responsible for its conduct.

Secretary DANIELS. Yes.

The CHAIRMAN. In addition to the General Board there were four aids. I wish you would correct me if I am not correct.

Secretary DANIELS. That is right.

The CHAIRMAN. One for Operations, one for material, one for personnel, one for inspection.

Secretary DANIELS. Yes.

The CHAIRMAN. Then there were the Bureaus of Navigation, Steam Engineering, Ordnance, Construction and Repair, Supplies and Accounts, Medicine and Surgery, Yards and Docks, the Judge Advocate General, the Marine Headquarters, and the Solicitor's Office—12 bureaus, four aids, and the General Board.

Secretary DANIELS. I think that is right.

The CHAIRMAN. In addition to these there were nine special committees or sections suggested as essential to the proposed Office of Chief of Naval Operations, according to House Report No. 1324; the historical section, policy section, strategic section, the tactical section, the logistic section, the organization section, the mobilization section, the training section and the executive section. That is correct, is it?

Secretary DANIELS. Yes; proposed in this bill. Yes; I think it is.

The CHAIRMAN. And you opposed the unanimous report of the House Committee on Naval Affairs to coordinate all these highly technical activities under a responsible officer who would be under the civilian Secretary—

Secretary DANIELS. I opposed the report of the House committee, which went out on a point of order made by Mr. Mann, because it put under the Chief of Operations the direction of the whole Navy, and eliminated the Secretary and Assistant Secretary, and put everybody under the Chief of Operations. Yes; I opposed that. I was very happy when Mr. Mann made the point of order which killed it.

The CHAIRMAN. That is, the plan to put them all under a responsible officer, who would be under the civilian Secretary?

Secretary DANIELS. I opposed the plan to make the Chief of Operations the Secretary of the Navy and the Assistant Secretary of the Navy and a superman; yes.

The CHAIRMAN. And you preferred the direct action of a civilian to administer, without coordination, this intricate organization?

Secretary DANIELS. There had never been any lack of coordination. There had never been any lack of administrative coordination.

The CHAIRMAN. You said you did not want a superman. Would not the Secretary have an aid for Operations?

Secretary DANIELS. Let me tell you how the department worked before we had an aid for Operations. We had an aid for Matériel. Under the aid for Matériel was the Bureau of Ordnance, attending to all matters in reference to munitions; the Bureau of Construction and Repair, building all ships and repairing all ships; the Bureau of Yards and Docks, building all dry docks, looking after all building operations; and the Board of Inspection of Ships, to see that they were all in proper condition. All these came under the aid for Matériel. He discussed with them their various propositions, and brought to the Secretary of the Navy directly the recommendations of the bureau chiefs, and his recommendations to the Secretary of the Navy after conference with those chiefs. I left out the Bureau of Steam Engineering. Everything connected with Matériel came under him.

Then, under the aid for Operations were all matters with reference to strategy, tactics, War College, instruction, operations of the fleet, plans of the fleet, readiness of the fleet. All operating matters came first to the Chief of Operations, and, through him, to the Secretary. All personnel matters came through the Chief of the Bureau of Navigation, and this Congress, I think, is going to change his name to the Bureau of Personnel. It ought to be changed, because "navigation" is a misnomer. All matters of personnel came through the Bureau of Navigation to the Secretary. So we lacked no coordination. We lacked no facilities, and when we got the Chief of Operations we only improved upon another system. There never was any lack of coordination or cooperation for effective work. The only thing that we did was to give the Chief of Operations an aid for matériel and an aide for Operations, which did away with the Chief of Matériel.

There is a very erroneous impression that under our present law the Chief of Operations is the head of a general staff. It is very different. He can not spend a dollar, he can not appoint a man, he can not assign an officer. He is a thinking, operating, planning, strategical, tactical officer, charged with large powers by law, and under the Secretary given, as I have given the Chief of Operations since this law was passed, a full and free hand in the assignment of ships. During the war he had the full power to assign the ships of this or that fleet for this or that department of work, and that is his function.

The CHAIRMAN. I want to say, Mr. Secretary, as far as this matter is concerned, I personally have no preconceived predilection for one plan or the other, and I think the same is true of the committee. What we want is information.

Secretary DANIELS. I can tell you that I never in my life saw any plan for any organization that was perfect.

The CHAIRMAN. Yes. We want to get information. That is why I am asking these questions.

Secretary DANIELS. And I am giving it to you from my point of view.

The CHAIRMAN. Now, the Hobson report carries this description of the duties of the proposed Chief of Naval Operations:

This officer, under the Secretary of the Navy, is to be held responsible for the readiness of the Navy for war and in charge of its general directions.

Secretary DANIELS. Yes.

The CHAIRMAN. Let me finish.

Secretary DANIELS. I will.

The CHAIRMAN. The Hobson report continues:

He is to perform only such duties as shall be assigned to him by the Secretary of the Navy and such duties shall be performed under the authority of the Secretary of the Navy, and he is given the same authority regarding orders issued by him as is now given under existing law of the chiefs of bureaus of the Navy Department.

Now, Mr. Secretary, that on the face of it would seem merely to permit the Secretary of the Navy to delegate some parts of his authority to an officer subordinate to himself, who shall—

Perform only such duties as shall be assigned to him by the Secretary of the Navy.

Please explain why you designate that as a conspiracy, a secret and surreptitious conspiracy to Prussianize the Navy and turn the civilian Secretary into a "rubber stamp."

Secretary DANIELS. I will do so. Admiral Fiske appeared before the House Naval Affairs Committee and there this matter was discussed at very great length. Here is what the chairman of the committee said to Admiral Fiske, page 1774 typewritten hearing:

The CHAIRMAN. Would you give that authority to the naval officers, over military matters, independent of the Secretary of the Navy?

Admiral FISKE. I would not recommend that extreme; no, sir.

The CHAIRMAN. There was one officer who recommended it. You do not?

Admiral FISKE. No, sir; but I should like to say, in trying to define my position, which is rather difficult—

The CHAIRMAN (Interposing). In other words, while you do not recommend it, I infer from your answer that you would like to see it, as I understand.

Admiral FISKE. I think it would be safer from the standpoint of what might happen in a war.

In other words, Mr. Chairman, if by law you make any officer in the Navy responsible for the direction of the Navy, while you may put into the law the statement that he does so under the Secretary of the Navy, that officer will say and will feel that he ought to come to Congress and say to you, "I am responsible for the direction of the Navy, and I must exercise that responsibility, and the Secretary of the Navy denies me the right to direct the Navy."

The CHAIRMAN. Do you not think he ought to have the right to come to Congress?

Secretary DANIELS. I think he ought to have the right to come before the committee, and it is always done. The Chief of Naval Operations, so far as I understand, has always come before the House Naval Affairs Committee whenever they wanted him to come, and has always expressed his views fairly; but he ought not to have the right to come except as a witness. The estimates, the recommendations, must come from the Commander in Chief of the Army and Navy.

The CHAIRMAN. That is, you think he ought not to have the right to come on his own initiative, that he ought not to come until he is summoned?

Secretary DANIELS. To come when the committee sends for him. He should not be the Secretary of the Navy.

The CHAIRMAN. He ought not to come on his own initiative?

Secretary DANIELS. He should carry on his duties without the law giving him responsibility for the direction of the Navy. You will find some of the ablest officers who think the Chief of Operations should really be the Secretary of the Navy, but they say——

The CHAIRMAN. They do not say so in that statement.

Secretary DANIELS. This is what they say. They say that we ought to have a civilian Secretary of the Navy, but that the civilian Secretary of the Navy ought to have under him the Chief of Operations, who should be responsible for the direction of the Navy. Now, of course, it is utterly impossible to have an officer responsible for the direction of the Navy and have a Secretary of the Navy anything except a rubber stamp. The two things can not be true, so that you are camouflaging the situation. I talk to these officers very freely. I say, "Gentlemen, in America you can not turn over any department of Government to a military man." And, as a matter of fact, you will find very many officers who the last thing on earth they would want to see would be an admiral to be Secretary of the Navy. In the Navy, like in the Army, like in law or medicine, men who have been in the same profession all their lives, they have their differences, they have their associations, they have their friends. I would not turn over to any naval officer on earth, who is in the Navy for life, the direction of the Navy Department.

The CHAIRMAN. I do not think any of them testified that they thought that there ought to be a naval officer as Secretary of the Navy.

Secretary DANIELS. No, Mr. Chairman; but the conclusion of it all is, as Admiral Fiske says here, and as they all say who hold his extreme view, and who wanted the Hobson bill, they want that he shall be responsible for the direction of the Navy.

Now, when this matter went out of the House bill on a point of order, I wrote to the Senate and suggested practically the law we now have, which was adopted by the Senate and adopted by the House. That gives us an organization which is so far superior to the old board of strategy of the Spanish-American War that they are not at all alike. Now, their line of argument is this: They say, "We want a civilian Secretary," but they say, "We want Congress to say that this Chief of Operations is responsible for the direction of the Navy."

Under that, where does the Secretary of the Navy come in? He only draws his salary and draws his breath, and no man of character, no man of ability, no man of responsibility would hold a job like that.

The CHAIRMAN. The House provision had the following words in it:

He shall perform only such duties as shall be assigned to him by the Secretary of the Navy.

ecretary DANIELS. Yes; but it prefaces that by saying:

shall be responsible for the direction of the Navy.

ow, both those things can not be.

he CHAIRMAN. Do you think it would have been better to have
 , "He shall be responsible to the Secretary of the Navy?"

ecretary DANIELS. I think the law as we have it is better.

he CHAIRMAN. Would the suggestion I have made have taken
 of it?

ecretary DANIELS. I think we have gone just as far as we should
 a Republic in giving authority to any naval officer.

e CHAIRMAN. Would that have obviated the difficulty?

ecretary DANIELS. Not at all. The Hobson bill proceeds upon
 heory that the responsibility for the direction of the Navy is
 e Chief of Operations. Then it says he shall do nothing that
 ecretary of the Navy does not tell him to do, and then you
 a conflict. The Chief of Operations says, "I am responsible
 e direction of the Navy." But the Secretary says to him,
 dear sir, I do not give you any orders to do this or that." But
 eief of Operations says to him, "My dear Mr. Secretary, Con-
 has said I am responsible for the direction of the Navy."

would have a debating society in the Navy Department be-
 the Secretary of the Navy and the Chief of Operations if you
 Secretary with any guts, or you would have the Secretary of
 vy a rubber stamp.

CHAIRMAN. But you say that the present organization is sat-
 y. Now, the testimony of most of the officers has been that
 sent organization was not satisfactory during the war, and
 ommittee would like to know why it was not satisfactory.

tary DANIELS. Well, as I said to you before—

CHAIRMAN. Or do you agree with the statement that it was
 sfactory?

tary DANIELS. I think it was the best organization the Navy
 d and that the absolute test of it was the result. We got
 results out of it. I think it was a very good system.

HAIRMAN. Just as it was?

ary DANIELS. As it operated in the war and as it is operating
 I think no change should be made in it that would give the
 Operations one iota more of power than he has now. If
 put into the law the provision that the Chief of Operations
 sible for the direction of the Navy, then, in the name of
 o not waste any time on having a Secretary of the Navy or
 ant Secretary of the Navy. Whenever you have two men
 's work you have got one man too many. Abolish the Sec-
 the Navy at once, and let us go to it.

can understand why there are very many arguments in
 military chieftain of the Army and Navy. If this country
 ome to it, let us have it, but do not camouflage it.

HAIRMAN. The Senate committee made a different report
 House committee. What do you do in regard to getting the
 change the House report?

y DANIELS. In the hearing yesterday I put in my letter to
 committee, in which I called attention to the fact that the
 hout much reflection, had favored the Chief of Operations.

They had not had their attention called to the fact that this gave to him the direction of the Navy.

If you will take the House hearings of the next year, when this matter was taken up very fully, you will learn that Chairman Page said he was in favor of the principle of a Chief of Operations, and the House put in it, in regard to the principle.

Now, I wrote to the Senate at once. It went out of the House bill on a point of order. I was not very clear as to exactly how it did go out, but I refer to my memory. Mr. Merriman made the point of order that it was new legislation, and it went out.

I told you yesterday that I had been considering with some of the bureau chiefs and other officers of the Navy how we could improve the organization of the Navy, and when this provision was dead—utterly dead—then I proposed in a letter to the Senate, which I inserted in the record yesterday, that they should change the organization of the Navy by creating the Office of Operations, and I proposed the correction in the naval bill, which the Senate incorporated practically as I requested, and I think it passed in those words, either in those words or with the principle that the Chief of Operations should be charged with the plans and operations of the fleet, not with the direction of the Navy, a very wide difference, as wide as the sea.

The CHAIRMAN. And you asked them to take out the word “responsible”?

Secretary DANIELS. I requested them to pass the act as it now stands, or virtually as it now stands, and the Senate did so, and the House approved it and it became the law.

The CHAIRMAN. Then, when that word was stricken out, the responsibility rested on your shoulders?

Secretary DANIELS. Mr. Chairman, the responsibility, of course, for the protection of the Navy, in the last analysis, rests upon the Secretary of the Navy. The responsibility for the conduct of the Navy rests upon the Secretary of the Navy, limited only by such duties as Congress has imposed upon other officers; and, as I said to you the other day, and I want this to go into the record, the Secretary of the Navy is responsible in the last analysis for the direction of the Navy in peace and in war; and if, when this hearing began, you had sent for me first I should have assumed the full, entire responsibility gladly, and I should have demanded equally the full reward for the great things the Navy did. You have had these officers before you telling what they did and the great things they did. I gave responsibility to the Chief of Operations, and the Office of Operations in the war had a free hand in the disposition of ships, and other bureaus had other power, but the Secretary of the Navy, of course, in the final analysis has the responsibility, has the blame, and has the credit as the directing head of the organization.

The CHAIRMAN. Now, while you had this full responsibility and authority you looked to your Chief of Naval Operations to carry out your instructions for the readiness of the Navy for war and its general conduct, did you not?

Secretary DANIELS. I looked to the Chief of Operations for the performance of the duties prescribed by law, under me.

The CHAIRMAN. That would include the readiness of the Navy for war and its general conduct, would it?

Secretary DANIELS. Here is the act:

Who shall, under direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparedness and readiness of the plans for its use in war.

Then you will find that I issued certain regulations, which I do not know whether they were put in the record or not. If they have not been put in, I will put them in. Perhaps they have been. Here are certain regulations, found on page 5383. This will give you a start for the Chief of Operations.

After having quoted the law I will read only one section, section 2, telling what his powers shall be:

(2) This shall include the direction of the Naval War College, the Office of Naval Intelligence, the Office of Target Practice and Engineering Competitions, the operations of the Radio Service and of other systems of communication, the operations of the Aeronautic Service, of Mines and Mining, of the Naval Defense District, Naval Militia, and of the Coast Guard when operating with the Navy; the direction of all strategic and tactical matters, organization, maneuvers, target practice, drills, and exercises, and of the training of the fleet for war; and the preparation, revision, and enforcement of all tactics, drill books, signal codes, and cipher codes. The orders issued by the Chief of Naval Operations in the performance of the duties enumerated in this paragraph shall be considered as emanating from the Secretary of the Navy and shall have full force and effect as such.

These regulations, as found on pages 5583, 5584, and 5585, contain the duties prescribed for the Office of Operations, its responsibilities, and such duties as are prescribed by him, when he issues an order, they shall have the same effect as if emanating from the Secretary of the Navy.

So that if the commander of a fleet receives a telegram signed by the Chief of Operations, ordering him to do a certain thing with his fleet, those orders would have the same effect as if they had been signed by the Secretary of the Navy, under those regulations.

The CHAIRMAN. I take it when you gave your instructions for the readiness of the Navy and its general conduct, you gave them through the Chief of Operations, did you not?

Secretary DANIELS. Certainly; but these regulations did not require me. I made the regulations, because I did not wish to send for the Chief of Operations every minute something was to be done. So I made the regulations so he had the authority to do these things.

The CHAIRMAN. Yes; but when you did make any—

Secretary DANIELS. When I made policies.

The CHAIRMAN. Or when you gave any instructions, you gave them through the Chief of Operations?

Secretary DANIELS. As to these things, yes—as to these things.

The CHAIRMAN. What I am asking you about is the instructions for the readiness of the Navy for war and for its general conduct during the war.

Secretary DANIELS. Not the general conduct of the Navy, the conduct of the fleet, the operations of the fleet, and the ships and the things under his purview.

The CHAIRMAN. No; I say your instructions about the general conduct of the Navy would be given through the Chief of Operations?

Secretary DANIELS. No; if I am giving out a contract to build destroyers. for instance, that contract is made after consultation—

The CHAIRMAN. Yes; but that is hardly an instruction for the general conduct of the Navy.

Secretary DANIELS. You said preparation for the Navy, and you have got to have ships.

The CHAIRMAN. I said readiness for war.

Secretary DANIELS. I gave directions to Operations under these regulations, but I did not turn over to Operations all instructions to the Chief of Construction and Repair, or Ordnance, or other duties of the Navy.

The CHAIRMAN. Not for contracts and things of that sort, but any plans or policies of the readiness of the Navy for war you would communicate through the Chief of Operations?

Secretary DANIELS. For strategy, for tactics, for operation of the ships, yes; and that is done under the regulations. It does not require any new action of mine. When the Secretary of the Navy lays down a policy of operations, that policy is carried out by the Chief of Operations, but as to the method of carrying it out, that is left to the Office of Operations.

The CHAIRMAN. Now, Mr. Secretary, did not the changes that were made in the Hobson plan so limit the authority of the Chief of Operations as to deprive him of the authority to coordinate and control the bureaus in the work of preparing for and conducting and prosecuting the war?

Secretary DANIELS. He never could control the Navy Department. He can not now, and that plan I made——

The CHAIRMAN. No; I am asking about the Hobson plan.

Secretary DANIELS. The Hobson plan would have given him direction of the Navy. The act of Congress does not give him direction of the Navy.

The CHAIRMAN. Therefore he would be deprived of the authority that was given him under the Hobson plan to coordinate and control bureaus?

Secretary DANIELS. The authority given him under the Hobson bill would have made him Secretary of the Navy.

The CHAIRMAN. It would have given him this authority to coordinate bureaus?

Secretary DANIELS. There are two contentions. You read just now that he could do nothing at all except by direction of the Secretary. The purpose of the Hobson bill was to give the Chief of Operations the direction of the Navy, so that he could tell every bureau chief to do this and do that, so that he could control the whole Navy. Now, of course, the law passed by Congress did not give him that power.

The CHAIRMAN. Did not the change made by you make the bureaus more or less independent of the Chief of Operations?

Secretary DANIELS. In the line of the act of Congress, giving the bureaus certain responsibilities, they retained their independence——maintained it.

The CHAIRMAN. As a practical matter, then, they would maintain their independence under present conditions more than under the Hobson plan?

Secretary DANIELS. Unless you changed the law of Congress, but they are all dependent upon the Secretary of the Navy as the Chief of Operations is now.

The CHAIRMAN. Is now?

Secretary DANIELS. Yes; and as they must be if you have an American form of government in the Navy.

The CHAIRMAN. Are you familiar with Mahan's principle that the department should be so organized that it could pass from peace to war without shock to or change in its machinery?

Secretary DANIELS. I have the plan here.

The CHAIRMAN. You are familiar with that principle, are you not?

Secretary DANIELS. Let me get the report. There are so many reports. I read them years ago, but I have not read them recently.

The CHAIRMAN. That is a very simple question.

Secretary DANIELS. If the Mahan plan turns over to the Chief of Operations or any other individual the direction of the Navy—

The CHAIRMAN. I am not asking you about the Mahan plan. I am simply asking you about one of its cardinal principles.

Secretary DANIELS. What did you ask me?

The CHAIRMAN. I asked you if you were familiar with Mahan's principle that the Navy Department should be so organized that it could pass from peace to war without shock to or change in its machinery?

Secretary DANIELS. It was so organized and should be. When the war came, Mr. Chairman, we never changed in the Navy Department a single thing. We passed from peace to war with one telegram. We did not need to change our organization in the least. We did not add a new department or a new office except under the regularly organized channels. There never was a piece of machinery that passed from peace to war so perfectly as the Navy, and that principle is inherent in the law as it stands to-day.

The CHAIRMAN. You think that the Mahan principle is a sound one, do you?

Secretary DANIELS. That principle you speak of, that it should pass from peace to war easily, is in the law we have now, and it did that easily.

The CHAIRMAN. So you think the law as you have it now does not violate that principle?

Secretary DANIELS. The law does not violate that principle, because experience has shown that we did pass from peace to war easily and quickly and successfully.

The CHAIRMAN. Admiral Benson, in his testimony, advocated giving the Chief of Operations "authority" and "responsibility," and he stated that he should have the right to go direct to Congress and to sit at Cabinet meetings. Admirals McKean, Rodman, Wilson, Fletcher, and nearly all other witnesses think the Chief of Operations should have "authority" and "responsibility." Will you state briefly what you think about that?

Secretary DANIELS. I have stated my opinion very clearly.

The CHAIRMAN. I would like to see what you think about the Chief of Operations going to Cabinet meetings.

Secretary DANIELS. I think he has no place at a Cabinet meeting unless you are going to make him Secretary of the Navy. Now, Mr. Chairman, let me show you—

The CHAIRMAN. I am inclined to agree with that, Mr. Secretary.

Secretary DANIELS. Let me show you, Mr. Chairman, as I told a very distinguished naval officer who advocates the policy of making the Chief of Operations virtually Secretary of the Navy—I told him

that the only way he would ever get it through would be to quit having a Republic here and Germanize our Government.

Mr. Chairman, I will put in the hearings at this point the report of the Chief of Operations of June 2, 1917, and I will also put in the hearings an address delivered by Admiral Benson at the Naval Academy in 1916.

(The report and address referred to are as follows:)

[Confidential.]

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, June 2, 1917.

Memorandum for the Secretary of the Navy.

In compliance with your memorandum of May 31, 1917, I submit the following summary of the work in the Office of Naval Operations since the declaration of war:

OPERATIONS.

On April 1 all naval vessels were mobilized and immediate steps taken to fit them for war service as fast as their crews for full commissioning could be supplied. All naval districts were mobilized and their skeleton organizations are being filled as rapidly as personnel becomes available.

The Coast Guard, transferred to the Navy, have been operated by the Navy Department, and all vessels belonging to that service have been repaired and refitted.

German refugee ships have been seized in cooperation with the Treasury Department, and the interned German vessels have been taken over for naval service and are being rapidly put in shape for active service. Refugee German vessels in Samoa, Honolulu, and Porto Rico are being towed to the United States for overhaul and fitting out for service.

There has been organized and put in operation a patrol force with the Atlantic Fleet, under the command of Capt. H. B. Wilson, which patrols the offshore waters of Atlantic and Gulf coasts from Eastport, Me., to the Rio Grande. Suitable vessels of this force are held in readiness to operate against enemy raiders that may be reported in the north Atlantic.

There has been established in European waters a destroyer force under the command of Vice Admiral W. S. Sims, and 28 destroyers have been dispatched abroad for this service, together with two destroyer tenders. Two supply ships, under destroyer escort, have been dispatched to France, carrying cargoes of much-needed material for that country.

By agreement with the allied powers definite areas of patrol in the north Atlantic and off the east coast of Brazil have been taken over by the United States Navy, and a scout force has been dispatched to cover the area assigned our forces in the south Atlantic, under the command of Admiral W. B. Caperton.

There has been established in the Pacific a patrol of the Pacific coast, including Mexico and Central America as far south as Panama Canal, under Rear Admiral W. F. Fullam.

There has been organized a force of small craft designated for patrol service in waters adjacent to the coast of France, and Capt. W. B. Fletcher has been placed in command of the first contingent of this force, which will complete its fitting out in a few days and start for its field of operations.

There has been organized a system of convoy service under general charge of Rear Admiral Albert Gleaves, in readiness for the convoy of any troops which may be dispatched to France.

In addition to the foregoing, armed guards have been or are in process of being placed on all vessels, about 150 in number, plying between the United States and Europe, and the Atlantic Fleet has been given the duty of training the crews for the armed guards of merchantmen and transports.

The organization of the several forces, the regulations for convoy service, the instructions for the operation of merchant vessels supplied with armed guards, and war instructions for United States merchant vessels have all been prepared and issued by the planning section of the Office of Operations.

A board, of which Capt. Pratt, of the Office of Operations, is chairman, has been appointed to consider plans and devices connected with submarine war-

fare, and is in almost daily session and conference with the research committee of the Council of National Defense.

Definite and effective steps have been taken toward the organization of machinery to take over the control of the routing of all merchant vessels leaving United States ports. At present this function is being exercised by representatives of the British admiralty stationed in our ports.

Preparation and distribution of various publications and ciphers for use in communication between merchant vessels and men of war of the United States and of the allied powers is well advanced. The communication office has been greatly enlarged to meet the demands of the increased work brought about by the state of war, the taking over all radio service, and the establishment of the censorship over cables. It is contemplated to establish a service of officer-messengers for the distribution of secret orders, confidential publications, and ciphers.

NAVAL DISTRICTS.

The work of the naval districts has been extremely active, especially in districts 1 to 5, inclusive, because of their greater strategic importance and because of the great trans-Atlantic traffic passing to and from the ports within their limits. The sixth, seventh, and eighth districts are filling up their organization, but are not developed to the same extent. Those districts on the Pacific coast and in Hawaii have not yet been fully organized. Defensive sea areas have been declared and have been enforced in Boston, Newport, New York, Philadelphia, Cape Henry, Hampton Roads, and Charleston as fast as the number of patrol boats become available efficiently to enforce control over the areas. Other areas will be enforced as the organizations grow.

Six hundred and twelve small vessels have been inspected and found suitable for naval use. One hundred and fifty-two have been taken into the naval service and assigned to scout-patrol service and as mine sweepers. One hundred and thirty-eight have been ordered taken over, but have not yet been delivered. Those accepted are now actively at work patrolling and mine sweeping or are being fitted out as rapidly as possible for the work. All the small craft acquired by the naval district commandants have been manned by enrollment of Naval Reserves within the districts, and the personnel by active employment are rapidly being trained and accustomed to the line of work which the defense of the district demands. Mine sweeping is being carried out at Boston, New York, Delaware Bay, and in the Chesapeake.

The obligations under the emergency appropriation of \$115,000,000 incurred in equipping the naval districts is indicated in the attached table.

OPERATIONS ON SHORE.

The naval government of the Virgin Islands of the United States has been established under the governorship of Rear Admiral J. H. Oliver, and steps have been taken to supply at least a partial land defense of the islands by mounting eight 5-inch guns, distributed between the islands of St. Thomas and St. Croix. Steps have been taken having in view the establishment of quarantine services, medical research services, and agricultural services in the islands.

Affairs in the island of Haiti, involving the peace of the Republics of Santo Domingo and Haiti, have progressed satisfactorily, and the authority of the established Governments of these Republics has been maintained. In the two Republics there are now forces of marines aggregating 2,000. In Santo Domingo a *Guardo Nacional*, under the military governor and under the direction of United States marines, has been formed and is undergoing a course of training, while in the island of Haiti the *Gendarmarie* is reported to be in a very efficient condition. A small coast-guard service has been established in Haiti, and vessels repaired in ports of the United States assigned to this service have recently been delivered under United States naval escort.

In addition there have been employed in the disturbed districts of Cuba, caused by the recent revolution in that country, a varying force of marines for the protection of American interests there. There are at present about 450 marines maintained in the island. An information service throughout the island has been organized.

We have maintained constantly in Mexican ports and along the coast a patrol by our vessels, giving especial interest to the port of Tampico, in the vicinity of which are vast oil fields, constituting a large and important source of the world's supply of oil. From two to four vessels have been maintained continuously at this port.

MATERIAL.

The vast work of equipping and repairing the fleet has brought upon our various navy yards and shore establishments demands which have taxed their utmost capacity. Not only has it been necessary to complete the overhaul and repairs of our regular naval vessels, but repairs to the seized German merchant vessels and the fitting out and equipping of ships taken over for service have multiplied the work required to be done.

Repair work on battleships left unfinished before the movement of the fleet south has been taken up and practically all naval vessels have been made materially ready and put in service. The fitting out of vessels for distant service is nearly completed, 15 German ships badly damaged by their crews before seizure by this Government are being fitted out for naval purposes, and 8 German ships are being repaired for the Shipping Board.

AERONAUTICS.

The naval aeronautic program was considerably accelerated upon the severance of diplomatic relations, February 3, 1917, and the present program of naval aeronautic expansion may be considered to have begun on that date.

Enrollments in the Naval Reserve Flying Corps were begun under definite standards supplied to commandants of the various naval districts, and arrangements for accelerating the training of personnel at Pensacola and for establishing various other schools of training were made. There are five such schools now in operation.

Contracts were authorized for such aircraft as could be turned out for the Navy by July 1, including in this number 16 coastal dirigibles, and contracts are being made for additional aircraft as fast as they can be accepted by the manufacturers. Two hundred and eight aircraft have been ordered, but not yet delivered. There are under construction at Pensacola 12 temporary hangars, a dirigible shed, and a large hydrogen plant.

In accordance with the recommendation of the Joint Army and Navy Board on Aeronautical Cognizance, sites for coastal air stations were examined and selected, and complete plans for the development of such stations were drawn up. Money for the acquisition of these stations is not available, but is included in an appropriation now pending. One site, however, has been obtained through permission of the use of land from the city of New York, and the construction of an air station there is now under way.

An allotment from the emergency fund of \$3,000,000 was made to Aeronautics. Of this sum \$1,025,000 has been obligated and the expenditure of a further sum for the purchase of aircraft equipment, costing approximately \$1,244,000, has been authorized. The balance of approximately \$731,000 remains available.

W. S. BENSON.

Expenditures for patrol vessels, mine sweepers, etc., in naval district.

Vessels taken over:	
Patrols	\$1,821,868
Sweepers	3,064,260
Vessels ordered taken over	1,555,001
Vessels taken over by special board	1,475,500
Total	7,916,629

SPEECH OF REAR ADMIRAL BENSON, CHIEF OF NAVAL OPERATIONS, AT THE ALUMNI BANQUET AT THE NAVAL ACADEMY.

Mr. Toastmaster, fellow graduates, and guests, in calling upon me to answer to the toast, "The Navy," the objects of the graduates' association is, I take it, to satisfy, perhaps, the expectation of the service that I give an account of my stewardship as Chief of Naval Operations.

I may preface my remarks by saying that as time has gone on and the work of the office has developed, more distinctly outlining some of the vast problems involved, I have become more and more fully convinced that those who conceived the idea of creating by law a Chief of Naval Operations have in the

establishment of this office "bullded better than they knew." In speaking on this subject I do so without any intention of making odious comparisons and without any desire to attempt to enlarge upon the importance of the work or to magnify what has been already accomplished; and yet, in order to be quite sincere and candid, I must say that upon taking up this work a little over one year ago I started practically from the ground.

There were then certain elements of routine being carried out which might in a way be called the fragments of organization, but certainly nothing more. There were no data from which the chief of the office could obtain information at short notice. Only a few hours after assuming office it was necessary that a vessel of a certain class be sent from Hampton Roads to New York and it took hours to find out just what vessels were available in that vicinity, and particularly what ones were suitable for the duty to be performed. There were no definite data at hand relating to material or personnel. In order to find out about material it was necessary to send to some other office and get information piecemeal. Information as to personnel, and as to the relation between personnel and material, could only be obtained by consulting the several bureaus' files. In fact, no information except what was given in certain regular publications was available to show the relative strength of the various navies of the world. So it was necessary literally to begin at the bottom. It is true there were some efforts at organization, which had been carried forward nearly to completion. A board for the organization of the radio service had made its report and recommended an organization for adoption, but this report had not been approved and the older unformed system in the radio service was still in vogue. Messages for radio transmission were sent out by telephones to Arlington if received during ordinary office hours, and were given attention by the Arlington operators at their convenience. Messages received at night from Arlington or elsewhere had to await the opening of the office the next morning before being decoded and delivered.

Such facts as these serve to indicate the conditions formerly existing, and are recounted simply that the service may know what has been done since the establishment of this office and what is being done now, and I want especially to emphasize them in order that the service may have a true estimate of the situation and not be led astray or unduly influenced by what seems to have been a persistent effort during the past year or so on the part of certain persons and in certain elements of the press to try to create the impression, not only in the minds of the public but even in the minds of naval officers themselves, that nothing has been done in the department to improve conditions. And let me state here that the conditions which I have found to exist could not in any degree be laid at the door of the Secretary. He has at all times shown the most earnest interest and the most cordial sympathy in all the various features recommended for the development of this office, and he has given particular attention to every measure tending to increase its efficiency and the efficiency of the service in general.

The report of the board on the organization of communications, which I have already mentioned, has since been approved and is now in operation, and I do not hesitate to express the firm belief that it is the most thorough and efficient organization of its kind to be found either in the service or out of it. The office space occupied by the Chief of Naval Operations and his staff has been expanded from its formerly overcrowded condition to include nine rooms. These rooms have been cleaned, renovated, and equipped, and they are now kept in a condition that leaves little more to be desired.

One of these rooms has been fitted up especially to meet the needs of the communication service. A sound-proof compartment has been constructed, in which the radio operators are on constant watch day and night, and a space adjoining this compartment has been fitted for the telegraph and telephone operators. A commissioned officer, day and night, keeps watch to code and decode and to receive and send messages of every character without delay.

The subject of extending communications throughout the world has been given careful attention and, under the direction of Capt. Bullard, the Superintendent of the Naval Radio Service, phenomenal progress has been made toward the establishment of a system by which communication within our own country may be developed and improved, and, in cooperation with the systems in pan-American countries, expanded throughout the Western Continent. The subject of radiotelephony has, through the cooperation of Capt. Bullard and his men with the telephone companies, reached a development very little short of marvelous. At the instance of the superintendent of radio, the various companies

interested in this question agreed to mobilize their utilities and hold a demonstration which would show to what extent their systems of communications could be used. Some two weeks ago, when this demonstration took place, I sat in my office and, within the short space of time of less than two hours, transacted business by land, wire, and radio telephone with the commandant at the Puget Sound Navy Yard; the commanding officer at Yerba Buena, San Francisco; the commandant at the Mare Island Yard; the naval station at New Orleans; the aeronautic station at Pensacola; the commandant of the Charleston Navy Yard; the commanding officer of the *New Hampshire*, then at sea far off the capes of Virginia; the commandant of the Philadelphia yard; the president of the War College at Newport; and the commandant of the Boston yard. Communication was most satisfactory, and conversation between myself and the officers with whom I talked was taken down by a stenographer in my office, so that a complete record of all business transacted was available at once.

Soon after the appointment of the Chief of Naval Operations the duties of the aid for material were transferred, by the order of the Secretary of the Navy, to the cognizance of the Chief of Naval Operations and were placed immediately in the hands of one of his assistants. This change has served to provide positive means for the Chief of Naval Operations constantly to keep in touch with the material condition of the fleet and with the preparedness of individual vessels for active service. Work of the material bureaus is quickly coordinated under the immediate knowledge and assistance of the Office of Operations.

A plan of organization of the fleet on a large scale has been worked out and is now in operation. This plan is so arranged as to provide an organization for the entire naval force of the United States or for any portion of it in any part of the world. The various elements of the fleet have been given definite organization and flag officers have been detailed to the command of each, so that it may be justly said that the fleet is for the first time completely and thoroughly organized.

One of the first steps taken for the improvement of the organization of the fleet was with a view to the betterment of the submarine service, and to this end an officer of high rank has been detailed to command the submarine flotilla.

The subject of aviation also has been given especial attention, and every effort has been directed toward concentrating the development of aircraft toward a definite service. Aircraft have been placed in the same category as other craft, and the various bureaus have been assigned specific duties bearing upon the work construction and development and have assumed the responsibility for the work coming within the cognizance of each.

A thoroughly digested and well-developed plan of mobilization for the entire fleet in the event of war has been submitted to the department and approved. Each bureau and officer in the department has been assigned its particular duties in connection with the plan and reports quarterly to the department, giving in detail the progress of each toward preparedness to accomplish its task in mobilization.

The General Board has deliberated on the list of available merchant vessels useful for naval purposes in case of war and has determined the characteristics required for the special assignment of each. Guided by these requirements, the board of inspection and survey is now engaged in making a careful inspection of these merchant vessels, reporting for each the necessary alterations and equipment to fulfill the duty to which they have been assigned in the naval auxiliary service. Each merchant vessel inspected is assigned to a certain yard, where, in the event of need, it would be altered and equipped for naval service and where it would be supplied and repaired. The necessary equipment and supplies for such vessels are being sent as rapidly as possible to the yard at which these ships would be outfitted, so that in the case of emergency or war this work will be accomplished in the least possible time. Records are being kept at the department in such condition that complete data are immediately available, showing just what vessels could be used, what alterations would be necessary, and, in preparation for the event, all details, even to the drawing up of contracts, are being perfected in advance.

In past years the organization of naval districts has been merely a nominal one. The plan for the organization of naval districts has within the year been taken in hand and has been worked out in every detail. Each naval district will be organized according to a common share, and the general plan, together with a sample organization for one district, will be furnished to each naval district for filling in all data as to number and class of vessels, the organization and duty of personnel, etc.

The question of mine localities within our ports and along our shores has been studied, and the number of mines for each district and for our outlying defenses has been determined. Officers have been assigned to the various duties in the district for war service, and the distribution of vessels for the district defenses has been made, each vessel being assigned to its well-defined function in the defense.

Plans have been completed for the mobilization of the Naval Militia and detailed instructions have been prepared providing that each step in the mobilization shall proceed without interruption and with the utmost expedition. In addition, special attention has been directed to peace-time training of the Naval Militia, and arrangements have been made for sending the Naval Militia to sea this summer on board nine of the older battleships not attached to the active fleet. Arrangements have also been made for a cruise with citizen volunteers for training, on the general principle of the Plattsburg encampments conducted by the Army, and during four weeks, in the latter part of August and the first half of September, these volunteers will cruise at sea and will exercise during the last week with motor boats in conjunction with the battleships, destroyers, and submarines, working out such problems as would arise in time of war.

The organization of the ships in reserve has been given special attention. Not only have the complements been increased but special attention has been paid to the ratings of the men on board, so that the important stations will at all times have a sufficient number of well-trained men properly to break in the additional personnel that would be required to fill the complements. The ships are kept in material readiness, so that it will be necessary only to fill the complements in order that they may be ready to join the active fleet. A system of periodical inspection of every ship belonging to the Navy has been established and its good results are already apparent.

Regulations have been drawn up by a joint board for the proper control of the Coast Guard, which automatically comes under the Navy in time of war.

In response to the request of the department, the General Board has been indefatigable in making out the plans and selecting the locations for advanced bases, and in determining the location of submarine bases and working out the detailed plans for their development.

The annual period of overhaul for vessels has been discontinued. The old system under which for three months—and often for a longer period—in every 15 vessels of the fleet lay at a navy yard unready in material respects and demoralized in personnel, has been done away. These demoralizing influences, due to stagnation at navy yards, were well known to every officer, and it will be appreciated that they must have had a very bad effect upon the Navy. It was only natural, under the old system of lengthy overhauls, that spare parts would be used up and important work postponed that could have and should have been done at once in order to keep the ships in first-class condition. Such prolonged periods of inactivity at a repair yard during which the unavoidable disorder incident to the pressure of large numbers of workmen on board, and sometimes with the added discomfort of climate, could not help but have a very serious detrimental influence upon the ships' personnel, besides immensely increasing the expense of maintaining the fleet.

At the present time practically every vessel of the fleet is ready to perform its designed duty, except possibly the *Georgia*, which is to have new boilers installed, and the *Connecticut*, which is having extended boiler work done, one or two of the earlier submarines now being utilized for experimental purposes, and some of the later destroyers.

The equipment of my office has been greatly improved and added to. Data on all essential subjects have been collected and kept near at hand and are constantly being added to. Because of this improvement I was able, when called before the House Naval Committee during the present session, to give full and exact information of our own and the other principal navies of the world and was able to show not only in figures but graphically to the eye the number and type of ships of each of the principal navies of the world. Photographic silhouettes of the ships of the several navies were made and pinned upon sheets in groups according to type, so that a clear idea of the relative strength of the various fleets could be obtained at a glance. These sheets will eventually be placed upon the walls of one of the offices.

An annual program of operations of the fleet has been worked out and adopted and has so far been followed without difficulty. There is no reason to believe that it can not be successfully followed as a standard yearly pro-

gram. In my office there are kept data and records from which, at a moment's notice, one can determine the whereabouts of every vessel of the service and, within a very few minutes, the position of any merchant vessel can be located.

On the walls of the general office charts of places of special interest throughout the world are kept on chart rolls in the most convenient manner for easy reference. In another office there is a roll on which are maps showing the interior subdivisions of various countries and giving almost every kind of desirable information connected with the naval service.

Cooperation between the various bureaus and offices of the department with the office of the Chief of Naval Operations has been most cordial and complete, and the practical result has been all that could be desired. One day in each week the Secretary holds in his office a council composed of the chiefs of bureaus, heads of the various offices, the Assistant Secretary of the Navy, and the Chief of Naval Operations. At these meetings various questions of importance affecting the whole service are considered, the progress of work on ships discussed, new enterprises gone into, and a decision arrived at under the most favorable circumstances for wise action. Through these councils all are kept informed of important work, and a hearty cooperation followed by satisfactory execution of the Secretary's decisions, is the result. In addition to this weekly council, the Secretary of the Navy, through his own efforts, has organized a naval advisory council known as the Naval Consulting Board, which, with his approval and sympathy, is collecting vast stores of information regarding the industrial resources of the country and is perfecting a plan for the utilization of these industries for the support and assistance of the Army and Navy for the defense of the country in time of need.

A thoughtful consideration of the work that has been accomplished will show that all is being done now that could reasonably be expected from a so-called general staff. In my opinion, the organization that exists in the department and that is now in successful operation, is accomplishing in a purely American and businesslike manner all that could possibly be expected from the creation of a general staff, and is, I believe, doing this in a much more satisfactory way. It is folly to talk of or to advocate clothing a Chief of Staff or a Chief of Naval Operations with authority independent of the head of the Navy. Such independent authority would lead on to a confusion and would do great harm.

The fact that the bureaus as now constructed represent the different sections of the General Staff, that they have their special appropriations and are responsible for the proper expenditure of moneys under their control, and of the proper development and operation of the various parts of the Naval Establishment under their cognizance gives, in my opinion, to the organization of the Navy Department a distinctive strength and an added efficiency not possible under a so-called General Staff organization. The present organization should be made stable and permanent, and if legislation is necessary to make this absolutely sure, then there can be no doubt that such legislation should be enacted, but in considering any legislation care should be taken that too great restriction is not imposed upon the freedom of action of the head of the Navy.

I desire to add that all the results I have related have been accomplished with the Secretary's assistance. No new legislation has been necessary, and all that has been required of me has been to present the need and desirability of changes and improvements in order to receive the Secretary's sympathetic attention. He does not blindly yield to suggestions, but gives them the most earnest and thoughtful consideration. As the Secretary has often reiterated, his only requirement is that the proposed change shall add to the efficiency of the Navy in order that both the Navy's personnel and material may be capable of rendering and may be made to render 100 per cent efficiency. This policy of 100 per cent efficient service has been the basic creed of the Office of Operations, and when we shall have fulfilled that policy every unit of the fleet will at all times be ready to perform its functions, whatever the occasion that may require its service.

Secretary DANIELS. As I say, it would make no difference to me who advocated making the Chief of Operations Secretary of the Navy, I should not advocate it. I think it is making a military direction of the Navy in all its function which is un-American, and in saying that I know that some of the ablest officers of the Navy, men of very high ability, take that position, that that should be done,

but that does not affect me or change my views in the least, and I have no idea that it will affect the judgment of Congress or of the American people.

The CHAIRMAN. And you do not think the Chief of Operations should attend Cabinet meetings?

Secretary DANIELS. Not unless he is made Secretary of the Navy.

The CHAIRMAN. How about the statements of the others about "authority" and "responsibility"?

Secretary DANIELS. I have stated that the authority and responsibility as contained in the law now are all the authority and responsibility that should be given to any naval officer unless you wish to make a naval officer Secretary of the Navy.

There is another report from Admiral Benson which I wish to put in the hearing at this point.

The CHAIRMAN. It will be inserted at this point.

(The report is as follows:)

APPENDIX B.

STATEMENT BY THE CHIEF OF NAVAL OPERATIONS.

NAVY DEPARTMENT,

Washington, October 12, 1916.

1. The Office of Naval Operations, organized in May, 1915, under the Chief of Naval Operations, has continued during the past year the consistent development of its work. In harmony with the department's already confirmed disposition to afford the chief of this office all necessary support for the exercise of his appropriate functions, Congress, by the act approved August 29, 1916, has strengthened the dignity of the Chief of Naval Operations by conferring upon him the rank of admiral and has given permanency to the office by providing that he shall have not less than 15 assistants of or above the rank of lieutenant commander in the Navy or major in the Marine Corps. As soon as these officers become available for assignment they will be ordered to duty as provided for by law.

2. The experience in the administration of the Office of Operations during the past year has demonstrated that in it lies an effective means of coordinating the complex work of the Navy in harmony with maturely considered plans. The Chief of Naval Operations is, by law, charged, under the direction of the Secretary of the Navy, with the preparation and readiness of plans for the use of the fleet in war. A war plan constitutes a scheme of action and upon its soundness and completeness will depend the measure of success of our fleet when called upon to meet the test of war.

3. When properly understood, an approved plan becomes the guide for the effort of all executive branches of the department, to the accomplishment of which as a whole each branch within its own sphere of action must give its loyal adherence. The plans which have been formulated by the General Board and approved by the department have been received by the several bureaus and offices of the department in this loyal spirit, and there has resulted a closer and more efficient cooperation than ever before. Service of the fleet by all shore activities of the Navy, in order that the fleet may serve the Nation, has been accepted by all as a suitable mission.

4. In the work of preparation for war emergencies and incident thereto in the collection of data relating to sources of supply, two or more bureaus have often covered the same field of inquiry, thus causing unnecessary multiplication of departmental work, and sometimes, unfortunately, causing a very natural irritation to private industrial managers subjected to repeated requests for information already furnished by them to the same department of the Government. To correct this very unbusinesslike practice, a permanent logistics committee of bureau representatives is now charged with the duty of coordinating the work of the several bureaus in collecting logistic data. This committee has also the broader duty of determining and maintaining, under the approval of the bureaus, a suitable war reserve of material and of devising methods for reserve expansion when it is imminent. There is a vital necessity for a war reserve for engineering

and construction material sufficient to equip our fleet upon mobilization without delay.

5. The inspection of merchant vessels, with a view to their adaptation as naval auxiliaries in war, has continued. This work had formerly been carried on by a naval inspection board independent of the Army, which involved the risk of complication and confusion in the event of war through the fact that a similar inspection was being conducted independently by an Army board with a view to employing such vessels in the Army service. To obviate this, there has been organized, through an agreement with the War Department, a board of inspection of merchant vessels consisting of both Army and Navy officers. No merchant vessels will be inspected hereafter for war service except by this joint board. Merchant vessels already inspected by either the War or the Navy Department, as well as vessels yet to be inspected, will be assigned definitely by the joint board either to the War Department or to the Navy Department. Each department will, when war is imminent, be able by this scheme to act with celerity and in perfect agreement. Like arrangements affecting the allotment of the country's ammunition resources to the two departments are in process of adjustment. Other matters connected with the making of plans in which the Army and Navy must cooperate need close association of the two departments for satisfactory settlement. Steps are being taken to make a closer association with the War Department in such matters more easily possible.

6. A carefully thought-out plan for the development of naval shore bases and naval stations has been prepared by the General Board and in its main features has been approved by the department. To insure a consistent plan of development of our navy yards and stations in accordance with such a plan, a departmental board, on which all bureaus and offices concerned have representation, has been organized. The duty of this board is to advise a logical and scientific scheme of development and to determine the best method of applying the requirements of such scheme to each navy yard. By such systematic procedure each yard will be satisfactorily developed toward its maximum capacity for most efficient service, in conformity with the general approved plan. So, it is hoped, will immature or hasty recommendations for improvements be avoided and a permanent argument and justification for appropriations recommended will always be at hand based upon sound reasons.

7. In May, 1916, an officer of the rank of captain was given charge of naval districts in the Office of Operations. In accordance with the previously approved plan, the revision of the regulations governing naval districts was begun. A complete study of one district was worked out and was furnished to the commandants of districts as a type organization, with directions to organize each district along similar lines. This work is now being completed in the most satisfactory manner, and in addition the Offices of Naval Communications Service and of Naval Intelligence have prepared rules for obtaining and transmitting information within the naval districts.

8. The adoption of oil as the fuel of our naval vessels, the greatly increased use of fuel oil in commercial pursuits, the rapid depletion of our oil fields, and the difficulty of securing reserve fields to meet the future needs of the Navy, have created a very serious situation. The advantages of oil for naval use are so great that only a compelling necessity should ever force the Navy to consider its abandonment and a return to the use of coal. Such necessity can be avoided only if provision is made in advance to secure the necessary oil reserve. Having in mind these manifest conditions, the department appointed a board of naval officers to give this whole subject earnest consideration, and this board is now making a thorough study of the fuel-oil situation. It is hoped that the board's work of investigation may result in a definite recommendation to the department for a practical solution of this grave problem.

AERONAUTICS.

9. The development of naval aeronautics has continued to receive the department's serious attention, and though progress has not been rapid, the difficulties have been met without discouragement, and it is hoped that a type of naval aeroplane adapted for use over the sea and its use from shipboard are now problems near solution.

10. It must not be forgotten that all the wonderful advance in the science of aeronautics has been almost wholly along the lines of service over land, and that the service over sea is a new field, involving many unsolved problems widely different from those which have been solved in the land service. The

naval aeroplane has its home on a ship, from which it must learn to take its flight and to which it must return to be reclaimed undamaged. The naval aeroplane has no smooth meadow from which to rise and upon which it may alight. It started from the heaving deck of the scout and may have to rest on its return upon the surface of a stormy sea. Difficulties in the design of motors, of propellers, and of landing floats have been encountered and are steadily being overcome, the solution of these problems being greatly aided by the testing laboratory established at the Washington Navy Yard.

11. An aeroplane constructed after the department's own design is now nearly completed and is expected to solve many of our difficulties and establish the standard type for future construction.

12. One of our armored cruisers, the *North Carolina*, has been fitted with a practical aeroplane launching device and, supplied with a number of naval aeroplanes, has joined the fleet to cooperate in fleet work and to develop the tactics of aircraft on the sea. The *West Virginia* and *Washington*, sister ships of the *North Carolina*, have similar equipment installed, and other armored cruisers and scouts will, when opportunity offers to do the work, be fitted in like manner.

REPAIRS TO SHIPS.

13. In the effort to maintain our fleet in a state of constant readiness for efficient service, the department's policy abolishing regular overhaul periods at navy yards and requiring that all work within the capabilities of the ship's force and the fleet repair ships be done by these agencies away from navy yards has been adhered to and will be continued. The benefits of such a policy, when thoroughly understood and reduced to practice, will be fully appreciated, and will result in an ever-increasing reliance within the fleet upon the fleet's own resources for maintaining its cruising efficiency.

14. That our important ships, under the operation of this policy, still continue to spend prolonged periods at the yards is due to abnormal circumstances existing at this time, when extraordinary work of alterations and repairs are made necessary by radical changes in the fire-control systems of all, the serious shaft troubles of some, and the renewal of boilers in others. These large items of repairs and alterations, of course, could only be taken care of at navy yards.

VESSELS IN COMMISSION IN RESERVE.

15. Vessels which have been placed in commission in reserve, though usually those of older construction, have still a definite military value, which exists so long as they are kept in readiness for active service. If allowed to deteriorate in their material condition or if stripped too bare of their personnel, these ships at once lose most of their military worth, and when so conditioned are virtually stricken from the Navy list. Under the department's present policy all ships in reserve are to be maintained in material readiness for active service at short notice, with a sufficiently large part of their trained crew on board to keep alive knowledge of the ship and to sustain the spirit of efficiency within the ship as a haven to the "green" men that upon commissioning for active service must be placed on board.

16. All reserve ships are organized into the reserve force under the reserve force commander. They are given periodic military inspections and are required to perform an annual program of exercises involving some form of target practice. The reserve force during the past year has been called upon to perform various services, and has in all cases answered the call with gratifying performance. On both the east coast and the west coast the reserve ships were given the duty of exercising the Naval Militia on its annual summer cruise of two weeks, and later they embarked nearly 3,000 civilian volunteers for a cruise of four weeks, giving these enthusiastic Americans an opportunity to see something of Navy life and of naval duties on shipboard.

GUNNERY EXERCISES AND ENGINEERING PERFORMANCES.

17. A better systematized and more searching analysis of the performances of ships during the training period preliminary to the gunnery exercises and during gun practice itself by boards of officers appointed in the fleet has resulted in the elimination of many faulty methods, in the standardization of good methods, and in a general increase in the knowledge of principles underlying successful gunnery practice.

18. The fleet has carried out the various forms of gunnery exercises prescribed, and the advance in battle efficiency has been maintained. The satisfactory progress noted in my report of last year is being maintained, and though not sacrificing the time necessary for other exercises, more time is being given to fleet gunnery training than in any previous year. Firing at extreme ranges has been carried out successfully, and greater experience with approved fire-control instruments and installations warrant the hope of still better results in the coming year.

19. Improvement in gunnery has not been confined to the battleship force alone, and it is worthy of note that the submarines show an equally satisfactory advance in torpedo work, keeping pace with the improvement noted in both the battleship and destroyer forces.

NAVAL COMMUNICATIONS SERVICE.

20. The Naval Radio Service, under its new name of Naval Communications Service, has continued its past efficient performance in handling the Government's radio service, and in addition has taken over the work of handling all telegraph, telephone, and cable communications connected with the naval service outside the fleet. In addition to this work of serving the Government as well as commercial needs it has continued the censorship of radio stations in accordance with the President's neutrality proclamation of August 5, 1914.

21. An interesting demonstration of the progress attained in this interesting field was had on May 6, 7, and 8, 1916, when, in conjunction with the American Telephone & Telegraph Co., the communications service was mobilized for test. The Navy Department was connected by telephone and telegraph with all navy yards and radio stations in the United States. Radiotelephone apparatus was installed on board the battleship *New Hampshire*, and that ship, lying off the capes of the Chesapeake, was able to communicate by radiotelephony with the department in Washington and with the Mare Island Navy Yard, in California. The department itself had no difficulty whatever in communicating with the *New Hampshire* or any of the naval stations in the United States, using a desk telephone as on any ordinary occasion.

22. A new radio station has been completed and put in service at Point Isabel, Tex. This station will be of great service to the merchant marine in that section as well as to the Government in facilitating communication with vessels in Mexican waters.

23. As an illustration of the growth of the radio service in the past few years, it may be noted that during the period from December 13, 1912, to December 31, 1913, there were handled a total of 12,854 commercial messages, while during the period from July 1, 1915, to June 30, 1916, the number had increased to 97,084. Of course the number of official messages had correspondingly increased, the number for the latter period above mentioned being 628,997.

OPERATIONS OF THE FLEET.

24. Our fleets on the several stations have been actively employed during the past year. In Asiatic waters the conditions in China have long been disturbed, and the unrest of the Chinese people has frequently been made manifest by local revolts and uprisings of more or less serious magnitude. Our ships on the Chinese coast, and especially in the rivers of that country, have rendered important service in keeping in touch with conditions, in sustaining our diplomatic representatives, and in general looking out for American interests.

25. The chief duty of the Pacific Fleet has been, as heretofore, service in Mexican waters. Unsettled conditions still continue in that country, and the recurrent threat of danger to the lives of our numerous citizens resident there has kept most of the active ships on the Pacific station, and at times many of the reserve ships distributed along the Mexican coast, ready for any service that the occasion might demand. Beginning in the latter part of June, 1916, and continuing through July, when the safety of Americans in Mexico seemed to be seriously threatened, our ships assisted thousands of our citizens out of that country and provided them transportation to the United States. On the east coast of Mexico the ships of our cruiser force in the Atlantic have performed like service.

26. The Atlantic Fleet has followed an approved annual program of exercises. In the main this program requires a stay in Cuban waters from January

to April, during which target practice and tactical exercises are carried out. Then the fleet returns north for docking, repairs, and continued training, including elementary target practice and participation in the department's annual maneuver.

27. During the year, since October 1, 1915, the battleships *Pennsylvania*, *Nevada*, and *Oklahoma* have been completed and added to our active fleet, and the *Arizona*, which is to be commissioned on the 17th of this month, will soon join them. In addition, there have been completed and assigned to active service 10 destroyers and 7 submarines, together with the destroyer tender *Melville* and the submarine tender *Bushnell*.

28. The department's annual strategic maneuver took place in August last off the northern Atlantic coast. In this maneuver 83 vessels were engaged, of which 28 were battleships and 13 were submarines. The operations of the maneuver lasted for four days and developed most interesting and instructive situations for everyone concerned. It is with much gratification that the department noted the thoroughness and completeness with which the plans of the two commanders were treated and the very admirable manner in which the maneuver was carried out.

OPERATIONS IN HAITI AND SANTO DOMINGO.

29. The occupation of Haiti by the expeditionary force of United States marines which was initiated in July, 1915, still continues. The Haitian gendarmerie, under officers of the United States Marine Corps, has been organized in accordance with the treaty recently concluded between this Government and that of the Haitian Republic, and as soon as certain administrative details provided for in a supplementary agreement between the two Governments have been satisfactorily arranged, it is contemplated that the necessity for continued occupation of that country will cease. The present Government of Haiti gives every evidence of stability, and that country is now enjoying a prosperity greater than it has for many years past.

30. The situation in Santo Domingo reached a crisis in May, 1916. The President of that country, Jimenez, abdicated his office, and the Santo Domingan cabinet withdrew from Santo Domingo City, which was then held by an armed force of revolutionists under the revolutionary leader, Arias. In cooperation with our minister in Santo Domingo, naval forces were landed and occupied the city for the preservation of order and the protection of lives and property. The revolutionists having later established themselves in the town of Santiago, in the interior, an expeditionary force of marines was dispatched to occupy that town, to disarm all insurgents, and to reestablish order. This work was most efficiently completed, and at this writing there are in existence no known revolutionists in arms against the constituted authority. All disorder in Santo Domingo has been suppressed, and it is hoped that permanent peace, under stable government, will soon be established. There are now 900 marines in Haiti and 1,800 in Santo Domingo.

THE "HECTOR" AND THE "MEMPHIS."

31. On July 15 the U. S. S. *Hector* was wrecked and stranded off Cape Romaine, S. C. The *Hector* at the time of her wreck was proceeding on her usual service as collier from Charleston to the Caribbean and was caught in a severe gale, during which, after being disabled and having become unmanageable, she finally stranded as stated. Salvage operations are now in progress, though greatly hampered by weather conditions which prevail at this season. No lives were lost in the wreck of this ship.

32. On August 29 the U. S. S. *Memphis*, flagship of the commander of the cruiser force lying at anchor off the city of Santo Domingo, was driven ashore by heavy seas. This menace came upon the ship suddenly and without any previous warning. All material on board the *Memphis* of value is being salvaged, and an investigation is being held as to the feasibility of salvaging the ship. It is a matter of regret that 40 lives were lost in this wreck, 33 from the swamping of the ship's boats caught in the effort to return to the ship and 7 killed and 5 injured by the bursting of a steam pipe in the engine room.

W. S. BENSON.

The CHAIRMAN. Which do you consider the more important function of the civilian Secretary of the Navy, the coordination of the

administration of the Navy with the state of the Nation's foreign affairs, or the internal administration of the Navy?

Secretary DANIELS. That is like asking me whether I think my arm or my leg is the more important. They can not be separated.

The CHAIRMAN. You think the two go together?

Secretary DANIELS. Absolutely. A Secretary of the Navy who does not concern himself deeply with everything that makes the Navy ready for war is not doing his duty, and that is his function. and he must do that, therefore, through his officers who he selects for special ability, both for administration and for everything else.

The CHAIRMAN. So would you say that the principal thing was the internal administration of the Navy, and that the other would take care of itself?

Secretary DANIELS. No; I said I can not get along without my hands and my legs, and I would rather have both. You can not use one without the other. If you were going to divide the question, Mr. Chairman, and say which was the more important, you would have two Secretaries. You would have one Secretary to do one thing, and one to do another; but you have one Secretary, like you have one captain of a ship. You might have two captains of a ship, one to take charge of the guns and the other to take charge of the personnel. but you do not. Therefore the Secretary of the Navy must be in touch with everything that makes the Navy efficient.

The CHAIRMAN. There are a large number of professional sections of work under the Chief of Naval Operations, and constituting the internal administration of the Navy. I want to ask you about the qualifications that the Chief of Naval Operations should have. In war he has control over all the naval fighting forces, has he not?

Secretary DANIELS. He directs the naval fighting force.

The CHAIRMAN. So he should have had experience afloat in the command of a fleet, should he not?

Secretary DANIELS. The Chief of Naval Operations ought to be a naval officer of ability, large experience and knowledge. If you will read my report of 1914, I went to the War College that year, and I found there were more teachers up there than there were students. and in an address I made at that time I took the ground that we must let all the younger naval officers have an opportunity for more instruction, and the day will come, when we have done that, that all naval officers with ambition will go to the Naval War College. But. of course, the man to be selected is the man best fitted for the job. the man who has had experience in the Navy, a man whose success in every place to which he has been called has demonstrated his ability.

The CHAIRMAN. But ordinarily, would you not say that he should have had experience in the command of a fleet?

Secretary DANIELS. He should have been in the fleet and he should know about it.

The CHAIRMAN. Practically every officer of high rank has been in the fleet.

Secretary DANIELS. He should be one of the ablest officers of the Navy. He should be an officer tried and able. I should not, however. lay down a civil-service examination for the Chief of Operations. because the personal element, the matter of executive ability, the matter of what he has done in every other place in the service, are of the highest importance. There are some men who are theoretical, like

Admiral Fiske. There are some men who are practical, like Admiral Benson. And for Chief of Operations I would take a practical man before I would take a theoretical man.

The CHAIRMAN. But for a man who is to have control over all naval fighting forces, would you not say that one of the experiences that he should have had would be that of the command of the fleet?

Secretary DANIELS. Not necessarily, if he had other qualifications that gave him the ability and the capacity and the experience.

The CHAIRMAN. You do not regard that as an important matter?

Secretary DANIELS. Not as absolutely essential. All-round ability, knowledge, capacity, and tried experience—

The CHAIRMAN. Now, as a great variety and volume of administrative matters pass through the hands of the Chief of Naval Operations, do they not, he should be an experienced administrator, should he not?

Secretary DANIELS. A great variety of matters touching administration pass through his hands; but, as a matter of fact, the Chief of Operations is a thinker, a planner, more than an administrator; but, of course, the more he knows about administration matters the better, and in the case of Admiral Benson, before he became Chief of Operations, after he left command of the *Utah*, he was commandant of the navy yard at Philadelphia, which yard was the first one fitted out in America, except the New York yard, for the building of ships; and in the administration of that very important yard his success was most remarkable, and was so regarded in the whole Navy.

The CHAIRMAN. As a rule are officers assigned to the command of navy yards with the idea of fitting them for higher command later on?

Secretary DANIELS. As a rule the men who are in charge of navy yards are men who, after they have been afloat, are assigned to shore duty. They have sea duty and shore duty. When a man comes to shore duty you send him to the command of a navy yard or the Naval Academy, or you put him in charge of a bureau of the department. His shore duty in command of a navy yard like Philadelphia gives him large administrative duties as well as military duties.

The CHAIRMAN. I asked you if they are assigned to the navy yards with a view of fitting them for higher commands, as a rule, later on?

Secretary DANIELS. They are assigned to the navy yards as a part of a greater experience, in making them fitted for any duty in the Navy.

The CHAIRMAN. With the general idea of using them in other and more important positions later on?

Secretary DANIELS. Why, certainly; for when they leave a navy yard, if a man becomes an admiral, he either becomes Chief of Operations or goes to the fleet, or some other high duty. I think I see what you are driving at. If you will read the testimony you will find—

The CHAIRMAN. I have heard all of the testimony here, and have reread it all.

Secretary DANIELS. If you will read the record at the time of the naval officers and the commendations when Admiral Benson was appointed you will find that his appointment was a very popular

one in the Navy, because they knew that in every situation he had filled it with ability.

The CHAIRMAN. The Office of Operations determines the campaign policy in war, does it not, very largely?

Secretary DANIELS. The General Board makes the plans, and the Chief of Operations carries them out.

The CHAIRMAN. Not the operational plans?

Secretary DANIELS. He directs the operation of the ships.

The CHAIRMAN. So he should erudite in the history of and the experience of naval warfare, should he not?

Secretary DANIELS. "Erudite"—that is a pretty big word.

The CHAIRMAN. "Well versed," if you like that better.

Secretary DANIELS. He should be a capable, experienced, efficient naval officer, who in every position that he has occupied, should have filled it with ability and credit, and his experience should have been such that it demonstrates his fitness for the place.

The CHAIRMAN. I know, but I am asking you now if he should not be well versed in the history and experience of naval warfare?

Secretary DANIELS. The more history a man knows, if he knows it aright, the better; but after reading some of the history I read to you this morning, of Admiral Fiske, who claims to be the greatest strategist in America, I should think the less history he knew of the kind he promulgates here, the better.

The CHAIRMAN. Then, would you say that being well versed in history and the experience of naval warfare would not be a necessary qualification?

Secretary DANIELS. On the contrary, the more a man knows of history and the more a man knows in practical matters the better.

The CHAIRMAN. So he should be well versed in history and naval experience?

Secretary DANIELS. He should first of all be an able naval officer with large experience.

The CHAIRMAN. But that is purely a general answer. I am asking you about a specific thing.

Secretary DANIELS. I am giving you a general answer, because otherwise—let me tell you—we have got admirals in the Navy who write reams and reams and reams of history, who have been to the War College twice, and they write and write and write, and nobody in the Navy would think they had the practicability to command as Chief of Operations. They have a narrow vision. Take Admiral Fiske as an example. Admiral Fiske has read and read and read. He has written and written and written, and yet when he made my life a burden for months, begging me to make him commander in chief of the Atlantic Fleet, I would never have dreamed of making him commander of the Atlantic Fleet or Chief of Operations. Though he knew much history, he was possessed with the German idea of naval operations. The greatest thing necessary about a Chief of Operations is that he shall be a man of practical judgment, who knows the Navy, who has held responsible places in it, and performed his duties successfully.

The CHAIRMAN. I am trying to find out what qualifications the Chief of Operations should have, and I have asked certain specific things, and I want to know whether that is one of the qualifications he should have.

Secretary DANIELS. Listen. The first thing is, he should be a man of practical judgment. He should be a man who is a graduate of the Naval Academy. He should be a man who when in command of ships has always done his duty well. He should be a man of judgment. He should be a man of fairness. He should be a man of conscientious justice. They are the qualities. Then if you add to that, the more history he knows, the more tactics he has studied and studied wisely, and the more he has studied to make an American Navy, not a Germanized navy, the better Chief of Operations he is.

The CHAIRMAN. Then I infer from your answer that you do not look on that as one of the requisites, that a man before being made Chief of Operations should be well versed in history and the experience of naval warfare?

Secretary DANIELS. If that were the chief qualification, I would not take a naval officer, I would take a professor of history.

The CHAIRMAN. Then you think it is merely a minor qualification and not necessary?

Secretary DANIELS. As between being a practical and experienced naval officer and a historian, certainly I would take the former.

The CHAIRMAN. I presume, Mr. Secretary, that almost all officers of high rank have had practical experience as naval officers, but not all of them are qualified to be Chief of Operations?

Secretary DANIELS. And all of them have studied history, and all of them have studied tactics, and all of them have studied strategy.

The CHAIRMAN. They may have studied them, but they are not always well versed in those matters, are they?

Secretary DANIELS. The question as to who is well versed is a question of opinion.

The CHAIRMAN. I know I have studied a good many things and I have forgotten, and I think you have done the same.

Secretary DANIELS. Very many; very many.

The CHAIRMAN. We are all human.

Secretary DANIELS. We are all human, and so I know of no naval officer who is an admiral who has not in his experience somewhere had diplomatic duties calling for a knowledge of constitutional law, who has not had a study of history, who has not had a study of things that come to a man of experience and education, particularly naval experience.

The CHAIRMAN. But unless he has kept up with those matters, his having studied them is of no particular avail to him, is it?

Secretary DANIELS. I do not know of any admiral who has not kept up with them.

The CHAIRMAN. I take it there are some who have kept up more than others.

Secretary DANIELS. Undoubtedly.

The CHAIRMAN. And there are some who are recognized in the Navy as being particularly conversant with those matters?

Secretary DANIELS. Undoubtedly some men are better historians than they are sailors. Some men are better diplomats than they are captains of a ship.

The CHAIRMAN. And the ideal arrangement would be to have some one who was well up in both, would it not?

Secretary DANIELS. The ideal arrangement is to have the ablest and fittest man that you can find.

The CHAIRMAN. Who would be well up as a practical sailor and also well up in knowledge of history and naval experience?

Secretary DANIELS. The more he knows the better fitted he is. At the bottom of it all is that he shall never be a theoretical man who flies off on theories, but a practical, just man, who knows his ship as an officer of the Navy.

The CHAIRMAN. Should he not be so well versed in the policy of all naval powers, as these may affect our interests and policies, that he really becomes a naval statesman? You have referred several times in your testimony to naval statesmen.

Secretary DANIELS. Yes, indeed, I have. Such men as Admiral Fletcher, Admiral Benson, and Admiral Badger I would say are naval statesmen, and there are others.

The CHAIRMAN. Admiral Benson, Admiral Fletcher, and who?

Secretary DANIELS. Admiral Benson, Admiral Badger, Admiral Fletcher, and there are a number of others.

The CHAIRMAN. You said those three were naval statesmen?

Secretary DANIELS. Yes; and there are others. I might say, when you are speaking about scholarship and knowledge of history, the greatest man this Navy has produced as a scholar, as a writer, as a tactician in writing, is Mahan. He was a wonder. His book on Seapower, there is nothing like it, and yet nobody in the Navy would have told you that Mahan was as good a seaman as other men who never wrote a book. You must take all a man's qualifications.

The CHAIRMAN. Would you say he would not have made a good Chief of Operations?

Secretary DANIELS. I would not say that, but I would say there were men who could not write books who would have made better. I would have much preferred Mahan for president of the War College, much preferred him as a writer on sea power, than I would have assigned him to duty of that character. He was the greatest man in the Navy in knowledge, in lore, in that big word you used, "erudition." He filled the bill there, but I do not think that in his day he was regarded as so great a man in all around qualities, commanding the fleet, personnel, and that, Mr. Chairman, is very natural. You take a man who makes his life a study of history, a study of books, who becomes proficient in it and a master in it, there is only one man in a million who can do more than one thing well; and so when he became a master in those things, there are other men who have not studied so much history who were more capable than Mahan in the matter of navigation and directions.

The CHAIRMAN. Ought not the Chief of Operations to be an expert naval strategist?

Secretary DANIELS. He should be a naval strategist.

The CHAIRMAN. Expert?

Secretary DANIELS. He should be.

The CHAIRMAN. Should he not be an expert naval tactician?

Secretary DANIELS. He should be.

The CHAIRMAN. Briefly, what is the purpose of the War College?

Secretary DANIELS. The War College is called a college. That is the common name for it, but, of course, it is not a college like the colleges in civil life.

The purpose of the War College is that officers who wish to go there may there make a study of tactics, of strategy, of international

law, of things that give a man larger knowledge of history, of naval warfare, of logistics, tactics, strategy. The biggest thing about the War College—if you have time to go there, Mr. Chairman, some time, I think this committee would enjoy a visit to it. They have what they call war plans, little ships on a table, “painted ships upon a painted ocean”; and they make war games. They fight. For instance, they have a war with Germany, and some of the students will constitute the American Navy and some the German Navy, and they will fight with those ships, and their maneuvers are very interesting. I spent time there once to my great edification, and in the little time I was there I almost became an erudite man myself. The plans they have and the study are tremendously interesting, and it is wonderful really how interesting they get in the battles. That is the purpose of the War College—to learn to fight.

The CHAIRMAN. On page 187 of this volume entitled “Naval Administration and Warfare,” Mahan says:

It may be said that the true aim (of the Naval War College) is to promote not the creation of naval material but the knowledge how to use that material to the best advantage in the conduct of war.

You would agree with that, would you not?

Secretary DANIELS. Of course.

The CHAIRMAN. Then, am I right in saying that while personal study and broad experience in the command of fleets may in a measure take the place of a full course at the Naval War College, still officers who have taken that course of instruction in how to use the Navy are better equipped to act as Chief of Naval Operations than those who have not?

Secretary DANIELS. To show you my feeling about that, I gave an order in 1914 that the staff of the War College and the number of people who go to the War College should be just as important as the men who went on ships, and that the younger men should have an opportunity, and look forward to the day when War College education will be as much a part of a naval officer's education as going to Annapolis; and, as Admiral Sims said in his letter to me, “Of course, I agree with you, Mr. Secretary, that the time will come, but we can not put it into operation as to the lower officers until they have had a chance to go to the War College.” And, therefore, when I come to name a man for a great place, I do not make it a condition precedent that he should have gone to the War College, but that he should be an able planning officer.

The CHAIRMAN. The Hobson naval report specified that no one under the rank of rear admiral should be appointed to the office of Chief of Naval Operations and put in charge of the general direction of the Navy; but the law you recommended permits the appointment of a captain.

Secretary DANIELS. Yes.

The CHAIRMAN. Why was that change made?

Secretary DANIELS. No law ought to limit the commander in chief of the Navy to one rank. I have sometimes placed a commander in a very high place because he seemed to have particularly fine qualities. A captain of the highest grade—for example, take the case of Admiral Benson. He was appointed the Chief of Operations in April, 1915, when he was a captain. He became an admiral in September.

The CHAIRMAN. Of the same year?

Secretary DANIELS. Of the same year.

The CHAIRMAN. He became an admiral ex officio?

Secretary DANIELS. No; in the regular line.

The CHAIRMAN. But he became admiral ex officio when he became Chief of Operations.

Secretary DANIELS. He became a rear admiral under the law. He was a full admiral when he was made Chief of Operations, but under the law he became a rear admiral in September, so that he was a captain only four or five months after he was Chief of Operations, and I knew then that he would be an admiral in four or five months.

The CHAIRMAN. You mean he was a captain in actual rank for four or five months of his service as Chief of Operations?

Secretary DANIELS. He was the highest ranking captain, and I knew that in September he would become a rear admiral.

The CHAIRMAN. At that time did they not have a board of selection?

Secretary DANIELS. No; no board of selection.

The CHAIRMAN. That was done afterwards?

Secretary DANIELS. Yes.

The CHAIRMAN. So that at that time every officer——

Secretary DANIELS. Every officer of ability who passed the health test, who had served long enough, became an admiral.

The CHAIRMAN. But, of course, the health test was not taken at that time, and he was an officer of ability. Of course, the board had not acted at that time.

Secretary DANIELS. No.

The CHAIRMAN. You mean you supposed they would so act from your knowledge of Admiral Benson.

Secretary DANIELS. I knew he was regarded in the Navy as one of the ablest captains in the Navy.

The CHAIRMAN. I am not questioning that. I simply wanted to know your process.

Secretary DANIELS. But I would not have hesitated to appoint a younger captain if I had thought he was ablest and best for the place.

The CHAIRMAN. At the time you appointed your first Chief of Naval Operations the following rear admirals were on the active list, and were line officers not restricted to any naval duties: Admirals Howard, Knight, Fiske, Helm, Winslow, Usher, Fletcher, Capperton, Bousche, Mayo, Dunn, Tappin, Pond, McLean, Coffman, Fullam, Winterhalter, Fechteler, Gleaves, and Grant. Among those were there none, in your opinion, competent and available to inaugurate the all-important office of Chief of Naval Operations?

Secretary DANIELS. Certainly, and, as a matter of fact, I first offered the place to Admiral Fletcher before I offered it to Admiral Benson. Certainly they were, and I at first offered the place to Admiral Fletcher. I talked with him about taking it and organizing it. He was then commander in chief of the fleet, and he said if it would suit me, he preferred to remain commander in chief of the fleet.

The CHAIRMAN. Would you say one of the essentials for the qualifications of the Chief of Operations that his mind should run along with that of the Secretary?

Secretary DANIELS. I should say that he should be a man of sound judgment and convictions, and he should always give the Secretary of the Navy his honest and frank opinion, whether it agreed with his or not, and that is the kind of man I appoint to every position of importance. When a man comes into a bureau chiefship, or to be Chief of Operations, I always send for him before I appoint him and I say, "Now, you will be a member of the council. We will discuss everything that comes up; but I would not wish you to be Chief of Operations or chief of a bureau in the Navy Department unless upon every question you are just as free as I am to express your opinion, and I want your honest, frank opinion, whether you agree with me or not." That is always the policy.

The CHAIRMAN. I take it that when you appointed Admiral Benson as Chief of Operations you appointed the man who in your opinion was the best qualified in the Navy for the position.

Secretary DANIELS. I appointed him because I thought, of the men who were available, he was the man best qualified for the position.

The CHAIRMAN. This list of officers whom I have given you were, of course, all available, and you thought he was better qualified than any of them?

Secretary DANIELS. Most of those officers were on some special duty, which they were filling, and I decided after much reflection that his appointment was the best that could be made.

The CHAIRMAN. Ordinarily you would take a rear admiral rather than a captain, other things being equal, would you not?

Secretary DANIELS. I have not followed that policy. I have appointed the best man. I would not have made that a condition. Sometimes you have two or three men equally capable, but a certain man is on a particular duty which he is performing very well, and you would not take him off that duty. For example, Admiral Fletcher felt that he could render better service to the Navy by staying as commander in chief of the Atlantic Fleet. I discussed it with him as to whether he should come to the department and organize as Chief of Operations or be commander in chief of the fleet. He felt he could render better service there, and I therefore acceded to his desire to remain as commander in chief of the fleet.

The CHAIRMAN. I have asked you about some qualifications of the Chief of Operations. Would you say that Admiral Benson, when he was appointed, was a preeminent naval statesman?

Secretary DANIELS. I would say Admiral Benson was an able naval statesman?

The CHAIRMAN. And that he was a preeminent administrator of the Navy as a whole?

Secretary DANIELS. I would say his record showed he had been an able, successful officer, who had discharged every duty intrusted to him with great ability.

The CHAIRMAN. And preeminently adapted to administer the navy as a whole?

Secretary DANIELS. When you use the word "preeminent," I could not say he was preeminently greater than Fletcher and Adger, or other men; not at all. I would say he was an able, experienced, capable man. I would not qualify those gentlemen as being preeminent over the others.

The CHAIRMAN. And you considered that he was particularly well versed in the history of naval warfare?

Secretary DANIELS. He was well versed in the history of naval warfare.

The CHAIRMAN. Particularly so?

Secretary DANIELS. I never examined him on history. Whenever I discussed with him matters of former naval battles, I always found him well informed. I would not have selected him to be professor of history in Johns Hopkins or Harvard, nor would I have selected a man from the chair of history to be Chief of Operations.

The CHAIRMAN. He had never been in command of a fleet of battleships and their subsidiaries?

Secretary DANIELS. I think not.

The CHAIRMAN. There is no question about that, is there?

Secretary DANIELS. He had never been in command of a fleet.

The CHAIRMAN. Was he noted as a naval strategist?

Secretary DANIELS. He stood very high as a naval strategist.

The CHAIRMAN. Was he noted as a strategist?

Secretary DANIELS. He was regarded by his fellow officers as one of the ablest strategists and tacticians. When he was appointed, the naval press, the public press, the naval officers, the whole service with very few exceptions, declared that it was an ideal appointment.

The CHAIRMAN. What outstanding qualities did he possess that led you to appoint him—a captain—over the heads of those rear admirals, to be in general control of the entire Navy?

Secretary DANIELS. He had been captain of the *Utah*, and I had known him as captain of the *Utah*. I think that was the service he was rendering when I became Secretary of the Navy. When we had to make a change in the Superintendent of the Naval Academy, Admiral Badger and a number of other officers recommended Capt. Benson to me to be Superintendent of the Naval Academy and said that, having been commandant there, he had shown such ability that he would be the best man for superintendent. I did not know him very well then. I knew him afterwards as captain of the *Utah*. When we had to make a change in the commandant of the Philadelphia Navy Yard, one of the most important positions on shore duty in the Navy, the consensus of opinion of admirals and captains with whom I talked was that Benson was admirably qualified for that or any other duty in the Navy requiring ability, responsibility, and judgment, and so he was appointed to that place.

And then, in pursuance of the policy to enlarge the Philadelphia Navy Yard, of making it into a shipbuilding yard as well as a repairing yard, I had visited the Philadelphia yard several times, and I had talked with Admiral Benson about naval policies and naval development and naval matters. I found he was frank, direct, well informed; an excellent officer; and so, when it came to the time of selecting the Chief of Operations I felt first of all that I wished to bring a man to Washington who would bring a fresh, clear view to this great office, and I talked with different officers and I learned that my opinion of Admiral Benson was shared by officers of high standing, and so he was appointed.

The CHAIRMAN. Mr. Secretary, the House Naval Affairs Committee report recommended that 15 officers be assigned for duty to the planning division, but the Senate bill which you approved of omitted that provision. Why was that?

Secretary DANIELS. I think it was a perfectly absurd proposition to put in any act of Congress that a certain number of officers shall be assigned to a certain duty. We have had as many as 60 there. We have had as many as 50. We have had as few as 15. I do not think that you ought to limit the number of officers, but you ought to have as many men as are needed.

The CHAIRMAN. You have had fewer than 15, have you not?

Secretary DANIELS. Yes.

The CHAIRMAN. I think when the war started Capt. Pratt testified that there were only three.

Secretary DANIELS. As I said to you just now, I will give you tomorrow morning the number we had. I have not the figures with me. But the Secretary of the Navy and the Chief of Operations ought not to be limited by law.

The CHAIRMAN. I would like to have you give me the number on February 1, 1915, and on the 1st of—

Secretary DANIELS. You had no Chief of Operations on February 1, 1915.

The CHAIRMAN. I mean 1917.

Secretary DANIELS. You mean 1917?

The CHAIRMAN. Yes.

Secretary DANIELS. I will do that.

The number of officers in Operations at various dates is as follows:

Feb. 1, 1917	47
Apr. 6, 1917	50
July, 1917	61
January, 1918	162
July, 1918	204
Nov. 11, 1918	281
In Operations now	110

Secretary DANIELS. The Chief of Operations ought not to be limited. Sometimes he ought to have a very large number. Sometimes he does not need a very large number. I always think that it is a mistake for Congress to go into the details. You might as well say that you should have only so many officers in Ordnance. Before the war we had very few officers in Ordnance, and during the war we had many more; and so, in all offices; you are bound to make the same distinction.

The CHAIRMAN. I take it that if the law provided there should be 15 officers assigned exclusively for work in the planning section, there would be nothing to prevent you putting others on there?

Secretary DANIELS. It was a perfectly unnecessary provision and hampered the bill, and I believe that legislation ought to be very brief and ought not to require the number. I think it was an immaterial section, and therefore it ought not to have been in.

The CHAIRMAN. Do you remember when you had 15 officers devoting all their time to this planning section?

Secretary DANIELS. No, sir. I can get you the figures.

The CHAIRMAN. The figures you are going to give me will show that, will they not?

Secretary DANIELS. Yes. You must remember this: When you speak about planning, the great plans of the Navy are made by the General Board. The operative plans are made in Operations, so that it is a matter of not very great importance, so long as you have enough men of ability and experience to carry out the duty in hand. I would rather have four or five men like Pratt than 15 men who had not had experience in writing plans. I think the number is immaterial so long as you have enough men to do the work.

The CHAIRMAN. Now, Mr. Secretary, as I told you before, I have asked a number of officers of the Navy to submit to the committee suggestions as to changes that might be valuable in the organization of the Navy.

Secretary DANIELS. Whom have you asked, Mr. Chairman?

The CHAIRMAN. I have a list here that I will give you, and also, if you have any suggestions about this matter, I should be very glad if you would submit a paper to the committee.

Secretary DANIELS. I might give you some names of officers whom you might ask. I would prefer not to ask any, myself, because while, of course, this committee has a perfect right—or the full committee—to take up matters of organization, and while I would not for a minute assume to say what the functions of this committee are, of course no legislation looking to organization should be taken up except by the full committee, and I should think that was entirely outside the authority of this committee, investigating for the purpose for which it was organized. However, if you desire, I shall give you some names of some officers who have made some study of organization.

The CHAIRMAN. I have asked the following officers to submit suggestions: Admiral Fullam, Admiral Badger, Admiral Fiske, Admiral Mayo, Admiral Knight, Admiral Coontz, Admiral Fletcher, Admiral Sims, Admiral McKean, Admiral Twining, Capt. Pratt, Capt. Laning, and Commander Pine; and I have also asked Assistant Secretary Roosevelt to submit suggestions.

Secretary DANIELS. I would suggest, Mr. Chairman, without naming names, that at once you ask—

The CHAIRMAN. I also asked Admiral Wilson and Admiral Rodman, I believe, while they were here if they had any suggestions, and they said they had not.

Secretary DANIELS. It would also be well for you to ask all the chiefs of bureaus or departments, who have had larger experience in administration than most of these men.

The CHAIRMAN. Will you give me a list of them?

Secretary DANIELS. Yes; I will send you a list.

The CHAIRMAN. The purpose of doing this, as I have said before, is to get these suggestions from the various officers; and then I hope, and think, that the committee will suggest that a board of experts, a commission of experts like the Mahan Board, be appointed to go over these different suggestions and make recommendations; and I think this board or commission should have on it a number of civilians, so that it will not be entirely a naval commission.

Secretary DANIELS. Well, it will be interesting as a pure academic study.

The CHAIRMAN. I think after a great war such as we have had it is not improbable that something can be learned.

Secretary DANIELS. Undoubtedly. There never was an organization in the world that was perfect. And if you decide to take that up in your full committee, I take it you could not do so at this session of Congress; and if you decide to take it up in your full committee, I shall ask to be heard before the full committee before action is taken.

The CHAIRMAN. We have no authority to appoint any commission. Secretary DANIELS. No.

(Thereupon, at 12 o'clock m., the subcommittee took a recess until 3.30 o'clock p. m.)

AFTER RECESS.

The committee met at 3.35 o'clock p. m. pursuant to the taking of recess.

The CHAIRMAN. The committee will come to order. Are you ready to proceed, Mr. Secretary?

Secretary DANIELS. Yes; Mr. Chairman, I am ready.

The CHAIRMAN. When did the European situation, between the summer of 1914 and the spring of 1917, cause you to take the first definite step to prepare the Navy for the contingency of its having to participate?

Secretary DANIELS. We were preparing the Navy all the time for the contingency, and contingency that might arise.

The CHAIRMAN. I refer particularly to the effect that the European situation had on your plans to prepare the Navy.

Secretary DANIELS. Well, of course, in 1914 we did not think America would be drawn into the war. We went forward with preparations for that or any other emergency.

The CHAIRMAN. But you do not think that America would be drawn into the war?

Secretary DANIELS. I did not think so in 1914.

The CHAIRMAN. When did you first think that it would be drawn into the war?

Secretary DANIELS. Well, I do not remember the date. As it went on—with the sinking of the *Lusitania* I feared it.

The CHAIRMAN. And thereafter did you get over that fear?

Secretary DANIELS. No; I always feared it from then on, but I hoped that national honor would not make it necessary for America to be involved.

The CHAIRMAN. Was it your opinion that national honor would not make it necessary for America to be involved?

Secretary DANIELS. When?

The CHAIRMAN. After the sinking of the *Lusitania*.

Secretary DANIELS. I was waiting for Congress to determine that question.

The CHAIRMAN. And in the meanwhile were you taking any special steps to prepare the Navy?

Secretary DANIELS. Oh, yes. Yes; Mr. Chairman, I gave you the dates the other day of what we did in 1915.

The CHAIRMAN. Begin with 1914, Mr. Secretary, after August 1.

Secretary DANIELS. In 1914 I made recommendations to Congress, estimates to Congress for the appropriations for that year. It was

a very difficult matter to secure the passage of the bill for as large an estimate as I made. I asked Congress for two dreadnaughts and many other things. And by only a majority of 9 did we get it through the House. The motion was made to strike out 2 dreadnaughts and put in one. That was in the winter after I had recommended two dreadnaughts. We passed it, I think, by a majority of 9, or a change of 9 would have knocked out two dreadnaughts and given us only one. We also had a program for other construction. But the very large program was announced by me in the summer of 1915. I will give you the dates which will show that from two days after the sinking of the *Lusitania* we began to do very great things. The act of 1914, after sinking of the *Lusitania*, we secured the first naval reserve we ever had, which would enable us at any time of emergency to bring into the Navy a reserve.

The CHAIRMAN. 1914?

Secretary DANIELS. 1914. I will get for you, Mr. Chairman, and put in the hearings my estimates made in October, 1914. I have not them here. It will show what we were doing, and an extract from my report showing what we recommended.

The CHAIRMAN. Has not that already been put in the record?

Secretary DANIELS. No; I think not.

The CHAIRMAN. Well, I want in a general way to know the steps that you took between 1914 and 1915?

Secretary DANIELS. We took steps in 1914 to secure a naval reserve and to secure large construction of ships and to secure the building of all the ships we had as rapidly as possible. I will put that in the hearings.

The CHAIRMAN. That brings them down to—

Secretary DANIELS. 1915.

The CHAIRMAN. 1915?

Secretary DANIELS. Yes; and I will place in the hearings—I wish I had them here—in 1915, I think two days after the sinking of the *Lusitania*, I called upon the General Board to make a report of such increase or additions to the Navy as would make the Navy the equal of any navy in the world. A little later I called upon the General Board to give me the details of how they would use \$500,000,000 in new construction that would best enable the Navy to be an efficient agency of the Government to protect it in case of war.

I gave you the other day—I am sorry I have not a copy of it now, but the stenographer who took it is not here—a detailed statement of the various acts of 1915. We recommended quite a number of very important measures, of which, of course, the building program, the new naval-reserve act in 1915, the dreadnaughts, the increase of personnel, the increase of officers, were examples, and made a bill which I think increased naval appropriations that year from \$140,000,000 to \$340,000,000.

The CHAIRMAN. Mr. Secretary, these matters appear in your statement that you have already made?

Secretary DANIELS. I gave you a long list.

The CHAIRMAN. Right down to 1917?

Secretary DANIELS. I gave it. I do not think it is necessary to go into it again.

The CHAIRMAN. It is unnecessary.

Secretary DANIELS. But I only gave, I think, 1915. I have a record of 1916.

On January 5, 1916, hearings were begun by the House Naval Committee on the naval appropriation bill.

On May 31, 1916, the Secretary of the Navy appeared before the House Naval Committee in support of a five-year building program.

On May 24, 1916, the naval bill was reported to the House, calling for 5 battle cruisers, 4 scout cruisers, 10 destroyers, 20 submarines, 1 fuel ship, 1 ammunition ship, and 1 hospital ship.

On May 31, 1916, occurred the Battle of Jutland.

On June 2, 1916, a bill was passed by the House calling for 5 battle cruisers, 4 scout cruisers, 10 destroyers, 50 submarines, 1 fuel ship, 1 ammunition ship, and 1 hospital ship, a total of 72 to be built at once.

On June 8, 1916, a bill was received by the Senate and referred to the Naval Committee, which, with the concurrence of the Secretary of the Navy, recommended that the entire program be laid down within three years instead of five years, as originally proposed. It was in this form that the bill was finally passed by both Houses of Congress and received the approval of the President.

On June 30, 1916, the Senate Naval Committee reported a bill calling for 10 battleships, 6 battle cruisers, 10 scout cruisers, 50 destroyers, 9 fleet submarines, 58 coast submarines, 1 submarine (Neff system), 34 fuel ships, 1 repair ship, etc., a total of 157, 66 to be begun at once, the remainder prior to July 1, 1919.

On July 21, 1916, the bill passed the Senate.

On July 31, 1916, to August 2, 1916, the House conferees held hearings on the Senate amendment to the bill in regard to personnel legislation.

On August 11, 1916, conferees submitted partial report.

On August 18, 1916, conferees submitted final report and report agreed to by House.

The bill as finally adopted provided for 157 war vessels to be built within three years; immediate increase in enlisted strength to 74,700, plus the hospital corps, and authorized the President, in emergency, to increase the authorized enlisted strength to 87,000 plus 6,000 apprentice seamen and 4,000 hospital corpsmen, a total of 97,000.

On August 29, 1916, the President approved the act. The department issued plans and specifications and invited bids for practically all vessels, except battle cruisers appropriated for, to be begun in first year, including 4 battleships, 4 scout cruisers, 20 destroyers, and 27 submarines. The law required 60 days advertisement before opening of bids, and as soon as bids were opened all these were contracted for. Instructions were issued to navy yards August 29 for construction of one fuel ship, one hospital ship, and one gunboat.

The Navy recruiting organization was extended to all parts of the country and active campaign for recruits began.

On October 2, 1916, bids were invited and plans and specifications issued for battle cruisers.

The Bureau of Navigation was working out plans for creating a large naval reserve, which had been authorized in the act of August 29.

On October 25, 1916, bids on battleships and destroyers were opened, and contracts were let forthwith.

On November 1, 1916, bids on scout cruisers and submarines were opened, and contracts were let at once.

On December 1, 1916, the Secretary called attention to the enormous task imposed upon the department in securing increase of ships and personnel provided for in the act of August 29; recommended that practically half of the 90 vessels still to be appropriated for in the three-year program be laid down in the next fiscal year, and that additional powers be granted the Navy Department in placing contracts, securing materials, and insuring that the completion of the entire building program be expedited. He announced that plans for naval projectile and armor plant at Charleston, W. Va., extension of Naval Gun Factory at Washington, extension of navy yards, etc., had been made, and work on these various improvements had been started or would soon be begun.

The CHAIRMAN. That carries you through 1916?

Secretary DANIELS. 1915 was in the hearings first.

The CHAIRMAN. Now, Mr. Secretary, the first steps, then, to prepare the Navy for the contingency of its having to participate in the war were taken in the fall of 1914?

Secretary DANIELS. The first steps taken? No. We had been taking steps the year before the war was declared, and three battleships—

The CHAIRMAN. I know, but the first steps after the outbreak of the war?

Secretary DANIELS. Those steps were taken to strengthen the Navy—

The CHAIRMAN. Not especially for the war?

Secretary DANIELS. For that war or any other war that might come.

The CHAIRMAN. And not especially for that particular war?

Secretary DANIELS. Yes; that particular war if we got into it. But I could not—

The CHAIRMAN. Now, did you talk over with your professional advisers these steps that you were taking in 1914?

Secretary DANIELS. Certainly.

The CHAIRMAN. When did they give you advice about preparing the Navy for the contingency of its having to participate in this war?

Secretary DANIELS. I do not recall that they gave me advice at any particular date about taking part in that particular war, but we were all of us interested in strengthening the Navy so that if we should be drawn into the war we should be in a better shape, and we particularly felt that a strong naval reserve, and we particularly felt that more battleships were the necessary things to have.

The CHAIRMAN. Now, Mr. Secretary, I have here Senate Document 413, of the Sixty-fourth Congress, first session. In it is a letter which you wrote to the Senate on April 21, 1916, and which I will now read.

Secretary DANIELS. What date is that?

The CHAIRMAN. April 21, 1916. [Reading:]

THE SECRETARY OF THE NAVY,
Washington, April 21, 1916.

To the Senate:

I am in receipt of the resolution adopted by the Senate on April 12, 1916, calling for—

(1) A communication, dated August 3, 1914, from the General Board of the Navy warning the Navy Department of the necessity of bringing the Navy to a state of preparedness.

Secretary DANIELS. What date was that?

The CHAIRMAN. What?

Secretary DANIELS. A report when?

The CHAIRMAN. Dated August 3, 1914. [Reading:]

(2) A communication, dated November 9, 1914, from Rear Admiral Bradley A. Fiske, senior adviser to the Secretary, warning the Navy Department of the unprepared state of the Navy.

Secretary DANIELS. Both are from Fiske?

The CHAIRMAN. The first was a letter from the General Board of the Navy and the second is from Admiral Fiske. I have a copy of 413 here.

Secretary DANIELS. Let me have that, please, sir.

The CHAIRMAN. I will continue with the letter. [Reading:]

Upon receipt of this revolution, diligent search was made in the files of the department for the communications desired. That, dated November 9, 1914, from Rear Admiral Fiske, is appended hereto. The chief clerk was unable to find it in his files, it having been withdrawn by an officer who "looked it up several times but could not find it." However, the copy herewith transmitted was furnished the department by Admiral Fiske at my request.

This communication was not furnished me, and I did not know of its existence until long after it was written. I find upon inquiry that it was filed with the chief clerk, without my knowledge that it had been written. Although Admiral Fiske was in office daily he did not tell me that he had placed the communication on file. His article was written after the estimates for the Navy, as required by law, had been submitted, and I was left in ignorance of its existence, while Congress was considering legislation for the increase of the Navy and actually enacting legislation which has secured the best organization the Navy department has enjoyed in its history. I was greatly surprised when I learned that a communication deemed important enough now to be the subject of a Senate resolution was not considered by its author of sufficient importance for him to present in person to me, instead of depositing it, without acquainting me of his action, in the files of the Navy Department.

We were unable to find any communication such as that described in the resolution from the General Board under date of August 3, 1914, though our files contained a letter of two days previous not bearing upon the subject mentioned in your resolution. I therefore addressed the following letter to Admiral Dewey, President of the General Board:

APRIL 17, 1916.

MY DEAR ADMIRAL DEWEY: I am in receipt of a resolution from the Senate requesting me to send "a communication, dated August 3, 1914, from the General Board of the Navy, warning the Navy Department of the necessity of bringing the Navy to a state of preparedness."

I have made a careful examination of the files of the Navy Department and have not been able to find any such communication. If the General Board has such a communication of that date, won't you please send me a copy?

Sincerely, yours,

JOSEPHUS DANIELS.

Admiral DEWEY.

President of the General Board, Washington.

In response to this inquiry, I received the following letter from Admiral Dewey:

OFFICE OF THE ADMIRAL OF THE NAVY,
Washington, April 18, 1916.

MY DEAR MR. SECRETARY: I am in receipt of your letter of the 17th instant asking me to send you a communication from the General Board, dated August 3, 1914, "warning the Navy Department of the necessity of bringing the Navy to a state of preparedness."

There is no letter or recommendation from the General Board bearing the date of August 3, 1914. I find, however, that on August 1, 1914, a special meeting was called at the request of Rear Admiral Fiske, aid for Operations, to consider the withdrawal of battleships from Mexican waters to their home yards. A letter adopted at this meeting, and bearing its date, was signed by Rear Admiral Knight, senior member present, a copy of which is forwarded herewith.

You will note that this is a confidential communication, and as it bears intimately upon our policy with regard to certain foreign powers, I do not think it advisable that it should be given to the public.

Sincerely, yours,

GEORGE DEWEY.

HON. JOSEPHUS DANIELS,
Secretary of the Navy.

It will be noted that Admiral Dewey states the communication of August 1, 1914, "bears intimately upon our policy with regard to certain foreign powers," and that he does "not think it advisable that it should be given to the public." In view of this statement of Admiral Dewey and of the fact that the letter of August 1, 1914, does not refer to "the necessity of bringing the Navy to a state of preparedness," as stated in the resolution adopted by your body, it does not appear to be in the public interest to transmit the confidential communication of the General Board of August 1, 1914. No other report from the General Board touching preparedness has been received except those published as appendixes to my reports and in my hearings before the House Committee on Naval Affairs.

Respectfully,

JOSEPHUS DANIELS.

I call your attention to the evidence in this letter, which is that April 18, 1916, Admiral Dewey transmitted to you a copy of a letter dated August 1, 1914, and that you, having that letter in your possession on April 21, wrote to the Senate that it "does not refer to 'the necessity of bringing the Navy to a state of preparedness.'"

Secretary DANIELS. A letter from the General Board?

The CHAIRMAN. Yes.

I will now read the letter which you state to the Senate did not refer to preparedness.

Secretary DANIELS. Mr. Chairman, I stated that every letter that I got from the General Board and every action that I took regarded a state of preparedness. That was the only business of the Navy.

The CHAIRMAN. But you stated in this letter that it did not deal with the subject of preparedness.

Secretary DANIELS. That was its main reason, I suppose. Read the letter, or let me read it.

The CHAIRMAN (reading):

NAVAL WAR COLLEGE,
Newport, R. I., August 1, 1914.

From: Senior member present.

To: Secretary of the Navy.

Secretary DANIELS. I submit—

The CHAIRMAN (reading):

Subject: Withdrawal of battleships to home yards.

What is it?

Secretary DANIELS. Go ahead. From senior aid; that is what I meant. I said this morning that the letters that I received from Admiral Fiske were so numerous and generally so bulky and had to do with Prussianizing the Navy that I regarded them as of little importance.

The CHAIRMAN. This is a letter from Admiral Knight [reading]:
Subject: Withdrawal of battleships to home yards.

In view of the immediate danger of a great war in Europe, and in pursuance of its duties as laid down in paragraph R 167 (1) of the Navy Regulations, the General Board earnestly urges that the battleships be brought home, docked, and put in perfect readiness, with the exception of the ships actually necessary in Caribbean and Mexican waters.

(2) The present situation in Europe is absolutely without precedent; not only in the vast extent and variety of the interests involved, but in the suddenness with which it has developed.

(3) It is not clear at this moment that any interests of the United States are threatened. Yet it would be rash to assume that there may not emerge from the extraordinary situation in which so large a part of the world has become unexpectedly involved some incident or combination of incidents fraught with danger to our interests.

(4) Our commercial interests are closely interwoven with those of every one of the great powers which are apparently on the verge of war. Our trade routes pass through the waters of those powers and terminate in their ports. Our privileges and duties as neutrals may easily become matters of misunderstanding and controversy.

(5) There are said to be 300,000 United States citizens now in Europe. Many thousands of them are claimed by European powers as liable to military service, and those who find themselves abroad may at any moment be arrested and impressed. As bearing upon this point the following quotation from a press dispatch of July 31 is pertinent:

"Other Americans whose safety promises to be a serious matter are now naturalized citizens passing between Europe and the United States. Efforts may be made by European belligerents to arrest such people because of their nativity, regardless of their naturalization."

Should incidents occur such as are here forecast, they could hardly be ignored, and this is only one of the many difficulties that may arise in connection with the interests, personal and commercial, of American citizens residing or traveling abroad.

(6) Another press report from Copenhagen, of the same date, suggests another source of complications, if the report is authentic. The report is as follows:

"A German squadron, cruising off Langeland, in the Great Belt, is stopping all vessels to investigate their nationality and the destination of their cargoes."

There is so little American shipping engaged in foreign trade that such procedure in the locality mentioned is hardly likely to affect American vessels; but what has happened in one place may happen in another. The United States would hardly permit its merchant ships to be overhauled by foreign men of war when no actual state of war exists, and the spirit thus manifested by the German squadron might cause acts in violation of neutrality after war has supervened.

(7) In the event of a general European war it is probable that foreign shipping will endeavor to register under the United States flag. The shipping then needed adequate to supply the war requirements of European nations will be enormous. Many questions of neutrality, or alleged breaches of neutrality, may, in the irritable condition of public opinion at home and abroad, result in strained relations, and, notwithstanding all efforts to the contrary, may further result in the embroilment of this country with some country or countries of Europe.

(8) Again, the merchants of the United States will certainly endeavor to supply immense quantities of munitions of war, arms, ammunition, fuel, food, and other war-like supplies with the resulting accusation that the country has become a base from which war is supported against friendly nations in violation of its proclamation of neutrality.

(9) There are other possible complications—belligerents always tend to overstep their powers in executing the right of search; disputes will arise over

the definition of contraband; and accusations of unneutral service will be brought against the United States traders and foreigners doing business under the United States flag.

(10) A serious possibility for the United States connected with a great European war lies in the changes of sovereignty in possessions on or adjacent to the American continent that may result from corresponding changes in sovereignty on the continent of Europe. We can not forecast the eventualities of such a war. Many indications exist that Germany desires a foothold in American waters, and it is well known that she does not concur in the Monroe doctrine. If Great Britain is drawn into war the German fleet will be neutralized, as far as any danger from it to our interests in the intermediate future is concerned. If she is not, and if the end of the war should find Germany stronger than ever in her European position and with her fleet practically unimpaired, the temptation will be great to seize the opportunity for obtaining the position she covets on this side of the ocean. We should prepare now for the situation which would thus be created.

Now, Mr. Secretary, will you please reconcile the statement in your letter of April 21, 1916, to the United States Senate with the purport of the letter of the General Board to you, which I have just read?

Secretary DANIELS. This letter that you have just read stated—and it was not—I thought you were referring to the report of the General Board, which would come to me in the regular way. This seems a report from Newport, which is not the report of the General Board, with regard to the building program or other strengthening of the Navy. It seems that that report deals with conditions in Europe. The General Board, when it makes a report of that kind, always makes specific recommendations. This report of Admiral Knight touches upon the question of our preserving our neutrality. That summer, in fact, immediately after we entered the war, the State Department and Navy Department organized a neutrality board to look after all of our interests. The State Department named on that board a very distinguished lawyer, and I named Admiral Oliver and Admiral Knapp, and they were concerned and did a very important work on active neutrality. As soon as war broke out we went over the *Tennessee* with funds for these Americans that Admiral Knight talks about who were abroad. A board composed of the Secretary of the Treasury, the Secretary of the Navy, and other officers of the Cabinet took up every matter that could help Americans abroad, both with funds and in other ways.

I do not regard that letter from Admiral Knight as an official recommendation, otherwise than that we should bring the ships from Mexico, and should go ahead, as the General Board recommended in its report, with increasing the Navy. I did not regard the letter written by Admiral Knight from Newport as an official report of the General Board, but as a letter——

The CHAIRMAN. I would like to take that matter up afterwards. I want to finish with this letter of August 1.

Secretary DANIELS. Oh, I thought you had finished.

The CHAIRMAN. I want to ask some questions about it.

Secretary DANIELS. I thought you had finished.

The CHAIRMAN. You stated that this was not an official letter.

Secretary DANIELS. I did not regard that letter from Admiral Knight as the official action of the General Board, which they always send every year to the Secretary of the Navy with reference to what

he had done, but as a letter from Admiral Fiske and Admiral Knight expressing views.

The CHAIRMAN. The resolution of the Senate, Mr. Secretary, called for a communication dated August 3, 1914, from the General Board of the Navy, warning the Navy Department of the necessity of bringing the Navy to a state of preparedness. The first paragraph of this letter says:

In view of the immediate danger of a great war in Europe and in pursuance of its duties as laid down in paragraph R 167 (1) of the Navy Regulations, the General Board earnestly urges that the battleships be brought home, docked, and put in perfect readiness, with the exception of the ships actually in Caribbean and Mexican waters.

Secretary DANIELS. Are you through?

The CHAIRMAN. No, sir. In your letter to the Senate you made the following statement:

We were unable to find a communication such as that described in the resolution from the General Board under date of August 3, 1914, though our files contained a letter of two days previous—

That is August 1—

not bearing upon the subject mentioned in your resolution. I therefore addressed the following letter to Admiral Dewey.

How can you reconcile that?

Secretary DANIELS. I will read you Admiral Dewey's letter:

MY DEAR MR. SECRETARY: I am in receipt of your letter of the 17th instant asking me to send you a communication from the General Board.

The CHAIRMAN. I have read that.

Secretary DANIELS. I will read it again. [Reading:]

August 3, 1914, "warning the Navy Department of the necessity of bringing the Navy to a state of preparedness."

There is no letter or recommendation from the General Board bearing the date of August 3, 1914. I find, however, that on August 1, 1914, a special meeting was called at the request of Rear Admiral Fiske, aid for Operations, to consider the withdrawal of battleships from Mexican waters.

The CHAIRMAN. This is the second letter?

Secretary DANIELS. April 18.

The CHAIRMAN. Yes.

Secretary DANIELS. In response to this inquiry. You will note that this is "to consider the withdrawal of battleships from Mexican waters."

Now, Mr. Chairman, I will say this: When the situation developed at Vera Cruz with regard to sending ships in Mexican waters, when I became Secretary of the Navy, I found that the previous administration had sent battleships into Mexican waters. When we sent the whole fleet down there, there was a question. Admiral Fiske never felt they ought to be sent. When I told him that they had been ordered sent he felt that the battleships ought not to go. I had no doubt they ought to go, and they did go, and from that time on Admiral Fiske was, in May—well, in June, July, and August—was insisting that they should all come back. The matter of keeping them there was not a matter for Admiral Fiske to decide. It was a matter for the administration to decide. They were kept there in conformity with the policy of the administration. Admiral Fiske, when he was in Newport, evidently thinking still that his idea was

right, called this meeting, as Admiral Dewey says, "I find, however, a special meeting was called at his request," to take action on bringing ships from Mexican waters. Now, I suppose that that was the main purpose of this communication, which I have here before me, written by Admiral Fiske, except that the chief thing in this letter is the same thing he is always writing about, our Navy Department has no machinery for doing what a General Staff does.

The CHAIRMAN. You are not referring to the letter of August 1?

Secretary DANIELS. I am referring to the letter of Admiral Fiske.

The CHAIRMAN. I want to finish with the letter of August 1.

Secretary DANIELS. Let me see that letter, if you please.

(The letter was handed to Secretary Daniels.)

I do not recall Admiral Knight's letter, Mr. Chairman, so many things have happened since August, 1914.

The CHAIRMAN. Yes; but you recalled it when you wrote this letter of—

Secretary DANIELS. April 21; yes. The letter speaks for itself. I can not recall all these facts, but that letter speaks for itself.

The CHAIRMAN. Which letter?

Secretary DANIELS. The letter I wrote to the Senate. I wrote the facts as they were then.

The CHAIRMAN. Yes; but Mr. Secretary, the Senate called on you for two communications. The first request was for a communication dated August 3, 1914, from the General Board of the Navy warning the Navy Department of the necessity of bringing the Navy to a state of preparedness. In your letter to the Senate you state that you are unable to find any communication such as that, while in the communication from the General Board under date of August 3, 1914, "though our files contained a letter of two days previous not bearing upon the subject mentioned in your resolution."

Now, how do you reconcile that?

Secretary DANIELS. You refer to the letter of Admiral Fiske?

The CHAIRMAN. I refer to the letter of August 1 which I have just read to you. How do you reconcile your statement that that does not bear upon the subject mentioned in the resolution, which is—

Secretary DANIELS. I do not recall, Mr. Chairman. I do not recall this letter from Admiral Knight.

The CHAIRMAN. But you spoke of it yourself.

Secretary DANIELS. Yes; in my letter of April 21 I stated the facts as I understood them then.

The CHAIRMAN. But you said in your letter that the letter did not bear upon the subject mentioned in the resolution. On looking the letter over, do you not think it bore on the subject of the resolution?

Secretary DANIELS. I stated that by the authority of Admiral Dewey, who says, "There is no letter or recommendation from the General Board bearing the date of August"—

The CHAIRMAN. August 3?

Secretary DANIELS. August 3. Admiral Dewey in his letter of April 18 says that this was a letter "to consider the withdrawal of battleships from Mexican waters to their home yards."

The CHAIRMAN. As a preparation for war?

Secretary DANIELS. Yes. You will observe that this letter says, "August 1, 1914. Subject: Withdrawal of battleships to home yards."

The CHAIRMAN. Precisely; but is also specifies for what purpose they were to be withdrawn.

Secretary DANIELS. They were to be withdrawn to the home yards to be repaired and kept in shape just as soon as they could be. I can give you the time if you desire.

The CHAIRMAN. Do you not think, Mr. Secretary, that that letter was a letter that the Senate was entitled to have when it made a formal demand on you for it? Do you not think that the letter did bear upon the subject of preparedness?

Secretary DANIELS. I will answer your question by reading what Admiral Dewey said about that:

You will note that this is a confidential communication, and as it bears intimately upon our policy with regard to certain foreign powers I do not think it advisable that it should be given to the public.

In response to his statement I wrote my statement.

The CHAIRMAN. Based on that, did you give the Senate the information that you had in your files, a letter of two days previous, bearing upon the subject mentioned in their resolution?

Secretary DANIELS. I gave the Senate what you have here.

The CHAIRMAN. There appears the statement over your signature.

Secretary DANIELS. What I gave was this letter to the Senate.

The CHAIRMAN. Do you consider that you were justified in making that statement?

Secretary DANIELS. I considered, in view of Admiral Dewey's statement, that I was justified.

The CHAIRMAN. You do consider that you were justified?

Secretary DANIELS. I consider that; yes.

The CHAIRMAN. Then you consider now that this letter does not bear upon the subject of preparedness?

Secretary DANIELS. Well now, I will tell you, what Admiral Fiske was in attendance of at Newport I do not know. I never paid much attention to it.

The CHAIRMAN. I do not think that makes any great difference, does it, Mr. Secretary?

Secretary DANIELS. It makes a great difference when I get a letter on the withdrawal of battleships to home yards, which was the main purpose of the letter. That matter was taken up, and the ships were withdrawn to home yards.

The CHAIRMAN. For what purpose?

Secretary DANIELS. To be repaired. If there had never been any letter it would have been done. I do not have to wait for a letter from Newport to bring ships home to Mexico and put them in readiness. That was a matter of ordinary routing which aid to Material would attend to.

The CHAIRMAN. I will read again, Mr. Secretary, the first paragraph:

In view of the immediate danger of a great war in Europe and in pursuance of its duties as laid down in paragraph R 167 (1), of the Navy Regulations, the General Board earnestly urges that the battleships be brought home, docked, and put in perfect readiness, with the exception of the ships actually necessary in Caribbean and Mexican waters.

That was from the head of the General Board?

Secretary DANIELS. No.

The CHAIRMAN. It was a formal letter, was it not?

Secretary DANIELS. Mr. Chairman, let me answer you. The question of the ships in Mexico was one about which I had had many conferences with Admiral Fiske.

The CHAIRMAN. This is not Admiral Fiske. It is Admiral Knight.

Secretary DANIELS. It is a meeting called at the request of Admiral Fiske on the question of ships in Mexican waters, that were there by direction of the Commander in Chief of the Navy. It was not the business of Admiral Fiske or Admiral Knight or the General Board to tell the President of the United States when he should take ships away from Mexico. They were brought back as soon as the exigencies required, as determined by the Commander in Chief, who ordered them back. The aide to matériel put them in dock, made them ready for any emergency. If you wish to know the date they were brought back, I can not find it now. It was not a matter for the General Board to tell the Commander in Chief, particularly for a small branch of the General Board at Newport, what he should do about the ships in Mexico.

The CHAIRMAN. Who was at the head of the General Board?

Secretary DANIELS. Admiral Dewey.

The CHAIRMAN. And Admiral Knight was on the General Board?

Secretary DANIELS. I think he was ex officio by being president of the War College.

The CHAIRMAN. Now, you think therefore that you were justified in telling the Senate that this letter to which you yourself refer as having in your files did not bear upon the subject mentioned in the resolution? You think you were justified in telling that to Congress?

Secretary DANIELS. Yes, for this reason; because Admiral Dewey said that it was a confidential communication bearing intimately upon our policy with certain foreign powers, and as its title was "Withdrawal of battleships to home yards," and as its main purpose was to carry out neutrality conditions, which we were carrying out, I think it was at the time a proper answer.

The CHAIRMAN. Then, Mr. Secretary, if Congress asks of you a communication, a specific communication bearing on a specific matter, and you have that communication, and know that it bears upon that specific matter—

Secretary DANIELS. Oh, I say to you—

The CHAIRMAN. You feel you would be justified in telling them that it does not bear upon that matter, and is merely a confidential communication?

Secretary DANIELS. I say to you that it did not bear upon that matter primarily. The mere title of it shows you that it bore upon "Withdrawal of battleships to home yards," and the president of the General Board, Admiral Dewey, tells me that it is a confidential communication.

The CHAIRMAN. But does he tell you that it does not bear upon the resolution of Congress?

Secretary DANIELS. He writes a letter on April 18, after the resolution of Congress, and says, "I do not think it would be advisable"—

The CHAIRMAN. Precisely.

Secretary DANIELS. "To give to the public." I asked upon the advice of Admiral Dewey.

The CHAIRMAN. Could you not have told Congress it was a confidential letter and therefore not to be sent to them? Did you have

to tell them that it did not touch on the matter connected with the resolution?

Secretary DANIELS. I do not think, sir, that this letter can be said in its primary import to bear upon it.

The CHAIRMAN. To bear upon naval preparedness?

Secretary DANIELS. Listen to the letter.

The CHAIRMAN. Read the first paragraph.

Secretary DANIELS (reading). In view of the immediate danger of a great war in Europe " means should be taken, and urges that the ships be brought from the Caribbean and Mexican waters. Now, Mr. Chairman, as I have said three times, the President of the United States, the Commander in Chief, had sent those ships to Mexico. It was his business, and my business acting through him, to order them back, and I rather resented—I do now—the action of Admiral Fiske, without consultation with the Secretary of the Navy or any other responsible officer in Washington, going to Newport and writing a letter stating that they insisted that a policy should be carried out which the President of the United States had not decided to carry out. It had reference to international matters.

The CHAIRMAN. That, Mr. Secretary, might very well be, that you did not like his doing it or did not regard the matter as important, but that would not justify giving information to the Senate which is not borne out by the facts.

Secretary DANIELS. The information I gave to the Senate was based upon the letter of Admiral Dewey.

The CHAIRMAN. It does not deal with the question of whether it touched on the resolution or not.

Secretary DANIELS. Now, Mr. Chairman, there is not, as I see, in this letter a single recommendation from the General Board or from this small meeting of the board in Newport advocating any policy that would strengthen the Navy. The General Board met the next month, in October, and then is when they made their recommendations.

The CHAIRMAN. Was there anything in the resolution about strengthening the Navy? It was about preparing the Navy, was it not?

Secretary DANIELS. What is the difference?

The CHAIRMAN. Is it not preparing the Navy to get the battle-ships up North?

Secretary DANIELS. Mr. Chairman—

The CHAIRMAN. Even if you did not approve of getting them up North?

Secretary DANIELS. Wait until I get through. In using the ships in international matters, which the Commander in Chief has seen fit to use in international matters, it is his duty, and nobody else's, to say when those ships shall return. Now, the ships were returned as soon as the international conditions justified. In the first place, when they were returned they were taken up by the chief aide to matériel and repaired.

The CHAIRMAN. Then you have no further explanation to give of your letter?

Secretary DANIELS. I have given you a full explanation. That is all I have to say.

The CHAIRMAN. Now, Mr. Secretary, after you received the letter of August 1, 1914, what was the next document that you received from the professional advisers bearing on preparedness?

Secretary DANIELS. I do not recall.

The CHAIRMAN. Do you remember having an interview with Admiral Fiske on November 5, 1914?

Secretary DANIELS. I do not. I had interviews with Admiral Fiske pretty nearly every day.

The CHAIRMAN. And you do not remember anything that occurred at that particular interview?

Secretary DANIELS. I do not. At this time I would not recall the date, you know, because I can not recall the dates on everything that happened in 1914.

The CHAIRMAN. On page 555 of Admiral Fiske's autobiography, which is in evidence before this committee, it is said:

On the afternoon of November 5 Capt. Roy Smith, who was an unrecognized first assistant to me (I could not get a recognized first assistant), was in my office talking over with me my projected plan of getting the Navy Department on a war basis, when Cronan came into the office with the last draft of the paper I had written. Smith was already familiar with it, but the three of us talked it over for a few minutes, and then I took it into the Secretary. After the Secretary had read the letter he returned it to me, and I went back to my office. Smith and Cronan were still there, and I told them of the failure I had met. Then I put the letter on my desk, saying that I intended to speak to the Secretary about it again. I did not do so, however, thinking that it would do no good, and I finally filed it. The date the paper finally had when filed was November 9, 1914.

I have here a copy of the letter Admiral Fiske refers to in order to refresh your mind.

Secretary DANIELS. This was one of the 58 varieties he sent me, I suppose.

The CHAIRMAN. It is also one that was asked for by resolution of Congress.

Secretary DANIELS. Yes; I suppose he asked a Member of Congress to ask about confidential information.

The CHAIRMAN. Do you recognize the letter?

Secretary DANIELS. No; I do not. I do not know that I ever saw it. It ends this way, as everything else he wrote ended and began: "Subject: Improper organization of the Navy Department," etc. I was so wearied and tired of Admiral Fiske's wanting to Germanize the Navy that that did not interest me in the least.

The CHAIRMAN. You do not recognize it?

Secretary DANIELS. I do not recall it.

The CHAIRMAN. Do you think you have ever seen it before?

Secretary DANIELS. I may have seen it before. I suppose I saw scores of letters from Admiral Fiske, who wanted to Germanize the Navy. I read some of them, and after a while I quit—weariness of the flesh.

The CHAIRMAN. Now, in your letter of April 21, 1916, to the Senate, which is in evidence before this committee, you state:

Upon receipt of this resolution diligent search was made in the files of the department for the communications desired. That dated November 9, 1914, from Rear Admiral Fiske, is appended hereto.

So that at that time you had seen the letter?

Secretary DANIELS. I think you will see that when they asked for this letter that it could not be found. Now, I think you will find that Admiral Fiske—as a matter of fact, Mr. Chairman, if Admiral Fiske wanted to file this letter in the department what he ought to have done was to have said to me: “I have brought a letter here which I wish to file.” I never knew he had filed a letter of this character or any other character until long afterwards, and when it was brought out you see what I say here.

The CHAIRMAN. I want to read this to you what you said in your letter. Shall I go ahead or you?

Secretary DANIELS. Either you or I. One will read as well as the other.

The CHAIRMAN. I began, so I will continue. [Reading:]

That dated November 9, 1914, from Rear Admiral Fiske, is appended hereto. The chief clerk was unable to find it in his files, it having been withdrawn by an officer who “looked it up several times but could not find it.” However, the copy herewith transmitted was furnished the department by Admiral Fiske at my request.

This communication was not furnished me, and I did not know of its existence until long after it was written. I find upon inquiry that it was filed with the chief clerk without my knowledge that it had been written. Although Rear Admiral Fiske was in my office daily, he did not tell me that he had placed the communication on file. His article was written after the estimates for the Navy as required by law had been submitted, and I was left in ignorance of its existence, while Congress was considering legislation for the increase of the Navy and actually enacting legislation which has secured the best organization the Navy Department has enjoyed in its history. I was greatly surprised when I learned that a communication, deemed important enough now to be the subject of a Senate resolution, was not considered by its author of sufficient importance for him to present in person to me, instead of depositing it, without acquainting me of his action, in the files of the Navy Department.

In other words, Mr. Secretary, Admiral Fiske, on page 555 of his autobiography, says he showed you this letter of November 5, 1914; and yet in your letter of April 21, 1916, you say you never saw any such letter from Admiral Fiske. What explanation do you make of this contradiction?

Secretary DANIELS. I make this explanation, that I have no recollection of having seen this letter in my life. Admiral Fiske came in very day with some paper or other to show me. I never remember receiving this letter.

The CHAIRMAN. Then you did not remember seeing it when you wrote your letter of April 21, 1916?

Secretary DANIELS. What I wrote in that letter is exactly the fact.

The CHAIRMAN. There has been evidence of a number of important matters, such as the only copy of the plan of February 10 of war with Germany having been lost from the files of the department, for which you are responsible.

Secretary DANIELS. I was responsible?

The CHAIRMAN. The department for which you are responsible.

Secretary DANIELS. The department was responsible; yes.

The CHAIRMAN. The files of the department, for which you are responsible. I do not say that for the losing you are responsible.

Secretary DANIELS. Of course, for any matter mislaid in the department, no matter if mislaid by an employee—

The CHAIRMAN. I do not say you are responsible.

Secretary DANIELS. I was responsible.

The CHAIRMAN. In your letter of October 21, 1916, you say that Admiral Fiske's letter of November 9, 1914, had been withdrawn from the files and hence could not be found.

Secretary DANIELS. So I was informed.

The CHAIRMAN. When was it withdrawn?

Secretary DANIELS. I do not recall all the matters happening in 1915. They occurred almost a generation ago, considering the things that have happened since. What I stated in this letter is correct. I can not go into details from recollection now.

The CHAIRMAN. I think there was considerable attention called to the matter at that time. Do you know who withdrew the letter?

Secretary DANIELS. I do not recall.

The CHAIRMAN. Of what happened to it?

Secretary DANIELS. I do not recall.

The CHAIRMAN. Or when it was returned?

Secretary DANIELS. I do not recall anything at all about it except what I stated in the letter.

The CHAIRMAN. Now, I will read to you, Mr. Secretary. two letters from Capt. Sypher to Admiral Fiske, so that you may refresh your memory. The first was October 19, 1917.

Secretary DANIELS. Were those letters ever sent to me?

The CHAIRMAN. No; they were not.

Secretary DANIELS. Did I ever see them?

The CHAIRMAN. Not that I know of. They are letters from Capt. Sypher to Admiral Fiske.

Secretary DANIELS. If you are going to put into the record all of Admiral Fiske's correspondence you will have to get a good many printing presses.

The CHAIRMAN (reading):

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, October 19, 1917.

MY DEAR ADMIRAL: Upon meeting Murfin a few days ago he asked if I would have any objection to writing to you my recollection of the way a letter of yours came to be abstracted from the department files about two years ago, when you were aid for Operations and I was in the Division of Material.

I am very glad to give you what information I have. I had thought of writing to you at the time the absence of the letter was discovered, but as I was in China then and did not hear of the affair until it was all over, anything I could have said would have been several months old before it reached you.

I rather imagined also that the investigation had developed more than was published and that you had all the facts.

However, in spite of the time that has elapsed, my memory is very clear on the subject.

I was, as you know, the senior assistant to the aid for material, who was Capt. Winterhalter. Some time before his detachment he returned to his office from some other part of the department and sent for me to come in. He stated that you had written some kind of a letter reporting to the Secretary that the Navy was not in a state of preparedness for war, and he directed me to obtain him a copy of it.

I got the idea, and I think he had it, too, that the letter in some way reflected upon the condition of the material end of the Navy, which idea, as you know, was erroneous.

The knowledge of what to look for being somewhat vague, I went myself across the corridors to the file room and told Mr. Cassin there what I wanted. It took some search to find it, as I could give no very definite information as to either the subject or the date.

I returned to the file room, and later Mr. Cassin produced your letter. It was much shorter than Madison's paper, not more than two sheets of thin paper.

I glanced at it sufficiently to note that it did not refer to matériel, and handed it to Capt. Winterhalter, with a remark to that effect.

He read it, refolded it, and put it in his pocket, which is the last I saw of it.

Some time later Mr. Cassin asked to have the letter returned to the files. I asked Capt. Winterhalter for it, and he gave me permission to search his desk to see if I could find it.

I found the Madison paper, which Mr. Cassin said he did not need, as he had another copy, but I could not find your letter.

Several times later inquiries were received from the file room for the letter, but Capt. Winterhalter could not remember what he had done with it, although he suggested that he had probably left it at the General Board.

Just before he was detached, and while he was turning things over to me, I spoke of it again, and asked if he would keep a lookout for it, while packing his things at home, but he stated that he could not find it.

I am positive that it was not left in the office, for after I took charge I cleared up and sent to files or elsewhere a considerable accumulation of papers, and I kept that particular one in mind, as I was a little annoyed at having taken it and not being able to put it back.

When I was chief of staff to Admiral Winterhalter on the China station, and read in the papers that the Secretary had reported to the Naval Committee that the officer who had taken the letter had misplaced it, and had therefore been unable to return it, I reminded the admiral of the incident, but neither of us made any comment.

I have no doubt that the main facts in the above came out in the investigation, but I am glad to be able to fill in the details if they are of interest to you.

I hope you are keeping well and in your customary good spirits. It must be very gratifying to see how time has proved so many of your contentions.

Sincerely, yours,

J. H. SYPHER.

Then, the letter of October 27, 1917. [Reading:]

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, October 27, 1917.

MY DEAR ADMIRAL: I have just been to the file room to find out if there is any record of your letter being charged to me; and if so, when.

I saw Mr. Cassin, who remembered my getting the letter, but he surprised me by saying that it had subsequently turned up and was now in the files.

I asked to see it, and at once recognized it as the letter I had handed to Admiral Winterhalter, and as I read it I recalled it still more.

Mr. Cassin was apparently somewhat reluctant to talk on the subject, and could give me no information other than that he remembered my getting the letter, and that some time after the search had been made the letter had "turned up." I noted, however, that it had a receiving stamp on it dated "September 13, 1916." As the letter itself was now on file, there was no "replacement slip" to show when or by whom it had been taken out.

On the first page of the printed paper you inclosed and which I return herewith, the chief clerk is quoted as referring to the officer who had withdrawn the letter, so I went to the chief clerk to find out if I were the officer who was meant.

Mr. Curtis was absent in California, but his assistant, Mr. Moses, told me that it was I who was meant by that statement. I asked how he knew, and he said that when they were looking for the letter it was found to be charged to me on the replacement slip. This was a second confirmation—Mr. Cassin being the first—of my own recollection of the identity of the letter I handed to Capt. Winterhalter. I am equally certain that he placed it in his pocket after reading it.

As to the date when this occurred, I can only make an approximation. It was still in my mind as "unfinished business" when Admiral Winterhalter left

the department early in May, 1915, although it had occurred some time before that. I should say that I got the letter two or three months before he left, or some time about the latter part of February.

He was detached May 15, but I think was not at the department for several days preceding that date.

I have to rectify the statement in my previous letter to you wherein I said that your letter was so much shorter than the Madison paper that I remembered it as being only a couple of pages long. Upon seeing it and recognizing it just now I say that it is actually four pages.

I have made inquiry as to when Cronan may be expected, and it appears that while there is a slight chance of his coming on a transport due at San Francisco the last part of this month, the probabilities are that he will come in his own ship so as to arrive about the middle of December.

I shall endeavor to keep in touch with his ship's movements and will let you know if there is any change.

Please give my kindest regards to Mr. Fiske and your daughter, in which I am joined by Mrs. Sypher, and assuring you that I am always glad to be of any service you may require, I am,

Very sincerely, yours,

J. H. SYPHER.

Both of these letters Admiral Fiske has certified are true copies of letters to him. I will also put the letter of November 9 referred to in the record, but I will not read it now. I would like to have that in at the present time.

(The letter referred to is here printed in the record, as follows:)

NAVY DEPARTMENT,
Washington, November 9, 1914.

From: Aid for Operations.

To: Secretary of the Navy.

Subject: The Navy's unpreparedness for war.

1. I beg leave, respectfully but urgently, to request the attention of the Secretary to the fact that the United States Navy is unprepared for war.

2. It is true that the United States does not expect to get into war in the near future and is not preparing for war. It is true that nothing could be more unwise than for the country or the Navy itself to become nervous about the condition of war into which most of the civilized world has been plunged. It is true that there is no cause for excitement, and it is also true that even the most timid person can give no specific reason for anticipating war with any given country, at any given time.

3. It is also true, however, that the mere absence of actual certainty of coming war is no reason for neglecting preparation. Some persons assume that a disposition to make preparation evidences a state of alarm in the mind of the person who proposes to make preparation. Yet such an assumption is entirely illogical. Wise men and wise nations show their wisdom in no better way than by taking wise precautions against possible dangers. The prevalence of smallpox induces wise people to guard their families against it by vaccination. They do not expect to be attacked by smallpox, but, nevertheless, they think it wise to take precautions against it.

4. Because of the position which I have occupied for more than a year and a half as senior adviser to the Secretary of the Navy, it has been my duty to keep myself informed, so far as I have been able, of the condition of the various nations in relation to war, the effects of that condition upon us, the strength of our Navy compared with other navies, and the degree of probability of our being dragged into war.

5. The present condition all over the world is one of general upheaval. The state of unstable equilibrium which the great powers maintained for many years with great skill and care has been at last upset. A conflict is going on very few results of which can be foretold. One thing probably can be foretold, however. I mean that it can be foretold that the conflict will be violent and also will be long, involving other countries than those now taking part, and followed, even after the war as present outlined has been ended, by a series of more or less violent readjustments of boundaries, insular possessions, treaties, and agreements of every kind.

other countries, and periods of tension between this Government and others, periods like that preceding the Spanish War, needing only a casualty like the blowing up of the Maine to precipitate a conflict.

7. In my opinion, as your professional adviser, and in the opinion of every naval officer with whom I have talked, the United States is in danger of being drawn into war and will continue to be in danger for several years. And when I say war, I do not mean war of the kind that we had with Spain, but war with a great power, carried on in the same ruthless spirit and in the same whole-sale manner as that which pervades the fighting in Europe now. It is true that I can not specify the country with which war is most probable nor the time nor the cause. But my studies of wars in the past and my observations of conditions at the present time convince me that if this country avoids war during the next five years it will be accomplished only by a happy combination of high diplomatic skill and rare good fortune.

8. Would it be wise to base all our hopes of national safety on such a frail foundation? Would it be use to close our eyes to the dangers that confront us? Would it not be wiser to look the dangers clearly in the face and take reasonable precaution to avert them?

9. Comparing our Navy with the navies which we may have to meet in war, I find that our Navy is unprepared in three ways:

10. First, it has an insufficient number of officers and enlisted men. The number of officers can not be increased—that is, the number of suitable officers—because it takes four years to get a midshipman through the academy and several years afterwards to train him. But the number of enlisted men can be increased, and very quickly. It has been said that in time of war we could add to our enlisted personnel from the Naval Reserve and the Naval Militia. To my mind, this is a visionary notion, with no basis of fact to rest upon. We have been working to get a Naval Reserve and a Naval Militia for more than 30 years; scores of expedients have been tried, and the only result has been no Naval Reserves at all and less than 7,000 incompletely trained militia. Possibly we may do better with the Naval Reserve in the future than in the past, but only possibly, not probably. All reasonable expectation for the future is based, and must be based, on the experience of the past, and the experience of the past shows us that to place dependence on the Naval Militia and the Naval Reserve is to place dependence on hope, not reasonable expectation. The only men we can depend upon for naval work on board our ships are men who are enlisted regularly, who have been trained on board our ships, and wear the naval uniform. But even if we would expect reasonably to get a Naval Reserve in the future, the fact remains that we want enlisted men right now. To man the ships which should be used in war we need 10,000 more men.

11. The second way in which I find our Navy unprepared is in departmental organization. Our ships are well organized, and pretty well drilled; the fleets are well organized, though not very well drilled, but the department itself is neither organized nor drilled in a military way. Perhaps this is nobody's fault, and may be attributed to the fact that our Navy has never had to fight a serious enemy—certainly not in 100 years. The people of the country have naturally devoted their energy along the paths of most obvious profit, and have not been confronted with any obvious military dangers. But in my opinion there is an obvious military danger at present, and the Navy Department should be organized to meet it. The organization, which other navies and all armies of great power employ to meet this danger is known, in English, by the phrase, "general staff." In different languages, of course, the words are different; but the meaning is the same. In Great Britain it is called the "board of admiralty." This "general staff" has as its first duty preparation for war, and as its second duty, the conduct of war when war comes. In making preparation for war, the "general staff" makes war plans. These war plans are of two kinds, general and specific. The general plans are simply analyses of what should be the general conduct of the Navy in case of war; and the specific plans are plans in which the general plans are worked out in detail. Besides these general and specific plans, however, the "general staff" devises means whereby information regarding these general and specific plans shall be given to the various executive bureaus and divisions, corrected up to

date; and whereby the various executive bureaux and divisions shall always be compelled to be ready to carry the various parts of those plans into immediate effect.

12. In directing the conduct of the war the general staff, under the direction of the minister, sees to it that all information is kept up to date and supplied to the various commanders, and that all machinery for carrying out their decisions is kept in working order.

13. Our Navy Department has no machinery for doing what a general staff does. The closest approach to it is the General Board, which as part of its numerous duties, "shall devise measures and plans for the effective preparation and maintenance of the fleet for war," and "shall prepare and submit to the Secretary of the Navy plans of campaign," etc. The General Board does carry out these duties, but the plans that it makes are general and elementary. It exists entirely as an advisory board to the Secretary of the Navy. It is highly valuable; but, as its name indicates, it is only a general board. It does hardly 1 per cent of the duties that a general staff would do. Having no executive authority and no responsibility, and being called upon to do a great variety of work, it has not the time to prepare specific plans, and has no means to see that even its general plans are ever carried out. If we compare our General Board with the general staff of any other country, or with the Admiralty of Great Britain, and when we see what those general staffs have been accomplishing during the past three months, we must become convinced that unless we go on the theory that we shall always have peace we shall be whipped if we ever are brought into war with any one of the great naval powers of Europe or Asia. We shall be like the lawyer who has not prepared his case when pitted against the lawyer who has prepared his case. We shall be as the French were before the Germans in 1870.

14. The performance of the German Army during the last three months is greatest triumph of the human mind and human will that has ever been accomplished. It is not the triumph of one mind or one will, but the triumph of several million minds and several million wills, coordinated by a general staff with a degree of perfection that the world has never before seen. This pace being set, any navy not provided with a general staff is a navy not provided with the most modern improvements.

15. The third way in which I find our Navy deficient is in training. This deficiency in training is not due to lack of spirit or ability but to a combination of the two preceding causes; that is, to insufficient personnel and lack of departmental organization, to which must be added lack of small ships. I mean that because we have had not enough small ships to do work on the coasts of Haiti, San Domingo, and Mexico, because our ships have been insufficiently manned, and because the Navy Department has had no general staff which would devise and carry out a progressive system of training, lack of progressive training has resulted. When I say lack of progressive training I mean lack of training such as the Germans and other nations have. I mean lack of training that secures a high degree of skill. If we are forced into war with a navy like Germany's or England's or Japan's our training should be at least as good as theirs; or rather our skill should be. It is impossible for me or for anybody to compare exactly the skill of our Navy with the skill of other navies; but, on the theory that cause produces effect, we must admit that we have not had nearly so good a system to produce skill as other navies have. The developing of skill in the navies and armies of the other great powers is carried out with a vigor and persistency that we can not approach, and has been directed by an organized intelligence that certainly has no superior and probably no equal in any other branch of human effort.

16. The subject of the improper organization of our Navy Department was exhaustively analyzed by the Moody Board and afterwards by the Swift Board in 1909. Certain recommendations were made to remedy the evils that they found. These recommendations have not been carried out. They were, in effect, to establish a general staff, though the words general staff were not used. In my opinion, the failure to adopt those recommendations was serious, and will invite disaster if a great war comes.

B. A. FISKE.

The CHAIRMAN. Now, do those letters refresh your memory at all in this matter?

The CHAIRMAN. They have something to do with your statement, do they not, about the letters having been taken out of your files?

Secretary DANIELS. I think he says they were taken out of the files, and I think he says they were returned to the files, but I never put them in the files, I never ordered them in the files, and I never took them out of the files.

The CHAIRMAN. You stated:

This communication was not furnished me and I did not know of its existence until long after it was written. I find upon inquiry that it was filed with the chief clerk, without my knowledge that it had been written. Although Rear Admiral Fiske was in my office daily, he did not tell me that he had placed the communication on file. His article was written after the estimates for the Navy, as required by law, had been submitted, and I was left in ignorance of its existence, while Congress was considering legislation for the increase of the Navy and actually enacting legislation which has secured the best organization the Navy Department has enjoyed in its history. I was greatly surprised when I learned that a communication, deemed important enough now to be the subject of a Senate resolution, was not considered by its author of sufficient importance for him to present in person to me, instead of depositing it, without acquainting me of his action in the files of the Navy Department.

Secretary DANIELS. Of course, Mr. Chairman, it may be very well to put in all of this ancient history of grievances and grudges and conditions, but I do not see what it has got to do with the question of the Navy Department's conduct of the war.

The CHAIRMAN. I think it has to do with the question of preparedness in the Navy, Mr. Secretary, and as to whether you were directly warned by your responsible assistants.

Secretary DANIELS. I have no objection to all the grievances and grudges of officers I have had to dismiss from important duty because they failed going into the record.

The CHAIRMAN. Do you not think, Mr. Secretary, in the light of the General Board's letter of warning to you, dated August 1, 1914, and of Admiral Fiske's letter to you on unpreparedness in the Navy of November 9, 1914, that you had early advice from your professional advisers of the need of preparing in case of war with the Central Powers?

Secretary DANIELS. And if you will read my estimates of October 15, 1914, you will see we were making provision.

The CHAIRMAN. And you think that you received adequate warning, do you not, from your professional advisers?

Secretary DANIELS. I did not need any warning.

The CHAIRMAN. No; but you received it, did you not?

Secretary DANIELS. I do not have any recollection of when I received those letters.

The CHAIRMAN. But you would not say you did not receive them?

Secretary DANIELS. If Admiral Fiske had said that he had sent 700 letters about reorganizing the Navy, I would not deny it. He sent them in in abundance. He brought them in and sent them in.

The CHAIRMAN. But this letter is an important letter, is it not?

Secretary DANIELS. Which one—from Fiske?

The CHAIRMAN. Yes.

Secretary DANIELS. I do not regard it as any more important than his other 58 varieties.

The CHAIRMAN. It was a letter dealing directly with preparedness sent to you by the Chief of Naval Operations.

Secretary DANIELS. Not the chief.

The CHAIRMAN. By aid to Naval Operations, who was the head of the department?

Secretary DANIELS. At that time he was chiefly directing propaganda for reorganization and making trouble, and therefore I gave very little attention to his demands to reorganize the Navy.

The CHAIRMAN. The committee will stand adjourned until 10 o'clock to-morrow morning.

(Thereupon, at 5 o'clock p. m., the committee adjourned until to-morrow, Wednesday, May 26, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

WEDNESDAY, MAY 26, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 o'clock a. m. in room 235, Senate Office Building, Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Keyes, and Pittman.

TESTIMONY OF HON. JOSEPHUS DANIELS, SECRETARY OF THE NAVY—Resumed.

The CHAIRMAN. Mr. Secretary, will you proceed?

Secretary DANIELS. Mr. Chairman, some days ago when we were discussing the North Sea barrage, I said that I would put a map in the hearing with an explanation. I have it here with me.

(The matter referred to by Secretary Daniels, together with the map referred to, is here printed in the record, as follows:)

NORTHERN BARRAGE.

The northern barrage was by far the greatest mine field that was ever planted. There were not in the whole history of mine warfare previous to the great war as many mines used in the world as were employed in this effective scheme to hem in the German submarine.

The United States planted 56,611 mines and the British 13,652, making a total of 70,263, of which the American portion constituted 80.5 per cent and the British 19.5 per cent.

In longitude the field extended through a distance of 230 miles; its average width was 20 miles; the total area of the barrage 4,600 square miles.

As we were not permitted by international law to mine closer to the neutral Norwegian coast than the 3-mile limit, a thoroughfare of that width for our enemies would have been left had not the Norwegian Government finally protected her neutrality by mining around the island of Udsire using for this purpose 700 mines. This completely closed the North Sea from the Norwegian coast westward to within 10 miles of the Orkney Islands. This gap of 10 miles was left as a passageway for our own vessels and the passage of enemy submarines was to be prevented by a close patrol.

In order to lay the mines it was necessary for the United States to construct a fleet of special mine layers, some of which were capable of carrying as many as 860 mines. Ten of these mine layers were engaged in constructing the northern barrage and made 13 separate trips or expeditions, planting on each trip an average of 4,350 mines in approximately four hours' time.

All of the mines planted by the American Navy were manufactured in the United States, transported to Scotland by a special fleet of 26 mine carriers, and were then assembled at the American mine bases before being loaded into the mine layers.

In order to prevent enemy submarines diving beneath the barrage and thus gaining access to the Atlantic Ocean, it was necessary to plant mines at the

greatest depth to which it was believed submarines would dive. This was accomplished by laying mines at four different depths, 45 feet, 80 feet, 160 feet, and 240 feet.

By means of a highly ingenious contrivance which had been developed a few weeks after the United States entered the war, it was not necessary for a vessel to actually strike the mine in order to explode it. Therefore, by laying mines at the above levels they served to form a complete wall extending to a depth of 240 feet thus making it impossible for a submarine to pass through the barrage at any depth between these limits without encountering the danger of being destroyed by a mine.

Since an enemy knowing the barrage to exist and being forced to cross it would prefer to risk such a passage on the surface where the chances to save themselves would be greatest, the mines, at the depths of 45 and 80 feet were sown more thickly than those at the lower level. This increased density is shown graphically in the accompanying chart.

Secretary DANIELS. A day or two ago you asked me a question about the number of ships, how many of those of the three-year program did we use during the war?

The CHAIRMAN. Yes.

Secretary DANIELS. Here is a statement containing a table which gives that information as to destroyers and other antisubmarine craft that we put into commission during the war. The table is as follows:

Authorized.	Prior to 3-year program.	3-year program.	Subsequent to 3-year program.	Totals.
Destroyers.....	6	26	12	44
Submarines.....	28	6	4	38
Eagle boats.....			3	3
Submarine chasers.....			408	408
Mine sweepers.....			17	17
Grand total.....				519

Of the submarine chasers 100 were delivered to and commissioned by the French. The first 20 destroyers of the 3-year program authorized to be contracted for were advertised the day the bill passed and contracted for in the fall of 1916. The average prewar time of completing destroyers from time of contract was 24.8 months. Had this held during the war we would have completed none of the 3-year program destroyers and but 6 new destroyers in all during the war period instead of 44. Production was increasing rapidly at the time of the armistice, having reached the rate of about 10 a month. For 1919 the deliveries anticipated prior to the armistice were 12 to 13 per month. After the armistice overtime was stopped and work slowed to an economical rate, but even so the deliveries during the year averaged 9 per month.

I wish to add to that a statement published in the Fore River Log, by the Bethlehem Shipbuilding Co., headed "Last of 71 destroyers delivered to Charlestown Navy Yard," in which is quoted a statement that I made at Squantum when they began the work:

We have the medicine for the Kaiser. You gentlemen are the druggists—you are compounding the medicine. You must work every minute until we have the medicine prepared. Hand these destroyers over to the Navy as soon as you can, and they will finish the job.

This article is a statement of President Powell of the work done at Quincy and Squantum, where most of our destroyers were built. That answers the question you asked me the other day.

On Monday, May 17, the destroyer *Osborne*, the last hull to be launched at Squantum Works and the last of 71 destroyers which have been built by the Fore River Plant, was delivered to the United States Navy Yard at Charlestown, Mass. The Fore River plant is the only yard in the country to deliver every boat of its contract, amounting to over \$100,000,000.

The beginning of the building program started on June 18, 1917, with the laying of the keel of the destroyer *Little*, and from that time on previous records began to be broken. Five keels were laid in one day; two destroyers passed their tests the same day, and were turned over to the Government within 32 hours of each other; four boats were launched in 25 hours, and during that time another destroyer was delivered to the Government. One riveting crew in nine hours drove 2,805 three-fourth-inch flush rivets in an oil-tight bulkhead subject to an air test. That is driving rivets at the rate of more than five per minute.

Long before the hulls were ready for trial trips, it was found necessary to organize regular trial-trip crew. Men who were the best mechanics in the yard were selected to do the "trick," and they showed the world that Fore River could build destroyers fast and build them well. The 36 destroyers built at the Quincy Works went out on 160 trial trips; 20 of which were regular standardization, full-power runs off Rockland; 44 were official trips; and 90 were builders' trials. Many of these trials were made under the most trying conditions, both extreme heat and cold. One remarkable thing was the trial of two destroyers in one day by the same crew, for on August 14, 1918, two boats left Quincy the same day on trial trips.

Production kept growing faster and faster during the war, and on the 4th of May, 1918, the keel of the *Mahan* was laid with the intention of smashing the record time of building a destroyer, which at that time was 26 months. On the 4th of August the *Mahan* was launched, and on the 24th of October it was delivered to the Navy in the record time of 174 days.

On Tuesday, September 23, 1919, the *Turner*, the thirty-sixth and last destroyer of the Quincy Works contract, was delivered to the Navy Department. These 36 destroyers were built and delivered in the remarkable period of 27 months and 5 days, which is all the more wonderful when we realize that the time taken to build one destroyer has been usually 26 months.

The following Fore River destroyers built on this contract saw service abroad: *Little*, *Kimberly*, *Sigourney*, *Gregory*, *Stringham*, *Dyer*, *Colhoun*, *Bell*, *Stribling*, *Murray*, *Israel*, *Luce*, *Mauzy*, and *Lansdale*.

Vice President J. W. Powell, responding to the call for more destroyers, planned the Squantum Works to build 35 destroyers, and he also established a turbine shop at Buffalo, N. Y., and a boiler shop at Providence, R. I. Other independent concerns enlarged their plants to care for the additional contracts for outfitting these boats. Works were started at Squantum on October 7, 1917, and hull fabrication was begun on January 14, 1918. The first keel was laid on April 20, 1919. On July 18 the first destroyer at Squantum, the *Delphy*, was launched. The organization of a working force at this yard was done in a wonderful manner. The best men from the Quincy yard were sent to Squantum, and there was developed from an army of clerks, salesmen, and other nonmechanics a crew of workmen who at once entered into the spirit of production. On September 9, 1919, the keel of the destroyer *Reid* was laid, and this boat was completely built and delivered in the unparalleled time of 45½ working days. This world's record probably received more publicity than any other shipbuilding feat ever performed.

The trial-trip crew at Squantum made some surprising records, the best of which was the trial of the *Moody* on September 19, 1919. Starting out at 7.06 a. m., every test, including the four-hour run, was finished successfully, and at 1.29 p. m. the ship was docked.

Already the turbine plant at Buffalo, N. Y., and the boiler and condenser plant at Providence, R. I., have been returned to the Government, and the

\$10,000,000 destroyer plant at Squantum will be turned over to the Government on June 1, 1920.

The 25,810 employees of the Fore River and Squantum Works may look back with pride that they had a part in making the Fore River plant the first to respond and the first to deliver destroyers to the United States. The Secretary of the Navy, in speaking to the men of the plant during the war, said: "We have the medicine for the Kaiser. You gentlemen are the druggists—you are compounding the medicine. You must work every minute until we have the medicine prepared. Hand these destroyers over to the Navy as soon as you can and they will finish the job." We did the job for him.

The CHAIRMAN. Who prepared this statement about the destroyers and other boats, submarine chasers, and mine sweepers, etc.?

Secretary DANIELS. This was prepared in my office.

The CHAIRMAN. It is authoritative?

Secretary DANIELS. It is authoritative. The figures were obtained from the Bureau of Construction and Repair.

The CHAIRMAN. Of the ships that were provided for in the three-year program, there were no battleships that were completed and used in the war, were there?

Secretary DANIELS. As soon as the war came on the need for smaller craft was so great that the General Board and the Chief of Operations and our allied forces abroad recommended that we do not press the building of the big ships, but press the building of small ships.

The CHAIRMAN. And quite properly.

Secretary DANIELS. Quite properly.

The CHAIRMAN. And there were no battleships completed that were laid down, then, during the war?

Secretary DANIELS. None except those that had gone so far that we ought to have finished them.

The CHAIRMAN. None were completed for use in the war?

Secretary DANIELS. I think that none of those authorized in 1916 were completed; no.

The CHAIRMAN. No?

Secretary DANIELS. No.

The CHAIRMAN. And no battle cruisers?

Secretary DANIELS. No.

The CHAIRMAN. And no other cruisers?

Secretary DANIELS. At the request and suggestion of all the authorities, we—

The CHAIRMAN. You stated here that the 26 destroyers that were provided for in the three-year program were finished during the war?

Secretary DANIELS. That statement is correct.

The CHAIRMAN. How many of these 26 took part in the war in the war zone?

Secretary DANIELS. I should have to get you a statement of that. Mr. Chairman. I gave it to you the other day in the hearings. I will get you that statement.

The CHAIRMAN. I think it was eight, was it not?

Secretary DANIELS. I do not recall the number. It is in my statement, which I can refer to and give you.

The CHAIRMAN. Will you give me that information and put it at this place in the record?

Secretary DANIELS. Yes, sir.

advance of the three-year program, were the *Shaw, Caldwell, Craven, Connor, Stockton, and Manley*.

The 26 destroyers completed during the war period, which were part of the three-year period, were the following: *Wickes, Philip, Woolsey, Erans, Little, Kimberly, Sigourney, Gregory, Stringham, Dyer, Colhoun, Stevens, McKee, Fairfax, Taylor, Bell, Stribling, Murray, Israel, Luce, Maury, Lansdale, Mahan, Schley, Champlin, and Robinson*.

The 12 destroyers completed during the war period, from special appropriations, were the following: *Kathbourne, Talbot, Waters, Dent, Dorsey, Lea, Lamberton, Radford, Montgomery, Breese, Boggs, and Ward*.

The 28 submarines completed during the war period, which were authorized prior to the three-year program, were the following: *L-5, L-6, L-7, L-8, M-1, N-1, N-2, N-3, N-4, N-5, N-6, N-7, O-1, O-2, O-3, O-4, O-5, O-6, O-7, O-8, O-9, O-10, O-11, O-12, O-13, O-14, O-15, and O-16*.

The six submarines completed during the war period, which were a part of the three-year program, were the following: *R-15, R-16, R-17, R-18, R-19, and R-20*.

The four submarines completed during the war period from special appropriations subsequent to the three-year program were the following: *H-4, H-5, H-6, and H-7*.

Information as to the war-zone activities of all of the above is given in the table in my testimony of the — day of May, 1920.

The CHAIRMAN. And of submarines there were six, according to this statement, provided in the three-year program, that were finished during the war.

Secretary DANIELS. That statement is correct.

The CHAIRMAN. Were these submarines used in the war zone during the war?

Secretary DANIELS. I will give you that statement.

The CHAIRMAN. Will you also give me that statement at this point in the record?

Secretary DANIELS. I think it is already in Admiral McKean's statement, but I will look it up.

(The answer to the above question will be found in the statement inserted above.)

The CHAIRMAN. I see you also give the figures of vessels of this sort that were provided for subsequent to the three-year program?

Secretary DANIEL. Yes; very properly, because they took the place of the large cruisers that we suspended work on.

The CHAIRMAN. Can you give the total expenditures on destroyers from the beginning of the war on?

Secretary DANIELS. I will get that.

The CHAIRMAN. And the figures also on submarines and Eagle boats?

Secretary DANIELS. I will furnish it.

The CHAIRMAN. To be placed at this point in the record?

Secretary DANIELS. I will furnish all that; yes, sir.

(The following statement was subsequently submitted by Secretary Daniels:)

The expenditures on 331 destroyers built, or building at the beginning of the war and undertaken after the beginning of the war over the period from April 1, 1917, to April 1, 1920, have been, in round figures, \$382,000,000.

Similar expenditures on 156 submarines are \$90,000,000.

The similar expenditures on 60 Eagle boats completed and 52 begun but canceled after the armistice were \$40,000,000.

The CHAIRMAN. You said that three Eagle boats were in commission?

Secretary DANIELS. Yes.

The CHAIRMAN. Did these Eagle boats ever get as far as the Atlantic?

Secretary DANIELS. I think Admiral McKean gave you that, but I will get that information. That was a matter handled by Operations. I will get you the information.

The CHAIRMAN. At any rate, they did not get to Europe, did they?

Secretary DANIELS. I will get you the information as to that.

(The following statement was subsequently furnished by Secretary Daniels:)

The three Eagle boats above mentioned reached Europe May 2, 1919. They served in the White Sea, the Black Sea, and the Mediterranean, and two returned to the United States February 15, 1920. The Eagle No. 1 is now in the Mediterranean.

The CHAIRMAN. Now, Mr. Secretary, in his testimony Admiral Badger, on page 2700, spoke of the General Board's letter to the Secretary of the Navy of November 17, 1914. This was the letter that had to do with the recommendation of a personnel of 19,600, which was not given to Congress in its initial form [reading]:

39. The General Board can not too strongly urge upon the department the necessity of using its best endeavors to carry out the repeated recommendations of the General Board made from year to year, to provide the fleet with a personnel, active list and trained reserve, equal to the manning of the fleet for war.

40. In the opinion of the General Board this is a matter of even more serious import than that of construction, for it can not be too often repeated that ships without a trained personnel to man and fight them are useless for the purposes of war. And the training needed for the purpose is long and arduous, and can not be done after the outbreak of war. This must have been provided for long previous to the beginning of hostilities; and any ship of the fleet found at the outbreak of war without provision having been made for its manning by officers and men trained for service can be counted as only a useless mass of steel, whose existence leads only to a false sense of security.

Admiral Badger states that this was not sent to Congress, and that Congress was not informed.

Secretary DANIELS. You mean what you have read was not sent to Congress?

The CHAIRMAN. The recommendation of 19,600.

Secretary DANIELS. But all that you have read was sent to Congress. If you will look in my annual report, in Appendix A, the report for 1914, you will find everything you have read was in the report that went to Congress.

The CHAIRMAN. I think it was the figures, 19,600, were not sent.

Secretary DANIELS. Yes; that is correct.

You will find what you have read on page 68 of the annual report of the Secretary of the Navy for 1914, Appendix A. All you have read is in that report, which was published at that time.

The CHAIRMAN. On page 2702 the following appears:

The CHAIRMAN. And the report, with the numerical increase in it, was not published, was it?

Admiral BADGER. It was never sent in.

That refers to the numerical increase suggested?

Secretary DANIELS. I think that is what he referred to.

The CHAIRMAN. 1914.

Secretary DANIELS. What was the question you asked me? Please read the question.

The stenographer read the question as follows:

The CHAIRMAN. Can you explain to the committee why this vital recommendation for the 19,600 increase was not given to Congress?

The CHAIRMAN. You have already taken up that matter in your statement, and I would like to have you state.

Secretary DANIELS. It was not a recommendation at all. It never came to me as a recommendation, but I will give you all the facts in connection with it.

The CHAIRMAN. You have already given them in your statement, so give them as briefly as possible.

Secretary DANIELS. I am going to give them very briefly, in five minutes.

The CHAIRMAN. Very well.

Secretary DANIELS. Mr. Chairman, you have heard retailed here gossip as to some communication I held with the General Board of the Navy in 1914, and I think it was Admiral Fiske who undertook to convey the impression that I had directed the General Board to cut out certain recommendations as to increase of personnel. Such an impression would be injustice to the General Board as well as to me. Not once, but at least twice, or probably three times, I have suggested to the General Board the omission of certain specific recommendations in their reports which would be printed as appendices in my annual reports. In each case I suggested that those particular recommendations not to be published should be contained in communications for the study of the Secretary of the Navy and of Operations. It is manifestly proper that certain of their recommendations should be confidential. Most of them are. My relations with the General Board have been such as to justify the utmost free and confidential exchange of views. When an ex-officio member of the General Board so far forgets his sense of the proprieties as to gossip about those communications he publishes his unfitness for membership on that board and loses his usefulness.

In the latter part of 1914 the Bureau of Navigation had succeeded for the first time in years in securing the enlistment authorized by law. My opinion was that the big immediate and difficult duty was to concentrate on getting appropriations for capital and other fighting ships and on teaching and training the more than 50,000 men then enlisted, and in keeping that strength up to that number authorized before I should ask an increase. I am frank to say that at that time I did not believe the spirit of the country and Congress was in a mood to vote the money that would be required for a large increase and also the money for two dreadnaughts. An increase of 20,000 men, as I am informed by Supplies and Accounts, would necessitate an additional appropriation of \$16,000,000.

I know it would be extremely difficult to secure the money for large increase in personnel and for the new ships the General Board felt necessary and the number for which I had estimated. As obtaining

money for new dreadnaughts was paramount, and as Navigation reported we had sufficient men to man the best ships, I did not ask the money for the increase of men, but stressed the fight—and it was a hard one—to secure enough money for the new dreadnaughts and other fighting ships. The recommendation of the General Board as forwarded to me and published as an appendix to my report (see Appendix A, p. 68, Report of the Secretary of the Navy, 1914) was in these words:

43. In view of all that has been herein set forth, the General Board recommends:

(a) That legislation be asked for providing an active personnel, officers and enlisted force, capable of keeping in full commission all battleships under 15 years of age from date of authorization, all destroyers and submarines under 12 years of age from authorization, half of the cruisers and all gunboats and all the necessary auxiliaries that go with the active fleet; and of furnishing nucleus crews for all ships in the Navy that would be used in time of war, and the necessary men for the training and other shore stations.

(b) That the general policy be adopted of expanding the active personnel with the expansion of the fleet in the proportions indicated in (a).

(c) That immediate steps be taken to form a national naval reserve of trained officers and men, and that this work be pushed until this reserve, in connection with the Naval Militia, has reached the point where, combined with the active list, it will be possible to fully man the entire fleet with war complements and furnish 10 per cent additional for casualties.

(d) That the Naval Militia be expanded in number and that the department encourage the continuance and improvement of its training to the end that it may still more efficiently serve to reinforce the regular service at need.

GEORGE DEWEY.

I suggested to the board that it stress the building program and lay down the general principles of personnel omitting any particular number of increase in that year. The Chief of the Bureau of Navigation recommended as complements for the ships enough men in his judgment—and that was his duty prescribed by law—for manning the ships of the Navy in accordance with the recommendation of the General Board. The board never then or since intimated to me that my suggestion was not entirely proper, and I published the report as it was forwarded to me. It was never until I had refused to approve Admiral Fiske's plea to reorganize the Navy Department on plans "made in Germany," patterned after the Von Tirpitz method, and had not yielded to his repeated solicitations to make him commander in chief of the Atlantic Fleet, that this comparatively unimportant confidential talk with the General Board was given currency and an airing in Congress long before the United States entered the World War. Inasmuch as I recommended an increase in 1915 and Congress gave the large increase in August, 1916, larger than the Bureau of Navigation could enlist before we entered the war, the condition of a few thousand men, more or less, in 1914, would have exerted no perceptible influence in a great war in which we enlisted and enrolled more than 500,000 men in the Navy. To hark back to this warmed-over criticism serves only to show that this investigation, limited by the resolution to the part the Navy played in the World War, is regarded by some as merely an opportunity of airing ancient grievances without contributing anything of value to lessons taught by the World War.

The CHAIRMAN. Do I understand that you are objecting to the questions of the committee on this matter?

Secretary DANIELS. Not at all.

The CHAIRMAN. It is not the committee that you are referring to?

Secretary DANIELS. No. Let me read it again: To hark back to this warmed-over criticism serves only to show that this investigation, limited by the resolution to the part the Navy played in the World War, is regarded by some as merely an opportunity of airing ancient grievances without contributing anything of value to lessons taught by the World War.

The CHAIRMAN. But not so regarded by the committee.

Secretary DANIELS. Not the committee.

The CHAIRMAN. Is it not the committee that is harking back to these questions?

Secretary DANIELS. No; I think it is the witnesses who have come before you. I do not think the committee knows anything about these ancient grievances.

The CHAIRMAN. But the committee asked the questions.

Secretary DANIELS. You will observe that when these witnesses read grievances before the committee, they generally made prepared statements, and brought this out without any questions from the committee.

The CHAIRMAN. That has been done by all the witnesses throughout the hearing practically.

Secretary DANIELS. I am referring to those who have ancient grievances, and are very mad because I did not give them the high signments they wished, or removed them from places which they are not filling well. I say this is regarded by some as merely an opportunity of airing ancient grievances without contributing anything of value to lessons taught by the World War.

I had the fight of my life, Mr. Chairman—I do not think you were a member of the Senate in 1914.

The CHAIRMAN. I was not.

Secretary DANIELS. Every man who was in Congress in 1914 knows very well the difficulty of securing appropriations for a larger Navy. I had the fight of my life in 1914, working with the majority of the Naval Affairs Committee, led by Chairman Padgett, to secure an appropriation for two battleships in that bill, as the following extract from the Congressional Record, February 8, 1915 (p. 3438) shows:

Mr. Witherspoon moves to recommit H. R. 20975 to the Committee on Naval Affairs with instructions to forthwith report the bill back to the House with an amendment striking out the word "two" where it occurs in line 4, page 64, and insert the word "one" in place thereof.

The vote stood: Yeas, 149; Nays, 165. Representative Witherspoon, backed by nearly half the Members of the House, made a valiant fight to prevent my recommendations, incorporated in the bill by the Naval Affairs Committee, for the two battleships being voted. His motion was to build only one dreadnaught and a change of eight votes would have reduced the building program in that bill to one dreadnaught instead of the two secured. An analysis of the vote shows that both the leaders of the two parties—Mr. Mann, Republican, and Mr. Underwood, Democrat—was cast for recommending the bill with instructions to substitute "one" for "two." This is significant as showing the public attitude and the attitude in Congress at that time, and no discussion now of what might have been

done two or three years before we entered the war has any value without the sidelight of public opinion as represented by a large element in Congress in opposing the two-battleship construction urged by the Secretary of the Navy and approved by the President. I believed then, and the General Board agreed, that in comparison with securing the money for two dreadnaughts everything else was less important. Besides, I recommended in 1915 and actually secured in 1916 all the men needed for the new ships and secured them before the ships were even launched; and never during the World War, with an increase from 342 to over 2,000 vessels to be manned, was a ship ready for service that the department did not have the men ready to man it. So much for this backstairs gossip about 1914 and like ancient history.

The CHAIRMAN. Mr. Secretary, you stated that the General Board did not make this report to you, including the 19,600 increase?

Secretary DANIELS. I have published their report.

The CHAIRMAN. They did, however, prepare a letter giving facts and figures, did they not, and this letter was shown to you—read to you at a meeting of the board?

Secretary DANIELS. No. Admiral Fiske made me a statement, which I do not think had been passed by the board, or it may have been, containing those figures. Then I went over to the General Board and had a discussion with them and suggested that in view of the very greatly divided sentiment in Congress and the very great difficulty we were going to have to get any large building program that I thought it was wiser that we should strain every point to secure two dreadnaughts, because I knew of the fight coming in the House to secure those two dreadnaughts, that it was going to be very difficult, which, as the result proved, it was, and I suggested to them that in their report which they should send to me they should state what ships should be in full commission, what ships should be in reserve, and that then the Bureau of Navigation would provide the personnel for such ships.

The CHAIRMAN. Let me read to you the testimony of Admiral Badger, found on page 2705:

Admiral BADGER. The report never left the board containing that 19,600. It never left the board at all and never was returned.

Secretary DANIELS. That is what I thought.

The CHAIRMAN. Let me read further:

The CHAIRMAN. But whether it went to him officially or not, it went to him?

Admiral BADGER. He knew it; yes.

The CHAIRMAN. After the Secretary declined to accept the report of the General Board for that numerical increase of 19,600 men, did the board, before sending the deleted report back to the Secretary, send to the Secretary a letter in regard to the needs of the personnel, giving more details than those contained in the printed report? That report was the letter to which you have referred?

Admiral BADGER. No; that letter was never sent—no letter of that kind was sent to the Secretary.

The CHAIRMAN. Was not this letter read to the Secretary at a meeting of the General Board?

Admiral BADGER. It was; yes. That is what I have stated.

The CHAIRMAN. Was any action taken by the Secretary on this letter, or was it simply filed?

Admiral BADGER. Filed.

The CHAIRMAN. With the General Board?

Admiral BADGER. Filed with the General Board, to be produced whenever, in case—

Admiral BADGER. I can not tell you, but I think so.

Secretary DANIELS. I have stated that I went to the General Board meetings. ✓

The CHAIRMAN. So you knew about the recommendations of the 19,600 increase?

Secretary DANIELS. Certainly. I stated so before the House committee three years ago.

The CHAIRMAN. And at that time, at your suggestion, that was left out in their report?

Secretary DANIELS. It was, and for the reason I have given you, because—

The CHAIRMAN. Yes.

Secretary DANIELS. Let me finish.

The CHAIRMAN. Certainly.

Secretary DANIELS. Because I knew we had a tremendously hard fight on our hands. The Congress in 1912 had only given us one dreadnaught, and I knew we had a tremendously hard fight to get two, which I regarded as the most important thing.

The CHAIRMAN. Did you consider at that time that we had an adequate personnel for the Navy?

Secretary DANIELS. I took up the recommendations of the General Board as to what ships should be in full commission, and I sent them a letter. I will quote the letter I wrote to them. I wrote a letter which appears in my annual report of 1914, Appendix B, on page 70:

WASHINGTON, November 18, 1914.

From: The Secretary of the Navy.

To: The Bureau of Navigation, Navy Department.

Subject: Increase of the Navy, building program and personnel, 1916.

Reference: General Board's letter No. 420-2 of November 17, 1914.

In its report on personnel, in section 43, paragraph (a), the General Board makes the following recommendation:

"That legislation be asked for providing an active personnel, officers and enlisted force, capable of keeping in full commission all battleships under 15 years of age, from date of authorization, all destroyers and submarines under 12 years of age from authorization, half of the cruisers and all gunboats, and all the necessary auxiliaries that go with the active fleet, and of furnishing nucleus crews for all ships in the Navy that would be used in time of war, and the necessary men for the training and other shore stations."

The department desires a report from the bureau as to personnel available for carrying out the recommendations of the General Board above quoted, together with such comment and recommendation on the subject as the bureau sees fit to make.

JOSEPHUS DANIELS.

That was the specific recommendation as to the use of men by the General Board.

Now, I wrote to the Chief of the Bureau of Navigation as follows:

The department desires a report from the bureau as to the personnel available for carrying out the recommendations of the General Board above quoted, together with such comment and recommendation on the subject as the bureau sees fit to make.

On pages 70, 71, 72, 73, and 74 the Chief of the Bureau of Navigation takes up, ship by ship, all characters of ships, shows the per-

sonnel needed, the number of line officers, the number of enlisted men needed, every class of ship, and concludes with the following:

After due consideration of the foregoing figures the bureau sees no necessity for asking for an increase of enlisted personnel this year, but believes that it will be necessary to do so next year if the recommendation of the General Board is approved. The question of the shortage of officers is much more urgent than that of enlisted men, as a sufficient number of ex-service men, to fill vacancies in war complements, can be readily obtained on the outbreak of war. But as the supply of officers is limited to the output from the Naval Academy it will necessarily be several years before the needs of the service in like respect can be filled if all vessels of the Navy serviceable for war purposes are placed in full commission.

That was the report of the Chief of the Bureau of Navigation. Now, I call attention to the fact that the Chief of the Bureau of Navigation, in his report of December, 1912, had recommended that no new appointments be made to the Naval Academy, and had said that the output of officers from the Naval Academy, upon the then existing number of appointments, would be adequate to man ships for a number of years. But, in May, 1913, the first act I performed in the way of personnel after I became Secretary, was to write and ask every Member of Congress to appoint two midshipmen instead of one. The next act was to have them appoint three instead of two, the next four instead of three, the next five instead of four, and in this same act of 1914, recommended at that time, I recommended and we secured from Congress the first naval reserve act ever passed. We secured the strengthening of the Naval Militia, and under this reserve act as amended in 1915 we were enabled to secure authority by which, when the war came, we enlisted a quarter of a million men who served the Navy very well.

The CHAIRMAN. The report of the General Board lays great stress, does it not, on the importance of increasing the personnel, and they say that it is of even more serious import than that of construction. Now, that being so, how can you reconcile your suggestion——

Secretary DANIELS. In my report——

The CHAIRMAN. Please let me finish my question——

Secretary DANIELS. Certainly.

The CHAIRMAN. Because it does not mean anything as a question unless I finish it.

Secretary DANIELS. Certainly, Mr. Chairman.

The CHAIRMAN. That being so, how can you reconcile your plan to increase the ships of the Navy ahead of the personnel, in view of this statement?

Secretary DANIELS. Very easily, Mr. Chairman. I knew that it would take three years to build a ship; that if we got a naval reserve and strengthened the militia—I will read from my annual report, page 31 of the annual report of the Secretary of the Navy for 1914:

It is for the Congress to establish the effective strength at which the Navy shall be maintained, both in personnel and in material, and for the department to advise as to the proper balancing of the two. For the reasons given above, the department is strongly of the opinion that any retrenchment that may be deemed advisable on account of the financial condition of the Treasury should not be in new construction, as it has pointed out that, if deemed necessary, the present authorized personnel can take care of the new ships that will be added to the Navy in the next two years by withdrawing from service old vessels of little or doubtful military value. Later on, however, increase in personnel should keep pace with new construction.

asked for for years and never obtained, and had strengthened the Naval Militia—

The CHAIRMAN. So you do not agree with the opinion of the General Board that the matter of personnel was of more serious import than that of construction?

Secretary DANIELS. I thought at that time, in view of the opinion of Congress and the very close appropriations of Congress, that it was best to get the dreadnaught then and defer until the next year the increase of personnel.

The CHAIRMAN. Capt. Taussig in his testimony says:

In 1915 we had 42 ships with only three-tenths of their peace complement, 16 ships with only one-tenth of the peace complement, 38 ships out of commission, with no personnel on board.

Secretary DANIELS. What year was that?

The CHAIRMAN. That was 1915—no personnel available for those ships.

Secretary DANIELS. In full answer to anything Capt. Taussig says, I will say that he had a very subordinate position. He had no responsibility. I will say that I never went to those officers to find out about ships. I went to the Chief of the Bureau of Navigation, and I have given you the report of the Chief of the Bureau of Navigation in full. I will quote it in my testimony, showing every character of ship in the Navy and how it was manned.

The CHAIRMAN. At that time you knew we were very short of men, did you not?

Secretary DANIELS. At what time?

The CHAIRMAN. In 1915.

Secretary DANIELS. No; I did not. I know that in 1914 we had increased in one year 4,600 men. Let me give you the number of ships we had placed in commission in that one year—more than we had ever had before. On page 31 of my annual report for 1913 I state:

It is estimated that more than 90 per cent of the effective fighting power of the Navy is now fully manned.

The CHAIRMAN. If those figures are correct that were given by Capt. Taussig it would certainly show that we were fatally short of men.

Secretary DANIELS. I have never read Capt. Taussig's testimony, nor do I propose to enter into any discussion of anything Capt. Taussig said. I have given you the report of the responsible Bureau of Navigation.

The CHAIRMAN. But I ask you, if those figures were correct, would it not indicate a shortage of men?

Secretary DANIELS. I have told you what the Bureau of Navigation said. I have told you we had 90 per cent of the effective fighting power of the Navy fully manned. What Mr. Taussig's opinion might be concerns me not at all. He had no responsible position.

The CHAIRMAN. If you do not want to take Capt. Taussig's testimony, I will state myself, then, I understand that in 1915 42 ships had only three-tenths of a peace complement, 16 ships only one-tenth

of a peace complement, and 38 ships were out of commission with no men available for those ships.

Secretary DANIELS. Do you state that from your own knowledge?

The CHAIRMAN. I will state that I get that from the testimony of Capt. Taussig.

Secretary DANIELS. I refer you to the report of the Chief of the Bureau of Navigation, which does not bear out at all the statement you have read.

The CHAIRMAN. If those statements happen to be correct, I would like to know, would they not indicate that we were short of men?

Secretary DANIELS. I acted upon the suggestion—

The CHAIRMAN. I know; but that is a very simple question.

Secretary DANIELS. A very simple question which you premise upon a statement which has no facts to bear it out.

The CHAIRMAN. I am asking you, if those figures are correct do they not show that we were short of men?

Secretary DANIELS. I am giving you the statement of the Chief of the Bureau of Navigation, which is official. Now, what the opinion of Capt. Taussig, or any other of the 2,000 officers of the Navy is, I never asked them. I have given you the report of the Chief of the Bureau of Navigation, who reported to me officially, and I put it in the record—as to every ship we had in the Navy, how it was manned, and to show you that 90 per cent of the effective ships were fully manned.

Now, it may be true, as it always is, that we had a lot of junk in the Navy, ships that we ought to have scuttled, that were not fully manned; but I will show you from the report of the Bureau of Navigation that the ships were manned exactly in accordance with the recommendations of the General Board.

The CHAIRMAN. Mr. Secretary, Capt. Taussig said that 42 ships had only three-tenths of their peace complement. Is that untrue?

Secretary DANIELS. I am giving you the statement of the Bureau of Navigation. I have never examined Capt. Taussig's statement.

The CHAIRMAN. I am asking you about these particular ships. Is that untrue?

Secretary DANIELS. I do not know anything about Capt. Taussig's statement. I give you the official report of the Bureau of Navigation.

The CHAIRMAN. I am asking you if there were not 16 ships with only one-tenth of their peace complement—

Secretary DANIELS. Let me read you the report—

The CHAIRMAN. Let me—

Secretary DANIELS. On this question, Mr. Chairman—

The CHAIRMAN. You will not answer my question. I want to ask something that you will answer.

Secretary DANIELS. I am going to answer the question officially. The General Board recommended enough personnel to keep in full commission all the battleships under 15 years of age from date of authorization, for destroyers and submarines under 12 years of age from date of authorization, half the cruisers and all the gunboats—that is what they recommended. Here is the report of the Bureau of Navigation, which shows that was done with the personnel. Now, as to somebody else's opinion as to the matter, I have no answer to make.

Taussig, or some other captain, or some other commander said that certain ships were not in full commission. I am answering you that all ships recommended by the General Board to be in full commission were in full commission; all that they recommended to be in part commission were in part commission. That is the official report to me.

The CHAIRMAN. Mr. Secretary, Capt. Taussig has stated that 42 ships had only three-tenths of their peace complement; that 16 ships had only one-tenth of their peace complement; and that 38 ships were out of commission, with no personnel on board and no personnel available for those ships. Will you please furnish the committee with the information which you can get, I take it, from the department, as to whether this statement was or was not correct in 1915?

Secretary DANIELS. I will furnish the committee with the report of the Bureau of Navigation.

The CHAIRMAN. I would like to have you furnish this specific information.

Secretary DANIELS. I have not the time.

The CHAIRMAN. I know; but you can get it from the department, and we will put it into the record at this point.

Secretary DANIELS. I will furnish you the report of the Bureau of Navigation of the ships at that time.

The CHAIRMAN. Will you not have information on this particular matter that I have asked you looked up and inserted in the record?

Secretary DANIELS. I will give you information as to every ship in the Navy.

The CHAIRMAN. But will you not specifically have the matter which I am asking you about looked up?

Secretary DANIELS. I will specifically have it looked up and will give you the statement of the Bureau of Navigation.

The CHAIRMAN. And in giving the statement of the Bureau of Navigation, will you please see that that question is definitely answered?

Secretary DANIELS. I will have the question definitely answered and give you the answer.

Senator TRAMMELL. And in view of the fact that you are going to get that information, I would like also to have the information furnished as to the number of these ships that were reserve ships and the number that were discarded ships. Capt. Taussig did not state that.

The CHAIRMAN. I think that is entirely proper.

Senator TRAMMELL. He did not state that in his direct testimony. He tried to create the impression in his direct testimony that they were all ships ready for war, but he did admit on cross-examination that he knew more or less of them were discarded or merely reserve ships.

The CHAIRMAN. It is entirely proper to have that put in.

Secretary DANIELS. Let me state again that every ship that the General Board said ought to be in full commission was in full com-

mision; that battleships, destroyers, and submarines, and all other ships were in such condition as the General Board recommended.

The CHAIRMAN. Now, if Capt. Taussig states that you forbade him to publish an article in the Naval Institute on "Personnel needs"; do you recall that?

Secretary DANIELS. I have no recollection of it at all.

The CHAIRMAN. You do not know whether you did or not, and you do not know any reason for doing so?

Secretary DANIELS. I do not know anything at all about it. When did he say it was done? I never heard of Capt. Taussig ever having written an article on personnel needs, to my recollection. To my recollection this is the first I ever heard of it. If he did, it came in from the Intelligence Office. There come in from one to 20 articles a day that officers wish to have published, and they go to Naval Intelligence and Operations, and I usually follow their recommendations, but I have no recollection at all of any communication or article that Capt. Taussig ever wrote. I think he was a commander at that time, maybe a lieutenant commander.

The CHAIRMAN. It appears on page 1160 of the typewritten record:

Navy personnel. J. K. Taussig, January 1, 1916.

Secretary DANIELS. 1916?

The CHAIRMAN. Yes.

Motto: "Historically, good men with poor ships are better than poor men with good ships." Naval Institute. First honorable mention. Never published, by order of the Secretary of the Navy.

Secretary DANIELS. I have no recollection of that at all.

In October, 1915, I recommended and we secured a very large increase of personnel.

The CHAIRMAN. You say in your statement that Admiral Plunkett told you that the Navy could never shoot so well as then; that is, in 1917?

Secretary DANIELS. I quoted from his testimony; yes. He said that in his sworn testimony before the committee.

The CHAIRMAN. Do you not remember that Admiral Mayo stated that the detachment of officers and men for armed guards greatly reduced the efficiency of the ships?

Secretary DANIELS. I do not recall his testimony. Of course, a ship that was placed in the York River for the purpose of training an armed guard would not be so efficient until those armed guards were trained as when you had taken the armed guard off, but that was temporary. Admiral Mayo stated in his testimony that when war was declared the fleet was in better condition than it ever was, and he was anxious to take the whole fleet and go across, and stated that it was ready to go.

The CHAIRMAN. And he also stated that taking the men off for the armed guards had reduced the efficiency of the ships.

Secretary DANIELS. Why, Mr. Chairman, of course, if you take a dozen expert gunners off a ship and put in men not quite so expert, you have to train them up a little while before they get quite as expert.

The CHAIRMAN. Mr. Secretary, Admiral Plunkett stated later that after the fleet came North about 50 per cent of the trained officers were detached, and he says that was the beginning of the downfall.

you might say, of the fleet efficiency, and I have seen nothing on record to indicate that they ever fully recovered from it, not even when the armistice was signed. In other words, the shooting was good and the ships were efficient before the war, but the shortage of officers and men reduced or destroyed the high state of efficiency as soon the war began.

Secretary DANIELS. I have told you a dozen times that when the war began the Bureau of Navigation took off of the old ships the most expert officers and put them on the ships most needed and turned them into training ships to train other men to take their places.

The CHAIRMAN. Do you not admit that the Navy was disastrously short of men when the war began?

Secretary DANIELS. I do not at all. I say that the Navy, so far as the fighting Navy was concerned, the first-line ships and destroyers, the fighting ships, we had an adequate number of men for them; but for the large duties we performed, if I had supposed we had enough men for all those duties, do you suppose I would have been running a Congress every week and asking for new men, until we increased from 60,000 to 500,000?

The CHAIRMAN. But the other witnesses have testified, Mr. Secretary, that we were very short of men—Admiral Badger, Capt. Pratt, Capt. McKean—

Secretary DANIELS. In the act of August—

The CHAIRMAN. I think every witness—

Secretary DANIELS. Wait until I get through. In the act of August 9, 1916, there was provision for the enlistment of something like 10,000 men additional, making a total of 77,000, until on March 24 the President authorized it up to 97,000. Now, what happened? Immediately upon the passage of the bill, August 29, I directed the Bureau of Navigation to use every effort, and the Bureau of Navigation did use every effort to secure the enlistment of men in the Navy. But yet we could not get the men. On the 1st of January, 1917, though in all those days we were appealing for men, we were 10,000 short of the authorized enlistment.

The CHAIRMAN. Therefore we were short?

Secretary DANIELS. And therefore I had requested Congress and Congress had granted the request for men; but if you ask me if we had enough men to carry on the war as we carried it on, why, my dear sir, if we had had enough for all purposes, I should not have been here every week before the Naval Committee asking for more. I could not have asked the President to sign an order on the 24th of March for 20,000 men. I would not have asked Congress the next month to increase it from 97,000 to 150,000. I would not have asked him to increase it again to 250,000. I would not have enrolled 100,000 reserves.

The CHAIRMAN. Whatever the reason, we did not have the men at outbreak of the war?

Secretary DANIELS. We had sixty-odd thousand men.

The CHAIRMAN. And that was not enough for the purposes?

Secretary DANIELS. Enough to man every dreadnaught we had, every destroyer we had, every submarine we had, every fighting ship in the line.

The CHAIRMAN. To man them fully for war?

Secretary DANIELS. To man them fully for war.

The CHAIRMAN. And they were fully manned for war?

Secretary DANIELS. Admiral Mayo says that they were all ready to go into the fight.

The CHAIRMAN. I will give you some figures a little later about this matter.

Secretary DANIELS. Of course, as soon as war came—in fact, before the war came, to wit, on March 24—in January we were 20,000 behind, and I instructed Navigation to press the enlistments.

On March 24 the President signed the order for 20,000 more, and I instructed Navigation to telegraph to every editor in the United States—of course, we needed more men for the purposes for which we were going into it. But 60,000 men could have manned every dreadnaught, every destroyer, every submarine, every first-line fighting ship. You see, Mr. Chairman, at that time, in the fall of 1916, nobody ever thought of having an armed guard on a ship. It was an entirely new naval function, and whatever lack there may have been on any ship in the latter part of March, 1917, was due to taking armed guards off of those ships for those purposes.

The CHAIRMAN. Mr. Secretary, in your annual report for 1918 you state that the Navy from stem to stern had been made ready to the fullest extent possible for any eventuality.

Secretary DANIELS. Mr. Chairman, I had apprehended that you would ask that question, because you have asked it of everybody else, so I prepared you an answer. I want to be very careful about this answer, because when I look back on it I am surprised at the moderation of my language.

THE NAVY WAS READY—THE FLEET MOBILIZED THE DAY WAR WAS DECLARED.

Mr. Chairman, you have repeatedly quoted an extract from my annual report for 1918 and have made it the basis of questions asked nearly every witness. It seems to be such a favorite question of yours that I will quote it in full:

Before the President went before Congress on the 2d day of April, 1917, and delivered his epoch-making message, which stirred the hearts of all patriots, and in the climax said, "America is privileged to spend her blood and her might for the principles that gave her birth and happiness and the peace which she has treasured; God helping her, she can do no other," the Navy from stem to stern had been made ready to the fullest extent possible for any eventuality.

You have asked repeatedly of witnesses, "Would you say that the Navy on April 6, 1917, was ready from stem to stern?" I will save you the trouble of asking that question of me, and will answer it now.

The CHAIRMAN. One minute, Mr. Secretary. That was your statement, not the President's, was it not?

Secretary DANIELS. That part, from "stem to stern," was mine.

The CHAIRMAN. Yes.

Secretary DANIELS. But this previous part is not mine.

The CHAIRMAN. I thought you were referring to it as a statement of the President.

Secretary DANIELS. It is one of the best statements that I ever made, and one of the truest. It is one of my statements that I think is really a good epigram, and really sums up in a few words the whole story of the Navy. If I had written a whole book I could not have said it more truly.

statements are true, so far as I know.

The Navy was ready from stem to stern. The fleet was ready, for it was mobilized the day war was declared, and Admiral Mayo, commander in chief, Admiral Wilson, and others have told you the fleet was in the highest state of efficiency it had ever been. The Navy Department was ready; for every bureau and office performed the greatly added duties of war with even greater efficiency than they had functioned in time of peace. There was need of more officers and more personnel, as there always has been and always will be when war comes. Everybody had to work overtime, most of us day and night, as always will be the case under such conditions. But, when the war call came, every division of the Navy, every office, bureau, or station, responded promptly, and not one bureau or division of the fleet or department failed in any duty it was assigned or called upon to perform.

Everything was not 100 per cent perfect. It never was and never will be in any human organization. Thousands more officers, hundreds of thousands more men and hundreds of ships were required for all the varied tasks the Navy was called upon to perform. And we got the ships and the men and the officers, and everything that was required.

If the Navy hadn't been ready, the department as well as the fleet, we couldn't have got them in anything like the time we did.

If the chairman bases his questions on the theory that we should have had all the officers and men needed for war; have had them trained and waiting for the whistles; should have had all the ships to create an ideal fleet and to perform all kinds of war service; all these ships in perfect condition, fully manned, with steam up, waiting for Congress to pass the resolution declaring war; if he assumes that all this must have been done before the Navy was "ready," there was really no need of asking them. We did not have a perfect Navy then, and never will have it—and neither has any other nation in the world. Germany, which for 40 years had devoted its energies to war preparation, didn't have a fleet prepared for the kind of war it must wage. When the European war began it had only 28 effective submarines, and after four years, centering its activities on the production of U boats, had produced only 400. Lord Jellicoe, Sir Percy Scott, and other naval authorities have devoted hundreds of pages to pointing out the deficiencies of the grand fleet. The British Navy, after three years of war, did not have half enough destroyers and other craft to meet the unrestricted submarine warfare. The United States Navy, one admiral after another has testified, was in as high a state of readiness as was any other navy at the time it was called upon for war service.

AFTER THE SINKING OF THE "LUSITANIA."

The chairman in his series of questions, reverts continually to two events—the sinking of the *Lusitania* and the Battle of Jutland.

The *Lusitania* was sunk on May 7, 1915. Four days later Admiral Benson assumed the office of Chief of Naval Operations, which had been created by act of Congress a few weeks previous. The new

organization of the Navy Department was put into effect promptly. I approved the administrative plan, and on May 28, as Admiral Benson told you, I sent a letter to every bureau directing them to make a report on their preparedness for war and to point out any particulars in which they were lacking. All the bureaus thereafter made periodical reports of progress in preparedness.

The plan for reorganization of the fleet, upon which we had been at work for some months, was approved and put into effect in July, 1915, Admiral Mayo told you; and Admiral Benson pointed out that this new organization was so efficient that "it carried us through the war and proved successful in every particular."

In the same month, July, 1915, I called upon the General Board to express its opinion to the department "as to what the Navy must be in the future to stand upon an equality with the most efficient and most practically serviceable" navies of other countries, and to submit a program "formulated in the most definite terms," one "planned for a consistent and progressive development of this great defensive arm of the Nation." The General Board, of which Admiral Dewey was chairman, on July 30, 1915, submitted a report laying down the following policy:

The Navy of the United States should ultimately be equal to the most powerful maintained by any other nation of the world. It should be gradually increased to this point by a rate of development year by year, as may be permitted by the facilities of the country, but the limit above defined should be reached not later than 1925.

I call your attention to the fact that the legislation which has been secured and which I have recommended to this Congress will carry out exactly what Admiral Dewey recommended.

At the same time the General Board submitted a building program for the fiscal year 1917.

On October 7, 1915, I directed the General Board to prepare "a building program for the Navy that will continue over a period of five years, with an expenditure of about \$100,000,000 each year for five years on new construction only." In accordance with this the General Board, on October 12, 1915, submitted an elaborate building program, which embraced 156 war vessels, including 10 dreadnaughts, 6 battle cruisers, 6 scout cruisers, 50 destroyers, 67 submarines, and vessels of various other types.

This five-year building program, with additional recommendation of 32 more submarines than the General Board had recommended, was presented in my annual report of December 1, 1915, in which I said:

In presenting this report I feel it my duty to urge above everything else the necessity of the adoption by Congress of a continuous program of construction.

I urged that measure in every possible way, and the result was that the next naval appropriation act, that of August 29, 1916, not only authorized the construction of 156 vessels, but shortened the time of the program from five to three years, provided for a very large increase in personnel, and carried appropriations of over \$312,000,000.

The Naval Consulting Board, which brought to our assistance in working out naval problems the most eminent inventors and scientists in the country, was created in 1915. On July 7, 1915, I wrote to Mr. Thomas A. Edison, telling him of my desire and intention to create

ments with a view to develop an which could be utilized by the Navy. Mr. Edison at once consented to serve in an advisory capacity. On July 19, 1915, I addressed a letter to the American Institute and other scientific societies, suggesting that each nominate representatives to serve on an advisory board. The result was the creation of the Naval Consulting Board, which did notable service for the Navy and the country both previous to and during the war.

All these things, and many more, in the way of preparedness for war were done in 1915, within a few months after the *Lusitania* was sunk, and long before there was any general conviction or opinion that this country would be drawn into the European conflict.

The CHAIRMAN. I referred to your statement in your report of 1918, in which you did state, did you not, that the Navy, from stem to stern, had been made ready for any eventuality?

Secretary DANIELS. I did state that, and that is correct.

The CHAIRMAN. Admiral Benson states that the Navy was not in all respects prepared for war.

Secretary DANIELS. If you will read the testimony of Admiral Benson—the only way to read a man's testimony——

The CHAIRMAN. Admiral Benson was your Chief of Operations, was he not?

Secretary DANIELS. Chief of Operations; yes, sir.

The CHAIRMAN. I will quote his statement. I read from page 4479 of the typewritten record. [Reading:]

The CHAIRMAN. Would you say that the Navy was in all respects prepared for war in April, 1917?

Admiral BENSON. It was not.

The CHAIRMAN. Would you say that the statement in the Secretary's annual report that the Navy was from stem to stern ready for war in April, 1917, was justified?

Admiral BENSON. Not from my point of view; no.

Secretary DANIELS. Let me read you from Admiral Benson's testimony on page 2085.

The CHAIRMAN. Is that the right page?

Secretary DANIELS. No; that is not right. Well, Mr. Chairman, I told you just now that we did not have, never did have, never will have, every ship and every officer and every man we need; but the Navy from stem to stern had been made ready to the fullest possible extent for any eventuality; and that is true.

Now, when I say to the fullest possible extent, I do not say that every man in the Navy was perfectly well and perfectly efficient; that every ship in the Navy was 100 per cent; but I say to the fullest extent possible it was done.

The CHAIRMAN. Then Admiral Benson was wrong, was he?

Secretary DANIELS. No; he was not wrong from his point of view.

The CHAIRMAN. Admiral Benson states that when war was declared the personnel of the Navy was inadequate.

Secretary DANIELS. Well, I have told you that when war began, on March 24, before war did begin, I requested the President to issue a proclamation to increase the Regular Navy 20,000, which he did. If I had thought we had all the personnel we were going to need for war, I would not have asked that.

In March I asked 50,000 men. Of course, we needed more men for the great duties we had to perform.

The CHAIRMAN. I will read you from the testimony at page 4540 of the typewritten record. This is from the testimony of Admiral Benson. [Reading:]

The CHAIRMAN. And that was the existing state of affairs on April 6, 1917, was it not?

Admiral BENSON. Yes; we were short of personnel. We were decidedly short of personnel.

Secretary DANIELS. But we had—

The CHAIRMAN. Wait a minute, please, and let me finish this.

Secretary DANIELS. Yes.

The CHAIRMAN (continuing reading):

The CHAIRMAN. That is for the battle fleet?

Admiral BENSON. The battle fleet was short of officers and men for battle purposes.

Secretary DANIELS. Exactly. As I told you, when we took off the thousands of men for armed guards, the battle fleet needed those trained men, and we trained men; and if you will look at the record, within a month—it is marvelous how those new men became efficient.

The CHAIRMAN. That is, the battle fleet was short of men at the time of the outbreak of war.

Secretary DANIELS. Of course the armed guards had been taken off, Mr. Chairman; and the armed guards had been taken off for a purpose that was essential and very wise.

The CHAIRMAN. Admiral Benson states that when war was declared the ships were not fully manned.

Secretary DANIELS. I told you we had taken off of the ships for armed guards and for other purposes that were acutely needed, which temporarily took that many men from the ships.

The CHAIRMAN. Admiral Benson states that when war was declared the ships were not all ready.

Secretary DANIELS. There never was a minute in the history of any navy on earth when ever ship was all ready; and there never was an officer of a ship since time began that would not say—why. Mr. Chairman, when a ship comes out of the shipbuilders' the first thing, a new ship built upon the most perfect plan of construction, when a captain goes aboard, in less than a month he writes and wants something changed in it. There is always that condition. Nothing is ever 100 per cent, and I have never said so.

The CHAIRMAN. Admiral Benson states that when war was declared the Navy was not mobilized.

Secretary DANIELS. Admiral Mayo has declared that on the day war was declared he had to issue only one telegram, "Mobilize," and the fleet was mobilized.

The CHAIRMAN. Then Admiral Benson was wrong in stating that the Navy was not mobilized?

Secretary DANIELS. What he meant by "mobilize," I should imagine, was that every ship on the Naval Register was not mobilized: that the fighting fleet—Admiral Mayo has testified, and Admiral Benson would, if you had asked him that question—

The CHAIRMAN. He was asked directly, "Was the Navy mobilized," and he replied that it was not.

Secretary DANIELS. When you refer to the Navy, you might ask me, that would include a warehouse and ordnance factory—was it

The CHAIRMAN. You think that is what one would deduce from the statements of Admiral Benson?

Secretary DANIELS. I would say that Admiral Benson's answer was this: If you will bear in mind Admiral Benson was asked a number of questions you put to him. If you will read his testimony in the large, you will see that its whole bearing does not justify picking out one or two questions in answer to which he said that he was not 100 per cent, which is not all not ready.

The CHAIRMAN. Do you mean that my questions were leading questions?

Secretary DANIELS. Not at all; not at all. But suppose I ask you the question, "Mr. Secretary, was every ship in the Navy on the 6th of April, fully manned, fully efficient; was every possibility that could be made on it, and addition"; and I were to say "No"—I am a little too foxy to be caught by such questions. You would say, "The Secretary of the Navy said the Navy was ready." Admiral Benson has told you truly that no navy was 100 per cent efficient, every ship is not 100 per cent efficient, as I said in my statement, and it is as true as Holy Writ, the Navy from stem to stern had been made ready to the fullest possible extent that is the truth.

The CHAIRMAN. That statement is not borne out, is it, Secretary?

Secretary DANIELS. Absolutely borne out. Does Admiral Benson say that it had not been done to the fullest possible extent?

The CHAIRMAN. What do you mean by "the fullest possible extent"?

Secretary DANIELS. Of human possibility.

The CHAIRMAN. Admiral Benson states that in 1917 we did not have an adequate air service. What have you to say to that?

Secretary DANIELS. That is very true; that is very true. We did not have an adequate air service in 1917. Great Britain did not have an adequate air service in 1917 or in 1918. Germany did not have an adequate air service in 1917 and 1918, and there never was an adequate air service that lasts three months. The airplanes in the United States and Germany were all scrapped about every three months. The time you got a machine you thought was all right, and then you got a better machine, and you had to scrap your machine and go ahead.

The CHAIRMAN. Admiral Benson has stated that when the fleet force came north from the Caribbean it was not screened.

Senator PITTMAN. Wait a moment. I think it would be more accurate to read just exactly the questions and answers and then attribute a conclusion of that kind to an admiral.

The CHAIRMAN. I read from page 4480 of the typewritten report. I think it will be better, because it brings out some other points.

Senator PITTMAN. Yes.

The CHAIRMAN (reading):

The CHAIRMAN. Were there any scouts or screening vessels with the fleet force when it came north?

Admiral BENSON. There were some.

The CHAIRMAN. Previous to the war?

Admiral BENSON. There were some destroyers. I have forgotten how many. Not very many. I will say it was not properly screened.

The CHAIRMAN. And do you consider scouts and screening vessels as of importance?

Admiral BENSON. Yes.

Secretary DANIELS. Mr. Chairman, let me add right there that Congress had authorized no battle cruisers or scout cruisers prior to that in time for them to have been constructed.

Now, adequately screening and adequately doing all those things requires many types of ships. Now, we did not have those types of ships; we have not got them now; and I am asking this Congress to give us new types of ships which have not yet been put into the bill, and if we have a war five years from now people will say, "Well, why haven't you got destroyer leaders? Why haven't you got these small scout cruisers?" I shall then reply and say, "Gentlemen, I recommended to this Congress to do it, and they did not." Congress had not authorized these things.

The CHAIRMAN. But many of the witnesses have testified—and I think there is no question about the fact—that we did not have all the screening vessels that we had in this country with the fleet. You will admit that, will you not?

Secretary DANIELS. That is a matter that I would have to refer to Operations and to Admiral Mayo.

The CHAIRMAN. But they have already testified to that.

Secretary DANIELS. If Admiral Mayo and Admiral Benson have told you—

The CHAIRMAN. Admiral Mayo has testified that the fleet consisted of certain battleships and a few destroyers.

Secretary DANIELS. Yes.

The CHAIRMAN. A very few; and one or two other boats.

Secretary DANIELS. Yes; and Admiral Mayo has also testified to you that the fleet was ready for war, and he wished to go across and fight.

The CHAIRMAN. Yes; but he specifically said that we were short of screening vessels—

Secretary DANIELS. Let me read you what Admiral Mayo said.

The CHAIRMAN (continuing). And that he did not have with the fleet all the screening vessels that were in our Navy. In fact, there were very few with it.

Secretary DANIELS. I do not know about that. Let me read you this [reading]:

When the fleet arrived in Hampton Roads about the 1st of April, after its training in Cuban waters, it was in the best state of preparedness that it had ever been, and there was a feeling of confidence of the personnel of being able to cope with every emergency.

The CHAIRMAN. I do not think that answers my question at all.

Secretary DANIELS. If you are asking me if every possible screening ship was with the fleet, I answer you that I have not the record.

Senator PITTMAN. Mr. Chairman, I have not been present a great deal lately at these hearings.

The CHAIRMAN. We have missed you very much.

Senator PITTMAN. I thank you for that, possibly more than I would had I been at the hearings; but I had some work to do that I thought of great importance lately, and it is still of importance.

The CHAIRMAN. I know you have.

about that; whether we come to an adjournment or take a recess, it will come before the Republican convention at Chicago.

The CHAIRMAN. Or at least before the Democratic convention in San Francisco.

Senator PITTMAN. I think there will be a bigger show at Chicago, and I am going to that. We will not do any more work; and there is a lot of work to finish up there, and, not to criticize the chairman at all of this committee, I do not believe that we are going to accomplish anything by constantly reading the evidence again into the record that is already in the record. The chairman reads from the record the testimony of some prior witness. The witness on the stands reads from the testimony of another witness that seems favorable to his position, with the result that we are not getting additional facts before the committee; and that is all that this committee is appointed for, to get the facts. We are piling up a cumulative record here, at a tremendous expense, and a delay of the services of Senators that should be valuable, and it seems to me that this argumentative character of examination and of testimony is not accomplishing anything. To ask the opinion of the witness as to whether or not he agrees with this opinion or with that opinion is not going to affect the determination of this committee.

The CHAIRMAN. Does not the Senator think that when a very high official of the Navy Department, the Chief of Operations, takes a stand which apparently does not agree with the stand taken by the Secretary of the Navy, his testimony should be read to the Secretary and at least he should explain his views about such testimony.

Senator PITTMAN. I do not see that it makes any particular difference to this committee or to the Senate as to whether or not the Secretary's view agrees with the view of Admiral Sims or not, as to whether there were enough screening vessels or enough of this kind of vessels. As a matter of fact, the committee will take the direct testimony of every one of these witnesses, and particularly of the experts with regard to that matter, and determine whether there were mistakes or not.

The CHAIRMAN. Does not the Senator think where the high official has made the statement, which statement we must regard as accurate unless we have some proof to the contrary—does not the Senator think that the Secretary of the Navy is entitled to explain these statements away if he can? It seemed to me that that was fair to him.

Senator PITTMAN. Well, the Secretary has undoubtedly explained them away; but the only trouble was, it was so unnecessary to take up all the time to have the Secretary explain something away that has already been explained away a hundred times.

The CHAIRMAN. The committee differ about that.

Senator PITTMAN. All I am saying is that I am going to protest upon the floor of the Senate against this character of unnecessary delay. I am tired of it, and I think the country is tired of it.

The CHAIRMAN. That will be interesting, but I doubt whether it will get very far. So far as the Secretary of the Navy is concerned we hope to get through with him to-day.

Senator PITTMAN. You expect to get through with the Secretary of the Navy to-day?

The CHAIRMAN. Yes.

Senator PITTMAN. And I will guarantee that I will get through with Admiral Sims on my cross-examination in such a short time that you will not know that I have started.

The CHAIRMAN. That will depend on how he answers your questions, will it not?

Senator KEYES. I think we would make a great deal more progress if the witness would only answer the questions that the chairman asks.

The CHAIRMAN. It would shorten matters.

Senator PITTMAN. Admiral Sims is not a direct answerer of questions.

The CHAIRMAN. I have several times asked the Secretary if he would not answer my questions—

Secretary DANIELS. I must interrupt you there. I have answered every one of your questions.

The CHAIRMAN. But very much at length.

Secretary DANIELS. I have always given you a full answer to your questions.

Senator PITTMAN. I am simply criticising what I consider to be the wasteful policy of reading the testimony backward and forward. It is cumulative, and you might read the whole record.

The CHAIRMAN. I do not think it is. I think we will get through very shortly now. I hope very much to get through before we adjourn this session and I think we can.

Secretary DANIELS. Mr. Chairman, I wish to say this: So far as I have observed, every time you have asked any witness on the stand the question which you quoted from my annual report, you have asked them this question: "Do you agree with the Secretary, when he said that the Navy was ready from stem to stern?"

The CHAIRMAN. Yes.

Secretary DANIELS. You have not, as a rule, quoted everything that I have said.

The CHAIRMAN. You mean the words—

Secretary DANIELS. "As far as possible."

The CHAIRMAN (continuing). "To the fullest extent possible for any eventuality?"

Secretary DANIELS. I have said that the Navy had been made ready to the fullest extent possible. Now, I submit that that statement is absolutely correct, and that no witness has denied it—either Benson or Mayo or any admiral who was in a responsible position.

The CHAIRMAN. I am asking you now about the specific statement of a witness. Admiral Benson states that when war was declared it would have been impossible for our fleet to meet that of Germany. [Reading:]

The CHAIRMAN. Several of the witnesses have already testified that our fleet could have met the German fleet and probably could have whipped it. You would not say that that was so?

Admiral BENSON. Theoretically it is an impossibility. It is a purely theoretical question, and the theoretical answer is that it would have been an impossibility.

Have you anything to say about that?

Secretary DANIELS. I have, indeed. I have a prepared statement about that, which I will either read to you or put in the record.

The CHAIRMAN. It depends on the length of the statement.

Senator PITTMAN. I certainly object to it. I think it is absolutely a duplication of what we have had before.

Secretary DANIELS. I have a very elaborate statement as to the effectiveness of the German Fleet and the American Fleet in every particular, and if you ask me that question I will put it into the record. This is a statement of Admiral Strauss, which appears in the Army and Navy Register, and I will place in the record also a statement by Capt. William D. Leahy, director of gunnery exercises and engineering performances, in which they take the ground that the American Fleet could have met the German Fleet and defeated them. That is a matter of opinion of naval officers on strategy; but I wish to put in the record the statements of Admiral Strauss and Capt. Leahy.

(The matters last referred to by Secretary Daniels are here printed in the record, as follows:)

[Extract from Army and Navy Register, May 1, 1920.]

Since his appearance before the committee Admiral Strauss has strengthened his testimony by inserting in the record a statement setting forth the reasons on which he based his unswerving faith in the superior fighting qualities of the American Fleet over that of the German. He says:

The entire battleship force of the German high-sea fleet has a broadside fire of 126,608 pounds. This excludes, of course, the torpedo defense battery, which would be ineffective against armor. Our fleet of 16 battleships had an equal armor-piercing broadside fire of 163,940 pounds. This is a superiority nearly 30 per cent. I think it will be admitted by all students of this subject that the lightly armored battle cruiser has no place in the line of battle. Nevertheless, had our enemy put her five battle cruisers in, she would still have been 60 pounds weaker in broadside fire than we would have been. It may be claimed that inasmuch as the five German battle cruisers survived the fire of Beatty's six, they would have had an equal chance with our heavy guns. This is not the case. They would not have fired the nonpenetrating shell employed by the British in the battle. Their ineffectiveness is referred to in Admiral Jellicoe's book, and has been repeatedly spoken of by other British officers. They have been discarded. We never had them. We would have sunk the German battle cruisers with the same kind of a shell that they used to sink the British battle cruisers—namely, if the Germans had seen fit to put those cruisers in the line against our battleships.

Now, if the fighting strength means anything it means the ability to deliver a heavy broadside and the armor to withstand them. We were fairly equal as to armor and superior in the ability to hammer our adversary."

The memorandum of Capt. Leahy, above referred to, is here printed in the record, as follows:)

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, May 18, 1920.

Director of gunnery exercises and engineering performances,
Secretary of the Navy.

Subject: Comparison of gunnery efficiency of the battleship fleets of Germany and the United States in 1914 and in 1917.

In a comparative analysis of the battle efficiency in gunnery of two modern ship fleets it is believed to be correct to take into consideration only the all-big-gun type of battleship (the all-big-gun ships) and in the United States this will include only the *South Carolina* and *Michigan* and battleships later date.

2. In order to avoid making in the comparison any assumptions that might be unfavorable to the enemy force, and in view of the fact that the United States had no battle cruisers to oppose the seven battle cruisers of the German Navy, the German battle cruisers will be given the full value of battleships carrying the same number and caliber of guns.

This assumption is favorable to the German fleet because of the proved inability of battle cruisers to stand up under the fire of superdreadnaught battleships.

3. In order to avoid inequalities in a comparison of gunnery effectiveness it is necessary to assume equal skill in the offensive use of its battery by the personnel of each fleet. It is believed that the gunnery efficiency of the personnel of the United States fleet was superior to that of the German fleet both in 1914 and in 1917, before it became necessary to transfer trained men from the battleships to armed guard duty, to transports, and to other duty which required trained men.

4. Assuming equal skill and determination to win, and in the absence of proof by battle, any fair comparison of the fighting strength of two battleship fleets must be based on the hitting power of their guns. This hitting power is composed of three factors as follows:

(1) Probability of hitting, which may be accurately compared by the relative danger spaces of the guns under consideration.

(2) Striking energy in foot-tons of the projectiles at the end of their flight. This remaining energy in the shell is effective in penetrating armor and is equal to one-half the product of the mass of the projectile and the square of its velocity.

(3) The destructive effect of the explosion of the shell, which may for the purpose of this comparison be assumed to be proportional to its weight.

5. Exact information as to the velocity and weight of German projectiles is not available, and it is assumed that they are the same as those of American projectiles of the same caliber, although it is believed that this assumption favors the German guns. It has been generally understood that American guns are designed for higher muzzle velocities than are the German naval guns.

During a recent inspection of the *Badin* a range table was found which showed a muzzle velocity of 760 to 800 meters per second (2,442 to 2,624 feet per second) for the latest 15-inch naval guns on that vessel.

In this comparison the German 15-inch gun is given the same muzzle velocity as our 14-inch .45 caliber guns, 2,600-foot seconds.

In comparing the effectiveness of the gunnery of the two battleship fleets it must be assumed that neither fleet has any advantage of position, that the simple battle formation ships in column will be used by both, and that only those guns which will bear on one broadside can be brought into action.

COMPARISON OF FLEETS IN 1914.

In 1914 the United States Navy had 10 dreadnaughts carrying eighty 12-inch guns and twenty 14-inch guns, a total of 100 heavy guns, all of which can fire on one broadside.

In the German fleet there were 17 dreadnaught battleships carrying one hundred and thirty-eight 12-inch guns and forty-eight 11-inch guns, a total of 186 guns. Of these one hundred and twenty-two 12-inch and thirty-two 11-inch, a total of 154, could fire on one broadside. There were also seven battle cruisers carrying twenty-four 12-inch guns and thirty-eight 11-inch guns, a total of 62 guns, all of which could fire on one broadside.

Counting battleships and battle cruisers, the German fleet could fire at one broadside one hundred and forty-six 12-inch guns and seventy 11-inch guns, a total of two hundred and sixteen 11-inch and 12-inch guns, as opposed to one hundred 12-inch and 14-inch guns in the United States Fleet. This would appear to indicate that the destructive power of the German fleet was twice that of the United States fleet. Such is not the case, however, due to the superior effectiveness of the heavier guns of the United States fleet.

The records of the battle practice of the United States fleet in 1914 show that a good percentage of hits was made at an average range of about 10,000 yards. It is, therefore, considered proper to assume that the battle in 1914 would have begun at ranges approximating 12,000 yards.

For purposes of comparison the 14-inch gun is taken as a standard and the effectiveness of other guns are compared with that of the 14-inch gun by the

$$D' \frac{1-2mv^2}{S'} \times \frac{A}{W'} = \frac{A}{W}$$

Where D=size of projectile.

$1-2mv^2$ =striking energy in foot tons.

S=danger space.

W=weight of projectile.

A=ratio of value of assumed projectile to 14" projectile.

14" projectile is the standard, or unity.

$$\frac{11'' \quad 385,343 \quad 55 \quad 666 \quad 14,115,114,000}{14'' \quad 903,125 \quad 57 \quad 1,400 \quad 72,069,375,000} \times \frac{A}{W'} = \frac{A}{W} = .195 \text{ or } .20$$

The results of this calculation are as follows:

Comparing projectiles to 14-inch projectile by the above formula:

$$11'' = .20$$

$$12'' = .56$$

$$14'' = 1.00$$

$$15'' = 1.45$$

Using the above factors and considering the total number of gun each other, we get the following comparison:

$$(1914) \frac{\text{German gun power} \quad 95.8}{\text{United States gun power} \quad 64.8} = 1.48$$

In other words, in 1914, if the United States fleet had met the G and fought at a range of 12,000 yards (the range which target-practice indicated would have been used), the German fleet would have been superior to the United States in effective gun power. This assumes the several battle cruisers of the German fleet would have hitting power of a battleship.

THE SITUATION IN 1917.

At the long-range practice of 1917, conducted by the Atlantic following results were obtained: Five ships carrying guns of 14-inch fired at an average range of 17,370 yards. The 52 guns of these 305 shots and made 22 hits in a battleship target. The average per hits was 7.3. Eight 12-inch-gun ships fired at an average range yards and made 12.1 per cent hits. The best ship of this class made 18.1 per cent hits. This clearly indicates that the United States fleet in 1917 have made effective hits against the enemy at a range of 18,000 yards.

In 1917 the United States fleet consisted of 14 dreadnaughts having 14-inch guns; seventy-eight 12-inch guns, a total of 142 guns a broadside. The German fleet consisted of 19 dreadnaughts firing in side sixteen 15-inch guns, one hundred and twelve 12-inch, thirty-two 10-inch and 160 guns on broadside. She had five battle cruisers carry 12-inch and twenty-eight 11-inch, a total of 44 guns. Counting dr and battle cruisers, the German fleet would then have opposed 204 guns. United States fleet having 142 guns. This difference in numbers is, however, by the greater number of heavier guns—for instance the 11-inch the German ships were much less effective at 18,000 yards range than and 14-inch guns of the United States vessels.

Using the same factors and formulas as in the 1914 comparison the comparison between the gun power of the German battleship fleet and American battleship fleet is obtained: German effective gun power of the United States battleship fleet equals 105.16

$$\frac{105.16}{105.60} = .995.$$

In other words, the United States battleship fleet was $\frac{1}{2}$ per cent to the German fleet in effective gun fire at battle ranges.

From the above it can, therefore, be reasonably concluded that even if the German battle cruisers are assumed to have the full fighting power of a dreadnaught, the United States fleet as it existed at that time (1917) would have been at least on equal terms in destructive gun power with the German fleet.

The following table shows the list of the effective ships in the American and German navies in 1917. It will be noted that the greatest disparity between the fleets exists in destroyers, submarines, and vessels suitable for scouting, which disparity might have had a material effect upon the battle tactics adopted by the fleet commanders. This comparison of the effective gun fire of the two battleship forces is based on the assumption that they engaged in the open sea, in simple column formation and at the accepted ranges of that date; and it is believed that in the last analysis of the outcome of battle would have depended upon the relative gun power of the two battleship fleets.

In the absence of accurate information as to the extent of their effect on gunnery, the battle experiences of the German personnel, and the material deficiencies of the German ships resulting from their long voyage to any probable battle area, have not been considered in this comparison.

	Germany.	United States
Battleships ¹	19	14
Battle cruisers.....	5
Cruisers ²	19	15
Light cruisers ³	18	2
Destroyers ⁴	160	51
Submarines ⁵	168	5

¹ All big-gun ships only.

² Vessels below the battleship and battle cruiser types, having 4-inch guns or larger, and a speed of under 25 knots, and launched since 1896.

³ Cruisers having a battery of 4-inch guns or larger, and a speed of 25 knots or more, launched since 1896.

⁴ Destroyers with displacements over 500 tons launched since 1901.

⁵ Submarines having surface displacements over 200 tons and launched since 1901.

WILLIAM D. LEAHY.

The CHAIRMAN. Do I understand that those opinions represent your ideas on the matter fully?

Secretary DANIELS. I think their arguments are sound. If you asked me about whether a certain number of ships could fight another number of ships, my opinion and your opinion and Senator Keyes's opinion and Senator Pittman's opinion and Admiral Benson's and Admiral Mayo's may not agree. I am giving you the statements of expert officers who have made a study and calculation mathematically, which is very interesting, and which I am inclined to think correct; but it is a matter of opinion. You never can know which fleet can lick the other until you try. That statement shows, Mr. Chairman, that in battleships hitting power we were the equal or superior of the Germans in 1917.

The CHAIRMAN. That is, in the hitting power of our guns, do you mean?

Secretary DANIELS. Yes; of the fleet; the German fleet and our fleet. It is all set out there. I will read it for you if you want to hear it.

The CHAIRMAN. No; I do not think it is necessary.

Secretary DANIELS. It is ably written by the head of the target practice, Director of Gunnery Exercises. He has made a very elaborate and able argument.

The CHAIRMAN. Did you ever at any time give orders, Mr. Secretary, that the Army and Navy Joint Board should not meet?

Secretary DANIELS. I could not give such orders, Mr. Chairman. The only man that could give orders to the Army and Navy Joint Board would be the Secretary of War and the Secretary of the Navy,

The CHAIRMAN. That is, could the President not give orders to have it stopped without the Secretary of War or the Secretary of the Navy joining with him?

Secretary DANIELS. Certainly; he is the Commander in Chief of the Army and the Navy. Any order he gives goes.

The CHAIRMAN. Could the Secretary of War give orders to have it stopped without the President or the Secretary of the Navy?

Secretary DANIELS. No; the Secretary of War could give orders that the Army officers should not attend; or the Secretary of the Navy could give orders to Navy officers not to attend. Let me explain that to you. Since that matter has come up it may be well to give you the facts, because it seems there is being retailed here by certain witnesses a lot of gossip having no connection whatever with this inquiry, but as to such a Joint Army and Navy Board did in 1914, which seems to me entirely out of place; but you will recall very well that in the early part of the administration there was a very acute situation between a friendly power and the United States, and that the President and the administration and the country were concerned with that acute situation. About that time the Joint Army and Navy Board had made certain recommendations, which, by some subterranean passage, became circulated upon the hill. I am not certain whether it was circulated in the newspapers or not.

Senator KEYES. Do you recall what the subterranean passage to which you refer was?

Secretary DANIELS. Well, I do not know whether it was a member of the Joint Army and Navy Board or some person to whom they communicated their information.

Senator KEYES. Do those passages still exist?

Secretary DANIELS. I think that I cut some of them off and torpedoed some others. But that information became general. Its becoming public might have resulted in a very serious trouble with a friendly power. The recommendations of the Joint Army and Navy Board, which were most confidential, became whispered about and discussed generally. People came to me and said, "Is it true that the Joint Army and Navy Board have decided to do this and to do that?" which, if it had been done, would have been tantamount in the eyes of a friendly nation to our getting ready to go to war with it; and the Army and Navy Board for a period held no meetings for a time.

The CHAIRMAN. Did you have anything to do with cutting off the meetings?

Secretary DANIELS. I instructed the naval members of the board not to attend any further meetings until they were directed to do so, and it was all on account of international very grave questions.

The CHAIRMAN. Is there any other agency to coordinate the Army and Navy for offense and defense?

Secretary DANIELS. When that international acute situation passed, the Joint Army and Navy Board resumed their meetings.

The CHAIRMAN. And their meetings were important meetings?

Secretary DANIELS. Their meetings were meetings of high officers of both branches of the service. They meet now as before. I have had papers from them in the last 10 days—several. They meet fre-

quently and discuss matters of joint action between the Army and Navy, which they forward to the Secretary of War and the Secretary of the Navy.

The CHAIRMAN. Admiral Benson has testified that no complete plan of cooperation was gotten up by them.

Secretary DANIELS. Well, Mr. Chairman, during the war we did not have time to stop for meetings. Admiral Benson and Capt. Pratt and Gen. March and Gen. Hines, the high ranking officers of the Army and Navy, met, not stately, every day, but every Wednesday there was a meeting of the Secretary of War, the Secretary of the Navy, the Chief of Staff of the Army, and the Chief of Operations of the Navy, the head of the Shipping Board, and the head of the Food Administration to discuss all operations and everything that could be done. Every day Benson and March had a discussion; every day Pratt and his corresponding man in the Army discussed matters. They moved so rapidly and acted so perfectly in harmony with the Army and Navy they were able to do a tremendous work because of this joint operation. Now, I do not—

The CHAIRMAN. But not because of the board's operations—because of the action of the joint board?

Secretary DANIELS. Well, it might not have been an official meeting; but the board is composed, you understand, of these high ranking officers. Gen. March, of the Army, would have been on the board. Admiral Benson, of the Navy, would have been on the board. Other high ranking officers of each would have been members. So that you may state practically that board met and decided problems every day, but they did not regard it as a meeting of the board as in peace times. There was a perpetual meeting and deciding upon matters of action.

The CHAIRMAN. But Admiral Benson says he does not recollect any action taken in pursuance of the meetings of the board.

Secretary DANIELS. I told you that the board met in that way, that Gen. March and Admiral Benson met daily, and Capt. Pratt and his corresponding man of the Army met daily and decided problems and carried them out in operations; and the purpose of the board is what? The purpose of the board is to formulate plans and carry them out for joint operations. These plans were made and carried out immediately.

The CHAIRMAN. Oh, no; the admiral states that there was no complete plan for operations.

Secretary DANIELS. He means that we did not meet in war times, like they do in peace times, and discuss, for example, what shall be done at Cavite, what is the necessary cooperation in Panama, and so on.

The CHAIRMAN. He says that the joint action was not gotten out.

Secretary DANIELS. He meant by that that they did not have the peace-time joint action. They had joint action every day.

Senator PITTMAN. Now, let me interfere once more. Admiral Benson testified to all of this stuff which you said he did so and so, and some of it he did testify to, and according to my memory—

The CHAIRMAN. I think not, at all.

Senator PITTMAN. What is the use of reading it all over, of putting it all in again?

The CHAIRMAN. Yes; I could read all the testimony.
Senator PITTMAN. You know, before we get through with
we are going to be charged by the Senate with delay, and—
The CHAIRMAN. I have said that I thought we could go
with the Secretary to-day, if the Secretary will answer my
briefly.

Secretary DANIELS. I have answered briefly and told
to the old, formal peace-time meetings, the Joint Board
old such meetings during the war. As to actual meet-
ere meetings between Admiral Benson and Gen. M
etween the Secretary of War and myself, and between C
nd the corresponding officer in the Army. There was
uring the whole war that we did not have interchange o
on, and formal policies carried out immediately, const
very Wednesday we had formal meetings and meetings.
ut I do not think that the secretary of the Joint Board
alled meetings in the old-fashioned way to discuss an
ve decided each day, and we carried it out.

The CHAIRMAN. I must differ absolutely from the Sen
evada about the importance of these questions. I cons
s of very great importance, and I shall continue, of
sk them.

Secretary DANIELS. And I shall continue to answer.

The CHAIRMAN. And I expect that we can get through

Secretary DANIELS. I will answer as briefly as I can.

The CHAIRMAN. Your statement, Mr. Secretary, took
ays to make?

Secretary DANIELS. I was here about six or seven days
ight days.

The CHAIRMAN. I think it was at least eight days.

Secretary DANIELS. We were here Monday, Tuesday, W
hursday, and Friday; and then we were here Monday
ay of the next week; I was away Wednesday, and we
hink, on Thursday.

The CHAIRMAN. Yes; that is eight days.

Secretary DANIELS. Eight days.

Senator PITTMAN. How long has the cross-examination

The CHAIRMAN. So far, I think, this is the fourth day.

Secretary DANIELS. I have lost all reckoning of time. I
re not going to ask me questions as to the time, or how m
have been asked or answered, or any other witness has
r answered.

The CHAIRMAN. I am not. I do not know what the Sen
Nevada will do.

Secretary DANIELS. All right, Mr. Chairman.

Senator PITTMAN. I am anxious that we may have a
his before the conventions meet. I do not want to be cha
aving a delay in this matter.

The CHAIRMAN. If the Senator thinks we are purposely
t, he is very far from the purpose.

Senator PITTMAN. There is no indication of delay on your part except—

The CHAIRMAN. I want to get through as quickly as I can. I have many other duties to perform, as the Senator probably knows.

Senator PITTMAN. I know it; but the trouble is that the country does not know it.

The CHAIRMAN. Now, Mr. Secretary, on April 21, 1920, I sent the following letter to you [reading]:

APRIL 21, 1920.

To Hon. JOSEPHUS DANIELS,

Secretary of the Navy.

DEAR MR. SECRETARY: It is requested that the Navy Department furnish the following information to the Senate Subcommittee on Naval Affairs on or before Wednesday next, the 28th of April:

I. For each and every individual battleship on the Navy list on the 2d of February, 1917.

(a) State whether in full commission, in commission in reserve, in commission in ordinary, or out of commission.

(b) State exactly where located then.

(c) State number of days then necessary to make matériel repairs essential for war service.

(d) State number of rounds of shells then on board for main battery.

(e) State percentage of personnel then on board in terms of per cent of full war complements as 100 per cent.

II. For each and every individual battleship on the Navy list on the 6th of April, 1917:

(a) State whether in full commission, in commission in reserve, in commission in ordinary, or out of commission.

(b) State exactly where located then.

(c) State number of days then necessary to make matériel repairs essential for war service.

(d) State number of rounds of shells then on board for main battery.

(e) State percentage of personnel then on board in terms of per cent of full war complements at 100 per cent.

III. For each and every individual battleship on the Navy list on the 7th of April, 1917, which was then not in proper matériel condition for instant war service overseas and which then had not on board its full war complement of officers and men:

(a) State date upon which the making of necessary repairs was started.

(b) State date upon which the making of necessary repairs was completed.

(c) State yard (or other place) where repairs were made.

(d) State date upon which each ship obtained its full war complement of officers and men.

IV. State for each and every individual battleship its apportionment of reserve shells for its main battery in terms of rounds for each ship calculated from the total reserve of shells ready but not on board on the 7th of April, 1917.

V. For each and every individual cruiser on the Navy list on the 2d of February, 1917:

(a) State whether in full commission, in commission in reserve, in commission in ordinary, or out of commission.

(b) State exactly where located then.

(c) State number of days then necessary to make matériel repairs essential for war service.

(d) State number of rounds of shells then on board for main battery.

(e) State percentage of personnel then on board, full war complements being taken as 100 per cent.

VI. For each and every individual cruiser on the Navy list on the 6th of April, 1917:

(a) State whether in full commission, in commission in reserve, in commission in ordinary or out of commission.

(b) State exactly where located then.

(c) State number of days then necessary to make matériel repairs essential for war service.

(d) State number of rounds of shells then on board for main battery.

(e) State percentage of personnel then on board, full war complements being taken as 100 per cent.

VII. For each and every individual cruiser on the Navy list on the 7th of April, 1917, which was then not in proper matériel condition for instant war service overseas and which then had not on board its full war complement of officers and men:

- (a) State date upon which the making of necessary repairs was started.
- (b) State date upon which the making of necessary repairs was completed.
- (c) State yard (or other place) where repairs were made.
- (d) State date upon which each ship obtained its full war complement of officers and men.

VIII. State for each and every individual cruiser its apportionment of reserve shells for its main battery in terms of rounds for each cruiser calculated from the total reserve of shells ready but not on board the 7th of April, 1917.

IX. For each and every individual destroyer on the Navy list on the 2d of February, 1917.

- (a) State whether in full commission, in commission in reserve, in commission in ordinary, or out of commission.
- (b) State exactly where located then.
- (c) State number of days then necessary to make matériel repairs essential or war service.
- (d) State percentage of personnel then on board, full war complements being taken as 100 per cent.

X. For each and every individual destroyer on the Navy list on the 6th of April, 1917:

- (a) State whether in full commission, in commission in reserve, in commission in ordinary, or out of commission.
- (b) State exactly where located then.
- (c) State number of days then necessary to make matériel repairs essential or war service.
- (d) State percentage of personnel then on board, full war complements being taken as 100 per cent.

XI. For each and every individual destroyer on the Navy list on the 7th of April, 1917, which was then not in proper matériel condition for instant war service overseas and which then had not on board its full war complement of officers and men:

- (a) State date upon which the making of necessary repairs was started.
- (b) State date upon which the making of necessary repairs was completed.
- (c) State yard (or other place) where repairs were made.
- (d) State date upon which each destroyer obtained its full war complement of officers and men.

XII. State number of depth bombs for use on destroyers on hand and ready on April, 1917.

It is requested that the Navy Department's report in reply be accompanied by separate tabulation for battleships, cruisers, and destroyers as per the enclosed forms.

Very truly, yours.

FREDERICK HALE.

On April 29, 1920, I received the following letter:

APRIL 29, 1920.

1. FREDERICK HALE,
United States Senate, Washington, D. C.

MY DEAR SENATOR: Complying with your letter of April 21, 1920, in which you requested that the Navy Department furnish certain information for the Senate Subcommittee on Naval Affairs on or before Wednesday, the 28th day of April, I am forwarding you herewith, by direction of the Secretary, this information tabulated separately for battleships, cruisers, and destroyers, as requested.

Yours, respectfully,

B. F. HUTCHISON,
Captain, United States Navy,
Acting Chief of Naval Operations.

These tabulations have already been put into the record, but I would like to have them go in again at this point, as I wish to refer to them.

The tables referred to are here printed in the record as follows:)

The CHAIRMAN. I have; yes.

Senator PITTMAN. Do I understand that this is a codification of the statement?

The CHAIRMAN. A codification of certain matters in the statement. Secretary DANIELS. Were they made up by the Navy Department?

The CHAIRMAN. No; they were not.

Secretary DANIELS. Who made them up?

The CHAIRMAN. They were made up in my office.

Senator PITTMAN. Is it an argument, or evidence?

The CHAIRMAN. I think it is evidence deducible from this statement.

Secretary DANIELS. I think it is important to know what expert made them up, if they were not made up by yourself.

The CHAIRMAN. They were not made by an expert. They were made in my office, and if there are mistakes here they can readily be corrected by the experts of the department.

Secretary DANIELS. If you ask me questions about that, I will say that you will find all the information about this in the testimony of Admiral McKean, who was assistant to the Chief of Operations for matériel.

The CHAIRMAN. These show a general summary of the preparedness of vessels. They cover all of the vessels given in this tabulation, whether in or out of commission.

First, there is a general summary of preparedness of vessels as to matériel and personnel. Under "Matériel" are given those that are fit to fight and those that are unfit to fight. Under those that are fit to fight are given the percentages of each class of vessel. Under those unfit to fight—

Secretary DANIELS. You say "fit to fight"?

The CHAIRMAN. Yes.

Secretary DANIELS. Whose opinion is that?

The CHAIRMAN. It is taken from your information in this statement here [indicating tables].

Secretary DANIELS. Well, I do not think those figures used the words "fit to fight," and "unfit to fight." I have not examined them, but I do not think they give any such statement as that. I do not think you ought to put in the record—

Senator PITTMAN. I do not see anything on this statement here—

Secretary DANIELS. I do not think you ought to put in the record, and I protest against the statement going into the record, "fit to fight," and "unfit to fight": "full manned," and "not full manned," unless it is stated by an expert.

Senator PITTMAN. I object to the introduction of this as a member of the committee, on the ground that it is not evidence.

The CHAIRMAN. I will make corrections of any kind that are proper, but this matter I wish to have go into the record.

Secretary DANIELS. I submit, Mr. Chairman, you have no right to make a statement here, nor anybody else, headlined "fit to fight," or "unfit to fight," and based upon the statement, unless you do it from Admiral McKean, who is the officer in charge of that work, or official documents.

The CHAIRMAN. This statement was given me by Capt. B. H. Hutchison, in response——

Secretary DANIELS. Does that statement say "fit to fight"?

The CHAIRMAN. I will come to that later; I am entirely willing to make any changes that are proper. If it does not say "fit to fight," it should not be in here. This statement was in response to my request to you as Secretary of the Navy to furnish me with the information.

Secretary DANIELS. If that kind of testimony or arguments are to go in the record——

The CHAIRMAN. Do you not think I have a right to take these figures and deduce whatever I can from them? I have a right to take those figures——

Secretary DANIELS. But you have no right, unless you are a witness, to testify about them. I think you have a right in your report to make any deduction you want to.

The CHAIRMAN. I think I have a right to put in these figures.

Secretary DANIELS. I do not think you have the right to put in the record a statement "fit to fight" and "unfit to fight."

The CHAIRMAN. I say that I am perfectly willing to change that, if it is not borne out. I will look it up.

Senator PITTMAN. Suppose you put the expert on, and let him be cross-examined as any other witness.

Secretary DANIELS. If you will call Admiral McKean here, and put the expert on, and let them discuss each ship, you will have something of value.

The CHAIRMAN. I do not want anything down except what appears in this statement, but I have a perfect right to put in anything that appears in this statement, and I intend to do so.

Secretary DANIELS. That is in the statement; but you have no right to take that statement and put the characterization "fit to fight" or "unfit to fight."

The CHAIRMAN. I say I am perfectly willing to change that, and if it is not borne out I will change it. I will look over the letter.

Secretary DANIELS. Who is going to say?

The CHAIRMAN. Unless I can show that it is borne out we will make the necessary change in that "fit to fight" and "unfit to fight."

Secretary DANIELS. How are you going to say whether it is borne out or not?

The CHAIRMAN. If you will allow me to look it over I will inform you in a very short time.

Secretary DANIELS. I submit, before that goes into the record that Admiral McKean, who is aid for personnel, shall go over that. He was here during the whole war, and knows all about it, and I insist that he shall examine it and he shall report upon it. Some nameless man, or somebody, is putting up a question of "fit to fight" and "unfit to fight."

The CHAIRMAN. I have already told you, Mr. Secretary, that that will be changed if necessary. I want to go over this letter and see if that is borne out.

Secretary DANIELS. Yes; but you are putting that out——

tion like that is a suggestion that should not be made.

The CHAIRMAN. I propose to put this statement in and correct it if it is not proper.

Secretary DANIELS. This statement?

The CHAIRMAN. Yes.

Secretary DANIELS. Before it goes in I shall insist, and if I have any rights in God's world, I shall demand, that Admiral McKean go over it.

The CHAIRMAN. Admiral McKean can go over it afterwards.

Secretary DANIELS. It ought not to go into the record, in all fairness, until Admiral McKean has gone over it.

The CHAIRMAN. I can not agree with you, Mr. Secretary. Now, if you will wait a minute, I will go over this letter.

Secretary DANIELS. Go ahead. Before you go further, Mr. Chairman, I want to call your attention to the fact that there never was a ship in the world that some officer would not like to have additions to it.

The CHAIRMAN. Now, Mr. Secretary, in my letter to you, in paragraph 3, I state:

For each and every individual battleship on the Navy list on the 7th of April, 1917, which was then not in proper material condition for instant war service overseas, which then had not on board its full war complement of officers and men—

The words "fit to fight," if you object to them, will go out, and we will put them—

Secretary DANIELS. I object to the whole statement.

The CHAIRMAN. I say the words "fit to fight" will go out.

Secretary DANIELS. I object to the whole statement. It is misleading, incorrect, and unfair.

The CHAIRMAN. Will you allow me to finish my statement?

Secretary DANIELS. Oh!

The CHAIRMAN. And in place of those words I will put in "not in condition for instant war service overseas."

Secretary DANIELS. I object to that statement, and I say if this statement is to go in at all this committee ought to have experts who know these material conditions before this committee for cross-examination and they ought to go over each question. Suppose they say, "We want to have 10 days' repairs on a ship." It is material to know what that 10 days' repairs consist of. Sometimes a repair on a ship does not affect at all its ability to fight or its conditions or ability to go overseas.

The CHAIRMAN. All this information is gotten from the tabulation made up by the department, and all of that is perfectly proper to go in the record, and the tabulation itself has already gone in.

Secretary DANIELS. I insist if that table goes in that right under it goes the statement of Admiral McKean showing what those repairs were, whether they were essential for fighting or to go to sea. There is a very great difference. We put on the record like this, for instance: A captain says, "I have a ship; I want it to go to the navy yard for overhaul." Ninety per cent of the things he wants done

are perfectly immaterial about fitness to fight. The ship can fight with or without them. So that is utterly misleading.

The CHAIRMAN. If the Secretary objects to this going in, I will take the matter up with the committee and we will decide whether or not it shall go in.

Senator PITTMAN. My objection to it is this—

The CHAIRMAN. I can see no objection myself at all. It is entirely based on figures you have given us, and I take it that I have a perfect right to have prepared any deductions I see fit from these figures, and if they are not correct later you can show that they are not correct.

Secretary DANIELS. Later? When is Admiral McKean coming back to show that they are not correct?

The CHAIRMAN. We will allow the admiral to make a statement to explain this.

Senator PITTMAN. My objection is based on this ground, that there is nowhere a question in regard to the accuracy of this statement, and I think the accuracy of this statement is of vast importance to this committee. You state that there is a computation made here from an official piece of evidence. The official evidence, in compliance with your letter, divided it as follows: "Full commission, reserve, out of commission, ordinary, operating with reduced complement, very old vessels, never had full complements on board." Those are the divisions made in this. Now, from those divisions in that official document you are making up an entirely different division and you are handing it in here as someone's conclusions drawn from this official document. Now, it is nothing but a conclusion, and a conclusion has no weight at all unless it is by someone competent to form a conclusion. I would like to have the person who prepared this compilation, if it is worth anything—I have not looked it over—sit down here and tell us how he prepared it.

The CHAIRMAN. I think I can tell how it is prepared.

Senator PITTMAN. If you are willing to go on the stand with regard to it, it will undoubtedly become evidence.

Secretary DANIELS. I suggest that the chairman of the committee be called as a witness and be sworn.

The CHAIRMAN. I do not think it is necessary. I am simply putting in a piece of evidence.

Secretary DANIELS. I submit that you have no right to testify unless you are sworn. If you are going to put that in—

The CHAIRMAN. I am going to put it in, and if anything—

Secretary DANIELS. You can not put it in fairly, unless you swear to it, as evidence.

The CHAIRMAN. Can I not ask you questions, and can I not use this in asking you questions?

Secretary DANIELS. Yes; but you can not put that in on a false basis. I shall refuse to answer any question upon a false basis.

The CHAIRMAN. After this has been put in, Admiral McKean or anybody else can go over it.

Secretary DANIELS. Before it is put in.

The CHAIRMAN (continuing). And find out any mistakes that are there, and any mistakes will be immediately corrected.

The CHAIRMAN. Precisely; but that can be done afterwards.

Secretary DANIELS. Not at all. It must not go in before that is done, because if you put it in before you will put a false statement in the record.

The CHAIRMAN. How do you know it is a false statement?

Secretary DANIELS. Because I know there is no statement of that kind, "fit to fight" and "unfit to fight."

The CHAIRMAN. I have already told you that we will change the words "fit to fight," and make it "in proper material condition for instant service overseas."

Secretary DANIELS. If you are prepared to go on the stand as a witness and take them—I decline, if I have any authority on earth, to stand for any such characterizations of the ships, based upon somebody's statement, that nobody knows who did it. Let the person who made it come before this committee and go on the stand before it goes in.

The CHAIRMAN. I have told you what I propose to do.

Secretary DANIELS. Well, I am impotent—

The CHAIRMAN. To put in this tabulation, and if there is any trouble in the tables, if there are any mistakes, they can be corrected and will be corrected, and we will be glad to correct them.

Secretary DANIELS. I submit, then, Mr. Chairman, that I have a perfect right to ask, as to this statement, anything that I please, without cross-examination, or to send anybody in America to make some characterization, without it.

The CHAIRMAN. How do you mean, "without cross-examination"?

Secretary DANIELS. I mean this statement ought not to go in unless it is cross-examined on.

The CHAIRMAN. I am perfectly willing to have you ask any questions about this statement as we go along.

Secretary DANIELS. Whenever you will take the stand and qualify as a witness before the committee, I will send for Admiral McKean and have him here to ask you questions, and then it can go in.

The CHAIRMAN. Admiral McKean can ask any questions he wants to about it.

Secretary DANIELS. It can not go in, it ought not to go in, in fairness, before it is cross-examined.

The CHAIRMAN. We will take that up with the committee.

Secretary DANIELS. I have no authority, but I have a right to protest to the American people against this thing.

The CHAIRMAN. I can not imagine any objection to having anything go in that has to do with the question of preparedness of the Navy.

Secretary DANIELS. Let everything go in; but this is not preparedness of the Navy; this is an analysis of the ships, that has no justification.

Senator PITTMAN. I do not care whether Admiral McKean examines it or who examines it; I am not concerned with that matter. I think any witness can come here as a witness the same as any other witness and give testimony, and then he will be subject to cross-

examination as to his qualifications to give testimony—as to his ability, as to his knowledge of such matters, as to how he arrives at certain figures, or not. In other words, it will be in accordance with the regular procedure of this committee; and any other procedure is the insertion of secret evidence into the record without the right of cross-examination.

The CHAIRMAN. How is it secret evidence when we simply take the figures that are given by the department? I think that I can explain how every figure is obtained from this tabulation. I have a right to take this tabulation and work up any figures from it I see fit; have I not?

Senator PITTMAN. These are your figures?

The CHAIRMAN. These are the figures prepared in my office, and I can explain them.

Senator PITTMAN. Do you know anything about the proposition?

The CHAIRMAN. I think I can give it to you as I go along.

Senator PITTMAN. How do you know, for instance—

The CHAIRMAN. There is not a thing that can not be obtained by adding these figures in this tabulation sent down from the department.

Senator PITTMAN. Now, you have this here [examining paper] “fit to fight, battleships, 30 per cent.” How did you arrive at that?

The CHAIRMAN. By taking the different battleships and the averages, here, and dividing and finding how they stood. For instance, in personnel, it is all given here, just what percentage of personnel they had on board. As to material it is all given just the same way.

Secretary DANIELS. Did you count the *Iowa* and the *Missouri*?

The CHAIRMAN. I said—

Secretary DANIELS. Did you count the *Iowa* and the *Missouri*?

The CHAIRMAN. Yes; I said all the battleships in the Navy, whether in commission or not.

Secretary DANIELS. You count in the *Iowa* as a ship and say that it is not fit to fight! Why, the *Iowa* and the *Illinois* and the *Missouri* and the *Massachusetts* and those old classes of ships were scrapped; and just see the unfairness of putting in a statement of whether an old ship that was scrapped is fit to fight or not, and putting that in the same class with the *New York* and the *Oklahoma* and the *Nevada*!

The CHAIRMAN. But it all comes from this statement received from the department.

Senator PITTMAN. It comes from your statement.

The CHAIRMAN. I stated in the beginning that we took all the ships. Those in reserve and in commission or out of commission, all that were on this list sent by your department.

Secretary DANIELS. You bring here a statement—

The CHAIRMAN. Yes.

Secretary DANIELS (continuing). In which you assume—

The CHAIRMAN. Yes.

Secretary DANIELS (continuing). To say what ships in the Navy are fit to fight.

The CHAIRMAN. Yes; I take your own statement.

up any such statement.

The CHAIRMAN. It is made from your own figures.

Secretary DANIELS. Ah! No; a statement prepared—a statement for a certain ship. You say the *Missouri*, and I note as recommended 27 days' repair. Another expert recommended something else. You have got to go into that and see what those repairs were, and whether they were necessary or what their character was.

Senator PITTMAN. Let us take the *Arizona*, for instance. What is the official statement; what do you find as to the *Arizona* there?

The CHAIRMAN (reading from letter):

(a) State whether in full commission, in commission in reserve, in commission in ordinary, or out of commission.

Full commission.

(b) State exactly where located then.

Navy yard, New York.

(c) State number of days then necessary to make matériel repairs essential for war service.

Sixty-two days.

(d) State number of rounds of shells then on board for main battery.

Twelve hundred shells.

(e) State percentage of personnel then on board in terms of per cent of full war complements as 100 per cent.

One hundred and nine per cent of line officers, no reserve officers; 100 per cent staff officers, 91 per cent warrant officers, and 93 per cent of enlisted men.

Secretary DANIELS. Upon what basis—

The CHAIRMAN. These are direct answers to my questions to you.

Senator PITTMAN. That is what I am getting at. Let us finish this for a minute. Those answers gave certain facts.

The CHAIRMAN. Those gave certain facts.

Senator PITTMAN. How did you determine from them whether that vessel was fit to fight or not?

The CHAIRMAN. I took, under—

(e) State number of days then necessary to make matériel repairs essential for war service—

Senator PITTMAN. It stated 62 days?

The CHAIRMAN. Sixty-two days.

Senator PITTMAN. Is that vessel fit to fight or not?

The CHAIRMAN. After 62 days.

Senator PITTMAN. You have two headings here, one "Fit to fight" and the other "Not fit to fight." That says "62 days." Was that vessel fit to fight?

The CHAIRMAN. That vessel was not fit to fight at that time; that is, she had necessary repairs to be made at that time.

Secretary DANIELS. The *Arizona* not fit to fight?

The CHAIRMAN. That date was February 2.

Senator PITTMAN. Well, I am going, Mr. Chairman. Excuse me, I am going to the Senate.

The CHAIRMAN. Senator, before you go I would like to say that I intend to put these matters in the record.

Senator PITTMAN. There is no way to prevent that that I know of.

Secretary DANIELS. I want to say, Mr. Chairman—and I want to put this in the record—that the only way to put that in the record is to put an unfair, unjust, and unfounded statement in the record that is not borne out by the facts.

The CHAIRMAN. It is entirely borne out.

Secretary DANIELS. And I protest against the injustice and the wrong of it. You have put the *Arizona* down there as unfit to fight. The *Arizona* is fit to fight.

The CHAIRMAN. Mr. Secretary, one minute. I gave you the conditions of the *Arizona* on February 2, 1917. Now, the figures show on April 6, 1917, as follows:

(c) State number of days, then, necessary to make material repairs essential for war service.

None.

That is, on April 6 she was ready. On February 2 she was not.

Secretary DANIELS. Now, Mr. Chairman—

Senator PITTMAN. The tabulation you have there is "Unfit to fight" on February 2.

The CHAIRMAN. Not fit.

Senator PITTMAN. You state from those figures that on February 2 she was not fit to fight?

The CHAIRMAN. Yes; and she was fit to fight on April 6, 1917.

Secretary DANIELS. Where does it show that she was when she was unfit to fight?

The CHAIRMAN. At the navy yard, New York.

Secretary DANIELS. Yes; and where was she in April?

The CHAIRMAN. On April 6 she was at Hampton Roads, Va.

Secretary DANIELS. The idea of putting down the *Arizona* as unfit to fight on any date! Why, she could have been repaired in a very brief time.

The CHAIRMAN. I will cut out the words "Unfit to fight" and "Fit to fight."

Secretary DANIELS. But you have not changed it materially when you have done that.

The CHAIRMAN. I have changed those words here.

Secretary DANIELS. Let us, if you wish, put any such statement in the record; but I demand that you be sworn and come before this committee as a witness, and that we may call Admiral McKean here, and that you be examined, or whoever put this statement in be examined, and that we enter into every particular of every repair necessary; and I submit that anything else is not fair.

The CHAIRMAN. I do not think it is unfair. I do not think you can cite a case where the chairman of a committee is called before his own committee and sworn as a witness in the matter of questions he wishes to ask.

Secretary DANIELS. You have not asked a question.

The CHAIRMAN. I say that I am about to ask you questions.

Secretary DANIELS. You are putting in this record something which I say is not founded on facts, and if it goes in, is an injustice to the American people; and I protest against it and I denounce it.

The CHAIRMAN. I have given your own figures about the *Arizona*.

Secretary DANIELS. Ah! You said she wanted some repairs.

The CHAIRMAN. Exactly.

Secretary DANIELS. And I told you that there was not a ship in the Navy to-day—if you want to ask whether the *Arizona* was fit to fight or not and is in condition and in repair, let us send for Mayo and McKean; let us send for somebody that knows. I submit that that statement there is so jaundiced and unfair and improper that it has no place here. If you want to know whether the *Arizona* is fit to fight or not, let us take these papers and let us send for Mayo and McKean, and let us send for men that know. I would not pass my judgment upon it. I would not take yours.

The CHAIRMAN. Mr. Secretary, will you deny that on February 2, 1917, the *Arizona* had 62 days' work to do on her.

Secretary DANIELS. I will refer you to the testimony of Admiral McKean, and I will say this. If she had——

The CHAIRMAN. She was all ready on April 6, 1917, and those days' work had been done.

Secretary DANIELS. I will say this, that if she had 62 days' work, it is absolutely essential for you to take up what those 62 days were for; what kind of repairs; what kind of improvement; and I submit that this whole matter should be held up until men who know, who are technically trained, admirals of fleets; technical officers, who can say whether a ship is fit to fight and is in a state of readiness——

The CHAIRMAN. Please cut out those words "fit to fight." That has been changed.

Secretary DANIELS. But you are not changing it materially.

The CHAIRMAN. I am using the exact words of my letter to you requesting this.

Secretary DANIELS. You have a right to put in that record a statement of Capt. Hutchinson's as to conditions, and then if there are any deductions from this statement, whoever makes those deductions ought to come before this committee and be sworn and cross-examined, and Admiral McKean ought to be called back, and Hutchinson called if you want him, and go through these matters and determine the question.

The CHAIRMAN. I am putting in the record the questions, and——

Secretary DANIELS. I can not stop you putting in the record; but I say it is an unjust and unfair thing to do.

The CHAIRMAN. I am putting in the record certain deductions taken from those figures—please let me finish, now.

Secretary DANIELS. Oh, of course.

The CHAIRMAN. Certain deductions taken from your figures which I have had worked up in my office from the figures given by you.

Secretary DANIELS. Yes.

The CHAIRMAN. Please wait, now—and these deductions I propose to introduce at this period in the record, and I wish to tell you when I introduce them that if there are any mistakes in these deductions I shall be very glad to have you point them out to me and they will be corrected.

Secretary DANIELS. Corrected how?

The CHAIRMAN. They will be corrected; a statement will be made.

Secretary DANIELS. How?

The CHAIRMAN. In the record.

Secretary DANIELS. By whom?

The CHAIRMAN. That is for you to say. You can have this looked over and verified. These are all made up as to the question of repairs, as to the question of personnel, from these figures, Mr. Secretary [indicating table].

Secretary DANIELS. Then, I submit that the proper thing to do is not to put them in the record, but to say that you have them there, and let them be examined by experts, and let sworn men come here and testify as to these matters, and then let that go into the record, and all these things, if it is testified to and sworn to.

The CHAIRMAN. You want sworn men to come here and testify to what—as to whether they follow the information given me?

Secretary DANIELS. As to whether ships are fit to fight or not.

The CHAIRMAN. There is no question about "fit to fight." That has been struck out already.

Secretary DANIELS. You have changed the wording, but it is not material.

The CHAIRMAN. I have changed the wording according to my letter to you.

Secretary DANIELS. I shall protest, and I shall denounce as long as I live the placing of any such unfounded or false, unfair statements in the record.

The CHAIRMAN. Would you prefer to have me ask you things about all of these? It will take a great deal of time.

Secretary DANIELS. If you should ask me questions, I should refer you to Admiral McKean's testimony. It is all in his testimony.

The CHAIRMAN. But Admiral McKean does not deal with these specific details that are given by your office.

Secretary DANIELS. He deals with all of them.

The CHAIRMAN. He does not in any way deal with these specific details that are in here.

Secretary DANIELS. Now, I submit, Mr. Chairman, that the proper thing to do, in view of the gravity of this perfectly unfair and unfounded statement—

The CHAIRMAN. Do you object to your own statements? You are characterizing your own statements here as unfair and unfounded, are you?

Secretary DANIELS. I am not criticizing anybody as unfair, but I say that this statement is unfair and unfounded.

The CHAIRMAN. It is made up entirely from your own figures, sir.

Secretary DANIELS. Then I say that the thing for us to do is to take your own statement and your analysis and let us determine by experts what are the facts about these ships.

The CHAIRMAN. Oh, that is what you should have done before this was sent to me at my request.

Secretary DANIELS. Then I will have it done, if you wish it.

The CHAIRMAN. You did not have it done. You have sent me certain information there, and from that information I have a right to make certain deductions, provided it goes with the facts.

Secretary DANIELS. You have a right, when you make a report, to submit any deductions you choose; but I submit, Mr. Chairman—because I wish to have this matter right, and I am certain you do—I submit that these deductions you have ought to come before the committee for cross-examination and examination by experts.

The CHAIRMAN. That can be done after the statement is made.

Secretary DANIELS. And I submit that the proper way to do that is before it is introduced in the record; that it all come together. Now, I have made statements here which you have cross-examined me about.

The CHAIRMAN. Did I ask you about them before you put them in?

Secretary DANIELS. Not at all; but you cross-examined me about them.

The CHAIRMAN. Did I hold them up until I could see whether they were true or not; before you put them in the record?

Secretary DANIELS. But I was a sworn witness. I do not know who prepared that statement. I do not know whether he knew it was correct or not.

The CHAIRMAN. I told you what it is.

Secretary DANIELS. I do not understand.

The CHAIRMAN. It is entirely based upon your own statement here.

Secretary DANIELS. You can place that in the record and you can place anything in the record; but when you undertake to interpret it, then let experts come and tell you how it is to be interpreted.

The CHAIRMAN. This will be placed in the record with the words—

Secretary DANIELS. What is that?

The CHAIRMAN. This statement that I have here will be placed in the record.

Secretary DANIELS. You intend to do it?

The CHAIRMAN. Yes; I intend to do it.

Secretary DANIELS. Oh, well, of course I am impotent; but I protest against it as an unjust and an unfair thing to do.

The CHAIRMAN. Now, I will state that from—

Secretary DANIELS. And I wish to say also that before this testimony is printed I shall take your statement and all these statements and I shall insist that I shall reply to it, and that that shall go in the record as a full answer and analysis alongside of this statement. Is that right?

The CHAIRMAN. I am perfectly willing to have it go in as your statement.

Secretary DANIELS. I think it has no business there, but you have decided it.

The CHAIRMAN. Do you bear me out, Senator Keyes?

Senator KEYES. Yes.

Secretary DANIELS. Mr. Chairman, I submit this, and I think I have a right to submit it. You have not a majority of the committee here.

The CHAIRMAN. I have authority from Senator Ball to represent him.

Secretary DANIELS. Very well: I have no question about that. I submit this, that this is a very important matter, and I suggest that it is wisdom in a matter of this kind in which the Navy Department feels that it is improper—we feel that you ought—

The CHAIRMAN. Does the Navy feel it in any other way than that its own figures are improper, and does the Navy Department feel that?

Secretary DANIELS. You have placed that statement in the record, and I have objected to it.

The CHAIRMAN. Does the Navy Department feel that its own figures are improper?

Secretary DANIELS. I say, put that in the record. Did you put it in?

The CHAIRMAN. What?

Secretary DANIELS. The statement of Capt. Hutchison.

The CHAIRMAN. That has already been in the record some time.

Secretary DANIELS. All right: then I insist, and I shall put in writing, that I be permitted to be heard before the full Naval Affairs Committee before this interpretation, which in my judgment is unfair, is placed in any printed record in the United States.

The CHAIRMAN. Before the full Naval Affairs Committee?

Secretary DANIELS. I protest, and I ask it as justice.

The CHAIRMAN. We have nothing to say about the full Naval Affairs Committee, as to what they will do.

Secretary DANIELS. You have the power to do it, you have the steam roller, but I protest against it, earnestly and sincerely, and every man in the Navy will protest against it, against the statement that the *Arizona* is not fit to fight going into the record.

The CHAIRMAN. Now, Mr. Secretary, I have told you before that if you object to the words "not fit to fight"—

Secretary DANIELS. I object to the whole business.

The CHAIRMAN (continuing). They go out.

Secretary DANIELS. I object to the whole paper that you have there unless it comes in as a sworn statement from a witness before your committee.

The CHAIRMAN. We are beating around the bush now. The words, "in proper material condition for instant war service" will go in instead. These are the exact words given in my letter to you.

Secretary DANIELS. I—

The CHAIRMAN. Wait a minute. These are the exact words given in my letter to you, where I asked for information, and your information is in direct response to that request. Those words will go in instead of the words "fit to fight" or "unfit to fight."

Secretary DANIELS. You will find my protest against it—

The CHAIRMAN (continuing). And so far as the *Arizona* is concerned I have shown you that on February 2 there were 62 days' repair work to be done on her, and that on April 6, 1917, there were no days of repair necessary to be done on her.

Secretary DANIELS. I have no power on earth, Mr. Chairman, to prevent you from putting that in the record.

The CHAIRMAN. None whatever.

Secretary DANIELS. But I have the power—

Secretary DANIELS. But I have the power to appeal to the Senate and to the people of the United States. I have the power to appeal to the Senate Naval Affairs Committee, which I shall do. I have the power to appeal to the American people that this does not go on until certain witnesses have been here and testified to that, and men competent to pass upon it have brought it before you.

The CHAIRMAN. One minute, Mr. Secretary. How far would you want these sworn witnesses to go; back of this statement made here?

Secretary DANIELS. I wish each ship taken up, in view of Admiral McKean's statement or Capt. Hutchison's.

The CHAIRMAN. Yes.

Secretary DANIELS. That is all right. Let that go in the record.

The CHAIRMAN. Would you wish him to go back of that?

Secretary DANIELS. Yes; I would wish to go back of that, to show exactly the character of the repairs that were to be made, because you have deduced and are putting in your statement that the *Arizona* was not fit to fight because certain repairs were necessary.

The CHAIRMAN. Will you cut out that "not fit to fight"? As a matter of fact, there is very little difference between "fit to fight" and "in proper condition for instant service overseas."

Secretary DANIELS. But when you talk about that, you have got a deficiency—

The CHAIRMAN. I am simply taking your own figures.

Secretary DANIELS. Yes; I know; but you ought, before you characterize it—let it go in, but let us take the statement of what repairs are necessary.

The CHAIRMAN. I shall be very glad to have you furnish anything of that sort. You have not furnished it when I requested it.

Secretary DANIELS. I protest that this statement does not go in except under oath, and I protest the chairman is not testifying, and this is putting testimony in that I say is unjust. Now I do not suppose that you think it is unjust or you would not do it, but I protest that this shall not go in until some witness comes here and testifies to it and is cross-examined. I make that protest. I am impotent if you do it, but I am not impotent to make an appeal.

The CHAIRMAN. I intend to put this matter in the record.

Secretary DANIELS. I understand you say you will do it upon the vote of Senator Ball, who is absent, by his authority.

The CHAIRMAN. I say Senator Ball has given me the right to vote for him.

Secretary DANIELS. I say you do it by his authority. You put it in the record.

The CHAIRMAN. Had you rather wait until I have Senator Ball here?

Secretary DANIELS. No; I have no doubt you have his authority.

The CHAIRMAN. If you protest against it, we will wait until we have a majority of the committee present, and have Senator Ball here.

Secretary DANIELS. No; I have no doubt of your authority. There is no use wasting time about that at all.

already read to you, I have made the following deductions—
Secretary DANIELS. Against which I protest.
The CHAIRMAN. These deductions—
Secretary DANIELS. I protest as solemnly as a man.
The CHAIRMAN (continuing). These deductions are tables prepared in my office and taken entirely from the furnished by the Office of Operations to me. They cover cruisers, and destroyers. In each case they cover all ships, cruisers, and destroyers given in the list, and battleships, cruisers, and destroyers in active commission that are in reserve, in ordinary, and out of commission.
In certain cases, on account of including these ships out of commission and which were not or could not have active service, the averages would be affected by them. There is no intention on my part in any way to put off that will deceive anybody. The statement, I think, is itself.

I hope very much that you will go over the statement if any mistakes have been made—and I can not guarantee that mistakes have not been made in making up this tabulation used in my questions—that attention will be called to them, and, of course, the record will show in that case that mistakes have been made, and should be corrected.

There is nothing included in the tabulation except what is based entirely on the figures given me by the Office of Operations. There is no new matter inserted at all, except what is deduced from these figures.

As to the question of the time necessary for preparing them in proper material condition for instant service or for simply taken the figures given by the Office of Operations, I can show that the figures given by your own office are not bear out the evidence sent to me—the tabulation you are, of course, entirely at liberty to do so, and I think so; but as far as this tabulation which I am putting into the record is concerned, I have simply taken what you have given me and have based my figures on that tabulation.

I will now read the deductions that I have made.

Secretary DANIELS. The same ones you read before?

The CHAIRMAN. Yes; but I had not finished them. I have not finished them, yet.

Secretary DANIELS. Oh, you have not?

The CHAIRMAN. No.

(The matter referred to was here read by the chairman.)

Line No.	Vessels.	Material.			Personnel (exclusive of all officers).		
		In proper material condition for war service: per cent of each class of vessels.	Not in proper material condition for war service.		Having full war complement on board: per cent of each class of vessels.	Not having full war complement on board.	
			Per cent of each class of vessels.	Number of days to put each class in proper material condition for war service.		Per cent of each class of vessels.	Per cent of crew on board.
A.	B.	C.	D.	E.	F.		
	On Feb. 2, 1917:						
1	Battleships.....	32	68	60	3	97	57
2	Cruisers.....	56	44	62	3	97	59
3	Destroyers.....	9	91	57	1	99	56
4	Averages.....	26	74	60	2	98	57
	On Apr. 6, 1917:						
5	Battleships.....	46	54	61	3	97	55
6	Cruisers.....	69	31	52	3	97	59
7	Destroyers.....	9	91	56	24	76	56
8	Averages.....	33	67	56	10	90	57

In other words, on February 2, 1917, 26 per cent of the fleet was reported as fit in material and 74 per cent of the fleet had an average of 60 days of repairs essential for war service to be made. Only 2 per cent of the vessels had full war complement on board and 98 per cent of them averaged to have but 57 per cent of their full war complement on board.

On April 6, 1917—that is, 63 days later—33 per cent of the fleet was reported as fit in material and 67 per cent of the fleet had an average of 56 days of repairs essential for war service to be made. Only 10 per cent of the vessels were fully manned and 90 per cent of them averaged to be but 57 per cent manned.

In short, from the figures presented by the Navy Department, we went into the war with two-thirds of our fleet not in proper material condition for war service and requiring on the average two months of repairs, and with but 10 per cent of our fleet having their full war complement on board and 90 per cent of it averaging less than three-fifths of its full war complement on board.

Personnel preparedness of vessels.

[Based on full war complement as 100 per cent and exclusive of all officers.]

—The Mayrant did not receive her full war complement of men until February, 1918.
 IX, clause d, reads: "IX. For each and every individual destroyer on the Navy list on the 2d of May, 1917: (d) State percentage of personnel then on board, full war complements being taken as 100 per cent."
 X, clause d, reads: "X. For each and every individual destroyer on the Navy list on the 6th of April, 1917: (d) State percentage of personnel then on board, full war complements being taken as 100 per cent."

Material preparedness of vessels.

SUMMARY.

Line No.	Vessels.	In proper material condition for war service.		Not in proper material condition for war service.			
		Number in each class.	Per cent of total in each class.	Number in each class.	Per cent of total in each class.	Average number of days required to put in proper material condition for war service.	Total number in each class.
		A.	B.	C.	D.	E.	F.
	On Feb. 2, 1917:						
1	Battleships.....	12	32	25	68	60	37
2	Cruisers.....	18	56	14	44	62	33
3	Destroyers.....	6	9	61	91	57	67
4	Total and averages.....	36	26	100	74	60	136
	On Apr. 6, 1917:						
5	Battleships.....	17	46	20	54	61	37
6	Cruisers.....	22	69	10	31	52	32
7	Destroyers.....	6	9	61	91	56	67
8	Totals and averages.....	45	33	91	67	56	136

In other words, of the 136 battleships, cruisers, and destroyers reported on by the Navy Department in response to the inquiry by Senator Hale, on the entry of the United States into the war 45 vessels (33 per cent) are reported as being in proper material condition fit for war service and 91 vessels (67 per cent) are reported as then requiring essential repairs before being in proper material condition for war service; and it appears these repairs were expected to take, on the average for all of the 91 vessels not in proper material condition for war service, 56 days, or practically two months after war was declared before they could be put in proper material condition for instant war service overseas.

It is furthermore noteworthy that one battleship, the *Oregon*, was not ready until April 7, 1919 (two years). One cruiser, the *Salem*, was not ready until November 1, 1917 (208 days), and one destroyer, the *Mayrant*, was not ready until March 14, 1918 (343 days after war was declared).

9	Percent of total which were not in proper material condition for war service.....	68	54

NOTE.—The North Dakota, at New York, with but 92 days of essential repairs scheduled against her on Apr. 6, 1917, was not repaired until Sept. 30, 1918, 542 days after war was declared. The Oregon, at New York and Mare Island, with but 39 days of essential repairs scheduled against her on Apr. 6, 1917, was not repaired until Apr. 7, 1919, just two years after war was declared and 147 days after the armistice was signed.

¹ Paragraph I, clause c, reads: "I. For each and every individual battleship on the Navy list on the 1st of February, 1917: (c) State number of days necessary then to make material repairs essential for war service."

² Paragraph II, clause c, reads: "II. For each and every individual battleship on the Navy list on the 1st of April, 1917: (c) State number of days then necessary to make material repairs essential for war services."

Material preparedness of vessels—Continued.

(The following communication, with accompanying papers, with regard to the above tables was subsequently received from Secretary Daniels and is here inserted in the record, as follows:)

THE SECRETARY OF THE NAVY.

Washington, June 1, 1920.

MY DEAR SENATOR: At the hearing of your committee on Wednesday last you presented a document made up, as you stated, in your office containing certain "deductions" regarding preparedness of naval vessels which, in my opinion, were so unwarranted and so unjust to the United States Navy that I entered my solemn protest against their introduction. In spite of my protest, they were placed in the record, with the understanding that the responsible officers and officials of the Navy Department would make a complete statement and analysis regarding the preparedness and condition of vessels and that these would be placed in the record immediately following the statement presented by the chairman.

In accordance with that agreement, I am sending you, for insertion in the record, this statement and the following:

1. A statement from the Chief of Operations and the Chief of the Bureau of Navigation, dated May 28, 1920, on the subject of "Readiness of ships of the United States Navy in February and April, 1917."

2. Letter from the Chief of the Bureau of Navigation to the Chief of Naval Operations on the subject "Personnel on board ships April 6, 1917."

3. From the Acting Chief of the Bureau of Ordnance, "Tabular statement on which is shown projectiles on hand on all ships of the Navy and reserve projectiles on shore for all vessels under date of February 2, 1917, and April 7, 1917."

4. Letter from Capt. B. F. Hutchison, United States Navy, dated May 29, 1920; subject, "Information for Senator Hale."

Your summary, as originally presented, classified vessels under the general heading "Fit to fight" and "Not fit to fight," but it was so manifest that these arbitrary classifications were not warranted that they were withdrawn and other headings substituted. But this mere change in the wording did not correct the erroneous character of the tabulations and inferences drawn therefrom, as will be apparent from your deductions, one of which was that "we went into the war with two-thirds of our fleet not in material condition for war service and requiring, on the average, two months of repairs, and with but 10 per cent of our fleet having their full war complement on board and 90 per cent of it averaging less than three-fifths of its full war complement aboard."

The careful analysis of all our fighting forces made by the experts most competent to determine their condition, the Chief of Naval Operations and the Chief of the Bureau of Navigation, so clearly show the actual state of preparedness, as regards both material and personnel, that I feel sure you will admit that your deductions, however honestly may have been their intent, were incorrect. The tables on which your deductions were based included many old vessels of small or no military value; it answered your questions categorically, with no proper explanations as to the age and unserviceableness of many of the ships mentioned, which should have been called to your attention. Furthermore, the personnel tables of July, 1917, referred, in many cases, not to actual war complements but to the number of men on board, which included thousands of men placed on ships for training, numbers far above any fighting complements.

Admiral Washington, chief of the Bureau of Navigation, shows that there were in the Navy, on April 6, 1917, not only enough men to man all our fighting ships, but also a surplus of 23,900 men available for other ships and shore needs. He states that to man the ships of the first line—12 dreadnaughts, 13 predreadnaughts, 22 cruisers, 67 destroyers, and the submarines—44,447 men were required. This includes such old cruisers as the *Raleigh*, the *Chicago*, the *Marblehead*, and the *Montgomery*, which he says, "could not properly be classed in first line or as of real fighting value," but are included in the list because, though old and slow, they were utilized in the war. The 12 very old battleships, which were of little fighting value and were used for training recruits, required 7,610 additional men; making a total of 52,277 necessary to man all the foregoing vessels. Admiral Washington states:

"There were 64,880 regulars and about 11,502 reserves in the Navy on April 6, and it required 52,277 men to operate all the above fighting ships, leaving 12,403 regulars and 11,502 reserves, or a surplus of about 23,900 men available for all other ships on the Navy Register and for shore needs."

"The enlistments and enrollments came in so rapidly after the war was declared," states Admiral Washington, "that by the end of April there were 111,175 regulars and reserves combined, enough to man all the ships that were considered at that time available for fighting and for all other purposes needed." In that connection he calls attention to the statement of Capt. Palmer, former Chief of the Bureau of Navigation, in his testimony before your committee: "I had the personnel ready at seaports to be put on vessels before the vessels were ready. We never had a delay of a vessel on account of not having the officers and men."

While some thousands of these were recruits, requiring training, I call your attention to the fact that on February 1, 1917, there were 57,042 regulars in the Navy, more than enough to man all the battleships, cruisers, destroyers, and submarines.

The joint statement from the Chief of Naval Operations and the Chief of the Bureau of Navigation, compiled from the official records of the department, gives in detail the following information:

(a) A list of vessels on the Navy list on February 1, 1917, divided into classes.

(b) A list of vessels of such fighting value as could be considered of service in battle if engaged with vessels of their own class.

(c) A summary of the enlisted-personnel situation of the Navy in February and April, 1917.

(d) The condition of the vessels of the Atlantic Fleet as regards material readiness for war service on April 6, 1917.

On the 1st of February, 1917, the Atlantic Fleet was at Guantanamo, Cuba, for the usual winter maneuvers and drills. The fleet was then, as it had at all

boats, and so on, and the east cost of the United States, about 3,000 men, and his shows that within 48 hours from the time of the order the complements of the entire fleet could have been filled to overflowing at any time.

It had been determined in February to furnish armed guards for American merchant vessels, and in the testimony of the commander in chief of the United States Atlantic Fleet, under date of March 11, 1917, he states: "An order was received to send North 30 gun crews for armed guard duty"; and on the same page, under date of March 14, he states: "Thirty more gun crews were ordered North by the Bureau of Navigation"; and on the same page, under March 16, he states: "Received information that the department contemplated sending Alabama to Guacanayabo with 800 enlisted men for active fleet." This personnel did not reach the fleet until its arrival at Hampton Roads, due to the fleet's orders to proceed North.

Admiral Mayo also noted that he received the following message: "Detail immediately 30 trained torpedo defense gun crews consisting of two gun pointers, sight setter, plugman, gun captain, each crew. Above crews to be divided into groups, each group to consist of 39-men crews. Detail immediately 10 lieutenants, senior grade, competent to command each group, 3 lieutenants, senior grade, competent to command each group three guns. Detail in addition one gunners' mate, one petty officer for each group of three guns. Above personnel to be placed on board United States merchant vessels as armed guard for defense against German submarines. The above personnel to be detailed from 13 vessels, battleship force, now with flag. Send above personnel receiving ship, New York, via destroyer to Key West and rail New York. Radio probable date of arrival party at New York. Be prepared for additional details. Acknowledge." Admiral Mayo in his testimony notes, under date March 28-31, that from conversation he understood the policy as follows: "The Atlantic Fleet would be maintained in readiness for active operations. No vessels would be sent to navy yards unless in need of major repairs. Fleet to continue intensive training of gun crews for armed guard duty."

Admiral Mayo, in his testimony regarding the preparedness of the fleet upon our entry into the World War, April 6, 1917, said: "When the active fleet arrived in Hampton Roads about April 1, after its training period in Cuban waters, it was in the best state of preparedness that it had ever been, and there was a feeling of confidence in the personnel of being able to cope with any emergency," and he also stated: "The material readiness of the active fleet was from good to very good. That such was the condition was demonstrated again and again by the duties performed by the vessels during the war."

Admiral Mayo in his testimony quoted a report dated February 4, 1917, from the commander, battleships force two to the commander in chief, Atlantic Fleet, regarding readiness for war service, as follows:

"From the above it will be seen that all ships of the battleship force except the Arizona were practically ready for immediate war service so far as their material is concerned.

"D. W. COFFMAN."

It should be noted that the Arizona was actually made ready for service about April 1.

It is further noted that there were transferred from the Atlantic Fleet, prior to April 6, 1917, 20 officers, 117 chief petty officers, and 539 men, nearly all for armed guard service.

The foregoing official data shows conditions with clearness, and that there was no question as to the ability of the Navy Department on April 6, 1917, to fully man the vessels of the active fleet with trained personnel should it have been necessary or desirable. But, from our own knowledge of the situation and the conclusion of the Allies that our battle fleet could serve no good purpose in European waters at that time, it was not deemed essential at once to place the fullest number of men on battleships, as other war activities were of more immediate importance, especially the manning of antisubmarine auxiliary and patrol craft, and in training the large number of new men being called to the colors, this number eventually becoming eight times the number of men in the Navy before the outbreak of the war.

The material condition of the ships of the active fleet is clearly set forth in the various reports and statements heretofore mentioned.

In regard to the deductions, percentages and results relating to material condition of vessels contained in your "General summary of preparedness of vessels," I call your attention to the following which is to be noted in connection with the table furnished you on April 26:

On page 1 of that table are listed 37 battleships in various conditions, out of commission, full commission, and in reserve. Of these battleships many were very old, some of them having been built in the last century and not to be considered as available fighting ships; for instance, the *Alabama*, commissioned in 1900; the *Illinois*, in 1901; the *Indiana*, in 1896; the *Iowa*, in 1897; the *Massachusetts*, in 1896; the *Kearsarge*, in 1900; the *Kentucky*, in 1900; the *Maine*, in 1902; the *Missouri*, in 1903; the *Ohio*, in 1904; the *Oregon*, in 1896; and the *Wisconsin*, in 1901.

Of the remaining 12 dreadnaught battleships and 13 predreadnaught battleships, all of the former were in the Chesapeake Bay and ready for service on April 6, 1917, the *Arizona* having just arrived from New York. Of the 13 modern predreadnaught battleships 6 were in Chesapeake Bay and of the remaining 7 the *Nebraska* left the navy yard, Boston, April 13, prepared for service, and the *New Jersey* left the navy yard, New York, April 29, prepared for service—in all 80 per cent by the end of April, 1917.

On page 2 of that table, under the head of "Cruisers," it is to be noted that many of these were old and not available as fighting ships. The *Rochester* was commissioned in 1893; the *Brooklyn*, in 1896; the *Chicago*, in 1889; the *Minneapolis*, in 1894; the *Columbia*, in 1894; the *Marblehead*, in 1894; the *Montgomery*, in 1894; the *New Orleans*, in 1899; the *Albany*, in 1900; the *Cincinnati*, in 1894; the *Boston*, in 1897; the *Olympia*, in 1895; and the *Raleigh*, in 1894. These vessels were in various statuses from being in full commission to reserve, ordinary, out of commission, or to be sold as of no use for naval purposes.

Omitting the *Boston* and the *Montgomery*, which were totally unserviceable, of the remaining 32 vessels, armored cruisers and cruisers of the first, second, and third class, 19 were ready for service on April 6, 1917, and within one month thereafter. In addition, the *North Carolina*, *South Dakota*, *Chattanooga*, and *Raleigh*—23 in all. In addition, the *Huntington* was completed May 11, the *San Diego* May 28, the *Marblehead* May 14. Your percentage table in this respect, therefore, should be materially changed.

Of the destroyers, 67 in all, the *Mayrant* should not have been listed because she was out of commission and without engines and was not considered in any respect as of military value, and the *Downes* had been turned back to the builders because she had failed in her six months' acceptance trial. Of the remaining 65 destroyers, 21 were coal-burning vessels, 16 being of old type and small tonnage, being classed as coast torpedo vessels, and of restricted military value, although it was necessary to make such use of them as was possible at a later date. Of the 44 destroyers actually of full military value on April 6, 1917, 22 were ready for duty. Of the remaining 22, the *Ammen* was ready on April 7. She, however, returned to the navy yard, Philadelphia, on May 5, 1917, to fit out for distant service; the *Alycin* left Charleston on April 12, 1917; the *Cassin* left the navy yard, Norfolk, on May 4, 1917; the *Cummings*, while operating on April 6, had defective maneuvering valves and went to the navy yard for 10 days' repairs, May 3, 1917; the *O'Brien* was operating on April 6, 1917, but went to the navy yard, New York, on May 1 for 13 days to fit out for distant service; the *Sterrett* left the navy yard, Charleston, on April 28, 1917; the *Walke* struck a bell buoy with her propeller April 5, 1917, and was not ready, therefore, on April 6. She joined on April 23, 1917. This shows that we had ready and sent over the destroyers requested by Admiral Sims in his cablegram of April 24:

"Yesterday the War Council and Admiralty decided that cooperation of twenty-odd American destroyers, with base at Queenstown, would no doubt put down the present submarine activity, which is dangerous, and keep it down. The crisis will be passed if the enemy can be forced to disperse his forces from this crucial zone."

By May 25, 28 destroyers were either in Queenstown or on the way there, and by July there were 35 in European waters.

You will, I am sure, now understand why I entered a vigorous protest against placing in the record your deductions, and declared that, if uncorrected, they would place an unjust stigma upon the United States Navy. Anyone can see at a glance the injustice of general statements which, for example, take no account of the difference and readiness to fight of the dreadnaught *Pennsylvania*, with its big guns and giant power, and the antiquated *Oregon*, useful

for training and kept in commission mainly (then on the Pacific) in memory of its historic voyage around the Horn in the Spanish-American War. The statement you have incorporated says that the *Oregon* had a personnel of 33 per cent of some sort of supposed extra war complement. To the uninitiated this would imply that the Navy Department was very derelict in having the *Oregon* "fit to fight," because it had only 33 per cent of some complement aboard. The *Oregon* was a great ship in 1898. It would have a scrapped years ago except for its historic interest. It was in reserve mission in 1917 only because it might serve as some aid for coast defense to train recruits. And yet the "deductions" place the *Oregon* in the same gory as the *Pennsylvania*, the flagship of the Atlantic Fleet, which, in February, 1917, had 1,042 sailors and 96 marines and a full complement of 1,138 men aboard. The complement of the *Pennsylvania*, fixed when built, was showing that in February it had 91 sailors on board in excess of that complement and in addition 96 marines.

The backbone of the American Navy from 1898 to 1919 was the Atlantic Fleet. It was the fleet, the dependence of the Republic. All else was auxiliary to its unified fighting force. Therefore, to know whether the American Navy fit to fight in the early part of 1917 you need to know the condition of the Atlantic Fleet, commanded by Admiral Henry T. Mayo, commander in chief, and until the close of the war. What does Admiral Mayo say of this fighting force when the United States entered the war of 1917?

In his testimony Admiral Mayo says:

When the active fleet arrived in Hampton Roads, about the 1st of April, after its training period in Cuban waters, it was in the best state of readiness that it had ever been, and there was a feeling of confidence in the personnel of being able to cope with any emergency."

As to the fighting fleet of dreadnaughts, nothing remains to be said except accompanying statements of the Chief of Operations and of the Bureau of Naval Investigation, which show that these ships were fit to fight in the early of 1917. I do not hesitate to say that, in my opinion, there was no in the world more fit and ready to wage battle. The statement of Admiral Jellicoe, quoted elsewhere in these hearings, proves that our Atlantic Fleet was better prepared to fight, both in February and April, 1917, than the British fleet was in the Battle of Jutland, and recent disclosures in fact convince me that our fleet was in far better condition than was the British fleet. Nobody has denied that statement by Admiral Mayo; nobody can truthfully deny it; and nobody can discount the official confirmation from the records by Admiral Coontz and Rear Admiral Washington. These statements afford a complete, lasting, and historical refutation of all that has been said to the effect that the Atlantic Fleet "from stem to stern" was not fit to fight in the early days of 1917. It is significant also that Admiral Mayo says the men and officers were confident of "being able to cope with any emergency." What else do you want with a fleet? If the Secretary of the Navy on April 6, 1917, had sent one telegram, "Engage the fleet of the enemy," Admiral Mayo's fleet as then constituted could have met the German High Seas Fleet and would have defeated it, or it could have met any other fleet of any like equal strength and won victory. Why? It had been going through practice in southern waters to obtain the very experience needed for the fight, the men were on their mettle, full of confidence and pep, and nothing overwhelming odds could have withstood them.

It was the condition of the fleet in the early part of 1917, when we entered the war. The country had confidence in that fleet, and its confidence was well placed. We did not regard the *Oregon* or the *Massachusetts* or the other those old ships, manned with reserve crews, as capable of taking a battle at sea, and the parading of such old ships, with their reserve crews and lack of material readiness for war (they have all been scrapped and would have been a waste of money to do anything with them except as auxiliary coast-defense ships and as places for training recruits), will not let anybody believe the real modern dreadnaughts could not, in April, 1917, in any change, have proved equal, as Admiral Mayo says, "for any emergency." That is putting it strong, but not too strong. And Germany then, and all the world admits it now.

When we first entered the war Mr. Balfour, the first lord of the British Admiralty, made me word through the American ambassador at London that our fleet did not be needed in the early part of 1917. Therefore certain changes in ships at navy yards were not hurried, while preference was given

to destroyers and the work of converting other vessels for antisubmarine purposes. This explains the table showing that changes in certain battleships, most of them not essential to make these ships ready for battle, waited upon the more urgent making ready the antisubmarine vessels. Not only had Mr. Balfour when we entered the war sent this message that our battle fleet would not be needed in Europe at that time, but it was later confirmed in a cable by Admiral Sims, and by the French and British missions when they were in Washington in April. Therefore any criticism of lack of completing changes of any battleships in these early weeks is based upon a disregard of the situation.

Admiral Mayo was particularizing only as to ships and personnel, though he, of course, included everything when he declared that the ships of the Atlantic Fleet were ready "for any emergency." Admiral Plunkett had been director of target practice and had specialized in gunnery. In his testimony before your committee Admiral Plunkett said:

"At the end of March, 1917, when we were on the verge of entry into the war, the gunnery was at the highest state of efficiency that it has been in the history of the American Navy."

Admiral Rodman was the only admiral of the American Navy who was in command of dreadnaughts overseas during the entire war. Before the war he had been in the fighting Atlantic Fleet and on the General Board. Before your committee he said:

"* * * I wish to state from having been in the Atlantic Fleet from the time the United States declared war, that never in my forty-odd years of service, most of which I have spent at sea, and in the latter part in the North Atlantic Fleet, never have I seen such preparedness and efficiency as obtained in our battleship fleet as at the beginning of and during the war. No ship has ever, in my experience, been absolutely efficient; nor will there ever be one whose commanding officer will conscientiously state that it is 100 per cent so. For this reason, every officer who has pride and interest in his command will always strive for greater efficiency. No ship will ever be in absolutely perfect condition, for no other reason than that from its complicated design, from the multiplicity and complexity of its machinery and constructive features, it will always require certain repairs, alterations, and improvements to keep pace with new and important inventions and improvements, and for its maintenance and upkeep."

Much has been said about the destroyers and their condition. Who is better qualified to speak than Admiral Mayo? Speaking about their condition in the spring of 1917, Admiral Mayo told your committee:

"The destroyers that were first dispatched to the war zone (there were 28 dispatched in April and May), though they were assigned to operations for which they had not been specially trained, showed the effect of their general training by the efficiency with which they at once entered into their new duties."

That is expert testimony from the commander in chief of the fleet. What about these destroyers when they reached the other side of the Atlantic, after traveling 3,000 miles through heavy seas? Is not Admiral Sims a competent witness? As a matter of fact, every report we received from abroad called attention to the notably excellent condition in which our destroyers arrived, and Admiral Sims himself, in cables, letters, and reports, directed attention to this as a subject of comment and praise. A few extracts from his reports are quoted below.

Telegram of May 11, 1917:

"6. Our ships made no demands of consequence upon the navy-yard facilities after arriving, in spite of the length of their passage under adverse conditions. The commander of the division, when questioned by the vice admiral as to when his vessels would be ready for duty, reported that he should be ready that night, as soon as the ships were refueled. * * *

"7. The vessels themselves caused a great deal of complimentary comment, and, contrary to expectations, were found to be well equipped for their prospective duty, with the single exception of 'depth charges.'"

Dispatch, May 24, 1917, states that the *Melville* arrived in excellent condition.

Report of May 26, 1917:

"The Sixth Division arrived on the evening of the 24th of May in excellent condition, no repairs being required."

Report received in the Bureau of Steam Engineering June 18, 1917.

"1. It is gratifying to be able to report that the operations of our forces in these waters is proving, not only very satisfactory, but also of marked value to the Allies in overcoming the submarine menace. The equipment and construction of our ships had proved adequate and efficient.

"2. The *Melville* and the destroyers arrived fully prepared for the duty for which they were to be used, and the only additions which have been made to their armament or equipment has been the installation of 300 depth charges * * *

July 15, 1917, Letter No. 6 announcing the arrival of the *Jupiter* and *Neptune*, convoyed by the *Perkins*, *Jarvis*, *Walke* and *Sterrett*, states:

"All four destroyers arrived here in excellent condition."

Letter No. 38, July 19, 1917, forwards a copy of Commander Pringle's report, in which he states:

"All destroyers are generally in splendid condition and there is every indication that they will continue to give efficient service. Since operating with our allies our destroyers have never been called on in advance of it; they have always responded."

"3. * * * It has evidently been a source of considerable surprise and satisfaction to the British authorities to find that our ships have been able to look out for themselves.

"4. *Engineering*.—The machinery of all destroyers is generally in very good to excellent condition, and is holding up admirably under the trying conditions it is subjected to."

Report of November 26, 1917, under the heading, "Miscellaneous Information Regarding Destroyer Force," Admiral Sims states:

"The force commander is particularly gratified to be able to report the manner in which the destroyer flotillas are meeting the war demands placed upon them. A great deal of indirect commendation is heard and received concerning both the efficiency of their operations and the manner in which they stand up to the duty. Within the past week the admiralty has expressed concern as to whether they are not being driven too hard."

To be sure, in every instance, before destroyers were sent abroad they were "fitted out for distant service"—given the last touches, every screw and bolt tightened, extra officers and men placed on board to make sure of the highest efficiency as to matériel and personnel. We knew the crowded condition of navy yards in Great Britain and we took the brief time necessary to put our destroyers in extra good condition so they would make few demands upon our associates when they arrived. Experience proved the wisdom of this policy. It was preparedness, not delay.

Capt. Palmer, who was chief of the Bureau of Navigation during the war, and from September, 1916, under oath stated: "I had the personnel actually ready at the seaports to be put on vessels before the vessels were ready. We never had a delay of a vessel on account of not having the officers and men."

As to personnel on ships, the official records show, as Admiral Washington points out, that there were enough men in the Navy when war began to fully man every ship of fighting value. If some of them did not have their full complements on board it was because some had been sent on armed-guard duty, and Operations and the Bureau of Navigation deemed as to other ships that it was a wiser policy to assign men to special training at schools ashore or to place them aboard older ships for training or other purposes. And, as shown by the letter of the Chief of the Bureau of Navigation, we had enough men to man every really effective fighting ship on the day we entered the war and there never was a ship ready when the men were not ready at the seaport. Of course, we did not then have anything like enough men or officers to furnish crews for the nonfighting ships or the hundreds of additional vessels we leased, bought, commandeered, or built, but the recruits came in by the thousands and learned with such zeal and quickness as to gratify the older officers, and enabled the Navy to promptly perform every task intrusted to it.

Now, in conclusion, I call your attention to the testimony of a number of naval officers of the Navy which, in a nutshell, completely and fully answers

every allegation made in your hearings reflecting upon naval readiness when the call came:

1. Admiral Benson, Chief of Naval Operations, has told you that I gave him instructions to have everything in the Navy 100 per cent efficient, and I have no doubt that these instructions were carried out as far as was humanly possible.

2. A few officers have testified that I was so careful in watching expenditures that I delayed action on some matters. But no officer has testified that this interest in getting a dollar's worth of munitions and ships for every dollar expended denied the Navy a single ship or a single torpedo or a single thing needed in the World War that it was possible by urgent effort to provide. This twaddle about delay was completely refuted by Capt. Pratt, Assistant Chief of Operations, who was formerly chief of staff of Admiral Sims, whose statement I take from his testimony:

"The CHAIRMAN. With regard to that particular point; I have asked you whether any specific instances came to your attention of a lack of promptness on the part of the Secretary in dealing with matters of importance that came before him?

"Capt. PRATT. I do not know what difficulties, if any, Admiral Benson may have had. I am only qualified to speak of my dealing with the Secretary directly. I had heard all sorts of rumors, but when I came definitely to deal with him on certain specific plans, I got an immediate decision. I can tell you one case specifically. This is while I was Acting Chief of Naval Operations. There were two cases, in fact. Admiral Benson was abroad, and he sent a cable over recommending that the battleships be sent over. I handled it directly with the Secretary, and he approved it right off, and directed that Admiral Mayo be sent up in conference in order to settle the details. I got a decision right off.

"Another case was the case of the northern mine barrage. Capt. Belknap, who had worked the organization of the forces up very definitely, had reached a conclusion where it was necessary to have a final decision in the matter before we could proceed to carrying it into operation, because that meant projecting this body of ships and men abroad into European waters, and naturally, being a joint agreement, we had to get the Admiralty's approval to it. I went in with Capt. Belknap about 6 o'clock one evening, Admiral Benson then being abroad, and laid the question before him [Secretary Daniels], and he approved it right off."

3. Capt. Palmer has testified that "we never had a delay on account of not having the officers and men." The tables to which you refer for complements of ships in February and April, 1917, are based upon a so-called "war complement" in the summer of 1917, and not in February and April, for which information was asked. The so-called "complements" in the summer were not complements in any real sense of that word, and therefore any deductions made upon such tables are worthless. In 1917 men enlisted in the Navy so rapidly that we lacked facilities ashore to train them, and they were packed in on ships of all characters for training. To call such overcrowding in 1917 and 1918 a ship's "complement" is utterly misleading, though some officers in the Bureau of Navigation did so, and data furnished you was improperly based upon these abnormal so-called "complements." When the dreadnaughts under Admiral Rodman went to the North Sea, from 300 to 500 excess men were placed on every ship so as to be ready for any emergency or for casualties. Admiral Rodman pointed out that the men were crowded and "packed in like sardines in a tin, two and three deep at times in close, poorly ventilated berth-deck compartments." Because of the overcrowding during the war some officers formerly in the Bureau of Navigation reached the conclusion that the complement of the *New York*, for example, should be increased from 962 to nearly 1,500, and other ships in proportion. It is upon the basis of such absurd so-called "complements" that the personnel shortages have been figured, and any deductions based upon such figures are misleading and inaccurate. At the hearings before the House committee in 1918-19 the subject of complements for ships was gone into fully, and the House committee agreed with the Secretary of the Navy that estimates based upon such excessive complements—50 per cent, and sometimes more, over the complements of like British ships—ought not for a minute to be countenanced or approved. They regarded such "complements" as are included in the so-called deductions as (1) unnecessary from a military point of view, (2) uneconomical from a taxpayer point of view, and (3) insanitary from a medical and health point of view. In all three the argument against these excessive complements is unanswerable.

Admiral Mayo has testified that the Atlantic Fleet (the very backbone of fighting Navy) was "in the best condition of preparedness that it had ever been" on the 1st of April, 1917.

Admiral Plunkett has testified that "at the end of March, 1917, the gun-ery was at the highest state of efficiency that it has been in the history of the American Navy."

Admiral Rodman testified that "never have I seen in our battleship fleet a preparedness and efficiency as obtained at the beginning of and during the war."

Very truly, yours

JOSEPHUS DANIELS,
Secretary of the Navy.

DR. FREDERICK HALE,

*Chairman Subcommittee Committee on Naval Affairs,
United States Senate, Washington, D. C.*

NAVY DEPARTMENT.
BUREAU OF NAVIGATION,
Washington, D. C., May 31, 1920.

1: Bureau of Navigation.

Chief of Naval Operations.

Set: Personnel on board ships April 6, 1917.

On April 6, 1917, there were in the Navy the following ships of the first-

	Men.
endnaughts, requiring-----	11, 195
edendnaughts -----	10, 527
isers (all classes) -----	16, 168
stroyers -----	5, 889
arlines -----	888
Total -----	44, 447

the cruisers, certain ones, such, for example, as the *Raleigh*, the *Chicago*, *Arblehead*, the *Montgomery*, could not properly be classed as in the first r of real fighting value, but they are included in the above list, because, r old and slow, they later were utilized in the war.

re were also in addition to the above 12 very old battleships which were or training recruits and required in addition a total of 7,610 men, making d total of 52,277 men necessary to man all the foregoing vessels.

re were 64,680 regulars and about 11,502 reserves in the Navy on April it required 52,277 men to operate all the above fighting ships, leaving regulars and 11,502 reserves, or a surplus of about 23,900 men available other ships on the Navy Register and for shore needs.

enlistments and enrollments came in so rapidly after war was declared y the end of April there were 111,175 regular and reserves combined, : to man all the ships that were considered at that time available for z and for all other purposes needed. In this connection attention is to the statement of Capt. Palmer, former chief of the Bureau of Naviga- s follows: "I had the personnel ready at seaports to be put on vessels the vessels were ready. We never had a delay of a vessel on account of ing the officers and men." Of course, as Capt. Palmer also stated, they ot all trained, and it was necessary to place many new recruits on or training and to train the others in the shore training stations and

o officers, we had in April enough to man all the ships ordered to sea. course, some of these officers were reserves and temporary, recently sioned, the latter as a rule having had more or less practical experi- ily made them useful and readily serviceable. Meanwhile the former rapidly. A school for officers was opened at the Naval Academy, An- in the spring of 1917, where intensive instruction was given to spe- icted men, most of whom made good.

THOS. WASHINGTON,
Chief of Bureau of Navigation.

NAVY DEPARTMENT.
BUREAU OF ORDNANCE,
Washington, D. C., May 27, 1920.

To: Secretary of the Navy.

Subject: Tabular statement on which is shown projectiles on hand on all ships of the Navy and reserve projectiles on shore for all vessels under dates of February 2, 1917, and April 7, 1917.

1. My attention has been directed to the tabular statement prepared in the office of Chief of Naval Operations on which is shown the statement of projectiles as of dates February 2, 1917, and April 7, 1917.

2. The information in regard to projectiles on this statement was furnished to the Chief of Naval Operations in a memorandum from the Chief of Bureau of Ordnance under date of April 26, 1920, at the request of the Chief of Naval Operations made in his memorandum dated April 23, 1920.

3. You will note on this statement that, in so far as ordnance requirements are concerned, everything is satisfactory with the exception of:

(a) The *Indiana*, *Iowa*, and *Massachusetts* show no ammunition on board; these vessels were out of commission and their ammunition was not carried on board. However, by looking in paragraph IV of the table you will see that their ammunition was carried at the ammunition depot in the form of reserve and was ready to go on board as soon as the vessels were put in commission.

(b) The number of reserve 14-inch projectiles shown in paragraph IV is small for vessels with 14-inch guns. This was a matter which could not be helped by the department, as contracts had been placed as follows:

January 28, 1914, with Bethlehem Steel Co. for 2,400 projectiles.

March 27, 1915, with Bethlehem Steel Co. for 1,800 projectiles.

January 27, 1915, with Crucible Steel Co. for 840 projectiles.

August 7, 1915, with Washington Steel & Ordnance Co. for 2,000 projectiles.

All of these projectiles should have been delivered April 7, 1917, according to the terms of the contracts, and if they had been so delivered there would have been an ample number of 14-inch projectiles held in reserve for vessels carrying 14-inch guns.

(c) No projectiles are shown on hand or in reserve for the *Montgomery*. This vessel had been used as a torpedo-training vessel and had no battery on board; there were ample stocks of ammunition at the depots to supply ammunition to the vessel in whatever caliber might be required by the nature of her battery.

(d) No ammunition is shown as being on board the *Boston*; this vessel was being held for sale and her ammunition was not carried on board.

(e) No ammunition is shown on board the *Minneapolis*, *Marblehead*, *Cleveland*, and *Salem*. The *Marblehead* had been used for training personnel, and no ammunition was carried on board. By consulting Paragraph IV it will be seen that her full amount of ammunition was held in reserve for her. The *Salem* and *Minneapolis* were out of commission, no ammunition being carried on board. By consulting Paragraph IV it will be seen that their ammunition was reserved for them. The *Cleveland* was in ordinary, and no ammunition was carried on board. By consulting Paragraph IV it will be seen that there was sufficient ammunition in reserve for her.

4. In the table of destroyers it will be seen that there were no depth charges on board these vessels. No depth charges had been manufactured and delivered on the dates mentioned and, therefore, entry was made in the table that there were none on board.

C. C. BLOCH.
Captain, United States Navy.
Acting Chief of Bureau.

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, May 28, 1920.

From: Chief of Naval Operations and Chief of Bureau of Navigation.

To: Secretary of the Navy.

Subject: Readiness of ships of United States Navy, February and April, 1917.

1. The records of the department show the following vessels on the Navy list on February 1, 1917:

DREADNAUGHT BATTLESHIPS.

Albatross	3,183	1894	Shanghai	Shanghai.
Albatross	3,200	1903	Mare Island	En route Hampton Roads.

3. The enlisted personnel situation of the Navy in February, 1917, was as follows:

On February 1, 1917, the number of enlisted men allowed by law was 700, exclusive of 6,000 apprentices, 350 flying corps, and about 3,200 hospital psmen, making a total of approximately 78,250 enlisted men. This number represented an increase from 51,500 authorized prior to the passage of the act August 29, 1916.

Commercial prosperity rendered recruiting difficult from the August, 1916, and in January, 1917, the number of enlisted men in the service was about 300 less than the total authorized, the actual number on February 1, 1917, being approximately 58,000, of whom 47,781 were afloat.

On March 24, 1917, the President by Executive order, under the emergency provisions of the act of August 29, 1916, increased the allowed enlisted strength 87,000, exclusive of 6,000 apprentices, 350 flying corps, and about 3,200 hospital corpsmen, which would make a grand total on that date of approximately 97,000.

On April 6, 1917, the number of enlisted men actually in the service was 80, of whom 50,121 were afloat, and the number of reserves on that date about 11,502. By this time recruiting had become very active, men were dily enlisting, and within probably 10 days the number of men actually dily to man all the ships and shore stations was enlisted. On April 30, there was a total of 111,175 men actually enlisted and available, whereas 87,785 were required at that time to man the ships and other activities, and afloat, as estimated by Operations.

Of the vessels listed in paragraph 2, above, as possessing such up-to-date ar qualifications as would render them suitable for action with enemy ships, following named were in the Atlantic Fleet in February and April, 1917, personnel on board as indicated:

Name.	Complement.		On board Feb. 2, 1917.		On board Apr. 6, 1917.

5. The vessels of the Atlantic Fleet listed in the preceding paragraph were, on April 6, 1917, materially ready for war service, except as noted in detail below:

DREADNAUGHTS.

North Dakota.—Required installation of new main engines. Engines did not become available for installation until July 1, 1918. Meanwhile vessel operated with fleet and continued valuable for training personnel.

Maine.—Renewing headers in main boilers. Left navy yard on July 3, 1917.

Nebraska.—Renewing thrust and line shafting of both main engines. Left navy yard on July 10, 1917.

New Hampshire.—Renewing thrust and line shafting of both main engines. Left navy yard on July 10, 1917.

New Jersey.—Miscellaneous overhaul work. Left navy yard on August 25, 1917.

Vermont.—General overhaul, especially of main engines. Left navy yard on August 25, 1917.

Virginia.—Retubing main boilers. Left navy yard on August 25, 1917.

ARMORED CRUISER.

North Carolina.—Installing new tube sheets, main condenser 4-inch tubes, main boilers, manufacturing and fitting couplings, overhauling pumps, installing one high-pressure cylinder in main engines. Left navy yard on May 5, 1917.

CRUISERS, FIRST, SECOND, AND THIRD CLASS.

Chicago.—Overhauling boilers, relining forward smokestack. Left navy yard on August 15, 1917.

Chattanooga.—General overhaul. Left navy yard on April 17, 1917.

New Orleans.—General overhaul. Left navy yard on August 2, 1917.

Raleigh.—Overhaul of main boilers. Left navy yard on May 1, 1917.

DESTROYERS.

Ammen.—Completed overhaul at navy yard, New York, on April 1, 1917. Returned to navy yard, Philadelphia, on May 5, 1917, for distant service and general machinery overhaul. Left Philadelphia on May 1, 1917. Time taken to fit out, 25 days.

Aylwin.—Under repairs at Charleston resulting from collision with *Drayton* on February 11, 1917. Left Charleston on April 12, 1917.

Balch.—Main starboard turbine stripped March 23, 1917. Arrived Norfolk, April 14, 1917, for repairs. Left Norfolk, repairs completed May 1, 1917.

Beale.—Boilers in bad condition. Operating off Port Delaware on April 1, 1917, when arrived at navy yard, Philadelphia, for retubing of boilers. Completed retubing on September 11, 1917. Ship left yard on same day. Time at yard, 130 days.

Burrows.—On limited duty off port of New York. Went to Philadelphia on May 5 for repairs to faulty condensers and general repair work. Left Philadelphia, June 2, 1917. Time for repairs, 27 days.

Cassin.—Unreliable maneuvering valves for main engines. On April 26, 1917, when arrived at navy yard, Norfolk, for renewal of valves and minor repairs and fitting out for distant service. Left Norfolk, on May 4, 1917, for Boston to join division to go abroad. Time at Norfolk, 7 days.

Cummings.—Unreliable maneuvering valves for main engine until May 3, 1917, when vessel arrived at navy yard, Philadelphia, for renewal of faulty valves, minor repairs, and fitting out for distant service. Left Philadelphia on May 12 for New York to join division going abroad. Time at Philadelphia, 10 days.

Cushing.—Main turbines damaged, faulty feed pumps, and condenser. Arrived at navy yard, New York, for repairs on March 31, 1917. Repairs completed May 12, 1917. Left navy yard May 13, 1917, for distant service. Time at yard under repairs, 43 days.

Fanning.—In need of general repairs, due to long service, as shown in his letter of April 7, 1917. Arrived at Philadelphia Navy Yard on April 13, 1917. Repairs completed May 1, 1917. Days under repairs, 35.

Henley.—Available for limited operation. Faulty main engines and boilers. New type of engines to be installed and boilers retubed. This work undertaken at navy yard, Philadelphia, on November 7, 1917, and was completed December 28, 1918. Time at navy yard, Philadelphia, 416 days.

Jarvis.—Faulty condensers and other general items of repair. Arrived navy yard, Philadelphia, March 3, 1917; left May 10, 1917, repairs completed. Time at Philadelphia, 67 days.

Jenkins.—Boilers (forced-draft blowers) reported in bad condition. Under repair at navy yard, Norfolk, Va., from April 17, 1917, to May 1, 1917. Went to Boston yard and continued repairs and fitting out from May 3, 1917, to May 22, 1917. Time under repairs at Norfolk, 23 days. Time under repairs at Boston, 19 days.

Jouett.—Boilers in bad condition. Vessel available for limited service and kept in operation until September 6, 1918, when repairs to boilers began at Philadelphia Navy Yard. Work completed February 15, 1919.

McCall.—Boilers No. 3 and No. 4 and both main condensers in need of retubing; also general overhaul. Repairs under way at navy yard, Philadelphia, beginning March 10, 1917, and ending May 23, 1917. Time at Philadelphia, 74 days.

Monaghan.—Doing limited service. In need of general overhaul, which was undertaken at navy yard, Charleston, from May 3, 1917, to June 19, 1917, when vessel was ready for distant service. Time at Charleston, 46 days.

O'Brien.—Faulty main air pumps. Vessel operative until May 1, 1917, when arrived at navy yard, New York, for repairs and fitting out. Left navy yard, New York, May 13, 1917. Time under repair, 13 days.

Parker.—In service until May 1, 1917, when vessel went to navy yard, Norfolk, for machinery and boiler overhaul. Finished overhaul on June 15, 1917. Time at Norfolk navy yard, 46 days.

Sterrett.—Under repairs, consisting of general machinery overhaul, at navy yard, Charleston, from March 29, 1917, to April 28, 1917. Time under repairs at Charleston, 30 days.

Terry.—Under repairs at navy yard, Charleston. Boilers in only fair condition, having arrived at yard during 1916. Repairs completed April 15, 1917. On April 22, 1917, main condensers developed leaks. Condensers retubed at navy yard, Charleston, from May 9 to 21, 1917.

Walke.—Propellers damaged and starboard tail shaft sprung by collision with bell buoy on April 5, 1917. Placed under repairs at navy yard, New York, on April 6, 1917. Completed April 23, 1917. Time at navy yard, New York, 17 days.

Warrington.—Main shafting out of line and boilers in poor condition. *Warrington* continued in service until May 6, when she arrived at Boston Navy Yard for repairs and fitting out for distant service. Only temporary repairs were made to boilers and no permanent repairs made to shafting. Left navy yard, Boston, on May 21, 1917, for distant service. Time at navy yard under repairs, 15 days.

Wilkes.—Engaged on only limited operations, due to faulty evaporating plant. Arrived navy yard, New York, for repairs and fitting out for distant service on May 2, 1917. Left navy yard, New York, June 11, 1917. Time at navy yard, New York, 40 days.

6. The destroyers not mentioned in this list were those in material condition to be immediately available for assignment to distant service. In case of assignment to distant service either in peace or war a fitting-out period would be required. This program was carried out in the case of all destroyers that went abroad during the war and was a necessary part of the operations, the same as it would be now with any destroyer in good condition that we might select for duty on a distant station.

R. E. COONTZ,
Admiral, United States Navy,
Chief of Naval Operations.
THOS. WASHINGTON,
Rear Admiral, United States Navy,
Chief of Bureau of Navigation.

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, May 29, 1920.

From: Capt. B. F. Hutchison, United States Navy.

To: The Secretary of the Navy via the Chief of Naval Operations.

Subject: Information for Senator Hale.

In compliance with orders received from the Chief of Naval Operations, herewith is transmitted herewith a statement showing the number of men and Marines on board the vessels for the months of February, April, and July, which appear on the tabulated form forwarded to Senator Hale on April 29, 1920.

This data was compiled from the official records in the Enlisted Personnel Division of the Bureau of Navigation and Marine Corps. The complement shown is the complement authorized by the Bureau of Navigation prior to July 6, 1917.

B. F. HUTCHISON.

(First indorsement.)

To: Chief of Naval Operations.

From: The Secretary of the Navy.

Subject: Information for Senator Hale.

Forwarded.

R. E. COONTZ.

Shaw was commissioned Apr. 9, 1917; completed May 25, 1917; sailed from Mare Island May 26, 1917.

The CHAIRMAN. When I say "fully manned," I mean with full war complement, which was what the letter asked for.

Secretary DANIELS. How many men did you put on there at once?

The CHAIRMAN. No figures were given as to the number of men on. The figure was given of the percentage of those men who were on, which was 93 per cent on February 2 and 87 per cent on April 6, 1917. The actual figures were not given, except as to the percentages.

Secretary DANIELS. I will furnish them to you.

The CHAIRMAN. Very well.

NOTE.—The following communication was subsequently received from Secretary Daniels, and is here inserted in the record:

THE SECRETARY OF THE NAVY,
Washington, June 1, 1920.

HON. FREDERICK HALE,

Chairman Subcommittee, Committee on Naval Affairs,
United States Senate, Washington, D. C.

MY DEAR SENATOR: In my hearing before your committee on Wednesday morning, May 26, 1920, after presenting what you called deductions based on the information contained in the table submitted by the Office of Operations, the following colloquy took place (p. 7391):

"Secretary DANIELS. How many men did you put on there at once?

"The CHAIRMAN. No figures were given as to the number of men on. The figure was given of the percentage of those men who were on, which was 93 per cent on February 2 and 87 per cent on April 6, 1917. The actual figures were not given, except as to the percentages.

"Secretary DANIELS. I will furnish them to you.

"The CHAIRMAN. Very well."

In my question there seems to be a stenographic error, for I asked how many men you put on the *Arizona*. As the record reads, there is no mention of the

Arizona, but it is clearly an omission. In accordance with the above, I append hereto the figures requested :

Designed complement.....	1,000
Bureau of Navigation complement, Feb. 2, 1917.....	1,006
On board Feb. 2, 1917.....	997
Bureau of Navigation complement, April 16, 1917.....	1,006
On board Apr. 6, 1917.....	928

Sincerely, yours,

JOSEPHUS DANIELS.

The CHAIRMAN. In other words, this shows that on February 2, 1917, 26 per cent of the fleet was reported as fit in material, and 74 per cent of the fleet had an average of 60 days of repair essential for war service, to be made. Only 2 per cent of the vessels were fully manned, and 98 per cent of them averaged but 50 per cent manned.

On April 6, 1917, that is 63 days later, 33 per cent were reported as fit in material, and 67 per cent of the fleet had an average of 67 days repairs necessary to be done.

On 10 per cent of the vessels were fully manned and 98 per cent of them averaged to be but 57 per cent.

In short, these figures presented by the Navy Department show that we went into the war with two-thirds of our fleet not in proper material condition for instant war service abroad, and requiring two months of repair on an average, and with but 10 per cent of the fleet up to their full war complement, and 90 per cent of it with less than three-fifths of its full war complement.

I want the wording of this to comply absolutely with the request made to the department to furnish the information, and if in any case it does not do so, it is an unintentional mistake.

The rest of this table, parts of which I have not read, I will put in the record without reading. There is no need of reading it to you now, is there?

Secretary DANIELS. None in the world.

The CHAIRMAN. I have made corrections in regard to the matter of wording.

Secretary DANIELS. I wish again to protest against such interpretations, which are not correct, going in the record.

The CHAIRMAN. Yes. How do you know they are not correct?

Secretary DANIELS. That is my opinion.

The CHAIRMAN. You think they are not correct from the figures that are given here?

Secretary DANIELS. It is my opinion they are not correct.

The CHAIRMAN. From the figures given by you?

Secretary DANIELS. From your own interpretation.

The CHAIRMAN. In what way do you mean, Mr. Secretary?

Secretary DANIELS. I mean that the interpretation that you have made of this statement and of Admiral McKean's testimony is not borne out.

The CHAIRMAN. Do you mean that the figures are wrong? Do you mean there are mistakes in the figures?

Secretary DANIELS. I mean your interpretations are not correct.

The CHAIRMAN. I wish you would show me how, because I wish it to comply—

as taken entirely from these figures furnished by you, and that is the intention.

Secretary DANIELS. I can not deny your right to do that; but I can not assent to it.

The CHAIRMAN. Yes. You do not condemn it before you see it, do you, Mr. Secretary?

Secretary DANIELS. What I have heard, I said, was not correct. That is my understanding.

The CHAIRMAN. Do you mean there are some mistakes in the tabulation?

Secretary DANIELS. No; I mean that your interpretations are not correct, as I understand it.

The CHAIRMAN. I wish you would point it out to me, because I wish to make the correction before putting it in.

Secretary DANIELS. I could do so in time, but I could not do so now.

The CHAIRMAN. Now, I ask you, Mr. Secretary, from this tabulation which I have put in, if you have any question about its correctness; and if so, you will call attention to any errors that have been made; and if not, does it not show that the Navy was not in a very perfect state of preparedness at the outbreak of war in 1917?

Secretary DANIELS. I have told you that I do not accept these conclusions and that I shall refer your deductions to experts, and then I shall make a statement to your committee.

The CHAIRMAN. The committee will stand adjourned until 2.30 this afternoon.

(Thereupon, at 1 o'clock p. m., the subcommittee took a recess until 2.30 o'clock p. m.)

AFTERNOON SESSION.

The subcommittee met at 2.30 o'clock p. m., pursuant to adjournment, Senator Frederick Hale (chairman) presiding.

TESTIMONY OF HON. JOSEPHUS DANIELS, SECRETARY OF THE NAVY—Resumed.

Secretary DANIELS. Mr. Chairman, since the adjournment of the morning session I have taken the matter up with Capt. Hutchison of your question, and he tells me that he filled up some blanks in a document for you, in which he stated, or some officer stated for him, the number of days' repair on certain ships, and he is making an examination in the Bureau of Operations, and he is preparing, and I will furnish you, a statement of every ship, of the number of men on it, of the personnel, the number according to the complements when the ships were put in commission, and the number of the fleet, of the highest number required in time of war, showing for every ship how many men it had on it, and also the character of repairs, which will show whether the repairs made it ready for war or only incidentally, and I will have that ready for you shortly.

The CHAIRMAN. Very well.

Secretary DANIELS. A few days ago you asked me and I gave you some percentage figures in the matter of projectiles and mines, torpedoes, and smokeless powder. You asked me to furnish the number. I have had the Bureau of Ordnance make up a statement of that which I herewith present.

The CHAIRMAN. That will be inserted in the record.

Secretary DANIELS. I have authenticated the percentages in that. They vary one-half of 1 per cent in certain cases, but I have had that authenticated by the Bureau of Ordnance.

The CHAIRMAN. This does not give the numbers that were on hand at the time of the opening of the war.

Secretary DANIELS. Mr. Chairman, it gives exactly the information you asked for. You asked for certain percentages on certain dates, and I have given exactly the number. You said you wanted the number as well as the percentages.

The CHAIRMAN. But I also wanted them on the date when war was declared.

Secretary DANIELS. You did not ask that question.

The CHAIRMAN. Then I would like to have that also.

Secretary DANIELS. Suppose I take that back and have it added, then.

The CHAIRMAN. Yes. [Returning paper to Secretary Daniels.]

Secretary DANIELS. I gave your question to the Bureau of Ordnance and they answered it exactly as you gave it.

NOTE.—The following communication was subsequently received from Secretary Daniels and is here inserted in the record:

THE SECRETARY OF THE NAVY,
Washington, June 1, 1920.

Hon. FREDERICK HALE,

Chairman subcommittee Senate Naval Affairs Committee.

MY DEAR SENATOR: At my hearing before your committee, Wednesday, May 26, afternoon session, I presented a table showing the percentages and numbers of increases of ordnance equipment for the McKinley-Roosevelt, Roosevelt, Taft, and Wilson administrations, from March 4, 1901, to September 1, 1916, and this colloquy followed (Testimony, p. 7395):

"The CHAIRMAN. This does not give the numbers that were on hand at the time of the opening of the war.

"Secretary DANIELS. Mr. Chairman, it gives exactly the information you asked for. You asked for certain percentages on certain dates, and I have given exactly the number. You said you wanted the number as well as the percentages.

"The CHAIRMAN. But I also wanted them on the date when war was declared.

"Secretary DANIELS. You did not ask that question.

"The CHAIRMAN. Then I would like to have that also.

"Secretary DANIELS. Suppose I take that back and have it added, then.

"The CHAIRMAN. Yes. [Returning paper to Secretary Daniels.]

"Secretary DANIELS. I gave your question to the Bureau of Ordnance, and they answered it exactly as you gave it."

You thus requested me to furnish the numbers on hand when war was declared. Complying with your request, I am inclosing herewith the table with a statement by Capt. C. C. Bloch, Acting Chief of the Bureau of Ordnance, giving all the information requested.

Sincerely, yours,

JOSEPHUS DANIELS.

To: Secretary of the Navy.

Subject: Hearings of the Secretary of the Navy at Senate investigation of preparedness of the Navy for war.

My DEAR MR. SECRETARY: You have asked me to supplement the table prepared for you in the Bureau of Ordnance by giving the total number of projectiles, torpedoes, mines, and amount of smokeless powder on hand under date of April 1, 1917. This information has already been supplied to the chairman of the subcommittee, Senator Hale, in connection with the testimony given by Rear Admiral Strauss. The aggregates requested to be supplied are as follows:

On hand April 1, 1917:

Projectiles-----	1, 179, 376
Torpedoes-----	2, 384
Mines-----	3, 832
Smokeless powder-----	pounds-- 50, 726, 275

These figures, as well as those given to the chairman of the subcommittee in connection with the testimony of Rear Admiral Strauss, are valueless without explanation. The requirements shown in the table furnished in connection with Admiral Strauss's testimony give the total requirements for all ships built or building, while the amounts on hand only indicates amounts of each article which had been delivered, and in another column those which had been ordered. The vessels projected at that date have not yet all been completed, and the requirements might seem unduly large and the amounts on hand similarly unduly small. For instance, while there were on hand only 8,907 14-inch projectiles on April 1, 1917, there were on order 25,577. The projectiles on hand of this caliber were sufficient to supply all ships in commission which carried 14-inch guns and to supply a small reserve in addition. Even this reserve would have been adequate had contractors for over 6,000 of these projectiles met their contractual obligations and delivered the projectiles which they had contracted to deliver in accordance with the terms of their contracts. In the cases of the 13-inch, 12-inch, 10-inch, 8-inch, and 7-inch calibers—in every case there were more projectiles on hand than were required for the guns afloat of ships built, even after providing over 100 per cent of reserve for these guns.

The smaller calibers of projectiles were so easily and quickly produced that they could be delivered at any time to meet almost all requirements.

In regard to torpedoes, there were on hand on April 1, 1917, 2,384, while there were required a total of 2,694, one-half of which were required to be afloat—the other half being held in reserve on shore. By inspecting these figures it can be seen that there was an ample number of torpedoes for all vessels afloat and a large proportion of the desired reserve.

On April 1, 1917, there were on hand 50,726,275 pounds of powder. For the guns of all vessels built there were required for service afloat and for providing over 100 per cent reserve for these guns, 52,072,850 pounds, from which it can be seen that there was sufficient powder for all guns afloat and approximately 100 per cent reserve on shore for these guns.

On this date there were on hand only 3,832 mines. However, there were under construction, a large number of which were well advanced towards completion, 15,400 mines. This will show that this most important weapon had not been neglected but that the Bureau of Ordnance was bending every effort to provide the number required by the service.

C. C. BLOCH,
Captain, United States Navy.
Acting Chief of Bureau.

Secretary DANIELS. I will try to assist you, Mr. Chairman.

The CHAIRMAN. And I hope where there are statements that have been already made that you may wish to put in, you can refer to them and they can be put in the record, so far as possible.

Secretary DANIELS. I will do all I can.

The CHAIRMAN. Mr. Secretary, you have heard some of the admirals of the American Navy testified that Admiral Sims's attack upon the work of the American Navy during the war was wholly unwarranted and grossly exaggerated. Did the confidential instructions given by Admiral Benson to Admiral Sims indicate clearly that we were about to enter the war against Germany, and that we would wage war aggressively?

Secretary DANIELS. Admiral Benson, so far as I know, gave no confidential instructions to Admiral Sims—do you mean before he left here?

The CHAIRMAN. Yes.

Secretary DANIELS. I do not know what instructions he gave him. I gave him instructions when he left here to go to Great Britain, to go to see our ambassador, to confer with the British Admiralty, to get into close touch with the British Admiralty and other Allies, and we were then a neutral Nation, and that he should keep the wires open and cable us fully. Of course I could not have said at that time anything, or until the 6th of April, when the war was declared. Of course there was nothing in the mind of anyone except to wage war most vigorously, from the time Congress gave us power.

The CHAIRMAN. You are familiar with the instructions that Admiral Sims states he received from Admiral Benson before he went abroad; I mean that he must not allow the British to pull the wool over his eyes, and that we would as soon fight the English as the Germans?

Secretary DANIELS. I have read that. I never heard of it until in Admiral Sims's statement.

The CHAIRMAN. That would not indicate that we were then about to enter into war with Germany, would it?

Secretary DANIELS. I am not interpreting what Admiral Benson said. You had him on the stand about that. I never heard of it until Admiral Sims wrote it.

The CHAIRMAN. I am trying to find out what the policies were.

Secretary DANIELS. Of course there was never any thought of anything, from the time Admiral Sims was in my office, except that we would have war with Germany, and we would wage it aggressively and earnestly, as we could.

The CHAIRMAN. There was never any thought of anything else?

Secretary DANIELS. No, sir.

The CHAIRMAN. In the department?

Secretary DANIELS. No, sir. At the time Admiral Sims left he went to get ready for that.

The CHAIRMAN. Admiral Benson stated that we kept our fleet intact on this side for fear the Germans might break through the English fleet and attack the United States. Was that a bold and audacious policy?

Secretary DANIELS. How is that?

The CHAIRMAN. I say, was that a bold and audacious policy?

Secretary DANIELS. You say Admiral Benson stated that he kept the fleet over here—

The CHAIRMAN. Intact, on this side, because the Germans might break through the British fleet and attack the United States.

Secretary DANIELS. It was kept over here in pursuance of the request of the Allied Naval Council and of the British Admiralty, ready for any offensive action that might be necessary.

The CHAIRMAN. Then it was not kept over here for fear that the Germans might break through the British fleet and attack the United States?

Secretary DANIELS. It was kept for any reason of necessity, to be used against the enemy. As to the exact purpose and purposes, I can only say that it was my direction to Operations to organize the fleet and all our ships for the most offensive and aggressive action possible.

The CHAIRMAN. If Admiral Benson did state that it was kept over here for fear that the Germans might break through the British fleet, that would not be a very bold and audacious policy, would it?

Secretary DANIELS. I think if you will read his testimony in full, the policy of the department was to use the fleet in the most effective and aggressive way possible. Sometimes the best policy, of course, is a defensive; but our policies were bold and aggressive. But of course there are always reserves.

The CHAIRMAN. Yes; but keeping the fleet over on this side for fear that the Germans might break through would not be a bold and audacious policy, would it?

Secretary DANIELS. If the Allies and the naval council requested us to keep the fleet over here, as they did—I have here their letter. Admiral Sims says as follows in *World's Work* [reading]:

There were almost as many conflicting opinions as there were minds. Certain authorities believed that our whole North Atlantic Fleet should be moved immediately into European waters. Such a maneuver was not only impossible, but it would have been strategically very unwise; indeed such a disposition would have been playing directly into Germany's hands. What naval experts call the "logistics" of the situation immediately ruled this idea out of consideration.

The simple fact is that we could not have supplied our dreadnaughts in European waters at that time. The German U-boats were making a particularly successful drive at tankers with the result that England had the utmost difficulty in supplying her fleet with fuel oil. It is impossible to exaggerate the seriousness of the oil situation at that time.

"Orders have just been given to use three-fifths speed, except in case of emergency," I reported to Washington on June 29, referring to the scarcity of oil. "This simply means that the enemy is winning the war." It was lucky for us that the Germans knew nothing about the scarcity of this indispensable fuel. Had they been aware of it, they would have taken pains to see that the grand fleet was constantly steaming at sea, and in this way they might so have exhausted its oil supplies as to possibly threaten the actual command of the surface. Fortunately for the cause of civilization, there were certain important facts that the German secret service did not learn.

But this oil shortness made it impossible that the American North Atlantic Fleet should move into European Waters, at least at that time. Since most oil supplies were brought from America, we could not have fueled our superdreadnaughts in Europe in the spring and summer of 1917. Moreover, had we sent all our big ships to England we should have been obliged to keep our destroyers constantly stationed with them ready for a great sea action; this would have completely fallen in with German plans, for then these destroyers could not have been used against her submarines.

This is Admiral Sims.

The British did, indeed, request that we send five coal-burning ships to reinforce her fleet and give her that preponderance which made its ascendancy utterly secure, and these ships were subsequently sent; but England could have made provision for our greatest dreadnaughts, the oil burners. In-
l, our big ships served the allied cause better stationed on this side than
would have served it had they been located at a European base. They
ided a reserve for the British fleet, precisely as our armies in France pro-
d a reserve for the allied armies; and meanwhile their destroyer escorts
d be sent to the submarine zone, to participate in the ant submarine cam-
n.

American waters these big ships could be kept in prime condition; here
had an open, free sea for training, and here they could also be used to
k in the thousands of new men needed for the new ships constructed during
war.

o that Admiral Sims advised us to keep the ships over here.

he CHAIRMAN. Did he not ask for battleships over on the other
?

ecretary DANIELS. He did later on.

ie CHAIRMAN. Not very much later on.

ecretary DANIELS. I do not remember when it was.

ie CHAIRMAN. At any rate, you would not have regarded it as
ative of an especially bold and aggressive policy, would you?

ecretary DANIELS. I would not regard that in itself as the bold
audacious policy to which I referred; but I would regard that
essential policy, along with the general broad policy of keeping
ships ready, as Admiral Sims says, for reserve in any emergency.

ie CHAIRMAN. Another reason given by Admiral Benson was that
ep them here for fear that Germany might send about six sub-
nes to attack our coast. Was that an especially bold and audaci-
olicy?

ecretary DANIELS. I do not recollect what he said.

ie CHAIRMAN. That is my recollection of the testimony.

retary DANIELS. But Admiral Sims said early in the war that
an submarines might come here. On the 13th of April, six days
we entered the war, we arranged with Admiral Browning that
an submarines might come over to attack Canada and America,
hat if they did come, we would send submarines to Halifax to
them.

CHAIRMAN. That does not especially indicate a bold and au-
s policy—that in itself?

retary DANIELS. I think the readiness to pledge and promise
ritish to send our ships to Halifax shows a certain readiness
illness to risk—

CHAIRMAN. I am talking now about keeping the fleet over here
inst those few submarines that might come.

etary DANIELS. I have given you the reason why the battle-
should stay here. I have given you the recommendation of
al Sims. In my previous testimony I told you that Lord
r, who was then the first lord of Great Britain, did not want
ps and the allied council stated we should keep the fleet here.
asons were very good.

CHAIRMAN. What I am trying to find out is just what specific
in regard to keeping the fleet over here constituted a bold and
us policy. The fleet would much rather have gone over, of

Secretary DANIELS. Why, of course; and they would have gone over early but for two reasons. One reason was the question of logistics, and the other reason was because battleships do not hunt submarines, and if we had sent the battleships over it would have required all the destroyers with the battleships. The British never permitted their destroyers to leave their battleships. We robbed our battleships of our destroyers so much that Admiral Mayo protested that we were sending too many, they being taken away from the fleet.

The CHAIRMAN. Now, Mr. Secretary, in your testimony as evidence of the desire of the department to enlist the thought and initiative of all officers in the service in bold methods an all-Navy telegram was sent under date of August 2, 1917. That was nearly four months after we entered the war. Why did you wait four months?

Secretary DANIELS. I was sending that to all officers. We did not wait four months. We conferred with all officers of rank and importance personally, but I could not reach all of them and so, later, we sent this all-Navy telegram so that it would go to ensigns, lieutenant commanders, commanders, and everybody. We, of course, had the views of the commanders in chief before.

The CHAIRMAN. Have you any specific record of letters written before that to anyone about bold methods?

Secretary DANIELS. Oh, there was not any time to write letters particularly, but there was discussion. For example, I sent for Admiral Winslow early in the war and I had several talks with him about what we should do to win the war—bold and audacious plans. I talked to officers, quite a number, and we discussed that with every officer that I saw of any standing from the time we entered the war and before—after it became certain—to get their advice. For instance, I will read you an extract from a letter from Admiral Winslow.

The CHAIRMAN. I asked you about letters that you had written to some officers.

Secretary DANIELS. Do you regard that I must write a letter or speak to an officer? Is there any difference?

The CHAIRMAN. I asked if you had any records of that.

Secretary DANIELS. I recall no letters, because I was just at that time discussing with all officers of any importance, personally. This all-Navy message was in addition to the personal request for suggestions and it was to go to officers I could not reach. Let me read you an extract from this letter from Admiral Winslow in response to my request to him for his views as to a bold and aggressive policy. This letter was written to me from Newport on August 17, 1917 [reading]:

Since my return from Washington I have thought a great deal of the conversation I had with you and of the subject of that conversation.

My recollection of what you said to me has left me with the impression that you believe that a more aggressive policy and larger military operations will be necessary to bring the U-boat menace under control or to destroy it altogether. I was very glad to find that you felt in this way, for I am of the opinion now, and have been for some time, that a policy which did not prevent the German submarines reaching the sea, but counted on capturing or destroying them after they were once clear of their bases, would not be sufficiently effective to prevent the German Nation being buoyed up by the hope that the U-boat would eventually win out against England.

but I think that the more complete and satisfactory solution will not be attained in this way. The British Navy has certainly failed thus far to stop the U-boat, and I believe that it is the business of our service to endeavor to solve the problem and not accept the verdict from the other side of the water which has from time to time appeared in the press that it is impossible to reach and destroy or control the bases of the submarines.

I was discussing with Admiral Winslow the necessity of some bold and audacious policy, not waiting for the submarines to come out in the sea, but to shut them up——

The CHAIRMAN. When was that?

Secretary DANIELS. I was talking with him in the summer. This was the 17th of August, 1917.

The CHAIRMAN. That is about the date I referred to.

Secretary DANIELS. Yes. He said further:

I do not doubt that conservative opinion in our Navy, like that of the British, will advise against attempting to secure such military control of the bases of the German submarines as will prevent their reaching the open sea. Nevertheless, it seems to me that it must be possible to develop a plan of major military operations, including operations under water and on the surface, on land and in the air, that will lead to success. The combined navies of England, France, and the United States largely outnumber in ships that of Germany..

Admiral Winslow used exactly the words used by the President in that speech of his. [Continuing reading:]

We can afford to take losses of ships and men if in the end we succeed, and we should make the attempt to destroy the German U-boat bases or control the exits therefrom if there is a reasonable chance of success.

The CHAIRMAN. I can not see what this has to do with my question.

Secretary DANIELS. Everything. You are discussing a bold and audacious policy.

The CHAIRMAN. I am asking you what you wrote yourself, and you are giving me letters from some one else.

Secretary DANIELS. Mr. Chairman, I do not see the difference between my sitting down and writing a letter to Admiral Winslow and my sending for him to come to Washington and talking to him. I think it was much better to ask him for his views. He was a bold and audacious man.

The CHAIRMAN. I asked you if you had any letters that you sent out.

Secretary DANIELS. I may have, but I am giving you the answer to a personal request which may be important, and I insist it is a very important thing as showing that I was trying to get the best opinions——

The CHAIRMAN. But here is page after page of statement on every question I ask you, and how are we ever going to get anywhere?

Secretary DANIELS. I will be through in one moment. [Continuing reading:]

The destruction of shipping by the U-boats may increase, increase to a considerable extent, and at the end of a year, if this happens, the situation will be much more serious and alarming, and the people of this country will want to know why our Navy has not taken a more aggressive attitude in dealing with the subject, just as many people in England are asking that question at the present time about the British Navy.

I do not venture to say now that the major military operations which I have just mentioned would be attended with success. Before expressing an opinion on the subject I would like to educate myself by closer examination of the field,

and discussion with those on the other side who are well informed as to what has been done and what it is proposed to do. Admiral Sims is the only officer in our Navy of high rank who has had an opportunity to thoroughly examine this subject, and doubtless he has formed his opinion, and such opinion is of great value, but it would seem to me desirable that the department should have the opinion of others and that they should be given the opportunity to examine the situation at close range.

I just added that as an illustration of the policy the department was pursuing, and I discussed it with officers without number.

The CHAIRMAN. Admiral Benson says he does not know when you decided that we would be drawn into war. Will you inform the committee? I take it that you had a great many talks with Admiral Benson.

Secretary DANIELS. Yes.

The CHAIRMAN. And were very close to him?

Secretary DANIELS. Yes; I talked with him every day. I told you yesterday that, of course, none of us were ever positively certain. We made large preparations after the sinking of the *Lusitania*. Of course, until we withdrew the papers from the German Ambassador, it could not be said that anybody was certain; and, of course, I could not act as to overt acts until Congress made the declaration of war. I could not say the date that I felt it. That is a matter that nobody could state.

The CHAIRMAN. I think very many people did take that ground about it.

Secretary DANIELS. The date?

The CHAIRMAN. I say, very many people did take the ground that we were going into war.

Secretary DANIELS. Before what date?

The CHAIRMAN. What is that?

Secretary DANIELS. You asked me about the date.

The CHAIRMAN. Very many people did, after the sinking of the *Lusitania*, and many people then first were convinced.

Secretary DANIELS. I do not think everybody was certain after the *Lusitania*. I think that the danger was greater.

The CHAIRMAN. A great many people made up their minds long before we did actually get into war, that we were going to war, did they not?

Secretary DANIELS. I think that opinion was entertained by a great many people; yes.

The CHAIRMAN. But there was a sufficient probability for it to warrant preparations being made in case war came, was there not?

Secretary DANIELS. Yes; and I told you yesterday, two days after the sinking of the *Lusitania* I wrote to the General Board to prepare plans for a tremendous increase in the Navy.

The CHAIRMAN. A number of the witnesses have made statements about what a neutral nation could do, in the nation, in overt acts, before war was declared. What do you have to say about that? I suppose you have read the testimony of the witnesses?

Secretary DANIELS. I have not read it all, Mr. Chairman, but of course the question of what an overt act is needs to be defined. When the German ambassador was given his papers, we began to arm the merchant ships, which I take it might be called an overt action. On March 24 the President, who had been authorized to increase the

sonnel in case of an emergency, issued an Executive order calling additional men. I had ordered, in February, all the navy yards closed to any visitors. I had instructed the navy yard people to be very active, earlier than that, in the work they had to do.

The CHAIRMAN. Do you think that a neutral nation was justified in preparing itself before war was actually declared.

Secretary DANIELS. Why, of course; and we did.

The CHAIRMAN. And do you think we were justified at any time on August 1, 1914, in making any preparation that we saw fit to make?

Secretary DANIELS. I think we are always justified in making any preparations we see fit to make for national defense; yes.

The CHAIRMAN. In a case like the present war, that would mean any preparation we saw fit to make?

Secretary DANIELS. It is our business to make such preparation as President authorizes us to make.

The CHAIRMAN. And there was nothing, in your opinion, that would have prevented us as a neutral nation from making any preparation that the occasion seemed to demand?

Secretary DANIELS. There was nothing, in my opinion, and we did not make a very large preparation for national defense. Of course we did not say, or did not say, "we are ordering these destroyers, and are doing this in order to fight a certain nation," until Congress authorized us to, but we were getting ready.

The CHAIRMAN. But we could have authorized the building of the destroyers at any time we saw fit, could we not?

Secretary DANIELS. Yes.

The CHAIRMAN. And we could have increased our personnel to any number we saw fit, could we not?

Secretary DANIELS. Yes; and we did. I recommended it in 1913.

The CHAIRMAN. And we could have done anything in the nature of the use of our Navy that we saw fit?

Secretary DANIELS. Anything in the way of strengthening our

The CHAIRMAN. Of what?

Secretary DANIELS. Strengthening our Navy.

The CHAIRMAN. That does not entirely agree with the testimony of a number of officers on the subject covered.

Secretary DANIELS. I take it there are a variety of opinions, of

The CHAIRMAN. I am more inclined to agree with you than what they say.

The CHAIRMAN. You say that Admiral Sims lacked vision to see that the great necessary project to bar the submarines from their hunting grounds should be carried out, no matter what the labor and burden, but that he did not regard it as practicable. Does that refer to the expense or to the blocking up of enemy ports?

Secretary DANIELS. It refers to any kind of bold or audacious policy or new policy. He recommended none.

The CHAIRMAN. If you and Admiral Benson believed in this bold audacious policy, why did you not insist on carrying it out in the early months of the war?

Secretary DANIELS. In the first place, on the 16th of April—I think it was the 16th—maybe the 13th, before the 16th—I think, a telegram to Admiral Sims stating that the opinion here was that we ought to pen up the submarines and keep them from getting into the open sea, and to take up with the British admiralty those projects: and you will find that on a later date he was instructed to take up with the admiralty the North Sea barrage. You will find in my testimony very fully, statements of my telegrams and my instructions. But, to be sure, we could not lay the North Sea barrage alone. It had to rest upon the English coast. It was in the North Sea, where their fleet was operating, and we could not act independently of the admiralty; but we instructed him to take it up with the admiralty, and the Bureau of Ordnance proposed it in April.

The CHAIRMAN. And it was not taken up until October; it was not adopted until October, I think.

Secretary DANIELS. If you will read my testimony, Mr. Chairman, you will see that we took up the barrage with Adimral Sims in April. We had a number of telegrams urging it, in the spring and summer. Admiral Sims opposed it; and finally, in the summer, we sent Admiral Mayo over to take it up with the British admiralty and to press it.

The CHAIRMAN. Was that the sole reason for Admiral Mayo going abroad?

Secretary DANIELS. No; not the sole reason.

The CHAIRMAN. I do not find anything in Adimral Mayo's testimony stating that was why he was sent abroad.

Secretary DANIELS. Not the sole reason; but that was one of the reasons.

The CHAIRMAN. Was he told that that was the reason, when he was sent over?

Secretary DANIELS. He was told to do that.

The CHAIRMAN. Told to inquire into the barrage question?

Secretary DANIELS. No; he was given a memorandum from the Bureau of Ordnance of all the things about it and was told to take it up with the British admiralty.

The CHAIRMAN. Was he not also told to explain to the British admiralty about the new mines?

Secretary DANIELS. He was given a memorandum for Ordnance.

The CHAIRMAN. The antenna mines?

Secretary DANIELS. Explaining all about it; telling all about it. But he was not told to take up with the British admiralty the antenna mines. He was told to take up with the British admiralty the question of the barrage. It was built with the old mines.

The CHAIRMAN. But until the coming of the antenna mines, the British did not approve of the barrage question, did they?

Secretary DANIELS. But I do not think that the antenna mines had anything to do with the British. They were opposed to this. They did not know anything about the antenna mines.

The CHAIRMAN. They knew that we were going to use it on the barrage, did they not?

Secretary DANIELS. We told them we would furnish as many mines as were necessary. It turned out, as a matter of fact, that we did furnish about 70 per cent or more of the mines. But all

The CHAIRMAN. Would it not have meant diverting for that purpose a large number of ships?

Secretary DANIELS. Not of ships—not destroyers or the ships that were fighting the submarine.

The CHAIRMAN. Was not Admiral Sims's ground for not going ahead with the barrage because he thought that all our attention and all of our efforts should be concentrated against the immediate submarine menace?

Secretary DANIELS. My testimony will show you that Admiral Sims did not believe that it was practicable. He said, "I have taken it up with the British Admiralty, and it is unfeasible." His argument, all his statements, was, "It is impracticable and unfeasible. Quit sending us new ideas. Let us follow the British practice."

The CHAIRMAN. Did Admiral Sims oppose the construction of the barrage at any time after the antenna mines were developed?

Secretary DANIELS. Then, mines were developed, in fact—

The CHAIRMAN. And it was brought to his attention that they were developed?

Secretary DANIELS. He never did advocate the North Sea barrage. He finally fell in with it after Mayo convinced the British Admiralty it was a good thing, but he never sent a telegram to the Navy Department saying his position about it was due to the mines. It was always due to the fact that it was unfeasible, impracticable, and the British had tried all the schemes, and it would not work.

The CHAIRMAN. As a matter of fact, Mr. Secretary, was the North Sea barrage ever finished?

Secretary DANIELS. The North Sea barrage was—finished? We carried it on to the islands on the coast of Norway, and they mined around that end of it.

Toward the British end I think they wanted to keep open a small passage for their ships to go through.

The CHAIRMAN. Were not our men working on the barrage clear up to the time of the armistice?

Secretary DANIELS. I am not certain exactly of the date.

The CHAIRMAN. And therefore there was an opening at all times in the barrage? It was never completed?

Secretary DANIELS. Oh, of course, if the British did not close it up, there always was a place there.

The CHAIRMAN. And the British had repeatedly tried to put a barrage across the English Channel, and had never been able to do so, had they?

Secretary DANIELS. Now, Mr. Chairman, about that there are two opinions. When we entered the war, the first proposition we made—and I think you will find it in one of my telegrams, was saying that we ought to have this North Sea barrage, and the British ought to close up the Dover Channel. The first officer who came back from Great Britain, I asked him why they had not closed the channel, why they had not put a barrage across there, and he said that the British said that the chalky bottom was such that they were unable to make it effective. Some of our officers believed that the reason they did not

do it was because they wished to keep it open for trade purposes. And we insisted all the time that it was essential to have it done, but they delayed about it. What their reason was I can not say. They had their own reasons. But we insisted all the time, from the first, that the closing of that channel was the most offensive thing—and the North Sea—against the submarine.

The CHAIRMAN. Whether or not it could have been done, it never was done, was it?

Secretary DANIELS. Perfectly? I do not think it was ever done perfectly. It ought to have been done long before.

The CHAIRMAN. I recall in the winter of 1916 crossing from Calais to Dover, and I remember that we had destroyer escorts zigzagging in front of us, which would indicate that they were in imminent danger of submarines at that time.

Secretary DANIELS. That was a matter with the British. We urged it and insisted upon it. I do not think they ever did close it. I was talking the other day with one of our most distinguished officers, who said the reason they did not close it was that it was a matter of great importance to have the trade pass through it, and that was why they did not close it. But, of course, it is a matter of opinion. As a matter of fact, we urged it from the beginning.

The CHAIRMAN. Admiral Mayo, on page 1478 and page 1534 of the typewritten record, gives the purpose of his going abroad on the two trips that he made.

Secretary DANIELS. I didn't hear you, Mr. Chairman.

The CHAIRMAN. I say that Admiral Mayo, on pages 1478 and 1534 of the typewritten record, gives the purpose of the two trips that he made abroad in the summer of 1917. The first one was for the purpose of observing conditions and operations in European waters and of inspecting the activities of that portion of the Atlantic Fleet, and the second one was an inspection of the forces of the Atlantic Fleet in European waters and observation of conditions and operations.

Secretary DANIELS. He was commander in chief of the fleet on this side of the Atlantic as well as the other side of the Atlantic.

The CHAIRMAN. And as such he naturally would want to go over there?

Secretary DANIELS. And very naturally, when he was over there, as commander in chief, he was instructed by Operations and given a memorandum by Ordnance to take up this North Sea barrage.

The CHAIRMAN. Now, you say you could not have gone on with the North Sea barrage without the consent of the British? Do you not think they would have allowed you to go ahead if you had wanted to?

Secretary DANIELS. As a matter of fact, Admiral Beatty never did want us to. Admiral Strauss testified here that he could have built the barrage in half the time it took if he had had the control of the matter himself, but that getting orders from Admiral Beatty delayed him so long; and if you will look into the matter, I think you will find that Admiral Beatty wanted the North Sea open for his fleet and never did believe in the barrage, and the British Admiralty were very slow about it.

The CHAIRMAN. But why could you not have gone ahead? They would have allowed you to go ahead with it if you had wanted to?

should go where it would not interfere with we could not have put a barrage across least the British assent, and the bases. A thing on Great Britain.

The CHAIRMAN. Do you not think that British that America would have done this with our own forces; they would have all

Secretary DANIELS. We put it up all the put it up, to build it, to go in with them build it; we can not get the mines." And will furnish the mines." They were very even at the end, Mr. Chairman, even at the time this, that when he would take it up with to him rather indulgently, as if they must not, but they did not take any interest and they felt—he said they said, "Well, be humored. It must be treated with caution, much of it." That was their attitude, and it without their assent and without their North Sea we could use without going to

The CHAIRMAN. As a matter of fact, while work, constructing the barrage, and while proud of it, did it actually have very much the submarine menace, in your opinion?

Secretary DANIELS. It destroyed 8 per cent destroyed during the war.

The CHAIRMAN. It destroyed what?

Secretary DANIELS. Eight per cent. It was laid down to take toll. It was the most offensive naval operation of the war.

The CHAIRMAN. When did it probably destroy submarines?

Secretary DANIELS. It had hardly been said, in June—I would not give the month within a month after they began to lay it

The CHAIRMAN. He said there was one was caught?

Secretary DANIELS. One at once. But nothing about the North Sea barrage, the great that it kept the submarines from coming had on the German morale. Just as long could leave their base and go easily out sailors were willing to take the chance. a destroyer if a destroyer was after the numerous as we would have liked to have said we ought to have had 25,000. It would if we had. But when they found that the thing under the water, that was different. here was a destroyer after them, and they had a better chance, because while the d

and while the depth charges which were introduced were very effective and very good, the submarine could submerge, and the sailors had what you would call a sporting chance. But after the barrage in the North Sea was made they went into a maw, and they knew if they went in there they would be clutched and destroyed, and some of them got in and got hurt and went back and carried the news back to Germany, and the first break of German forces, seriously, in morale, was in the German Navy. We were all astounded one day to hear that the German Navy had had some revolt. It was a surprising thing. The effect on the German undersea fleet, I think, was to greatly weaken their morale.

The CHAIRMAN. After the 20th of June, when this submarine was caught in the barrage, even by that time the curve of shipping that was being built had gotten past the curve of sinking by submarines, and the submarine situation was practically under control, was it not?

Secretary DANIELS. Oh, no; the submarine situation was never under control.

The CHAIRMAN. When the curve of building crossed the curve of destruction, it was evident that the submarine menace could not succeed?

Secretary DANIELS. Yes; but the barrage came along, and that was very pronounced.

The CHAIRMAN. Yes; but the curve of building—of construction—was increasing all the time then?

Secretary DANIELS. The submarine was never curbed by destroyers—

The CHAIRMAN. That is extraordinary.

Secretary DANIELS (continuing). Until the barrage destroyed the morale and began to take toll of them.

The CHAIRMAN. But that is merely conjecture about destroying morale. I think Admiral Strauss stated there were only 10 accredited to the barrage, and they only found 3.

Secretary DANIELS. The British only credited us with sinking two submarines with all our efforts, and besides the barrage.

The CHAIRMAN. That may be.

Secretary DANIELS. But the barrage closed the door and slammed it in their face.

The CHAIRMAN. It did not close the door. It was never closed. It was like a fence around a field.

Secretary DANIELS. It was closed, except a narrow place which the British kept open, and which, of course, they patrolled.

The CHAIRMAN. I do not think that the testimony has shown that it was ever an effective barrage.

Secretary DANIELS. What is that?

The CHAIRMAN. I do not think the testimony has ever shown that it was an effective barrage—an absolutely effective barrage.

Secretary DANIELS. If you will read Admiral Sims's book you will find he says so.

The CHAIRMAN. Will you show me where?

Secretary DANIELS. Yes; Admiral Sims says that the barrage had an important effect in injuring the morale of the German Navy.

marine menace was practically under control, was it not?

Secretary DANIELS. It was not. It destroyed 7 per cent of all the submarines that were destroyed during the war, so it is said.

The CHAIRMAN. That was during the latter part of the war, when they were pretty well under control?

Secretary DANIELS. They were never under control. Let me tell you something, Mr. Chairman—

The CHAIRMAN. They were never absolutely under control, of course.

Secretary DANIELS. Let us see whether they were under control or not. On the last of September—the 1st day of October, 1918—Sir Eric Geddes and Admiral Duff and a large mission of British naval officers came to Washington. We had quite a lengthy conference at my house one night, attended by the leading admirals of our Navy, and the British Navy, and Sir Eric Geddes stated to us, and Admiral Duff—and that was October, 1918—they said, “We have before us now the most serious time of all. The submarines are going to destroy more shipping in the next year than they have destroyed any year in the war.” That was the opinion of the Secretary of the Navy of Great Britain, the first lord of the Admiralty. I have placed it in my hearings. That was October 1, 1918. He did not suppose then that the submarines were under control. He came over here for that purpose. He was very earnest about it, and so earnest—I will give you a little inside history. He prepared a statement for the press in which he made that statement, and said that the next year was going to be the worst year of the war. This was October 1, 1918.

The CHAIRMAN. Who made that statement?

Secretary DANIELS. Sir Eric Geddes. It is in the hearing. And Sir Eric Geddes said, “We must get ready for the greatest fight we have had. We must have more destroyers than we have ever had.”

The CHAIRMAN. That referred largely to the fleet, did it not?

Secretary DANIELS. No, sir; not at all.

The CHAIRMAN. To another fight that they expected to have?

Secretary DANIELS. No, sir; he referred to the submarines, and he said, “We must get ready; and the war is going on.” He said, “It can not end in a year.” He sent me down his statement before he published it.

The CHAIRMAN. That was in October, 1918?

Secretary DANIELS. October, 1918.

The CHAIRMAN. By which time the losses due to submarines had gotten away down to the lowest point reached, had they not?

Secretary DANIELS. Yes; but Sir Eric Geddes said that it was going up to a higher point still.

The CHAIRMAN. This was his opinion?

Secretary DANIELS. That was his opinion.

The CHAIRMAN. In spite of the barrage?

Secretary DANIELS. Because the Dover Channel had never been closed, and Sir Eric Geddes was never a believer in the barrage.

The CHAIRMAN. Even though you say it was working in perfect shape?

Secretary DANIELS. I did not say in perfect shape.

The CHAIRMAN. Well, in very effective shape. You said it put down the submarines.

Secretary DANIELS. I said it was the most effective agency in that. I never said any one thing on sea or land ended this war. I have never said any one thing was the controlling thing; but I have said that the barrage was the outstanding, chief thing that ended the submarine menace. Now, Sir Eric Geddes prepared that statement.

The CHAIRMAN. He did not agree with you, did he?

Secretary DANIELS. What?

The CHAIRMAN. Sir Eric Geddes did not agree with you about the barrage having ended the submarine menace?

Secretary DANIELS. Here is what he said. This is on page 4929 of your typewritten record:

Sir Eric Geddes, first lord of the Admiralty, said: "I do not understand from the remarks of the first sea lord (Admiral Jellicoe) that the barrage should take the place of other offensive measures. It is not considered that the barrage can be sufficiently relied upon," etc.

He still felt that the danger from the submarine was very serious; and the break in German morale had not come so much as it did in October.

The CHAIRMAN. If Admiral Sims failed in vision and aggressiveness, why did you recommend him for permanent admiral, and not recommend Admiral Mayo, whom you now praise so highly—and quite rightly. He is a splendid officer.

Secretary DANIELS. For this reason. I have answered it several times. I have said it in my direct testimony. Admiral Benson was the head of the Bureau of Operations in Washington. Admiral Sims was the ranking officer abroad. And I have never said that Admiral Sims lacked ability or that he was not animated by a great desire to win; and I said in my hearings before the House committee that in giving this honor to Admiral Benson and Admiral Sims, it was not so much to them personally, but to the fact that each one of them occupied a position, Benson the head man here in Washington and Sims the head man in London, and it was a recognition of the entire Navy. And I wrote a letter to Chairman Padgett, of the Naval Affairs Committee, telling him that the only reason I did not recommend Admiral Mayo was because I did not feel that Congress would give us three admirals; that he was entirely entitled to it, and that he ought to have it, but that I felt that two were all that Congress would give, and I had recommended Benson and Sims because one in this country, in Washington, and the other in London, they were the men who had been intrusted with certain responsibilities in the public eye.

The CHAIRMAN. Mr. Secretary, I will put in the record at this point what you stated about Admiral Sims in your report for 1919.

Secretary DANIELS. As I stated in my hearing, Mr. Chairman—

The CHAIRMAN. It has all gone in, but I will simply repeat it and have it put in this record here.

Secretary DANIELS. Yes, Mr. Chairman. My feeling was when the war was over that the Navy had done a great job, and that

pressed them and recommended them highly.

The CHAIRMAN. I will also put in your letter of July 22, 1919, to Hon. Thomas F. Butler, chairman of the Naval Affairs Committee of the House, and the memorandum introduced by Senator McCormick. There is no need of reading them now. They were introduced at pages 551, 552, and 554 of the hearings on "Awarding of medals in the naval service."

Secretary DANIELS. They show that in spite of the fact that there were some things Admiral Sims desired to be done that I did not approve, and the fact that he lacked vision in the matter of the barrage, I recognized his ability, and I therefore wrote that letter.

The CHAIRMAN. They do show that he lacked vision?

Secretary DANIELS. The letter did not say that; no. I said that, though some of the things he did abroad I did not approve—

The CHAIRMAN. But there is nothing in those letters to show that you did not approve.

Secretary DANIELS. No; I was going on to say that in spite of that fact I was very generous in my commendation of him; and I desired this recognition of the two officers who incarnated, you may say, the work here in Operations, and the work in the London office, of the man at the head of it.

(The documents referred to by the chairman are here printed in the record, as follows:)

[Extract from Annual Report of the Secretary of the Navy for 1919.]

ADMIRAL SIMS'S DISTINGUISHED SERVICE.

In the allied naval council, Admiral William S. Sims, who had been the able representative of the Navy in Europe during the entire war, displayed ability of the highest order. His brilliant services abroad won world-wide admiration, and he demonstrated that he is worthy of the highest honors Congress can confer upon him. Admiral Hugh Rodman, who had commanded the dreadnaughts in the North Sea, represented our country in receiving the surrender of the German Fleet, and was justly honored and decorated by allied nations. In March, 1919, after receiving desired and distinguished honors and many expressions of the esteem in which he is held, Admiral Sims set sail for home to become the president of the War College, where he has already set a new and higher standard which will insure an enthusiasm and zeal and knowledge on the part of the naval officers privileged to attend the war college, which will be reflected in a more efficient Navy of the future. He was succeeded in command of the United States naval forces in European waters by Rear Admiral Harry S. Knapp, one of the ablest and wisest of naval officers, who also, upon the return of Admiral Benson to this country, became our naval advisor to the peace conference at Paris.

In the anxious days before duty led the United States to enter the World War, when it was decided to arm merchant ships, the President determined to send to Great Britain a naval officer of high rank and approved ability to represent our country. He selected for what was then a delicate mission, as it was all during the succeeding months, an assignment that called for a man of quickness of grasp, mastery of his profession, and ability to sit as the equal in any conference of the naval leaders of the free nations. The country approved the selection of Rear Admiral William Snowden Sims. He had already shown the qualities which made his mission not only of the greatest service to his own country, but which brought allied navies into warm fellowship as well as in close cooperation. He was at once welcomed into the conferences of naval leaders, and during the whole war was recognized among our Allies,

as well as by his own countrymen, as one of the ablest and most brilliant naval officers in the cause that demanded initiative, understanding, and a comprehension which included among others the hard duty to safeguard the carrying of millions of fighting men across the seas and to defeat the submarine menace.

It is a matter for national gratification that in Rear Admiral Sims America sent as commander of the United States Naval Forces Operating in European Waters an officer who served the world with such conspicuous ability as to win the confidence, the approval, and also the sincere admiration of the whole world. He has been given the highest honors by foreign countries which appreciated his rare accomplishments. He was promoted during the war because of his high merit successively to vice admiral and admiral, and it is just that this highest rank shall be conferred upon him by his countrymen and that it shall be a decoration of life of which his children may be proud.

WASHINGTON, July 22, 1919.

MY DEAR MR. CHAIRMAN: I am in receipt of your favor of July 19, requesting the department's recommendation on H. R. 7551. The promotion of Admiral William S. Benson and Rear Admiral William S. Sims to be permanent admirals of the Navy meets with my cordial and hearty approval and is in accordance with the message which the President sent to Congress on Friday, July 18.

If the Navy of the United States in the Great War has deserved well of the country and if it merits the tributes paid to it at home and by allied nations, its possession of world pride and world confidence is due to its demonstrated fitness, readiness, and resourcefulness in the days of testing. The congressional declaration, "All is well with the Navy," issued after thorough investigation in critical days, was made possible only by the perfect teamwork of the entire Navy personnel, embracing the zeal and quickness of the youngest recruit as well as of the wisest and most capable admiral. What measure of gratitude the Congress, as representative of the whole people, may choose to pay to the Navy must go to more than half a million men who, in the peril and hazard of war, sought the place of danger and never failed or hesitated in the face of death. But neither Congress nor the country can render deserved honors to all the brave men, every one of whom will be awarded a medal in recognition of their valor. Their leaders, young and old, were worthy of them. Congress has authorized honors to be bestowed upon those privileged to perform deeds of special distinction. The impossibility of fitting recognition of all who are worthy embarrasses the department and Congress. So many officers and so many men have shown themselves worthy of the highest honors of their country that full recognition must be confined to the men, who, assigned to the most important positions during the war, illustrated the best traditions of the noble service which they and their shipmates of every rank and grade adorn.

Long before the war began Congress created a new position of leadership in the Navy Department known as Chief of Naval Operations. To that place of responsibility the President called William Shepherd Benson, then a captain in the Navy. In every previous assignment to duty he had demonstrated ability and capacity and soon the country felt that in the new Chief of Operations it possessed a man who would measure up to the highest requirements in preparation for war or in the wise professional direction of war. The naval service already knew his fine qualities, had confidence in his sound judgment, and in his sense of justice. Soon the public learned what the President knew when the selection was made, to wit, that Capt. Benson had a rare quality of statesmanship, as well as knowledge of his profession, and possessed ability to visualize naval needs and to carry out well-matured naval policies. From the day he came to Washington he sensed the national duty and need for naval preparation. When war came it found the Navy ready with all its units for the service required of it. Shortly after our entrance into the war, after study and conference, Admiral Benson was selected to go abroad to confer with our associates, and he laid before the admiralities the views of his country and co-operated with them in the joint naval policies which more than justified their adoption. When the American peace mission assembled in Paris Admiral Benson was selected as the naval adviser of the mission, and served his country in that quasi diplomatic post with the devotion to his country and sound discretion which had attended his whole career. Allied nations have conferred their highest honors upon him, and his own country, I am sure, will honor itself by giving him the highest rank that can come to a naval officer.

In the anxious days before duty led the United States to enter the World War, when it was decided to arm merchant ships, the President determined to send to Great Britain a naval officer of high rank and approved ability to represent our country. He selected for what was then a delicate mission, as was all during the succeeding months, an assignment that called for a man of quickness of grasp, mastery of his profession, and ability to sit as the equal at any conference of the naval leaders of the free nations. The country approved the selection of Rear Admiral William Snowden Sims. He had already shown the qualities which made his mission not only of the greatest service to his own country but which brought allied navies into war fellowship as well as in close operation. He was at once welcomed into the conferences of naval leaders and during the whole war was recognized among our Allies as well as by his own country as one of the ablest and most brilliant officers in the cause that demanded initiative, understanding, and a comprehension which included among others the hard duty to safeguard the carrying of millions of fighting men across the seas and to defeat the submarine menace. It is a matter for national gratification that in Rear Admiral Sims America sent as commander of the United States naval forces operating in European waters an officer who served the world with such conspicuous ability as to win the confidence, the approval, and also the sincere admiration of the whole world. He has been given the highest honors of foreign countries which appreciated his rare accomplishments. He was promoted during the war because of his high merit successively to vice admiral and admiral, and it is just that this highest rank shall be conferred upon him by his countrymen, and that it shall be a decoration for life of which his children may be proud.

The honors which the President proposed for these distinguished officers is not only a recognition of their large contribution to the winning of the war, but these promotions will be regarded by the whole Navy as being conferred because these officers incarnate the courage, the skill, and deathless service rendered in the grim days of war by all Navy officers and by all Navy men who gave themselves fully to the victory which blesses mankind to-day.

I venture to suggest that the bill be amended by adding after "permanent admiral," in line 6, "with the pay of active admiral during their lives," and striking out the words "and they shall not be placed upon the retired list except upon their own application," and in lieu thereof there be substituted "the President is authorized, in his discretion, upon or after their retirement, to assign them to active duty." The policy of placing any officer permanently on the active list is one which is open to grave objection. These officers should, upon reaching the age of retirement, be placed on the same footing as all other officers, and their continuance upon active duty should be determined by the commander in chief of the Navy, who may well be empowered, in his discretion, to assign them to active duty after retirement. These changes are made the bill would read as follows:

ILL. To appoint Rear Admiral William S. Benson, United States Navy, and Rear Admiral William S. Sims, United States Navy, as permanent admirals in the Navy.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is hereby authorized to appoint, by and with the advice and consent of the Senate, Admiral William S. Benson, United States Navy, and Rear Admiral William S. Sims, United States Navy, permanent admirals with the pay of active admiral during their lives, and the President is authorized, in his discretion, upon or after their retirement, to assign them to active duty, and whenever such offices shall be ended by death or otherwise the offices shall cease to exist."

With these minor changes, I earnestly recommend the passage of H. R. 7551, introduced in the House on July 18 by Chairman Butler.

I am appending hereto a brief summary of the naval service of both these naval officers.

Sincerely, yours,

JOSEPHUS DANIELS,
Secretary of the Navy.

W. THOMAS S. BUTLER,
*Chairman Committee on Naval Affairs,
House of Representatives, Washington, D. C.*

MEMORANDUM—ADMIRAL SIMS'S DUTIES.

Admiral Sims's duties at the beginning of the war were those of United States naval representative at the British Admiralty, from which point the policy and operations of the allied navies were directed. As United States naval vessels were ordered abroad from time to time, Admiral Sims was ordered to command all vessels, and later ordered to command the United States naval forces operating in European waters. On November 20, 1917, he was given additional duty as naval attaché at London. Admiral Sims was personally responsible for the degree and character of cooperation which was effected in the employment of the United States Navy in European waters. This cooperation may be considered as the principal accomplishment abroad to be credited to the Navy during the war. The forces of the United States Navy in the summer of 1917 entered a naval campaign which was approaching its fourth year of progress and in which practically every form of naval activity existed.

In order to throw in the force of our service to the fullest extent required exceptional tact, and in many cases it required abandonment of methods to which our service was accustomed to—methods which we knew to be less efficient but which were necessary to the combined campaign. Admiral Sims's policy, which was adhered to with a clear mind throughout, was that his mission could be accomplished only by treating the United States naval force in the rôle of reserves being brought to the front, and there is ample evidence that the example set by the coordination thus worked out had a marked effect upon the efficiency and progress of the campaign.

Upon the signing of the armistice, Admiral Sims had under his command approximately 81,000 officers and men and 373 naval vessels. A brief résumé of some of the accomplishments of the forces under his command follows:

(1) Escorted 62 per cent, or about 1,250,000 troops of the United States, without loss from enemy action.

(2) Escorted 27,000 of all United States, allied, and neutral shipping, carrying cargoes to France, England, and Italy during the period from April 6, 1917, to November 9, 1918.

(3) Laid 80 per cent of the northern mine barrage from Orkney Islands to Norway.

(4) Maintained all vessels under his command self-supporting in all respects, except in cases of serious accident and docking.

(5) Initiated tactics of "barrage system" in use of depth charges.

(6) Established, manned and operated 9 shore bases to support cruising vessels and 34 aviation bases in England, Ireland, France, and Italy from which aircraft bombed enemy submarine bases and patrolled at sea protecting convoys from submarines.

(7) Advised and assisted Mr. Hoover in operating food ships throughout Europe; established naval organization in every part of Europe where United States merchant vessels called. This was necessitated because all peace-time port facilities were so thoroughly disorganized.

(8) Operated fleet of 67 ships, manned by the Navy, carrying coal from Cardiff to France for the Army.

(9) Operated 120 submarine chasers in offensive warfare against the submarines, maintaining five special and three auxiliary bases to support these vessels.

(10) Based and operated a flotilla of seven submarines from the base in Ireland and five submarines from the base in the Azores.

(11) Reinforced the British Grand Fleet with five United States battleships.

(12) Operated a division of United States dreadnaughts, based on the west coast of Ireland, held in constant readiness to oppose threats on convoys by enemy battle cruisers or battleships.

Admiral Benson retires September 25, 1919.

Admiral Sims retires October 15, 1922.

Act of May 22, 1917, fixes pay of fleet admirals at \$10,000 per annum, and fleet vice admirals at \$9,000 per annum, and their allowances were made to correspond with those of general and lieutenant general in the Army, responsibility, in act of July 1, 1918.

Act of August 29, 1916, provided that the "Chief of Naval Operations shall have the rank and title of admiral, to take rank next after the admiral of the Navy, and shall, while so serving as Chief of Naval Operations, receive the pay of \$10,000 per annum and no allowances."

Act of July 1, 1918, provides that "the Chief of Naval Operations shall receive the allowances which are now or may hereby be prescribed by or in pursuance of law for the grade of general in the Army."

Naval act of May 13, 1908: "Hereafter all commissioned officers of the active t of the Navy shall receive the same pay and allowances according to rank d length of service, and the annual pay of each grade shall be as follows: r admiral, \$13,500 * * *."

Admiral Sims ordered abroad, confidential duty, March 28, 1917.

Ordered to command all destroyers operating with British April 28, 1917, including tenders, supply vessels, and all auxiliaries.

Made vice admiral from May 25, 1917.

Ordered "commander United States naval forces operating in European ters" June 14, 1917 (change of title).

Additional duty as naval attaché November 20, 1917.

Made admiral November 27, 1918.

Detached March 31, 1919.

The records of the department show that Rear Admiral William Snowden is, United States Navy, was born in Port Hope, Ontario, Canada, October 1858; on June 24, 1876 was appointed a cadet midshipman, Naval Academy, n the eighteenth congressional district, State of Pennsylvania, by the Hon. S. Stenger; completed the four-year course of instruction at the academy e 10, 1880, finally graduating June 22, 1882; on June 22, 1882, promoted to shipman; promoted to ensign (junior grade) March 3, 1883, which rank is obsolete; promoted to ensign June 26, 1884; and subsequently promoted follows: Lieutenant (junior grade), May 9, 1893; lieutenant, January 1, 1894; lieutenant commander, November 21, 1902; commander, July 1, 1907; ain, March 4, 1911; rear admiral, August 29, 1916.

uring his career as a naval officer he served on naval vessels, among others, follows: U. S. S. *Kentucky*, *Monterey*, *Brooklyn* (aid on staff to commander hief of Asiatic station, and later as fleet intelligence officer and inspector arget practice, Asiatic station); U. S. S. *Minnesota*, commanding officer 1909 to 1911; commander of torpedo flotilla, on U. S. S. *Dixie*, 1918 to ; U. S. S. *Nevada*, commanding officer.

e was naval attaché at Paris, France, St. Petersburg, Russia, and Madrid, n. from September, 1896, until April, 1900; aid of Admiral Dewey on U. S. S. *Dolphin*; president of Naval War College from January, 1917, until l, 1917, on which date he assumed command of all American destroyers, ers, and auxiliaries operating from British bases. with flagship on the U. S. S. *Wadsworth*, and later on the U. S. S. *Melville*. In accordance with the of Congress approved May 22, 1917, he was designated as commander of United States destroyers operating from British bases, and authorized to ne the rank and hoist the flag of a vice admiral in the Navy; on June of year his title was changed to commander, United States naval forces ting in European waters, with additional duty as naval attaché in Lon-England. He was designed in November, 1918, as full admiral in the Navy ive from December, 1918, and served as commander of United States forces operating in European waters throughout the Great War, and and including March, 1919, when he returned to the United States and ed duty as president of the Naval War College at Newport, R. I., at time he reverted to his former lineal rank in the Navy as rear admiral.

WASHINGTON, May 22, 1920.

DEAR SENATOR: In my hearings before the subcommittee on last Tues-May 18, I read a speech I made before the Anglo-American Society on , 1919. I thought that when I read it it was my entire speech, but I at in copying it the copyist accidentally omitted a portion of the speech. therefore, sending you the entire speech, and request that it be substituted er that the permanent record may show what I did say in London.

Very truly, yours,

JOSEPHUS DANIELS.

FREDERICK HALE,

Chairman Subcommittee of Senate Naval Affairs Committee,

Washington, D. C.

Press delivered by Secretary Daniels at a luncheon given in his by the Anglo-American Society and the Sulgrave Institute in n, Thursday, May 1, 1919:

I believe, more than a coincidence that this meeting of the Anglo-Amer-ciety which the American Secretary of the Navy and distinguished naval

officers are privileged to attend, is held on the anniversary of the day that commemorates a notable American naval victory. On May 1, 1898, Commodore George Dewey, afterwards made the Admiral of the Navy of the United States, in the early morning passed the torpedoes and obstructions in Manila Bay and won the battle which gave new prestige to the Navy of our country and added a new luminary in the firmament of fixed naval stars. Upon every ship flying the Stars and Stripes to-day there will be fitting recognition of this anniversary, a day which shines in our calendar. We in America can never forget the spirit shown by the brave Admiral Chichester, of the British Navy, in the days which followed Dewey's victory, and that memory stirs our grateful appreciation particularly to-day. It was typical of the friendly relations that have long existed between the two navies. It was prophetic also of the closer cooperation which has been the crowning glory of British and American participation in the great war in which the fleets of those two mighty commonwealths were so united as for the time being to compose virtually one fleet. We never think of Dewey's delicate and difficult task, after the signal victory, 21 years after, as we celebrate its having attained its majority, without deep and abiding love for the British Navy and the British people because of the wisdom, consideration, and friendship displayed by your admiral at Manila.

It is good on this day to recall, with American gratitude, and I doubt not with British pleasure, the outcome of the veiled threat of the German admiral to contest the fruits of Dewey's victory in the Philippines. Admiral Dewey, out of that appreciation which every naval officer has for his responsibility to avoid trouble between his own and another country with which his Nation was at peace, withheld from his memoirs the full story of the tension almost at the breaking point caused by Admiral von Diederichs in those crucial days. We know enough of the circumstances, however, to understand the narrow escape from hostilities between the Navy of the United States and the Navy of Germany, and we have sufficient information to cause us always to be deeply sensible of the important and helpful part the British admiral played in those anxious hours.

"What would you do," asked the German Admiral, "if I moved my ship over to the *Olympia* (Dewey's flagship)?"

It required just two words for an answer that we are happy to recall to-day. "Ask Dewey," was Admiral Chichester's delphic to the uninitiated, and illuminating in the light of history, answer which was so well understood by the German admiral that he never moved his ship over to the *Olympia*. The crisis was averted, and to the day of his death Admiral Dewey held in grateful and fresh remembrance the action of the distinguished commander of the British naval forces in the Far East.

"Match the Navy." This was the keynote of the appeal of the Secretary of the Treasury of the United States during the third Liberty loan when, to make ready and effective war upon the submarines, the Navy personnel made such large subscriptions to the third issue as to have their action held up for the emulation of the whole country. The people of Great Britain, particularly the members of the British Navy, who were closely associated with them during the silent watches of the cruel war, can best know whether the United States Navy was worthy of the honor done it by selecting its achievements for national efficiency and national liberty as the high-water mark of attainment.

It was our pleasure and we gladly embraced the opportunity shortly after the United States entered the war to send over a portion of our fleet to be associated with your British Grand Fleet. Our fleet and yours acted together to lay mines in the North Sea, to convoy ships bringing troops, to fight the stilettoes of the seas in all zones of danger, and in every naval activity courage and skill were united. We kept all other ships of our Navy ready for sailing orders when the Allies felt a larger naval force might be needed, for from the day the United States entered the war there was no thought but readiness for the fullest and quickest cooperation and use of all our sea power where joint naval statesmanship felt it could be best employed. It was a gratification to us at home to know that British experts regarded our fleet in home waters, well disciplined and ready to come over at a moment's notice, as an invaluable reserve, as indeed we always deemed it. Our fleet at home was kept busy in the invaluable work of training recruits, and especially in training armed crews for merchant ships. It was tedious and, in a sense, work that brought no glory to officers and men. It was well done, while our British brothers of the Grand Fleet waited in enforced inaction for the Germans and suffered a

the essential power and use of those portions of our fleets now in the most infested areas but removed from the areas where we expected—nay, where we hoped—the decisive great naval engagement would give striking proof of the incomparable power of the allied fleets. In America we hoped that hour for which all other hours were but preparation. Here your naval fighters, as ours, were kept for the day when in fair combat in the open sea the opposing forces might in battle give the seal and eternal proof that the sea power of our countries would win as notable a victory as Nelson's or Dewey's. That this opportunity was not given, because the Germans knew the fate in store if they dared win or lose all by the sea fight, it must be confessed took away some of the anticipated satisfaction of the men of our Navies. But we should remember that the victory was all the more complete, though lacking the glory of a titanic conflict and denying the human satisfaction of demonstrating that the men of the British and American Navy of to-day are of the same stuff as in the days when neither wind or rain nor guns nor any other power could withstand their naval supremacy. It was the most humiliating spectacle in the annals of naval history—was the tame surrender of the much vaunted fleet that was organized with the boasted purpose to conquer the seas as the Prussian troops were to dominate the land. In truth that inglorious limping spectacle of defeat and disaster had a greater significance of complete undoing in the doing in the eyes of the world to-day and in history than could have come from a magnificent victory in a sea duel. It was not thrilling or spectacular. It did not stir the blood—the thing Navy men had made ready for and coveted as their heart's desire. But it did more: wrote on sea and sky the imperishable doom, "Thou art weighed in the balance and found wanting," and carried the same lasting message as when those fateful words were interpreted by the prophet of old.

May we not, borrowing the words used by our Secretary of the Treasury of our American naval fighters, give it the larger meaning and employing it to embrace your own and our own Navy's sentiment, say to the civilian peoples of both countries and of all free nations "Match the Navy"? I speak not now of daring service or of liberality or of that initiative and skill which the world applauds. To Americans and to British people, in the vast expanse of both countries, the call is, "Match the Navy" of your country in mutual appreciation, in clear understanding, in full fellowship, and in that loving brotherhood and helpful comradeship which will forever unite the two countries in championship and sacrifice for democracy, liberty, and fraternity.

Why match the Navy? The most beautiful fruit of cooperative effort and sincere friendship the war has ripened for us is the spirit which characterizes the intercourse of our men of the sea. They were privileged to know each other to the core, to plan together, and to test each other's knowledge of strategy and tactics and weapons of war, to go down together to the sea in ships, unfraid when the perils of the deep called only for men of the best mettle. Together they undertook the most gigantic task known to navies, the barrage of the North Sea, where a mistake or lack of skill meant instant death, and where the hardships were too great for any except the stoutest hearts and strongest bodies. They, and their equally brave Allies hunted the submarine in his jungle in the trackless sea, and together conquered the most insidious and most evasive and most murderous foe, which, without humane instinct, lay in wait for ships bearing noncombatants, sending ruthlessly to watery graves women and children in defiance of every law of the sea except the common law of the days of piracy. They transported millions of soldiers with a safety that seems almost miraculous. We can never forget that British ships brought over a million American soldiers from our shores, and the only limit of this invaluable contribution by the British was the limit of your large facilities. It was a service of such emergency and of such capital importance that American appreciation is beyond any expression of appreciation in words.

The naval force of our countries were instant wherever protection was needed as well as wherever the foe dared challenge their supremacy. The Navy of my country and yours during those years—we called them fateful then, but history will call them glorious—worked together as a unified organization and came to feel as truly one as if separate flags did not fly above their ships. The flags, it is true, were different, but they symbolized the same consecration to

world liberty and the same high resolve to again demonstrate that sea power is in the last analysis the determining force of the world. But better than that, or rather because of their mutual hardships and comradeship in love and sacrifice, the men of both navies, seeing eye to eye, came to regard each other as fellow crusaders. Ties of personal and national friendship were forged which can never be weakened, ties which are the best and surest guaranty of furnishing its large share of whatever mobile police the world's peace may require. What size this police force may be must be determined by the evolution of the League of Nations, happily, unanimously approved by the delegates from all the allied nations in the peace conference. It must be as powerful as world safety requires and in the development of the workings of the League of Nations must be reduced with all other armaments consistent with its declarations. The members of the league recognize that the maintenance of peace requires the reduction of national armaments to the lowest point consistent with national safety and the enforcement by common action of international obligations. Of one thing there must be no doubt; the end of competitive navy building has arrived. It would be a blunder, a calamity, equal to a crime if Great Britain and the United States should enter upon competitive naval building, either or both suspicious of the other.

As the common dangers and common experience of men in these two greatest navies brought to the men in each a better appreciation of the fact that their united strength was the most powerful agency to end the dreams of conquest by autocracy, so the continued cooperation in peace of our two great peoples in a league with our allies will be the best assurance of the blessings which will flow to the world out of the League of Nations.

Delighted as this brotherhood is, cemented forever in war for the men of the two navies, the outstanding lesson is that when all the peoples of these two countries know each other as intimately as do the men of the navies all civilians will "match the Navy," not only in appreciation of each other's virtues but in a full comprehension that only in high resolve to make this good feeling and cooperation permanent can these two enlightened countries fulfill their mission of duty to themselves and responsibility to the world. It is too much to expect that these English-speaking people will always be in agreement, that their interests may not sometimes clash, and that there will not be men in each country who would love to drive a wedge which would keep them apart and antagonistic. It is as true of nations as of individuals that differences of opinion honestly entertained and freely expressed, bind them closer together. When two men always express the same thought, it may be safely assumed that one is the thinker and the other the echo. Strong and virile men wish no such unity. This is equally true of strong and virile nations, and have perhaps greater application in the case of the United States and Great Britain. In the long ago we had serious differences, or, rather, our Governments did. The peoples, with largely the same impulses and the same traditions, each in their own way, have moved toward the same end, which is to make all governments serve the expressed will of the whole people. But these ancient differences are remembered by us only to serve to heighten our respect for each other and to give a pride that we drew our inspiration from the common refreshing stream of Runnymede.

What has been the outstanding attitude in times of crisis between these two countries? The best answer is found in naval action and in naval accord. On both sides of the ocean we will always remember Josiah Tattnal's defense of his display of friendship to Great Britain in Chinese waters. With true naval brevity he summed it all up in his sentence "blood is thicker than water," five words which during the great war have become on both continents a sentiment of mutual peace and has given a feeling of confidence to the world as that shibboleth was translated into action on sea and land. But Tattnal's sententious expression had a meaning deeper than is generally given to it. He knew that "blood" meant more than kinship in the flesh, for it embraced the blood of hostility toward absolutism and faith in free government. "My country, right or wrong," is not the slogan to call true men to the colors, and "Blood is thicker than water" could hearten no patriot unless the relationship embraced common ideals and common courage to visualize these ideals and make them a blessing to mankind.

We love to think in America, and always with deeper love for the British Navy and the British people, of the spirit of friendship displayed by your Admiral Chichester at Manila. Every American officer on duty in southern

ers at Vera Cruz in 1914 felt the same grief which bowed down the British when the news came of the death of your Admiral Craddock when priority in gun power gave victory to the Germans at Coronel. Close association at that time gave us to see the wisdom and statesmanship of your admiral and to conceive for him genuine admiration and regard. His spirit lives over us now, drawing the nations nearer together in imperishable friendship.

May we not in confidence assert that the people of both countries will "watch the Navy" in actual regard, interchange of ideas, and closer fellowship that make the intercourse between nations as noble and as helpful as that which existed between the men of both navies.

From the day that Admiral Sims, our brilliant naval representative in Europe during the war, arrived in London and your able naval representatives came to our country, there has not been an instant when the navies did not set an example which the whole peoples of both will follow in the better days. Countries by valor and statesmanship will do so much to bring to the world.

We hope—most of us, at any rate, hope—that the foundation of the League of Nations will eventually, perhaps sooner than scoffers imagine, sound the knell of at least inordinately large expenditures on great fleets. We realize the full the anxiety, indeed the urgent necessity, felt in Great Britain to reduce naval expenditures to the lowest level compatible with safety. The United States will, I am convinced, do nothing that international developments do not clearly require us to do, to add to the naval burdens of this or any other power. We recognize the political and geographical necessities which call for great sea power, we are convinced that Britons, on their part, recognize that our necessities exist in our case. We, too, have a prodigious coast line. We have a great foreign trade, which is bound to grow, a carrying trade that will grow with it, and obligations growing out of our League of Nations covenant. The United States does not aspire, as we believe Great Britain does not aspire, to possess such strength at sea that we can impose our decrees arbitrarily upon free people. Such a tradition is wholly foreign to our political nature and far out of tune with our traditions. But if the evolution of the League of Nations is not such as its friends and devotees in Europe and in America hope it may be, if competition in armaments must continue, as in the past, untrammelled by any other consideration than a nation's financial capacity—then, inevitable as the choice will be, repugnant as it will be to the American people, it will be essential, from the dictates of elementary national interest, that they build and maintain a fleet commensurate with the needs of national defence and with our international obligations.

The CHAIRMAN. On May 22 you wrote me a letter, which I will put on the record here, inclosing a copy of your entire speech made before the Anglo-American Society in London on Thursday, May 1,

Secretary DANIELS. That is right; yes.

The CHAIRMAN. In that speech I find the only allusion made to Admiral Sims was the following, on page 9:

On the day that Admiral Sims, our brilliant naval representative in Europe during the war, arrived in London and your able naval representatives came to our country, there has not been an instant when the navies did not set an example to the whole peoples of both will follow in the better days our countries by valor and statesmanship will do so much to bring to the world.

Let me state that as the allusion to Admiral Sims in your speech.

Secretary DANIELS. Yes; I made that speech before the Anglo-American Society on May 1, 1919.

The CHAIRMAN. In the London Times of Friday, May 2, 1919, extracts are given from your speech.

Secretary DANIELS. What date is that?

The CHAIRMAN. May 2. The speech is given. These extracts are in the third person.

Secretary DANIELS. You say it is in the third person?

The CHAIRMAN. Yes. I find the following [reading]:

A LASTING BOND.

He rejoiced—

That is, you—

that in its cooperation with the British Navy, the Navy of the United States was represented here by a courageous, wise, and brave man who understood the very heart of the struggle, and entered into it with sympathy and the heartiest feeling for his British comrades.

Do you recall having made any such statement? I do not find it in the transcript of the speech which you have sent me.

Secretary DANIELS. I could have made that statement about Admiral Rodman or Sims, or any other officer who was abroad; that they entered with the heartiest spirit, as they did. But, Mr. Chairman, I will say to you that the speech I gave you is the speech I wrote and the speech I furnished for the press.

The CHAIRMAN. And the speech that you gave?

Secretary DANIELS. And the speech I gave.

The CHAIRMAN. You did not say what was stated in the London Times?

Secretary DANIELS. I could not say that I did not use some of those words.

The CHAIRMAN. Now, I find in the Philadelphia Public Ledger for Monday morning, May 17, the following:

Secretary DANIELS. What year was that?

The CHAIRMAN. That is of this year, 1920 [reading]:

The following report of Mr. Daniels's remarks appeared in the London morning papers of May 2, 1919, and is virtually verbatim.

I find the following reference to Admiral Sims:

Ten years ago Admiral Sims, speaking at a banquet in London, made a speech in which he said that if the time ever came when the soil of Great Britain was threatened with invasion the American people would fight with the English people shoulder to shoulder. Nor did they forget that the admiral was rebuked for that speech, for the President, in pursuance of policy, sent him a formal reprimand. That reprimand, in the light of this hour, was a decoration of honor. He rejoiced that in this cooperation with the British Navy the Navy of the United States was represented here by a courageous, a wise, and a brave man, who understood the very heart of the struggle, and who entered into it with sympathy and the heartiest feeling for his British comrades.

Do you recall ever making a statement of that kind?

Secretary DANIELS. No; I recall making this speech.

The CHAIRMAN. Are you sure that you did not make that statement?

Secretary DANIELS. I am certain that I did not use some of those words.

The CHAIRMAN. Did you refer to his——

Secretary DANIELS. Guildhall speech?

The CHAIRMAN. Guildhall speech?

Secretary DANIELS. I do not think I did.

The CHAIRMAN. But you are not certain?

Secretary DANIELS. I never would be certain that I did not refer to it; no; but I was very careful to write that speech and to deliver it almost word for word as I had written it.

the CHAIRMAN. And what you have given me here is a transcript of speech as you had written it; and it was delivered and then taken up from your recollection?

Secretary DANIELS. No; I wrote it first, before I delivered it.

the CHAIRMAN. Then, can you be sure that you did not say what is in the London Times of May 2, or what was quoted from the Philadelphia Ledger of May 17, 1920, as having been given in the British papers?

Secretary DANIELS. Mr. Chairman, I have been a reporter myself. I put this speech out to all the London press. Reporters never do repeat you exactly as you make a remark. They try to get you right. Sometimes they fail and sometimes they do not.

the CHAIRMAN. But in an enthusiasm like that in London one sometimes expresses more than one has written down, does not one?

Secretary DANIELS. But not at that time, because I was very careful of that speech, and since you have quoted from it I wish to read a paragraph from this speech made to the Anglo-American Society, London, May 1.

the CHAIRMAN. Is not that already in the statement you have given us?

Secretary DANIELS. Yes; but this will come in here. It is just a paragraph [reading]:

Hope—most of us, at any rate, hope—that the foundation of the league of nations will eventually, perhaps sooner than scoffers imagine, sound the knell of at least inordinately large expenditures on great fleets. We do not to the full the anxiety, indeed, the urgent necessity, felt in Great Britain to reduce naval expenditures to the lowest level compatible with the maintenance of the United States will, I am convinced, do nothing that international law and justice do not strictly require us to do, to add to the naval burdens of any other power. As we recognize the political and geographical necessities, which call for great British sea power, we are convinced that the United States will, on their part, recognize that similar necessities exist in our case. We will not have a prodigious coastline.

And that in London, Mr. Chairman, when there was a great deal of discussion in the papers criticizing America for building a great fleet of battle ships [continuing reading]:

We have a great foreign trade which is bound to grow, a carrying trade which will grow with it, and obligations growing out of our league of nations to be met. The United States does not aspire, as we believe Great Britain does, to possess such strength at sea that we can impose our decrees unilaterally upon other free peoples. Such a tradition is wholly foreign to our American nature, and utterly out of tune with our traditions. But if the evolution of the league of nations is not such as its friends and devotees in America hope that it may be; if competition in armaments continues, as in the past, unchecked by any other consideration than a national financial capacity—then, regrettable as the choice will be, repugnant as it will be to the American people, it will be essential from the dictates of every national interest that they shall build and maintain a fleet commensurate with the needs of national defense and with our international obligations.

CHAIRMAN. That may be very fine, Mr. Secretary, but I can see what it has to do with Admiral Sims. I am asking you now about the admiral.

Secretary DANIELS. I wished to show you the character of the speech I made in London before the Anglo-American Society.

CHAIRMAN. Yes; but the paper indicates that you said a great deal more about Admiral Sims than you admit saying; and it seems

inconceivable to me that a great paper like the London Times or the Philadelphia Ledger would make statements not backed up by facts.

Secretary DANIELS. I spoke very cordially in that letter and in that speech about Admiral Sims. I spoke of Admiral Sims, I spoke of Rodman and of Strauss. The paper does not have that in other speeches I made there. I spoke of the very close cooperation we had with the British Navy, and how we rejoiced in it; and I do now. It is one of the things of the war that I am happy about, that in this great war our Navy and the allied navies worked in very close harmony and cooperation.

The CHAIRMAN. And when you made this speech and when you made these statements that I have referred to, you knew about what Admiral Sims had done during the war, did you not?

Secretary DANIELS. What do you mean, about what he had done?

The CHAIRMAN. About his record during the war, and what you call his alleged lack of vision and aggressiveness.

Secretary DANIELS. Mr. Chairman, I may state very well and very truly, and it is very true, and Admiral Sims was an able officer, and Admiral Sims did many things. When I say that he lacked vision about boldness, about audacity, about the barrage, about the bases, and other things over there, I do not minimize the value of his work in London and his cooperation with the allies. I would not, if I could. I rejoice in it, and as Secretary of the Navy I rejoice that our officer there was cooperating earnestly with our allies.

The CHAIRMAN. In a book of yours which I have sent for, Mr. Secretary, I believe there is a preface by a Mr. Jenkins.

Secretary DANIELS. Yes.

The CHAIRMAN. The preface you are familiar with, are you not?

Secretary DANIELS. Yes; I think I am.

The CHAIRMAN. And I believe in the preface it states that Admiral Sims, while on the other side, was in command of a great number of officers and men, and the exact figures are given in the preface.

Secretary DANIELS. Admiral Sims was the chief naval representative in London; yes.

The CHAIRMAN. And in command of those——

Secretary DANIELS. Of those men, yes, in the sense—his command over there was always this way: He was sent over first as a confidential representative. Then he was made force commander. Then he was made naval attaché, and the forces abroad reported to him, although the forces afloat technically were always under control of the commander in chief of the fleet, though the chief direction came from Operations here in Washington. It was rather an anomalous position.

The CHAIRMAN. But there was nothing in that preface—and I will quote the part referred to when the book comes—stating that he was not actually in command, was there?

Secretary DANIELS. Well, Admiral Benson was actually in command of every ship in the Navy all during the war, although he designated——

The CHAIRMAN. It seems to me if an error is made by a man who is writing a preface for your own book, before you allowed it to go out, you naturally would correct it, would you not?

Secretary DANIELS. What do you mean by "command." Mr. Chair-

the CHAIRMAN. I do not know. He stated they were under his command. I will read it when I get the book.

Secretary DANIELS. Admiral Sims was force commander of the fleet abroad; but, as I said to you before, his position was somewhat anomalous. He never was afloat; he never personally commanded a fleet of destroyers or otherwise, except one week when he took Admiral Baily's place at Queenstown. That is no reflection on Admiral Sims.

His duties were usually as naval attaché and British representative at London, and of course he was there in charge, and he was the force commander through whom the men reported. You will read on page 5, Mr. Chairman, of the report of 1919, "Summary of activities of United States naval forces operating in European waters," you will see he calls himself the force commander. That is what he was, and it was a very important place. The CHAIRMAN. Yes; but you have stated, or I think some of the witnesses have stated, that he was merely a representative of the Bureau of Operations.

Secretary DANIELS. I have never said that he was merely a representative. I have said that his function was chiefly in London, and that what Capt. Pratt's was in Washington. Capt. Pratt was assistant for Operations, and was called that. Admiral Sims was in charge of Operations in London. He was also naval attaché.

The CHAIRMAN. I will now read what Mr. Jenkins says in his introduction [reading]:

"When hostilities ended there were more than 300 vessels, and a force of more than 5,000 men and officers operating in European waters under Admiral Benson's command."

Do you not see how you could be very much more specific than that.

Secretary DANIELS. I have always said he was the force commander, and those ships reported to him and took orders from him just as he took orders from Operations here.

CHAIRMAN. Do you not think he is entitled to the credit of commanding those men?

Secretary DANIELS. Just exactly the same way as Admiral Benson in command of the fleet, both afloat and ashore; Benson in England and Sims in London. I do not reflect upon him. I am telling you the fact. He was not afloat; he was ashore. And I say this, that when the bill came up to make two admirals it was discussed in the Naval Affairs Committee with some members. One member of the committee objected to making two admirals in the Navy, and they said they understood if they were made, I would recommend Benson and Sims. I frankly said, "Yes, I will," and they said, "Well, we rather do not believe it ought to be done." Neither one of them was afloat; neither one of them ever commanded ships in battle; and we think that the title of admiral should go only to a man who commands ships afloat; and I think that largely had to do with the fact that the Senate did not make any admiral in the Navy.

Another gentleman of the committee said he was perfectly willing to make them both vice admirals, but he could not vote to make any admiral in the Navy for life unless, like Farragut or Dewey,

he had been actually in battle afloat; that men who were occupied with great administrative duties, like Benson and Sims, were entitled to distinction, but that he doubted the wisdom of making either of them an admiral, or any man an admiral for life, unless he had been afloat in battle.

The CHAIRMAN. When Admiral Benson went over to London and had looked matters over there, he recommended, did he not, that Admiral Sims be given an adequate staff, a much larger staff, than he had, in London?

Secretary DANIELS. I do not recall about that.

The CHAIRMAN. And Admiral Sims had been asking that for some time, and therefore he justified Admiral Sims's request, did he not?

Secretary DANIELS. Yes; Admiral Sims's staff. Well, you remember, as I said in my direct testimony, that before Admiral Sims went abroad the American ambassador wrote that if we would send an officer over, the British Admiralty would furnish an adequate staff. Admiral Sims had, when he went abroad, his aid, Commander Babcock, the naval attaché, Capt. Macdougall, Capt. Toby, and pretty soon, Commander Daniels, and he was authorized to take such staff from the excess of officers from the ships that went over early, as he might desire. My recollection about his staff is this, because that was not a matter that I personally handled, that the only telegrams that impressed me about his staff, from Admiral Sims in the early days, were that he telegraphed me repeatedly to send Capt. Pratt over; and then he telegraphed to send over Mr. Belknap—Commander Belknap—and he mentioned men by name. I did not have the disposition of the officers personally, myself, and as I said in my direct testimony, I should have been happier looking back on it—or looking forward to it if it had been called to my attention, if he had had more men on his staff the first few months and less the last few.

The CHAIRMAN. Admiral Palmer stated he wanted to get the course at the Naval Academy shortened to three years. You opposed that, did you not, until war was actually declared?

Secretary DANIELS. He did not propose it until about the time war was declared. I have a very jealous feeling about graduates of the Naval Academy. I think a graduate of the Naval Academy who gets less than four years lacks the training that ought to belong to a naval officer.

The CHAIRMAN. He did not propose it until war was declared?

Secretary DANIELS. He did not propose it until just before war was declared. Palmer came into office in August, 1916. I have forgotten the date he proposed it, but it was in the fall or the next spring.

The CHAIRMAN. That is, it was before we declared war on Germany?

Secretary DANIELS. He came in in 1916. I do not recollect the date, but it was before I went before the Naval Affairs Committee.

The CHAIRMAN. I think the testimony shows that it was some time before war was declared.

Secretary DANIELS. He came into office August 20 or August 25—in August, 1916—about six months before they broke off relations with Germany. I do not recollect the date when it was proposed. I was not very keen about it. I am not certain now that it was a

thing. I have very grave doubts of it, and so I told Admiral Palmer that I hated very much except under the gravest emergency to see men go to the Naval Academy and be graduated without a three-year course, and I would take it up with the Superintendent of the Naval Academy and talk with him about it. I took it up with Admiral Eberle and talked it over with him.

THE CHAIRMAN. You even considered a five-year course, did you not? Secretary DANIELS. Before the war?

THE CHAIRMAN. Yes.

Secretary DANIELS. Oh, yes; I believed we ought to have a five-year course at the Naval Academy in time of peace. I think it is a mistake to graduate naval officers without a long enough time. Send men to medical schools for four years. They go to college four years and then have three or four years at a medical school. In my way, and we had the time, I would not permit any man to graduate at the Naval Academy under five years; and then after he had graduated and gone to sea for two years I would bring him back for a post graduate course. It is a position requiring great knowledge in many ways.

Now, as to the Naval Academy, Mr. Chairman, I am glad you are about that. When I came into office the Chief of the Bureau of Navigation said that enough men were going to the Naval Academy to give officers for years to come. Before war was declared I recommended, and secured from Congress, an increase of midshipmen from one per Congressman to five per Congressman, making possible a large increase in officers from the Naval Academy. I doubted that a three-year course, but after I talked with Eberle about it he said that during these boys' study in the summer, and under these circumstances or conditions, he thought it the wise thing to do; so I recommended to the Naval Affairs Committee, after reflection, and we passed it and lost no time about it. I say now, if I had known when I proposed it that the war would end in 1918, as it did, I should have opposed it, and I intend to order every man who graduated there under a three-year course, as soon as he has been to sea for two years, to go to the Naval Academy for a post-graduate course; because, naturally, no matter how able and bright he is, he had to skim through the course in three years, when we owed him the full time of five years.

THE CHAIRMAN. But for the emergency of war you were justified in going down the course to three years?

Secretary DANIELS. In that emergency of war we did it.

THE CHAIRMAN. And you opposed it until war was actually declared?

Secretary DANIELS. It never was suggested to me—I will get that straight. My recollection is that it was suggested in the spring of 1917.

That my objection to it—and that objection is very well founded and very strong, in my judgment—I know that there was a delay of a day in securing it from Congress by reason of my talking about shortening the course for naval officers. I wished it to be longer.

THE CHAIRMAN. Admiral Palmer also stated that he wished to put more officers on duty in order to stimulate recruiting, and that you opposed this.

Secretary DANIELS. I believe it is a very exceptional retired officer who makes a good recruiting officer. Retired officers, as a rule, have been retired for age or for some disability, and there are certain duties they can perform very well, and we did call them back during the war; but for recruiting duty I did not then approve it, and I do not now approve it. I think we ought to have younger men, more active, and we ought to give places of more responsibility to old officers.

The CHAIRMAN. On page 1089 of the record, in Admiral Palmer's testimony, appears the following [reading]:

The CHAIRMAN. And you took matters in your own hands and went ahead? Capt. PALMER. Yes; I did. I did not do that, however, until after I had exhausted every other means to get the thing done. I think, though, the whole thing was due to procrastination.

The CHAIRMAN. On the part of the Secretary?

Capt. PALMER. Yes, sir. I was forced—

The CHAIRMAN. Did the Secretary give you any reasons for delaying the carrying out of the plan?

Capt. PALMER. Well, no reasons, of course, that appealed to me or appealed to our people that were charged with personnel, but he would say, "We have too many reserves now. We do not want any more."

The CHAIRMAN. Did not this, in your opinion, discourage recruiting?

Secretary DANIELS. I will tell you about that.

The CHAIRMAN. I want to ask you some questions on that.

Secretary DANIELS. Yes.

The CHAIRMAN. How many of the reserves came under class 4?

Secretary DANIELS. About three-fourths of them.

The CHAIRMAN. Those reserves that came under class 4 could not be ordered out of the districts in which they were enlisted?

Secretary DANIELS. And could not be called to service at all until war was actually declared. And when I told Admiral Palmer not to organize any more propaganda for reserves we were 20,000 short on regulars; and I instructed him to use all the machinery of his office to enlist the 20,000 regulars, who could be sent anywhere at any time to do anything, and then after they were in then we would get the reserves.

The CHAIRMAN. But undoubtedly you could get men in the reserves, when you could not get them to go into the regular Navy?

Secretary DANIELS. We could not use them. We could not even take them in and train them.

The CHAIRMAN. You could change them over, as you afterwards did, you could not?

Secretary DANIELS. Look here, Mr. Chairman, on August 29, 1916, we had authorization to go from 60,000 to a possible 97,000. I instructed Navigation to enlist all they could, and they were very active, but young men would not enlist. The reserve was perfectly open to them. They could have gone in without any let or hindrance, but the last of the year Capt. Palmer began to arrange plans for a propaganda and a drive for reserves, who could not have been taken in for training, who could not be called to the colors. All that would be done would just to be a card index man.

The CHAIRMAN. But they could be changed over at any time, could they not?

that nearly all of them were glad to come in.

Secretary DANIELS. That was in war, Mr. Chairman. In the days of the fall and the early spring every reservist who had come to us of classes 2 and 3 we earnestly sought for. The class 4 we did not desire to stress, because if we pressed them, we probably would have gotten men to have gone into the reserve that we could have gotten into the regulars, and the regulars were the chief men we wanted. There was no lack of any earnest effort to secure regulars, and when the number of regulars was filled there was no lack of earnest desire and order to enlist the reserves.

The CHAIRMAN. On page 1096 of the typewritten record appears the following [reading]:

The CHAIRMAN. Did the Secretary ever criticize you for not carrying out his orders, or did he ever talk with you about the fact that you had not done so?

Capt. PALMER. Well, the Secretary sent for me several times on the subject. In fact, I was in the Secretary's office at least a dozen times a day. This was all, generally, in regard to the details of assignment of a man or an officer, or something like that, that he wanted to ask about. He said, "I told you to stop the reserves, and it has not been done. Now, I want to see the order about stopping the reserves"; and he wanted them stopped. Pretty soon he would find out that some one was in some place, and he would ask me about it. I would say, "Mr. Secretary, we had to go ahead. We needed these people and those people." And I said, "We got the word from Operations, and we simply had to go ahead." Well, the general thing was, "Well, don't get any more." That was the general idea.

The CHAIRMAN. If you had not done so, the Navy could not have performed the signal service during the war that it did perform?

Capt. PALMER. It could not have done anything, sir. It could not have done anything.

That is the statement of the Chief of the Bureau of Navigation.

Secretary DANIELS. Well, Mr. Chairman, Capt. Palmer is mistaken about that. Let me give you a statement. As I said just now, I never ordered not to enroll reserves at any time except when we did not have the Regulars full, when I ordered them not to make an active campaign. There never was a minute when reserves could not have been enrolled, but we could not begin an active campaign.

On April 1, 1917, there were then a total of 8,000 in the reserve. During the month of April there were 16,000 enrolled in the reserve force. Of this number there were 11,000 enrolled in class 4, and none of them could be sent to sea on regular service.

During the month of May there were 13,000 Naval Reserves enrolled. Of this number 10,000 were in class 4.

On June 1—this is a remarkable figure—out of a total of 38,000 men enrolled in the reserve force, 25,000 were in class 4. In other words, nearly three-fourths of the Naval Reserves enrolled on this date could be used only for seacoast defense on land and could not be sent to sea for the general service of the Navy.

So, as soon as the regular force was filled up, we got the reserves; and as to getting men in the service, Mr. Chairman, we had a very hard time getting them in until just before war was declared; and after that they literally poured in, so that there was not any trouble about getting men. They just came, and we had to hold them back sometimes. There were a great many of them coming in.

The CHAIRMAN. And at any time they could have been changed over from class 4 to class 2?

Secretary DANIELS. Any time after they came into the service.

The CHAIRMAN. Any time after they came into the service.

Secretary DANIELS. Not until they came into the service. The way we change them over was this. I had no authority to do it. They enlisted in class 4. The President could not send one man in class 4 out of the district in which he enlisted to work. We could not put a class 4 man on a destroyer.

The CHAIRMAN. But you could change him over at any time on his request, or if you did ask him to do it, and he consented, then you could change him over?

Secretary DANIELS. Yes. I told the Bureau of Navigation that no man must be promoted who did not get out of class 4 and come into a seagoing class.

The CHAIRMAN. You do not think it was only on account of that promotion that those splendid young men changed over, do you?

Secretary DANIELS. No. In my direct testimony I said this, that most of those men in class 4 enrolled in class 4 because they thought that class 4 was the only way they could come in the Navy for the war. Nine-tenths of them were influenced only by a desire to serve for the war. They did not wish to be bound for service after the war. But there were men in class 4—not many—who did not wish to go to sea. But the bulk of them came in from a fine spirit, into class 4, for the war, and then later, of course, those splendid young fellows very gladly and voluntarily went into the other class. But I had no authority except to take them voluntarily or refusing promotion. And so I did that, and they came in and did splendid service. Most of them were actuated in coming into the reserve because they only wanted to come in for the war.

The CHAIRMAN. What were the circumstances that led to your appointment of Admiral Sims for service abroad? Why did you pick him out?

Secretary DANIELS. Well, we first picked out Admiral Wilson to go. He was first choice. But about that time it was decided to organize a patrol force under Admiral Mayo, and Admiral Wilson was put in charge of the patrol force, of cruisers, etc., and we selected Admiral Sims for the reason that he was president of the War College; he had spent much of his life abroad; he had been naval attaché in Paris during the Spanish-American War; and he knew the people in France; he had spent much time in Great Britain, and he had a wide acquaintance with British naval officers; and we thought he was well equipped for the work and that he would immediately get in such intimate touch with our allies abroad in the navy as to enable us to more rapidly and whole-heartedly throw our whole force into the war.

The CHAIRMAN. Did he possess your confidence?

Secretary DANIELS. I had confidence in his ability—yes; he possessed my confidence. I would not have sent him unless I had thought that he was an able and loyal officer.

The CHAIRMAN. What was your attitude toward the recommendations made by Admiral Sims—that you wanted to follow them out if possible, or not?

Secretary DANIELS. Wherever they were wise, and in most instances they were followed out. Of course, we assumed the right and the duty—the responsibility—of passing upon them.

The CHAIRMAN. They were followed out what?

Secretary DANIELS. I say, we assumed the responsibility and the duty of passing upon his recommendations; but the policy generally was, as I told all the bureau chiefs and everybody, our forces must have the first go. Do everything you can for the men abroad; give them everything possible as quickly as possible; cooperate wholeheartedly and rapidly and effectively.

The CHAIRMAN. As quickly as possible? Did you know at the time that these recommendations were made only after full discussion and agreement with the heads of the allied navies?

Secretary DANIELS. Did I know what?

The CHAIRMAN. That these recommendations were made only after full discussion and agreement with the heads of the allied navies?

Secretary DANIELS. What recommendations?

The CHAIRMAN. That Admiral Sims made, that I just asked you about.

Secretary DANIELS. Which ones?

The CHAIRMAN. I asked you what your attitude was with regard to Admiral Sims's recommendations. Now, I ask you if you knew these recommendations were made only after full discussion and agreement with the heads of the allied navies?

Secretary DANIELS. I think some of them were; and some, I think, were his own recommendations. Certainly he did not ask them for any recommendations about whom he should have on his staff, or whom we should have abroad in the American Navy. As to policies, he would generally say, "The naval council recommended so-and-so," and if they were his own recommendations, he would say, "I recommend so-and-so."

The CHAIRMAN. There has been a good deal of testimony about the delay in carrying out these recommendations. Have you any particular explanation about that?

Secretary DANIELS. No; I know of no delay that could have been avoided.

The CHAIRMAN. Did you believe that any of his recommendations were unsound, or did you consider Admiral Sims untrustworthy in anyway?

Secretary DANIELS. I considered some of his recommendations absolutely unsound, and did not approve them.

The CHAIRMAN. Not enough so to warrant calling him back?

Secretary DANIELS. No; because, as I have said in my direct testimony, the things he did that I enumerated here that I heartily disapproved of, I did not know of until long after he came back.

The CHAIRMAN. Did you consider any of the recommendations made unsound that were afterwards accepted?

Secretary DANIELS. How is that?

The CHAIRMAN. Did you consider any of his recommendations unsound that were afterwards accepted?

Secretary DANIELS. Well, I do not know how to answer that, unless I knew what you mean.

The CHAIRMAN. If you did, that would prove that they were not unsound as developed by later events?

Senator PITTMAN. They might be unsound to-day and sound six months from now.

Secretary DANIELS. Exactly. For instance, he made some recommendations about men he wanted over there, that I knew so well that they were not the best men to go that I did not send them. Every recommendation that he made was taken on its merits, with the view always, and the desire, to do everything possible that might make it easy for him to throw the fullest weight of American cooperation in the war.

The CHAIRMAN. Was it your policy to sacrifice every other consideration to defeating Germany on the seas, by overcoming the submarine menace?

Secretary DANIELS. It was my policy to sacrifice everything on earth to defeat Germany by every way possible.

The CHAIRMAN. Especially by overcoming the submarine menace?

Secretary DANIELS. In every way possible.

The CHAIRMAN. In the beginning, before the war that was looked upon as the principal thing we could do?

Secretary DANIELS. In the beginning of the war we sent Admiral Sims over to give us information, and my purpose was that the Navy should do everything possible to win the war. Now, of course, the outstanding and great service that the Navy rendered, the most important service it rendered, and the service which to me was always the nearest and dearest, was the safeguarding of the troops that went to France, who won the war.

The CHAIRMAN. When you sent Admiral Sims over you believed that the personal friendships that he had in England were of material value to his office, did you not?

Secretary DANIELS. I thought his acquaintance and intimate association with the British officers would bring him into close touch, and accelerate the cooperation that we desired.

The CHAIRMAN. Not to get any private information from that?

Secretary DANIELS. Oh, no.

The CHAIRMAN. But to enable him to cooperate with the British?

Secretary DANIELS. I thought if he went to Great Britain and he knew these officers, the more rapidly could he get information if some man should go whom they did not know. You have to get acquainted.

The CHAIRMAN. And he went as the fully accredited representative of the Navy Department to the allied admirals?

Secretary DANIELS. I have told you he went as the fully accredited, confidential representative of the Secretary of the Navy. Afterwards he had other status.

The CHAIRMAN. Did you place any confidence in the reports of Admiral Sims, and Ambassador Page, and Mr. Hoover about the criticalness of the submarine situation?

Secretary DANIELS. Certainly. I knew the situation was critical—I knew they were sinking many ships before Admiral Sims went over.

The CHAIRMAN. And you believed it to be very critical at that time?

Secretary DANIELS. Yes; I believed that it was a serious situation.

The CHAIRMAN. They put it that it was a very serious situation.

Secretary DANIELS. Well, it was a very serious situation, and I was tremendously interested in it.

Secretary DANIELS. I directed the Chief of Operations—

The CHAIRMAN. What?

Secretary DANIELS. I directed the Office of Operations to use every ounce of naval strength in the best way possible to defeat the Germans. As to the disposition of any fleet, as to the assignment of this or that ship, that was a matter which was entirely in the hands of the Office of Operations.

The CHAIRMAN. Did you have any particular information which led you to fear an attack on the Atlantic coast?

Secretary DANIELS. Admiral Browning told me on April 13—told us—that he feared that submarines were coming over to Halifax, and he wished us to meet them, which we promised to do; and I think Admiral Sims telegraphed that they might do that.

The CHAIRMAN. But no submarines came?

Secretary DANIELS. And as a matter of fact, I do not think there is any man in America, from the beginning of the war to the end, who did not fear two things. I think there were two things that were always possible and imminent—or were believed to be so then. One was that the submarines would come across the Atlantic, and when we began to send our soldiers over, the thing we feared was that some German raider would get out.

The CHAIRMAN. But no submarine could come over very well without warning, could it—and did not?

Secretary DANIELS. Yes; they could.

The CHAIRMAN. But they did not?

Secretary DANIELS. They did come over.

The CHAIRMAN. But not without warning?

Secretary DANIELS. Well, Mr. Chairman, when a submarine comes over you have warning in time.

The CHAIRMAN. As a matter of fact, we got very adequate warning, did we not?

Secretary DANIELS. Yes; in time.

The CHAIRMAN. From Admiral Sims, when they did come over?

Secretary DANIELS. Not when they came over before we entered the war.

The CHAIRMAN. No; I am talking about afterwards.

Secretary DANIELS. And we had warning that they had come out and were coming over; but as Admiral Jellicoe well says in his book, and all naval experts will support that, while the Allies had what they thought was, and what in many instances was, excellent service by which they knew often that submarines were coming out, they often came in most unexpected places, and you never could depend absolutely on saying that you always had warning. You had always to understand, in this warfare as in all warfares, the unexpected may happen.

The CHAIRMAN. But as far as the patrol duty of our ships on this side is concerned, as the matter turned out, they need not have done this patrol duty, need they?

Secretary DANIELS. Well, it is very well to sit down to-day and say what you knew. All during the war there was always the danger of submarines coming on this coast, and at the request of the

British and French admiralities we started a patrol on the 13th of April and kept it up during the war, and kept it up from Halifax to beyond Panama.

The CHAIRMAN. Have you any reason to believe that Admiral Sims had any other motive than to secure the earliest possible defeat of the Germans?

Secretary DANIELS. What is that?

The CHAIRMAN. Have you any reason to believe that Admiral Sims had any other motive than to secure the earliest possible defeat of the Germans?

Secretary DANIELS. No; I do not think he had; certainly not. Of course every man in America did and every patriotic American did. That was the whole purpose of everyone.

The CHAIRMAN. And is it not true that his suggestions about fighting the submarine menace, when they were adopted, led to an immediate decrease in the amount of tonnage sunk by the submarine?

Secretary DANIELS. If you want to know what decreased the sinkings by submarines, in early days there were several things that did it. The first thing was—well, I say the first; it is very difficult to name them in the order of their importance, but there was the real experience of men on the sea in handling their ships. The personal experience was a very important element in reducing the submarine menace. Depth charges were very important and very valuable. The convoy system was important and valuable. The listening devices were important. There were many, many things all employed together, which did that. You can not say that any one thing alone reduced it altogether.

The CHAIRMAN. Do you not think that the putting down of the submarine menace had the effect of shortening the war? We have had a lot of testimony on that.

Secretary DANIELS. Have you?

The CHAIRMAN. Yes.

Secretary DANIELS. When you ask me those questions, just put in there, without my having to go over it, that I agree with Capt. Pratt in his testimony in which he said it did not shorten it a day or an hour.

The CHAIRMAN. Then, if the work of these men who were over there fighting against the submarine menace—and it included a very large number of our naval fighting forces—if their work did not contribute in any way toward shortening the war, what good did it do in the war?

Secretary DANIELS. They did a tremendous service, and the greatest service they did in shortening the war was in getting soldiers to the front. They ended the war. Everything the Navy did toward doing that and getting supplies, helped to shorten the war; but the war was won on the western front.

The CHAIRMAN. And these men that helped to put down the submarine menace brought about the condition that allowed the troops to go over, did they not?

Secretary DANIELS. We escorted all our troops over; we used our destroyers in escorting them over; and we protected them in going over; and every man who served and did anything on earth in the Navy from beginning to end to get our soldiers and their supplies over, helped in winning the war.

The CHAIRMAN. We used very few destroyers to escort our troops over and escorted very few soldiers, and a very much larger number toward putting down the submarine menace, did we not?

Secretary DANIELS. I do not remember the number, but they all did very good work.

The CHAIRMAN. And if the work done toward putting down the submarine menace had not been effective work, do you think we would have gotten them over without losing a single life?

Secretary DANIELS. What do you mean by putting down the submarine menace?

The CHAIRMAN. Keeping the submarines in check.

Secretary DANIELS. Every man who fought in the war helped and did good work; but the war was ended on the western front.

The CHAIRMAN. Is it not true that if Germany had won the war from the Allies or had forced Great Britain or France to withdraw from the war, the situation would have been infinitely more dangerous to the United States than any other situation that would have resulted?

Secretary DANIELS. If you will read the report of the General Board, before we entered the war, you will see that they had prepared plans then so that if the worst should come to the worst, we were prepared to fight the war ourselves. The very minute we entered the war we had the closest and most cordial cooperation on land and sea with the Allies, and it is one of the big things of the war that we did.

The CHAIRMAN. Did not the department realize that the war would be lost if the allied shipping could not be protected sufficiently to permit the continuance of war by the Allies?

Secretary DANIELS. We knew that the war would be lost unless enough American soldiers got to France to win it, and everything else was secondary to that.

The CHAIRMAN. In regard to cooperation, was it your idea that the American battleships should operate independently, separate from the grand fleet, under separate command, in case of battle?

Secretary DANIELS. It was my idea that they should take whatever course would make them most effective to win the war; and if the case had ever turned out that we sent our full fleet over, we, of course, would have taken the matter up; but I believe that on sea and land the American forces ought to be American; but there ought to be an allied—a unified—command.

The CHAIRMAN. A unified command?

Secretary DANIELS. Yes.

The CHAIRMAN. And especially in case of war?

Secretary DANIELS. In case of war.

The CHAIRMAN. It would not have done to have had two effective fleets if the German fleet had come out?

Secretary DANIELS. No; we ought to work together.

The CHAIRMAN. This policy was adopted and approved by the department, was it not?

Secretary DANIELS. Oh, yes; the policy that was carried out was approved by the department. In fact, you know, the policy was not only approved by the department, but it was laid down by the department. When Admiral Sims went over he was instructed to

secure the most cordial cooperation, and the first order issued by anybody on this side of a war force was an order I signed to the first destroyers going over, ordering them to report to the British Admiralty at Queenstown. Our plan always was to serve in close cooperation, and in the way that would make our service count the most.

The CHAIRMAN. Could you ever have had the teamwork essential to victory without a common central direction in the case of allied warfare?

Secretary DANIELS. I think we needed the cordial cooperation of all the Allies, and that was the purpose all the way through, and the proper thing was to get together and agree upon the best allied cooperation; and that was the order of the department and the policy of the department.

The CHAIRMAN. You believe that the participation of the United States in the war was of great value to the allied cause, do you not?

Secretary DANIELS. I believe it was not only of great value, but I believe if it did not absolutely win the war, it was the greatest contributing factor to victory.

The CHAIRMAN. And that the naval contribution was a great one?

Secretary DANIELS. Was a great one.

The CHAIRMAN. Do you believe that the naval contribution helped to shorten the war?

Secretary DANIELS. I have told you just now what I thought about that. You could not have gotten the soldiers to France but for the Navy. You could not have gotten the supplies to France but for the Navy. Of course, it did great things; and the Army appreciated it; and the world appreciated it. There never was any suggestion that the Navy had not done a great work. When I was abroad last March in Italy and France and Belgium and Great Britain, I did not meet a naval officer or a king or anybody else that was not enthusiastic about the great thing that the Navy had done in getting the soldiers over.

The CHAIRMAN. And they did help shorten the war?

Secretary DANIELS. I have just told you; they did a great effective work in making it possible for our soldiers to get to the front and our supplies to get to the front; and, of course, that helped to shorten the war on the western front. Certainly they did.

The CHAIRMAN. It did help. Then it is a matter of opinion as to how much it helped to shorten the war; is it not?

Senator PITTMAN. He has already said that we would have lost the war without it. That is the maximum.

The CHAIRMAN. I say it is a question of opinion as to how much it helped to shorten the war; is it not?

Secretary DANIELS. When you go into figures as to what shortened the war, it is like what helped to reduce the submarine menace. But if we had not gotten enough soldiers to the western front the war would have gone on. The war was ended there. And I shall always be proud that the Navy was able to put everything it might wish to do for its own glory secondary to transporting and safeguarding the soldiers who went to France and with whom we cooperated in winning the war.

The CHAIRMAN. While this hearing has been in progress, a court of inquiry has been held in the Navy Department on the question of the dismissal of Admiral Fletcher, I believe.

Secretary DANIELS. Yes. He was not dismissed.

The CHAIRMAN. I do not mean dismissal from the service; I mean from his station in Europe.

Secretary DANIELS. Oh, Admiral Sims detached him from the service in France.

The CHAIRMAN. And the court of inquiry dealt with the question of whether Admiral Sims was justified in doing it, did it not?

Secretary DANIELS. Admiral Fletcher, that this matter be inquired into and officially, desired it to be done, and as in all cases of that character, at the time he requested it, but, of course, in the midst of the war we could not. Later he made the official request, and it was granted. As to the time, it has got nothing to do with this inquiry.

The CHAIRMAN. Oh, no; but as this question has to do with the record of Admiral Sims, can you inform the committee whether the court of inquiry has reported?

Secretary DANIELS. I have not seen their report. It has not come to me.

The CHAIRMAN. They have not reported as yet?

Secretary DANIELS. The court of inquiry, I think, has adjourned. If they have reported the report is in the Judge Advocate General's office. They have not presented it to me yet. I have not seen it. I do not know what they did. The rule in the Navy Department is when a court of inquiry is called, for them to make their report and finding, and it goes to the Judge Advocate General who makes a study of it, and then recommends to me any action that the department ought to take. It has not come to me.

The CHAIRMAN. In view of the considerable publicity that was given the case, and its possible bearing on the reputation of Admiral Sims as connected with this case, if it is proper to do so, I would like to have you inform the committee as to the results of the court of inquiry—the findings of the court of inquiry. I take it they will be made public; will they not?

Secretary DANIELS. All those things are made public.

The CHAIRMAN. They are made public?

Secretary DANIELS. Yes. After the Judge Advocate General passes on them, for instance, he passes on them to say whether they have been conducted properly or not. All the legal questions come out. When they finish they bring it to me for such action as may be wise, and then it is published. We publish a book every year, and it is a matter of public information as to the matter. I have not seen it or inquired about it. It has no reference whatever to this case or this investigation.

Senator PITTMAN. I do not see how this concerns this hearing. I do not know of any charge against Admiral Sims in this connection.

The CHAIRMAN. It does not directly concern this hearing, except that Admiral Sims was connected with the case, and I thought that the committee would like to know the results and the finding, if it was not improper to ask it.

Secretary DANIELS. As a matter of course the inquiry was not directed so much to Admiral Sims as it was a matter of inquiry to see if Admiral Fletcher, in the conduct of that important duty there, had conducted it well and wisely.

The CHAIRMAN. You have no objection to ascertaining whether they have made a report, and if they have, informing the committee, have you?

Secretary DANIELS. None at all. As soon as the report is made I shall make it public.

The CHAIRMAN. Oh, very well. Have you anything to ask, Senator Keyes?

Senator KEYES. No.

The CHAIRMAN. Have you, Senator Pittman?

Senator PITTMAN. This invitation to ask questions is very seductive, but I am afraid there might be rebuttal, and I forego the pleasure.

The CHAIRMAN. Senator Trammell, have you any questions?

Senator TRAMMELL. I do not think that I have any questions.

The CHAIRMAN. Have you any further witnesses you would like to have called before the committee, Mr. Secretary?

Secretary DANIELS. I understood that I was to be the last witness, and so I have not. I do not think so.

The CHAIRMAN. Then I think there is nothing further, and you may be excused. The committee will stand adjourned until 10 o'clock to-morrow morning, when Admiral Sims will appear before the committee.

(Thereupon, at 5.20 o'clock p. m., the subcommittee adjourned until to-morrow, Thursday, May 27, 1920, at 10 o'clock a. m.)

NAVAL INVESTIGATION.

THURSDAY, MAY 27, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 10 o'clock a. m. in room 235, Senate Office Building, Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Keyes, and Trammell.

The CHAIRMAN. The committee will come to order. Admiral Sims, will you be sworn?

TESTIMONY OF REAR ADMIRAL WILLIAM S. SIMS, UNITED STATES NAVY.

(The witness was sworn by the chairman.)

The CHAIRMAN. Admiral Sims, you have already testified before this committee, and since your testimony was given we have heard a great many other witnesses. You are now to be given an opportunity to make a further statement, if you so desire. Will you proceed?

Admiral Sims. Gentlemen, in appearing before you at your request, I desire to make certain fundamental considerations perfectly clear. You have heard a long series of witnesses, who have testified as to the activities of the Navy and of the Navy Department during the war and during the years immediately preceeding the war. You have listened to a long statement from the responsible head of the Navy Department, remarkable alike for its mistakes and misinterpretations and for its unrestrained assault upon my services during the war, upon my motives, and upon my ability and credibility as an officer.

But, before proceeding any further, I wish to state very clearly, and once for all, that in all of the comments that I shall have occasion to make upon the mistakes and misinterpretations in question I do not desire in the slightest degree to imply that they were intentional or that the Secretary was not sincerely convinced of the fairness and correctness of his conclusions.

I have no desire to enter upon any personalities, and I have no intention of doing so, nor will I attempt any answer to the personal reflections and aspersions contained in the testimony of the Secretary.

He has dealt at length with many technical questions, and in doing so has almost invariably drawn conclusions therefrom reflecting upon my conduct and upon my motives, not only during the war, but during a large part of my naval career.

However interesting may be the subject of my personal opinions and private character, it seems to me to have no connection, however remote, with the question as to whether or not the Navy Department committed serious errors in the conduct of the war. I am not appearing before you to defend myself. My sole purpose from the beginning has been, and still is, to do what I can to prevent a repetition of the military mistakes to which I have invited attention.

It was to be expected that some errors should appear in such a discussion of technical military matters. No civilian without previous military training could hope to deal at such length with so many questions of naval policy, strategy, and tactics without some misunderstanding, misinterpretations, and mistakes.

It was hardly to be expected, however, that the responsible head of the Navy should make, under oath, before this committee, a statement in which every essential conclusion was based on errors of facts or misinterpretations of naval matters.

The fact remains, however, that he has done so. In pointing these out I will confine myself to the testimony presented, not by myself or by the witnesses called at my request, but solely by the department's own witnesses.

SUMMARY OF TESTIMONY.

A review of the testimony presented by these department witnesses shows that it divides itself naturally into five main categories, which may be summarized briefly as follows:

First. Confirmation of the criticisms which led to this investigation. The testimony of the department's witnesses has in almost every case completely borne out the conclusions of my letter of January 7, 1920, and the summary of my testimony before this committee in March last.

Second. Tributes to the achievements of the Navy in the war. Nearly all of the department's witnesses have presented documents and made statements of opinion with regard to the achievements of the Navy in the war. Your attention has been repeatedly called to the faithful and efficient service performed by many officers, both previous to April 6, 1917, in an endeavor to prepare the Navy for war, and after that date to conduct the war efficiently and successfully. The inevitable inference from this testimony is that I have not only failed to recognize these services, but have cast aspersions on them. Nothing could be further from the truth. At no place in my testimony and at no time have I in the slightest degree reflected upon these services. On the contrary, in my testimony, in public statements, and in articles recently published I have expressed the full measure of my admiration and appreciation of the magnificent achievements of the American Navy in the war, in spite of the handicap under which it worked.

Third. Conduct of the war by the department. Much testimony and documentary evidence has been introduced by department witnesses concerning the conduct of the war by the department. The officers who occupied the most responsible positions have testified to the long-continued and often unavailing efforts which they made to get the Navy ready for war in the years preceding our entrance into

the war. They have told you in detail of the difficulties encountered in the early months of the war. Their testimony has revealed a condition even more distressing than I could have imagined, and constitutes a much severer criticism of the deplorable conditions in the Navy Department previous to and during the early months of the war than any evidence which I myself presented. They have shown that the department failed to prepare for war, and in many cases resisted the adoption of plans and measures which would have made possible an immediate and effective entrance into the war. These witnesses have also disclosed the full measure of the hesitation and delays and the disregard of military principles by the department in the early months of the war.

Fourth. Necessity for a reorganization of the Navy Department. This condition in the Navy Department was tacitly recognized by practically all of the department's own witnesses. There was an almost unanimous agreement in their expressions as to the necessity for a reorganization of the department so as to make a military organization able successfully to prepare for and conduct war operations. The officers most closely connected with the department's organization during the war were those who have testified most strongly with regard to the need for this reorganization. Further comment seems superfluous.

Fifth. Causes for the conditions brought to light. The department witnesses testifying with regard to the responsibility for the conditions which have been brought to light are in general agreement that these are due primarily to three causes:

- (1) The faulty organization of the Navy Department.
- (2) The policy governing the department's action previous to our entrance into the war and during the early months thereof.
- (3) The failure of the responsible head of the department to take the action required, both before and after the outbreak of war, to meet the urgency of the situation, to prepare the Navy for war, and to strike at once on the fighting front with all available forces.

I propose to take up each of these five points and by extracts from the testimony presented by the leading officers who served in the Navy Department during the war, and who were called by this committee at the request of the Secretary, to show how little disagreement there is as to the essential facts at issue, whatever may be the department's interpretation of these facts, or whatever its excuses may be for the failure to take the correct military action.

I wish, then, to take up the points raised by the Secretary and show by the testimony of the witnesses called at his instance that in each essential case the Secretary's conclusions were based upon mistakes of fact, unsound military reasoning, or misinterpretations of naval matters.

The elimination of extraneous issues: Before taking up detailed points of the testimony, let me invite your attention to one or two of the observations which I made in the preliminary statement which I read before this committee on the 9th of March, 1920.

In referring to the difficulty of separating the unessential from the essential points which were at issue, I said:

These difficulties have been increased by numerous fundamental misapprehensions, which have been indicated either by direct statement or by implica-

tion, in testimony presented to this committee. The entire object of my letter and, in my opinion, of this investigation in its national aspect, will be jeopardized if we are led off into sidetracks; if, for example, personalities having no bearing whatever upon the subject at hand are allowed to confuse the issue.

The fears which I then expressed have been more than borne out by the testimony presented by the department.

Assuming that this testimony is presented in perfectly good faith, still, unfortunately, by reason of the numerous misstatements of facts and misinterpretations it contains, it has all the effect of an endeavor to obscure the questions at issue instead of being an effort to arrive at a dispassionate conclusion as to past errors and as to methods by which they could be avoided in future.

Unfortunately, such mistakes in testimony must inevitably convey the impression that every possible means has been used to discredit and discount the simple statements of fact which have been presented to you, and that all the old familiar devices calculated to arouse prejudice and passions have been used to this end.

Moreover, many extraneous issues have been raised, and a great mass of testimony has been introduced which has no conceivable relation to the facts under discussion.

Yet still, it seems to me that the issues are so clear that even all this elaborate and mistaken testimony can not obscure the plain facts which are based upon official documents. When the testimony of even the department's witnesses is taken into consideration, it will be found that that alone will sustain practically all of the criticisms in question.

In my preliminary statement of March 9 I invited your attention to what seemed to me to be the primary issues involved in this investigation. With your permission, I should like again to refer to these issues.

We entered a great war. The war was won, thanks to a combination of circumstances which it would be entirely unwise and unwise to depend upon in the future. From a United States naval standpoint the prosecution of the war involved numerous violations of well-recognized and fundamental military principles with which every student of naval warfare is familiar.

Briefly stated, they were:

First. Unpreparedness, in spite of the fact that war had been a possibility for at least two years and was, in fact, imminent for many months before its declaration.

Second. That we entered it with no well-considered policy or plans and with our forces on the sea not in the highest state of readiness.

Third. That, owing to the above conditions and to the lack of proper organization of our Navy Department, and perhaps to other causes with which I am not familiar, we failed for at least six months to throw our full weight against the enemy; that during this period we pursued a policy of vacillation, or, in simpler words, a hand-to-mouth policy, attempting to formulate our plans from day to day, based upon an incorrect appreciation of the situation.

To consider these issues is not a violation of trust, nor is it an attack upon the service to which I have the honor to belong. It is the only method by which we can safely provide for the future.

Admiral Beatty has been quoted before this committee as speaking authoritatively against any effort to review critically the operations of the recent war, and the Secretary of the Navy stated that, in saying farewell to the American battleships, Admiral Beatty said: "Now the fighting is over and the talking is about to begin." How erroneously his statement has been interpreted can be judged

from Admiral Beatty's speech at Liverpool, on March 29, 1919, in which he said [reading]:

We made many mistakes, and it is our business to-day to see that the lessons have been taken to heart and that we shall not again be found in such a state that we have to face the greatest crisis in history with improvised methods, working from hand to mouth. It may be said that the result was good enough with such methods; but was it? We have surely no right to continue to rely on improvisation. We in the Navy know our defects, and it is our business to face them, to leave no stone unturned to avoid a repetition of the mistakes from which we suffered in the past. The work of reconstruction has to be taken in hand with a full knowledge of our requirements learnt by bitter experience in the past four and a half years. It must be our endeavor to profit by that experience. The navy is to-day what it has been for the past 200 years, the same sure shield of Britain and the British Empire. The more repetition of this very true and well-known phrase will not insure that we remain so. The sure shield must be kept sure. Clear thinking and concentrated efforts on scientific lines in the necessary struggle for retrenchment and such economies as certainly will be required must be applied with wisdom and a proper understanding of the problems before us in the light of the knowledge gained during the war. Only so shall we avoid impairing the essential efficiency of the navy.

Confirmation of the criticisms which led to this investigation.

In the summary of my statement to this committee in concluding my testimony in March last I stated that the documentary evidence which I had submitted established fully 13 points. A very careful review of the evidence submitted by the Navy Department's witnesses shows that in no single instance were these points disproved. On the contrary, most of them were freely admitted, and the testimony of the department's witnesses seemed to be designed not to disprove them but to explain them away or to obscure them by the raising of extraneous issues. In order to show you how fully the chief officers in the Navy Department confirmed these 13 points, I propose to quote brief statements from their testimony substantiating each one of these points.

Point 1, as contained in my statement of March 9:

That, in spite of the fact that war had been going on for nearly three years and our entry into it had been imminent for at least from February 2, 1917, the vessels of the Navy were not ready for war service when the United States entered.

All witnesses were in practical agreement on this point. It has been clearly established that, apart from the dreadnaughts and destroyers of the Atlantic Fleet, the vessels of the Navy were not ready for war, either as to material or personnel. Before we entered the war the efficiency of the fleet had been seriously impaired by transferring many gun crews to merchant vessels. The General Board, Admiral Benson, and other officers had repeatedly but vainly urged that the Navy be made ready for war. The only explanations offered for the lack of preparedness were the department's interpretation of the country's policy of neutrality and the hesitancy of the department to regard the Navy as an instrument for waging successful war.

ADMIRAL BENSON'S TESTIMONY.

These page numbers refer to the typewritten record.

Page 4480:

The CHAIRMAN. Would you say that the statement in the Secretary's annual report that the Navy was from stern to stern ready for war in April, 1917, was justified?

Admiral BENSON. Not from my point of view; no.

The CHAIRMAN. Was its personnel adequate?

Admiral BENSON. No.

The CHAIRMAN. Were all the ships ready?

Admiral BENSON. No; they were not all ready.

The CHAIRMAN. Were they fully manned?

Admiral BENSON. They were not fully manned.

The CHAIRMAN. Was the Navy mobilized?

Admiral BENSON. It was not.

Pages 4486 and 4487:

The CHAIRMAN. Was our fleet in 1917 in a condition to meet the German Fleet, constituted as it was at that time?

Admiral BENSON. Theoretically, no, Mr. Chairman, it could not be.

The CHAIRMAN. An admiral or commander in chief who would have informed the department that his fleet was in such condition that he could have met the German Fleet on a footing of equality would at heart be lacking in a duty, would he not?

Admiral BENSON. I should consider that it was. * * * With the situation as you stated it, I would have no hesitancy in saying so.

ADMIRAL BADGER'S TESTIMONY.

Page 2760:

Admiral BADGER. The action of the Secretary in 1914 in failing to ask Congress for the increase of 19,000 men recommended by the General Board prevented having adequate personnel for the fleet. * * * It was plain that it would be the part of prudence, and perhaps necessity, to have more personnel for the fleet. There is no doubt about that. Now, what prevented that from being accepted as a proper view, I do not know.

Admiral Badger at the same time stated that the addition of the men recommended by the General Board in 1914 would have made possible the manning of all light craft which were not ready in 1917 because of lack of personnel.

The responsibility lay with the administration * * * the Navy Department.

ADMIRAL M'KEAN'S TESTIMONY.

Page 4373:

The CHAIRMAN. Would you say that the Navy was ready from stem to stern on April 6, 1917?

Admiral McKEAN. From my interpretation of that phrase, I would not, by a good deal.

The CHAIRMAN. How long did it take to get * * * the light craft in a condition of matériel readiness for war?

Admiral McKEAN. Some of them two days, some two months, and some of them six months.

The CHAIRMAN. How long was it before substantially all of them were in readiness for war?

Admiral McKEAN. Oh, I should say six months.

Page 4380:

The CHAIRMAN. Was the Secretary backing * * * in your requests on matters necessary * * * to prepare the country for war?

The CHAIRMAN. I see that quotation contains asterisks which show that parts of the quotation have been omitted.

Admiral SIMS. Yes; in order to abbreviate it. [Reading:]

Admiral McKEAN. Oh, I do not think that the Secretary or I ever said preparing the country for war."

Page 4436:

The CHAIRMAN. I gathered from your testimony that you would not say that the fleet as a whole was ready for war in matériel or personnel in April, 1917?

Admiral McKEAN. No, sir; it was not ready for war as to personnel or matériel; that is, a hundred per cent ready or anything like a hundred per cent ready.

Page 4427. Admiral McKean testified that the action of Admiral Blue and the Secretary in 1914 led to a shortage of personnel in the Navy; that in 1916, the number recommended first was nine or ten thousand, finally increased to 28,000; that much of the matériel depreciation of ships was due to lack of personnel; that the Secretary was wrong in his action.

The CHAIRMAN. And you think that certainly waiting, until two weeks before the war began, to increase the personnel was rather a tardy way of going about preparing the Navy?

Admiral McKEAN. Yes I do; but you have got to take our people's attitude and our fall elections of the year before, and a lot of national policies into consideration before you condemn individuals.

Page 3424:

Admiral McKEAN. I will say that the fleet was not 100 per cent ready, is not 100 per cent ready now, and that it never will be 100 per cent ready at the outbreak of war.

Page 3427:

Admiral McKEAN. Very early in my duties my investigations confirmed my previous opinions acquired with the fleet, that our shore establishments, navy yards, supply bases, etc., had not been developed as rapidly as the fleet had been built up, and that they were not capable of maintaining the fleet materially fit for war.

Page 3421:

Admiral McKEAN. There is no question that we were short of both officers and men; the Navy personnel was too small for its job. The fleet had been built up materially but neither the commissioned or enlisted personnel had kept step with material. * * *

The question of the shortage of enlisted personnel has been fully gone into. We were short. I believe the primary causes of the incorrect recommendations of the then Chief of the Bureau of Navigation were due to the use of that old delusion, "Peace complements for fighting ships."

Page 3423:

Admiral McKEAN. From a conversation I had with Admiral Blue in January, 1918, I am convinced that his errors in estimating the total number of men required in the Navy were due to the fact that he took the ships listed in the General Board's plans and figured them with what he called "peace complements" * * *. His estimate was entirely wrong.

CAPT. PRATT'S TESTIMONY.

Page 3818: A question Capt. Pratt asked himself in his direct statement:

Suppose that on April 6, 1917, the United States Fleet had been forced, in the state of preparedness it then was in, to meet single handed the German high seas fleet * * * what would be your opinion of the state of preparedness we were in?

Capt. PRATT. I would consider such a state of affairs to be criminal.

Page 2832:

Capt. PRATT. Owing to our previous lack of preparedness in matériel and personnel, it was not possible to place them [our naval forces] at the front and

ready to operate as soon as was desired, nor was the organization or administration of the department at the time such that it lent itself to the most efficient handling of the Great War * * * at the beginning * * *. These conditions were true when we entered the war and they lasted until the defects could be remedied, * * * but by April, 1918, * * * they had been in the main remedied.

Page 3937:

Capt. PRATT. If the Navy, as it existed, had been ready for war in 1917, it would have relieved us of a certain amount of anxiety, due to the overload, * * * which it placed on people who have suddenly to jump from peace-time activities to war-time activities.

Page 3672:

Capt. PRATT. I have already told you of the Navy's struggle to prepare after war was declared.

Page 2875:

Capt. PRATT. In this particular war we were fortunate in being given a period of preparation, due largely to the fact that the control of the sea was held by the British Fleet and that, barring the submarine, the German Fleet was contained. Had the situation been reversed * * * our difficulties would have been greatly increased, if not rendered impossible.

Page 3968:

The CHAIRMAN. Was the Navy ready for war as to personnel * * * when war was declared?

Capt. PRATT. Not the way I would like to see it.

Page 3969:

The CHAIRMAN. Who was responsible for this lack of preparation that rendered our forces incapable of quick action?

Capt. PRATT. The Secretary, of course, was the responsible head.

Page 3972:

The CHAIRMAN. You would not repeat the policies and methods of handling the Navy that prevailed from 1914 to 1917?

Capt. PRATT. No, sir; not if I had to prepare for another war.

The CHAIRMAN. Would you say that the Navy of the United States was fully manned and officered in 1917, when war was declared?

Capt. PRATT. It is my impression that it was not * * * the reserve ships were not manned * * * there were not officers and men available to man them.

The CHAIRMAN. Is the Navy in all respects ready for war when its ships are not fully officered and manned?

Capt. PRATT. No, sir.

Point 2 of my statement of March last:

That the first few months after America entered the war were extremely critical ones for the whole allied cause, due to the success of enemy submarines.

Point 3:

That this critical situation was made clear to the Navy Department a few days after America entered the war, and repeatedly thereafter by cables and letters, and supported by independent advices to the Government from the American ambassador in London and by Mr. Hoover in person.

All witnesses agreed with these statements, though there was differences of opinion as to just how critical the situation was.

ADMIRAL BENSON'S TESTIMONY.

Page 4625:

Admiral BENSON. The department at all times had a realization of the situation and did everything they could to meet it.

Page 4630:

Admiral BENSON. I think that the situation was critical, but not very critical. * * * I was alarmed because the situation was a very serious one * * * but in my professional opinion I do not believe they would ever have been able to have forced a peace by the action of the submarine.

Page 4633:

Admiral BENSON. The department, I think, was sufficiently informed as to the seriousness of the situation.

ADMIRAL FLETCHER'S TESTIMONY.**Page 2375:**

Admiral FLETCHER. I always recognized the submarine menace * * * as a very urgent and important matter. * * * It was brought before the conference and certainly considered. (April, 1917.)

ADMIRAL BADGER'S TESTIMONY.**Page 2678:**

Admiral BADGER. * * * The British officers who were here gave practically the same information as Admiral Sims and bore out his recommendations * * * much of it prior to his statement. * * * The department was aware at all times of the real situation. * * * What they did to meet that situation was carried out after study * * * in the belief that the steps they were taking were the proper steps to meet that condition abroad.

Page 2713:

Admiral BADGER. Now, I do not object to saying this as one view of the situation. It looked in April and May very much as though peace would have to be declared by the Allies. The reports that we were receiving were most pessimistic here that they could not hold out.

CAPT. PRATT'S TESTIMONY.**Page 3993:**

Capt. PRATT. The situation was undoubtedly grave. * * * There was no question about that.

The CHAIRMAN. And it was up to us to do everything in our power to relieve it?

Capt. PRATT. There is no doubt about that.

Pages 3867 and 3868:

Capt. PRATT. I think we were all very familiar with Mr. Hoover's opinion on the matter. * * * I think the critical nature of the situation was known after Admiral Sims sent his report to us. I very much doubt if we fully realized the seriousness of the situation until his original cables were received. * * * I can not see how anyone would fail to realize the seriousness of the submarine situation after the first cables from Admiral Sims were received.

Page 3570 (quotation from departmental memorandum, Apr. 15, 1917):

"The result of the war hangs upon the submarine issue. Germany will win the war if she can continue the rapid diminution of merchant shipping. The only hope of the Allies, including America, lies in finding means to curb the effectiveness of the submarine and replacing lost ships, and any further delay will be futile. If the submarine menace can be materially diminished, the war can be brought to a successful conclusion, probably, within a year."

Page 3865:

Capt. PRATT. I do not know whether anybody else realized it in the same sense that I did. It was realized after I came in as aid for Operations, be-

cause then I could talk to my chief, and I know he realized it then. He is really the responsible man, and he can tell you how he realized it and what his attitude toward it was. * * * I thought it so serious that personally I would have sent everything. I never had any other attitude than that.

Point 4:

That the Navy Department supplied me with no plans or policy covering our participation in the war for three months after our entry therein.

This point was not contested. Witnesses explained that the department's only policy was that of full cooperation with the Allies—of doing whatever they wished.

ADMIRAL BENSON'S TESTIMONY.

Page 4684:

The CHAIRMAN. Why did you not realize just what his duty {Sims's} should be?

Admiral BENSON. I did not give Admiral Sims his definite and particular instructions. My impression is, although I do not know that, that they were given by the Secretary. * * * I think he had sufficient instructions for the duty he was called upon to perform. * * * I did not give him such instructions because I did not think it necessary.

Page 4593:

The CHAIRMAN. Was there a sound, complete, and well-defined plan for conducting this particular war?

Admiral BENSON. For this particular war, I do not think so; only such general plans or policies as I have already outlined. * * * No definite war plan was drawn up on paper. No, Mr. Chairman; there was not.

Page 4614:

The CHAIRMAN. What definite plans were drawn up?

Admiral BENSON. I can not give you that information. I can not tell you that now. I assume that there were [plans made]. I know that all that was necessary was done, and that is all that I do know. * * * The purposes that any plan would have accomplished were accomplished. I assume that as the policies went out to my subordinates, what we had of a planning section—drew up the necessary plans or memorandum or instructions or whatever you wish to call them.

Page 4680:

The CHAIRMAN. Did you formulate any definite operational plan?

Admiral BENSON. I merely outlined general policies and left it to the subordinates to develop any plans that were necessary for carrying them into execution. How many plans were developed at all it would be very difficult or practically impossible for me to state. * * * There must have been plans, but I can not recall them.

CAPT. PRATT'S TESTIMONY.

Page 3668:

Capt. PRATT. There were not issued to Admiral Sims any instructions beyond the simple statement of July, 1917. * * * The department relied on him, in close touch with the Allies, while guided by its fundamental principles, to formulate all general war plans within the area of his command and to send them back to us as the basis on which we could begin our work.

Point 5 of my statement of last March:

That having information as to the critical situation of the Allies, the Navy Department did not promptly assist them, and thereby prolonged the war by delaying the sending of antisubmarine vessels, none reaching Europe for nearly a month after war was declared, and over two and one-half months elapsing before 30 vessels arrived.

It has been freely admitted that all forces available were not sent at once and there has been a difference of opinion as to the result of the delays. Generally the witnesses have agreed that our naval contribution was effective when exerted, and that it shortened the war by saving shipping and making possible the dispatch of American troops abroad.

ADMIRAL BENSON'S TESTIMONY.

Page 4634:

Admiral BENSON. We might have sent more destroyers (and other antisubmarine craft * * *) but I doubt if I would have sent more destroyers, because I felt strongly the necessity of safeguarding the battleships (and the American coast). * * * There were a great many (light craft) that we had use for over here; but I think, as far as we could get them ready and in my judgment they could be spared, they were sent over.

CAPT. PRATT'S TESTIMONY.

Page 3670:

Capt. PRATT. That there were delays, that there were mistakes, that it took time before we got into the war in full force is fully and frankly admitted. * * * Some of the reasons why our Navy did not quickly enter the war in full force might * * * with the knowledge gained in this war, be avoided in the future. * * * Some of these (which in my opinion could be avoided) are: Lack of material preparation in the ships concerned; lack of adequate supplies, and of supply and repair bases; lack of sufficient personnel and facilities to train them; a building program planned specifically to meet the needs of the war the country intends to engage in; modern methods of organization and administration and the maintenance of a nucleus organization in peace; a budget system.

ADMIRAL BENSON'S TESTIMONY.

Page 4712:

Admiral BENSON. To have had more destroyers, or submarine chasers, or other craft on the other side * * * [in 1917] would have resulted in saving more British or other allied merchant shipping.

Page 4760: Admiral Benson testified that the work of the American naval forces in European waters was of material assistance in putting down the submarine campaign; that this was of importance in shortening the war because it helped to get the troops over there.

Admiral BENSON. The work in the final shortening of the war so far as the United States was concerned was in getting the troops into France * * * and everything that contributed to that result helped in the final ending of the war.

The CHAIRMAN. That is, helped to shorten the war?

Admiral BENSON. Helped to shorten the war. * * * That helped to shorten the war by helping the morale, that helped the general situation.

The CHAIRMAN. That did, then, help shorten the war?

Admiral BENSON. By getting the troops over.

The CHAIRMAN. Then it is only a matter of opinion as to how much they helped shorten the war, is it not?

Admiral BENSON. It must necessarily be a matter of opinion, the whole thing.

ADMIRAL FLETCHER'S TESTIMONY.

Page 2353: Admiral Fletcher testified that the greatest problem our Government had to face in setting out to win the war was—

to throw all our energy into combatting the submarine menace which at this time was the most critical part of the war on the sea. * * * I do not know just what they (the Navy Department) did, because I was not connected with the operations of the fleet.

Page 2364: Admiral Fletcher admitted that Admiral Sims's recommendations were ultimately followed, and forces sent abroad after delays.

Admiral FLETCHER. As the war developed we saw and could readily determine the probability of submarines coming to this coast, and we very rapidly developed a defense to meet them * * * then every available craft we could operate here was sent abroad.

ADMIRAL NIBLACK'S TESTIMONY.

Page 2420:

Admiral NIBLACK. It has been frequently stated before this committee that keeping the patrol squadron on our coast in the first few months of the war was unjustifiable. * * * In the early stages the forces were undergoing thorough organization and assisting in training additional men, and when the call came for ships to really inaugurate a convoy system, these ships were sent to escort work in France and the Mediterranean. This may not have been soon enough possibly, but the ships were better fitted and organized for their peculiar services by the delay.

ADMIRAL BADGER'S TESTIMONY.

Page 2713: Admiral Badger testified that the General Board, on May 3, recommended sending abroad "as much as the condition of our fleet and the number that we had would permit," but—

It looked in April and May very much as though peace would have to be declared by the Allies. The reports that we were receiving were most pessimistic here that they could not hold out. In that case, if the German Navy had remained untouched, there was no telling how we in this country might have become involved with Germany ourselves, and therefore it was a very doubtful policy whether we should strip ourselves and run the chance of coming in at the last moment and being defeated on the other side so far as the prevention of the collapse of the allied powers was concerned, or whether we would look out for ourselves and our own fleet until we could see about it. Therefore, the man who had a responsibility of that kind considered it from that point of view, also that we must look out for our own fleet in addition to the fleets of the other powers concerned and not strip our battleships of protection against the submarines that might attack them.

I hardly think it is necessary to comment upon those opinions. I have already in my direct statement pointed out that such expressions as "strip our battleships of their destroyer protection" do not mean anything, because they would not have been stripped of their protection by sending destroyers to the other side, because battleships could not be used until they went to the other side, and their protecting forces were already in the proper position to protect them.

ADMIRAL M'KEAN'S TESTIMONY.

Page 3442:

Admiral MCKEAN. While there were and always will be delays—delays on subordinated parts in coming to conclusions on what to base their recommendations, delays in convincing superiors of the desirability or necessity of approving these recommendations, delays in getting the necessary appropriations, delays in obtaining material and men with which to carry out the plans—the responsible authorities, the Chief of Naval Operations, the Secretary of the Navy, the committee of Congress, must each be given time for consideration and deliberation to enable them to act wisely.

Page 4344:

Admiral McKEAN. Our part in the suppression and control of the submarine menace was comparatively small. * * *

As has been previously explained in this paper, there were many good and, to me, sufficient reasons why the immediate sending of all craft that afterwards were sent was a physical impossibility.

That disposes of the statement that the ships were ready for war.

Page 4407:

The CHAIRMAN. If these recommendations [of Sims] could have been followed out very shortly after they were made, do you not think it would have been a very good thing?

Admiral McKEAN. Most of them, yes, decidedly.

The CHAIRMAN. So that if there was delay, it was unfortunate?

Admiral McKEAN. In some of them * * * in the case of the destroyers, yes * * * and the antisubmarine craft.

CAPT. PRATT'S TESTIMONY.

Page 3781:

Capt. PRATT. We should have had about 51 destroyers, 6 tenders, about 7 gunboats, 2 cruisers, and 12 submarines. * * * All these vessels could have been sent at once if they had been in shape.

Capt. Pratt did not know why the vessels were not sent.

Page 2863:

Capt. PRATT. The reason why these ships were not sent at that time can, of course, best be explained by the Chief of Naval Operations. * * * Personally I was not in accord with this policy, as I favored making concessions and sending the ships at once.

Page 2864:

Capt. PRATT. The matter was handled immediately by me and a favorable reply drafted. The answer was not sent immediately, and then it was not a favorable one. The question was being weighed by the Chief of Naval Operations and the Secretary, I think.

Pages 3889 and 3890:

Capt. PRATT. Many delays were caused by discussions in the department. Sims was left free in executing decisions, but a great many explanations were asked. * * * In the case of convoys the department was opposed to the scheme at first, until the Admiralty could prove it would be successful. * * * They were not ready to accept decisions of others or by United States representatives in Europe. * * * It would have been better if the convoy had been adopted earlier.

Point 6:

That the Navy Department failed to appreciate the military value of time.

The departmental witnesses have tacitly admitted this point by their defense and justification of the delays of the department. They contended that a delay of a few months made no difference, although this delay occurred at the most critical period of the war, when reinforcements were most needed.

ADMIRAL M'KEAN'S TESTIMONY.

Page 4375:

Admiral McKEAN. I had certain minor difficulties. I had delays. I had to convince my chief, first, of the necessity of it. I sometimes had difficulty in convincing the Secretary when it involved money. * * * It would not go as fast as I wanted it. * * * Congress, too, delayed.

Page 4376:

The CHAIRMAN. Did you meet with any delay that in view of what happened afterwards did not seem justifiable to you?

Admiral McKEAN. Oh, I could not cite examples. I think if they had accepted my recommendations as soon as made, and Congress had given me the money as soon as I wanted it, there is no doubt that we would have been better prepared; and with the hindsight, I have no doubt that the Secretary, when he did not agree with me right away, and the committees, when they did not give me more than half as much money as I asked for * * * I suppose they are both regretting it. I regretted it at the time. * * * After war was declared. Senator, we had all the money we could use.

Pages 4402 and 4403:

Admiral McKEAN. I probably felt very often when I wanted a thing very badly and very quickly that the Secretary was slow in making a decision. * * * The Secretary is not rapid in decisions involving the expenditure of funds. He hesitates until you prove it and clinch it, and sometimes reprove it and reclinch it. He consults everyone. * * * He was always thinking about justifying himself before your committees up here, and until you could convince him of the military necessity absolutely and beyond question, and also that he could justify the expenditures before Congress, you would not get him to approve an expenditure of any large amounts, and I often had to present the same subject many times before I got a favorable decision. I never had the Secretary refuse to listen to my arguments. I always tried to get a little new point of view on it and present it in a different light, and sometimes I thought I had proven the case beyond question a dozen times, and then I would try it on the thirteenth and I would get it.

ADMIRAL NIBLACK'S TESTIMONY.

Page 2417:

Admiral NIBLICK. The fleet was used for training men "which became the great problem for the Navy to solve during the first six months of the war."

Point 7:

That the Navy Department violated fundamental military principles in attempting to formulate war plans of operations without having sufficient knowledge of the whole situation.

Admiral Benson has taken the position that he alone was responsible for all operations, and that all decisions and plans had to be made or initiated by him. Witnesses agreed that the plans referred to in the testimony were drawn up by the department.

ADMIRAL BENSON'S TESTIMONY.

Page 4623:

Admiral BENSON. I would submit that Admiral Sims had no right to insist on the department varying from its policies and decisions. All he had to do was to give us the information, and it was the department's function to use that information to the best advantage, and that we did.

Page 4626:

Admiral BENSON. I think he gave us all the information we needed.

CAPT. PRATT'S TESTIMONY.

Pages 3858 to 3860:

Capt. PRATT. The department relied entirely on Admiral Sims. * * * The principal knowledge about matters on the other side came "almost entirely" from Sims. He was our representative there, and was sent for that purpose; * * * naturally, we depended upon him.

Page 3912: Capt. Pratt said Admiral Sims was not consulted about the handling of the first troop convoy. "He was perfectly willing to grant the point" that Sims should have been consulted in drawing up the plans for the first troop convoy.

Point 8:

That the department's representative with the allied admiralities was not supported during the most critical months of the war, either by the adequate personnel or by the adequate forces that could have been supplied.

This point was fully and freely admitted by the responsible officers in the department.

ADMIRAL BENSON'S TESTIMONY.

Page 4620:

Admiral BENSON. He [Sims] was not supplied with all the assistants that it would have been desirable for him to have had.

ADMIRAL BADGER'S TESTIMONY.

Page 2654: On April 5, 1917, the General Board recommended that officers be sent abroad to London and Paris. They gave a long list of the subjects on which data was desired, and suggested that 10 officers be sent to London and 6 to France.

Admiral BADGER. The General Board recommends this number of officers so that the work can be divided up and expedited, and believe that if this number of officers is detailed the information desired can be obtained in about two months.

Only 2 officers were sent and none more until four months later; then only 5 instead of the 16 recommended.

ADMIRAL M'KEAN'S TESTIMONY.

Page 4348:

Admiral McKEAN. There is no doubt that Admiral Sims should have had additional assistance, much more than he had as his duties expanded; but, likewise, there is no doubt that we were all short-handed.

CAPT. PRATT'S TESTIMONY.

Page 2870:

Capt. PRATT. Admiral Sims has a just complaint in this case. He should have been allowed more assistants, and earlier.

Page 2873:

Capt. PRATT. In my opinion Admiral Sims was not given an adequate staff early enough, and I think that should have been done at the expense of every other activity, if necessary.

Page 2882:

Capt. PRATT. The department made a mistake in not sending more officers to Sims. He should have had them. It was a stupendous task with which he was confronted. * * * An adequate staff was required from the beginning.

Page 3962:

Capt. PRATT. It seems to me that the facts pretty well speak for themselves; that if we had intended to immediately dispatch our destroyers abroad we could have had them in material shape, thoroughly manned to the minute. That is not an impossible thing to do, and if it was not done it is because steps were not taken to get them ready for it. It could have been done, I believe.

Page 3885:

Capt. Pratt agreed that in nearly every case Sims's recommendations were ultimately granted and personnel and forces requested sent. He did not know why delays occurred.

Capt. PRATT. I would have sent them over as soon as I could lay my hands on them. But the power of decision was not mine.

Point 9:

That the Navy Department violated fundamental military principles in dispersing forces away from the critical area in order to meet diversions of the enemy.

The departmental witnesses did not deny the fact but endeavored to defend the policy of keeping forces on the American coast, in the Azores, and elsewhere, remote from the critical area.

ADMIRAL BENSON'S TESTIMONY.

Page 4627:

Admiral BENSON. I acted on my own judgment in that matter, and I felt that the responsibility resting on me for our own national defense was first. That was my duty, to safeguard America's interest; that was my first duty, regardless of any other duty to humanity or anything else.

Page 4778:

Admiral BENSON. You always have one chance out of two, Mr. Chairman, to be right. I had to act on my judgment; I could not take chances; I had to view the situation and act according to my judgment and my natural inclination and my duty as I saw it to safeguard American interests and I did that; and whether I was right or wrong I should do the same thing again.

Page 4743H:

Senator PITTMAN. Your first thought was for the protection of our own coast and the preservation of our own Navy?

Admiral BENSON. Absolutely, sir. Mine was the responsibility. I had to exercise my judgment, and my first thought in the beginning, during, and always was to see first that our own coast and our own vessels and our own interests were safeguarded. Then when I was satisfied that that was done as far as I could with what we had then to give everything we had and to do everything we possibly could for the common cause.

CAPT PRATT'S TESTIMONY.

Page 2979:

Capt. PRATT. The Office of Operations realized full well that the areas mentioned were not vital areas * * * with one exception.

Point 10:

That the Navy Department in the first months of the war attempted the direction of details although 3,000 miles distant from the scene of active operations, where the situation was changing from day to day.

This was admitted and recognized as an error.

Point 12:

That the Navy Department, by controlling the operations and movements of certain forces within the war area, violated the fundamental military principle of unity of command.

This point was fully confirmed.

ADMIRAL BENSON'S TESTIMONY.

Page 4638:

Admiral BENSON. The department would have been derelict in its duty, in my opinion, even admitting they were all sound and right, to have adopted recommendations without due deliberation and careful consideration of all the conditions surrounding the situation * * *. Even if the recommendations were absolutely perfect, we would not have been justified in doing it.

Page 4630:

Admiral BENSON. I was willing to do it; but not until I had personally investigated. I did not have sufficient confidence in Admiral Sims's judgment and in his decisions to warrant me in relieving myself of that grave responsibility.

Page 4882:

Admiral BENSON. I think there is an exaggerated idea as to Admiral Sims's position that he occupied. I think the Allies understood that the operations in Europe were being directed from Washington.

There is a deliberate statement that the operations in Europe were being directed from Washington.

CAPT. PRATT'S TESTIMONY.

Page 2965:

Capt. PRATT. The department was wrong in interfering with the detailed movements of our forces at the front.

Page 3403:

Capt. PRATT. Operations at the front must be handled from London * * *. I think that in certain minor instances we may have interfered with him [Sims] in the details of ships' operations * * *. We issued direct orders to ships that were over there, when it would have been wiser to have turned them over to him bodily and said to him, "Order them where you please." Those, however, are mistakes that are liable to happen under all conditions, and I do not think they were very material.

Page 2873:

Capt. PRATT. If the admiral was handicapped by interference with the movement of his forces in contact with the enemy, this was wrong in principle. He has cited instances, but I have yet to note one which materially affected the outcome of the war.

Point 11:

That the Navy Department, in not clearly defining the responsibility and delegating authority to its representatives in Europe, failed to follow sound principles, common alike to the business and military professions.

It was clearly established that no clear definition of authority and responsibility was ever made by the department. The testimony reveals the fact that the witnesses still disagree materially as to the authority and duties of the department's representative in Europe.

ADMIRAL BENSON'S TESTIMONY.

Page 4672:

Admiral BENSON. I think there is an exaggerated idea as to Admiral Sims's position that he occupied. I think the Allies understood that the operations in Europe were being directed from Washington.

Page 4627:

Admiral BENSON. As I said, I was the responsible officer and I sized up the situation and made my decision.

Page 4630:

Admiral BENSON. I was willing to do it [that is, send forces abroad], but not until I had personally investigated. I did not have sufficient confidence in Admiral Sims's judgment and in his decision to warrant me of relieving myself of that grave responsibility.

CAPT. PRATT'S TESTIMONY.

Page 2995:

Capt. PRATT. It is the universal practice of the Navy for flag officers to make the recommendations for their subordinates. The final assignments are made by the Secretary in consultation with the Chief of Naval Operations. It is conducive to efficiency to associate those officers together whose relations are bound to be harmonious.

Capt. Pratt admitted that Admiral Sims was not consulted about the choice of his subordinates.

Point 13:

That the Navy Department failed to keep its representative abroad completely informed as to its plans affecting dispatch and disposition of forces in the war zone, and frequently reached decisions in such matters through information gained from sources other than its representative in the war zone.

The cases cited in the direct testimony were not questioned by any witnesses. The fact was admitted and an effort made to justify the department's negligence.

ADMIRAL BENSON'S TESTIMONY.

Page 4672:

Admiral BENSON. I think the Allies were kept informed of the development of any of our ideas and intentions. * * * While a good deal of the information may not have gone directly to Admiral Sims we satisfied ourselves that the allied naval authorities were kept sufficiently well informed with regard to the development of the situation.

Page 4674:

The CHAIRMAN. Would it not have been a good idea to have answered Admiral Sims's letter?

Admiral BENSON. It might have been and it might not have been * * * but as I was in charge of the whole affair and responsible for it, I exercised my discretion and my judgment in the matter. I felt that Admiral Sims was very urgent * * * and I did not consider that it was necessary to consume time and so on, always, to answer all of his repeated requests, etc., and I exercised my judgment and discretion in the matter, and feel that I was justified in doing it.

Page 4677:

Admiral BENSON. I feel that we were satisfied that information that the attachés of the Allies (in Washington) had was sufficient for the particular cases that happened to be under consideration.

It is hard to be moderate in commenting upon a statement like that. The Chief of Naval Operations says that they were satisfied that information that the attachés of the Allies in Washington were giving them was sufficient for the particular cases that happened to be under consideration. In other words, they were making decisions concerning my forces abroad upon information obtained from people who were not on the other side, who were here on particular business and who could not have been informed as to what the condition was on the other side, even in its general nature, much less the particular and local situations that we had

to deal with. If this investigation results in preventing a thing like that from ever happening again, it will have justified the \$200,000 or \$300,000 that it has cost.

Page 4678:

Admiral BENSON. I was the responsible party and it was my function, given me by act of Congress, to handle this matter, and I did it; and I must feel that the impression may exist that Admiral Sims was not given proper consideration, and I want to insist that he was my subordinate and it was my right and my duty to exercise my judgment in the way in which he was treated.

CAPT. PRATT'S TESTIMONY.

Page 2987:

Capt. PRATT. It was always the department's intention to keep Sims fully informed of all such matters. If we failed in this respect, it was of course an error and an omission. Errors happen naturally, but in the vital essentials he was informed.

Page 3861:

Capt. PRATT. He should have been informed of all departmental plans for operations abroad, but I do not think he was, and in that way I hold myself rather negligent.

Page 3883:

Capt. PRATT. Admiral Sims ought to have had this information; but those were strenuous times, and no doubt a lot of information he wanted and should have had he did not get.

Page 3862:

Capt. PRATT. Admiral Sims knows if he did not get answers. He knows whether he did get them or not. If Admiral Sims says, "I did not get an answer to this," why, that stands; he did not get it.

Page 3224:

Capt. PRATT. If there were doubts in Admiral Jellicoe's mind on the subject (of agreement of April 11), why didn't he make a direct request either through Admiral Sims to us or via his own representatives here, as to the exact nature of the reinforcements required in European waters beyond those asked for specifically by the commander in chief of the British forces in North Atlantic waters who had been directed by the Admiralty to confer with our department on this subject.

It was an oversight of Operations not to have informed Admiral Sims, but would it not also have been better for the Admiralty to have reinforced Admiral Sims's pleas in view of the agreement which they knew we had entered into?

Page 3844: Capt. Pratt did not know if any effort was made to get prompt and favorable action on Sims's recommendations.

Capt. PRATT. I tried personally very frequently, and would go with these cables, acting myself as a sort of nuisance, possibly, in the subject, to get this done, and I have no doubt that we were doing all this * * * but not being the actual executive I * * * should hate to say * * * that I know that every one of them was carried out.

Page 3856: Capt. Pratt would not state whether delays occurred or not.

Capt. PRATT. I did not always get a yes (to Sims's requests). * * * I paid attention to every one of his dispatches. * * * I could not say whether they were acted on or not. * * * In cases of plans or policy it is difficult for me to say whether everyone of them was answered. I know one thing—I can speak for myself. * * * I did not keep Admiral Sims as fully in touch as I ought.

CONCLUSIONS.

A review of the testimony given by the department witnesses called before this committee, at the request of the department, shows that less than 10 per cent of their testimony was concerned, either directly or indirectly, with the points raised in my letter of January 7, 1920, or with the evidence which I introduced in my testimony.

The Assistant Chief of Naval Operations, during the war, who was the only officer to comment in detail on my letter or my testimony, freely admitted that 80 per cent of the facts which I have referred to were true, though he differed in some cases from my interpretation of these facts.

Four of the department's witnesses were officers who held subordinate commands in Europe during the war. Each of these officers admitted that he knew nothing of the relations between myself and the department, or of what happened in the department itself, except by hearsay.

Thus, for example, Admiral Rodman stated (p. 2097):

I wish to reiterate that I have not one single document nor record of any kind, class, or description to substantiate my statement * * * and I am simply trying to lay before this committee my views in general of what the Navy accomplished.

He admitted that he knew "very little" about the administration of the naval forces abroad about convoys, the sending of anti-submarine craft, or anything else, "except what I read in the public press, I know very little about it." Referring to my testimony before this committee, Admiral Rodman said, "I have never read it."

Admiral Rodman also said (p. 2154):

While I was in the North Sea I dare say I knew less about what was going on than you gentlemen here at home who read the papers. I knew very little. As to the other branches of the service I had very little knowledge, except in a general way. * * * I had no particular knowledge. I was not in a position to have. * * * There was no occasion for me to know about these things. * * * It was no business of mine.

Still, gentlemen, those are the witnesses who have been offered to substantiate the department's contentions, or to attack me personally.

Admiral Wilson when asked if he knew of the relations between myself and the department said (p. 2203):

Not a word do I know about it.

Asked if he had read my testimony, Admiral Wilson said:

Not a word do I know about it.

When asked if he knew anything concerning the attitude taken by the department toward the forces in European waters, Admiral Wilson said that he knew—

Not a word of it. * * * My time was fully occupied in other ways.

Admiral Niblack admitted a similar ignorance of the matters brought into issue before this committee. After describing his own

services in the way and paying his tribute to the accomplishment of the Navy Admiral Niblack said (p. 2408) :

I know little of my own knowledge of what it is claimed the Navy did not do.

Similarly, Admiral Strauss stated that he had no knowledge of any part of the operations on the other side except those concerning the laying of the northern barrage; that he had no knowledge of his own concerning the work of the department during the war, or of the relations between the department and the forces in Europe.

Admiral Fletcher similarly stated that he had no knowledge as to what steps were actually taken by the Navy Department to meet the issues growing out of the war.

Page 2251 :

I was not very closely associated with the executive officers of the Navy Department charged with the duty of conducting the operations of the war. My views upon the questions involved will therefore be confined to that obtained from the viewpoint of a member of the General Board, but more particularly from the viewpoint of a member of the War Industries Board.

Admiral Fletcher knew nothing of the action taken on my recommendations, as his position was not close enough to Operations to enable him to know (p. 2284). He said (p. 2288) :

I am not posing as an expert [on the question of the submarine campaign]. My main testimony is from the industrial point of view. I am not familiar with all that phase of the problem [campaign against submarines]. I am only speaking in a general way.

Admiral Fletcher said that he was not familiar with the conditions as to personnel or material in the Navy in 1917 (p. 2298), nor did he know what ships were available for service with the fleet in 1917 (p. 2303), nor did he know just what the department did, although he believed that they had thrown themselves with all their energy into combatting the submarine menace (p. 2353).

Because of the confessed ignorance of these officers with the matters under discussion, their testimony has not been quoted in this discussion of the issues raised by my testimony.

The other witnesses who appeared before the committee, and who had specific knowledge of the facts which I had referred to in my letter of January 7, 1920, and in substantiation of which I introduced documentary evidence in my testimony before this committee, almost without exception agreed that the facts as I presented them are correct. Their testimony, in so far as it deals with the issues involved, is concerned largely with explaining, excusing, or justifying the action of the Navy Department in these cases, or was intended to dispute the conclusions which I drew as to the results of the delays and mistakes of the department.

The general attitude of the department's witnesses seems to be not that of disagreement with my testimony but one of resentment that such mistakes should have been brought to the public notice.

Thus, Admiral Wilson said (p. 2183) :

I have had no time or desire to bring up things of the past. I well know that the lessons to be learned from the war will be studied by most competent officers in the Division of Operations and the General Board, whose duties are to study these lessons and to apply them to the future plans of the Navy.

Page 2200 :

Instead of finding any fault or any mistakes made by the United States on the breaking out of war, I feel proud and I feel sure it was onto its job.

Note that the previous testimony of this witness is to the effect that they were not in the position to know anything about their subsequent testimony.

Admiral Rodman said, page 2080 :

I am here purely from a sense of duty to defend the good name of the Navy. I shall make my statement for this purpose alone.

Having previous to this shown that he did not know anything about the issues in point.

The CHAIRMAN. I want to state that it does not seem to me that the good name of the Navy is at issue. * * * All of us want to defend it. * * * We are here because we believe that * * * certain faults have been developed in the organization of the Navy and what we want to do is to develop something constructive.

Admiral RODMAN. I have recommendations right along those lines.

Page 2082 :

I am here solely, as far as I know, to defend its deservedly good name.

Page 2089 :

Another deep impression that is made upon my mind is that * * * there has been laid bare before this committee every possible point that is derogatory to the Navy, without stating the thousand and one good ones which should redound to its credit.

Admiral Rodman also made the following statements :

Page 2082 :

Had his letter been less indiscreet * * * had it been couched in moderate terms, such as are usually used in official correspondence, had it been less antagonistic * * * doubtless good would have come from it.

It was hardly necessary to comment, and my letter was couched in extremely moderate terms, and in the official language usually used on such occasions, and that there was nothing whatever antagonistic about it.

Another quotation, page 2089 :

This whole affair, to my mind, savors of ill-advised criticism against the Navy. * * * Let us hope that some good will come of it, and I think it will.

Page 2095 :

Unqualifiedly mistakes were made, as there are in every great and highly technical enterprise.

Page 2096 :

I regret exceedingly for the Navy's reputation that it was through his (Sims's) instrumentality, directly or indirectly, that this investigation was instituted, with its resultant publicity, but I hope and believe that ultimate good may be obtained.

The Navy doubtless made mistakes during the war, but the methods and means which have been employed in attacking it will by necessity leave prejudice in the minds of those not familiar with the Navy and its organization * * *.

All these conclusions as to the responsibility for publicity have been fully answered and substantiated by official documents.

Admiral Niblack said (p. 2048) :

I am not here to defend any person, but am defending the United States Navy, which is now under the fire not of its enemies but of its friends. From my own personal experience I can bear testimony to the great things which were accomplished by our Navy from the very outbreak of hostilities until the war was won, though I know little of my own knowledge of what it is claimed the Navy Department did not do.

I will have occasion later to go into that whole matter of the attack on the Navy.

Admiral Badger, in the same connection, said the following (p. 2661) :

The department fully understood the situation at all times. The action that it took is now a matter under discussion. * * * It seems to me to be a waste of time to discuss at this late date the differences of opinion as to what should or should not have been done in the early days of the war, particularly as I can see no possible good to the Navy or the country.

Thus, in summarizing, it seems clear that the evidence which has been introduced by the various department witnesses fully substantiates the points brought out in my letter of January 7, 1920, and in my testimony before this committee. The testimony of the witnesses who were called at the request of the department has been confined, in so far as it dealt with these issues at all, first, to explaining and justifying the department's mistakes and delays; second, to disputing the conclusions which I drew regarding the results of these mistakes and delays; and, third, the expression of resentment that these things should have been brought to the public notice, and to attacks upon me for what they considered to have been my responsibility for this publicity.

THE ACHIEVEMENTS OF THE UNITED STATES NAVY IN THE WAR—PRAISE OF THE NAVY BY DEPARTMENTAL WITNESSES.

In reviewing the testimony that has been presented to this committee by the department's witnesses, the most superficial examination shows that the greater part of both the testimony and documents presented has no possible bearing upon the matters under investigation. For example, witness after witness has come before you to tell of the various achievements accomplished by the Navy in the war.

Admiral Rodman told you of the splendid work of our battleship division in the Grand Fleet.

Admiral Wilson has told you how efficient were the services of the forces under his command at Gibraltar and on the French coast. He also called attention to the very great part which the American anti-submarine forces in European waters played in putting down the submarine menace off the French coast, and in making possible the safe transport across the Atlantic of 2,000,000 troops, an unprecedented feat in the history of warfare.

Admiral Niblack has told you a great deal of how splendidly the personnel and ships under his command cooperated with the Allies in the Mediterranean, in handling the convoy operations to and from the Straits of Gibraltar.

Admiral Strauss has given you in detail the magnificent story of the forces under his command, who succeeded under great difficul-

ties in planting a mine barrage which, as an accomplishment, stands without parallel in the history of mine warfare. He has told you also something of the splendid work done by our Bureau of Ordnance in the development of a mine that would make possible the laying of the barrage, and of the supply of that mine in large quantities and in a remarkably short time.

Admiral Fletcher gave you a sketch of the tremendously valuable work of the War Industries Board on which he served, and told how they coordinated the industrial resources of the country so as to facilitate the putting forth of America's military effort. He also dealt with the efforts of the General Board to provide the Navy with plans and policies, and told you of the other long and continuous labors of the General Board.

Admiral Badger, the present head of the General Board, also dealt with the work of this body, and presented in detail an account of its activities before and during the war, emphasizing what splendid service it rendered, by endeavoring to provide the Navy Department with plans which would make possible effective action in case of war.

Capt. Pratt, in the course of the 2,000 pages of the record which his testimony occupies, included hundreds of documents to show with what patriotic zeal and what unsparing energy the officers with whom he was immediately associated in the Office of Operations discharged the duties confided to them. He has given you a full and detailed story of the many magnificent achievements of these officers in the department.

Admiral McKean has similarly described the activities of the Division of Material of the Office of Operations. He has told you how he endeavored continuously for two years before the war to get the Navy in a condition for war.

Admiral Benson similarly has spoken of the unprecedented expansion of the Navy and of the great things that the Navy was able to achieve in the war.

Incidentally none of them ever praised the Navy as much as I have, as I will show you later.

FALSENESS OF CHARGE THAT I HAVE BELITTLED THE NAVY'S WAR SERVICE.

It would be hard to understand why the department's witnesses considered it necessary to introduce such testimony, unless it be assumed they were laboring under a profound misapprehension, either as to my own views upon this subject or as to the purpose of this investigation. Unfortunately, an impression has been conveyed that I have endeavored to belittle the efforts of the American Navy in the war. All sorts of absurd extraneous matter has been injected into this investigation in the endeavor to strengthen this unfounded imputation. I would therefore, like to deal briefly with this question.

The first point to be emphasized is, of course, that this investigation was not called for the purpose of discovering or estimating the full extent of the achievements of the Navy in the war, but rather in the endeavor to discover whether or not the Navy Department, in its general direction of the Navy's war activities, committed certain military errors, and was responsible for certain unnecessary and very

grave delays which postponed the active intervention of our Navy in the war, rendered this intervention less effective than it would otherwise have been, and thereby resulted in an unnecessary prolongation of the war. I have deliberately confined my testimony before this committee to the subjects dealt with in my letter of January 7, 1920, which, as I understand the authority under which the committee is acting, are the sole matters to be dealt with.

Elsewhere, and especially in a series of articles which have been published in a monthly magazine, I have told the story of our Navy's accomplishments in European waters during the war. In these articles I have expressed fully my appreciation of the services which the Navy rendered to the country and to the allied cause. I have described the efficiency which characterized the personnel who served under my command, and to the best of my ability, I have attempted to describe, and pay tribute to, their devoted, enthusiastic and efficient services during the war. I have not considered it to be necessary or appropriate to burden the records of this committee with the hundreds of pages which would be required to describe in full everything which the forces under my command achieved in the war against the German submarine. I have also recorded officially, in a great many documents, my admiration for our splendid personnel, both officers and men. In fact, there is no person, in and out of the service, who has paid them such sincere and heartfelt tribute. Let me refer you, for example, to the statement which I made in beginning my testimony before this committee, in March, 1920.

For example, I said [reading]:

I find that I am being represented in many quarters as initiating an attack upon the part that the Navy played in the war, or, stated more briefly, that my object is to belittle the efforts of the Navy in the war.

Therefore, let me most clearly state a few salient facts:

First. I have raised no question whatever as to the efficiency of our naval operations in the war when viewed in their entirety, and without regard to the time element.

Second. Speaking of the Navy itself, that is, its personnel and ships, apart from the organization which directed it, I am in the fullest accord with the country in being unable adequately to express my admiration for its work. That work will grow larger and larger in public estimation as the facts slowly come out. I am proud to say, without fear of contradiction, that, in so far as the Navy was permitted by the machinery which controlled and directed it, it not only lived up to all traditions of the past, but, as a matter of fact, it excelled its former traditions. Without any disparagement of actual results accomplished, I believe that its greatest accomplishment was the example set and the spirit which it infused into the naval war, through its exhibitions of Americanism. For example, in its irrepressible enthusiasm, its indomitable initiative and versatility, its absolute refusal to be balked by obstacles, real or imaginary, its ruthless disregard of precedents, and, above all, in its absolute confidence in victory.

Similarly, in concluding my previous testimony before this committee, I said [reading]:

NAVY'S SPLENDID ACHIEVEMENTS IN THE WAR WERE IN SPITE OF DELAYS, INACTION, AND VIOLATION OF MILITARY PRINCIPLES BY THE HIGH COMMAND IN FIRST MONTHS OF WAR.

The statistical tables and the memorandums which I have just referred to will give a sufficiently comprehensive idea of the growth and importance to the Navy Department of their advance headquarters in Europe, after they had once adopted the policy which they had announced in July, 1917, of cooperating whole-heartedly with the Allies. Of course, when once the available naval

forces for operations afloat and a sufficient number of capable officers to administer these forces—to control their operations and to coordinate our activities with those of the Allies—were available, there could no longer be any question of the effectiveness of our help. The Allies themselves have repeatedly assured us of the vital services rendered by our Navy to the allied cause, and we of the Navy can take pride in the record that was achieved. Great as this record was, I think I have said enough to convince you that it would have been infinitely more effective if the policies ultimately adopted by the Navy, and which can be found set forth in the Secretary of the Navy's annual report of 1918, had been put into effect from the moment when we entered the war, instead of after dangerous delays of many months. Furthermore, it seems to me that these achievements of the Navy should gain greater importance in the public mind when it is realized, as had not been generally realized outside of the service, they were accomplished not because of an equal amount of efficiency in the higher command which directed them, but rather in spite of long delays, inaction, and violations of fundamental military principles committed by the high command in the first months of the war. In other words, the personnel of our Navy afloat, in accomplishing the mission assigned them, had to struggle with the enemy and also endure the handicap of a vacillating policy and of misdirection such as I have repeatedly pointed out in the cases which I have reviewed before this committee.

Almost the last words which I addressed to you on that occasion were the following [reading]:

My testimony has been devoted almost entirely to pointing out defects in the administration of the Navy in the first few months of the war. This does not mean that I have been insensible to the splendid work done by the Navy at large or by the bureaus and other offices of the Navy Department. I have at different times in letters to the chiefs of bureaus of the Navy Department and to other officials, including the Chief of Naval Operations, expressed my personal satisfaction at the splendid way in which many of my requests had been met, particularly during the latter part of the war.

Taking the service as a whole, I have the most profound admiration for the manner in which the officers and men of the Regular Navy, Naval Militia, and Reserve Force carried on their duties in this war, and have expressed this admiration in a series of articles now being published. Not only from the war zone, where events were constantly before me, but from home and remote areas, reports reached me which showed beyond any doubt what a magnificent body of officers and men we had in the Navy. You may be sure, gentlemen, that the Navy, if loyally and properly supported and directed, may be counted upon to maintain the finest traditions of the service.

It is a source of the greatest pleasure to testify to the pride and gratitude I feel for the manner in which the Naval Militia and the Reserves (in many instances at great personal sacrifices) came to the aid and support of the Regular Navy. Without their invaluable help, much of the work done by the Navy in this war could not have been undertaken. It would require volumes to tell of the hundreds of ways in which their splendid services made success possible. The outstanding feature of their service was the cheerful and loyal support which they gave to the Regular Navy at all times and under all conditions. I can not commend too highly their services to the Nation.

It is furthermore a great pleasure and satisfaction to me to be able to testify to the magnificent way in which the many enterprises were undertaken and pushed to a successful completion by the united efforts of the bureaus of the Navy Department, and the naval personnel engaged in the operations. I can not pretend to enumerate completely the operations of this nature which contributed to the winning of the war. I may mention, as typical examples, the northern barrage, the railway batteries, the transport of troops, and the training of officers and men in the ships of the Atlantic Fleet that remained in home waters.

In view of these statements of mine, which are but inadequate expressions of my real sentiments with regard to the war record and achievements of the service, I find it difficult to understand how any person can find justification for the insinuations that have been made to the effect that I have belittled the Navy's efforts in

wrong impressions. For example, it is apparently difficult for some people in America, as in every other country, to understand that in inviting attention to faults, errors, and defects with a view to correcting these, and preventing a repetition of similar errors, no reflection of any kind is intended, or is made, upon the achievements and successful accomplishments of the Navy as a whole. The mere fact that I have not burdened the record with lengthy and detailed praises of the various phases of our naval activities can hardly be interpreted as meaning that I hereby belittle, much less attack, the Navy's splendid record.

THE IMPORTANCE OF LEARNING FROM EXPERIENCE AND PROFITING BY PAST ERRORS.

There is unfortunately an unwise tendency to ignore or conceal our own errors and mistakes. We at times even seem to consider criticism, however well founded, to be unpatriotic, and twist and pervert such criticism until the impression left in the public mind is that of nothing less than a deliberate assault upon the things of which we Americans have a right to be most proud. To my mind, however, any public official is failing in his trust if he attempts, for personal or other motives, to deny or conceal errors and mistakes which may have a serious bearing upon our future safety. In my opinion it is the obvious duty of an officer, and an obligation which he owes to his service and his country, to invite the attention of his superiors to those mistakes and errors in past operations which, if passed unnoticed, might prove disastrous in future.

A disease can not be cured by ignoring it. Past mistakes, like diseases, are unpleasant things to contemplate. We naturally don't like to have them in our families, but obviously the only safe way is to attempt frankly and honestly to study them, analyze them, and administer those remedies to the causes discovered which the experience of the past have shown to be effective. That has been my sole purpose in the testimony which I have presented.

It is a very natural and a very human impulse, in the pride of one's accomplishments, to desire to forget one's errors; and, if this were merely a matter of personal interests or if it were merely a question of national pride, there would be no necessity of inviting attention to truths which are necessarily so exceedingly unpalatable, if one may judge from the tone of the testimony which has recently been given before this committee. But as a Nation we have the national safety to consider. Our only guide in facing the unknown events of the future are the lessons that we can draw from the past. Our surest means of preparing to meet the dangers we may be called upon to face is to study carefully the immutable principles which underlie warfare; the application of these principles under war conditions; and to observe, conscientiously and calmly, the result of past violation of these principles. Only thus can we make our service more effective in the future and prevent the necessity of enduring again

the dangerous and what might, under less favorable circumstances, have been the fatal consequences of such violations of these principles in warfare, as I believe this investigation has established.

SUCCESS IN WAR DOES NOT PROVE THAT NO ERRORS WERE MADE BY THE VICTORS.

Closely associated with the point that I have just referred to, our disinclination to admit our own mistakes—is another contention which is always raised after a war has been won. The proverb that nothing succeeds like success is apt to mislead those who are too blindly optimistic and self-confident. Nothing would be more dangerous, however, than to assume that because we were eventually successful, everything we did was necessarily right.

On many occasions success has been obtained and wars have been won, not because no mistakes were committed, but in spite of the mistakes. The mere fact that the war was won does not prove that we did not commit very dangerous errors. The obvious statement that we, in association with the Allies, were victorious over Germany in the Great War does not in the slightest degree prove that in a future war under conditions less favorable to us, a repetition of the mistakes which, in 1917, had happily no fatal consequences, would not result in a national disaster.

WHY MISTAKES AND INEFFICIENCY OF THE NAVY DEPARTMENT SHOULD BE CAREFULLY CONSIDERED.

While not in the least desiring to imply any criticism of our naval efforts which made possible the winning of the war, I considered it my duty to invite attention to the mistakes which postponed victory and resulted in unnecessary losses of blood and treasure. Your attention has been repeatedly called to the fact that in warfare time becomes one of the most essential elements of strategy. A few months' delay, in times of peace, or in a war where we were immune from enemy attack during those months, may seem to have no grave consequences. A military service, however, which is so constituted that it can not go to war and effectively operate, without a delay of many months, which has an organization which must be remade under the stress of war conditions in order to handle military operations, is fundamentally wrong. The same delays under other circumstances would be disastrous, as the history of warfare so repeatedly demonstrates.

If it is possible, therefore, by a study of the causes of those delays and by an analysis of the defects in the organization responsible for them to avoid their repetition in the future, it is, obviously, not only wise but imperative that a careful study of these causes should be made. The witnesses who have appeared before you, while insisting that the Navy fought well in the war, which nobody has ever denied, have also insisted that the Navy Department's organization is inadequate and that we were not able to go to war with our full forces within the time that military success requires. It is for this reason that in spite of the fact that we were successful in the war, in spite of the fact that the Navy added new laurels to its already proud

tradition, it seems to me not only wise but imperative that we should take into account the errors which were committed and endeavor to provide such a remedy for the causes as to prevent their repetition as far as it is humanely possible to do so.

TESTIMONY IN PRAISE OF NAVY'S ACHIEVEMENTS HAS NO BEARING ON
ISSUES UNDER INVESTIGATION.

From the standpoint of this committee, therefore, the testimony which has been introduced to show how splendidly the various parts of the naval service operated, to show how efficient were the services of various individual officers, is entirely beside the point. It is to be regretted that the issues should have been so obscured and so much testimony introduced in the endeavor on the part of the witnesses to answer criticisms which they wrongly believed had been made against their personal activities or against the efficiency of the service to which they belonged.

A regrettable failure to realize the vital importance of the issues involved has doubtless been responsible for the introduction of this great mass of testimony. It has absolutely no bearing upon the issues before this committee or upon the specific questions as to whether or not the Navy Department did commit errors, was responsible for serious delays, and violated military principles in the first months of the war; and as to how the causes of these errors, delays, and violations can be eradicated and their repetition in the future prevented. I shall, therefore, make no further reference to this great mass of testimony.

May I say here that I regret that there is a certain amount of necessary repetition in this statement because of the short time that I have had to prepare it.

REVIEW OF THE ACTIVITIES OF THE NAVY DEPARTMENT, 1913 TO 1917—
DEPARTMENTAL WITNESSES' TESTIMONY REVEALS INEFFICIENT CON-
DUCT OF ADMINISTRATION OF THE NAVY DEPARTMENT.

I have thought it necessary to go into that on account of what appears to be the possible result of an investigation of this kind.

The quotations which have been cited from the testimony of the officers called before this committee at the request of the Secretary of the Navy have shown clearly that the Navy Department's organization in 1917 was not adequate for the carrying on of the war; that plans to meet the special situation that arose had not been formulated, and that at least during the first part of the war no such plans were drawn up; and, finally, that the Navy was not in a condition either as regards personnel or material to meet the situation created by our entry into the war in 1917 as efficiently as it should have done.

In order properly to understand the significance of these conditions it seems advisable briefly to review in a general way the whole of the activities of the Navy Department during the administration of the present Secretary of the Navy in order that the proper settings can be obtained for the statements which have been quoted. I therefore desire to give you a brief review of the Navy Department's activities in these years as it has been revealed by the testimony of the wit-

nesses called by the department. I call particular attention to that phrase. I might further say that throughout this whole long statement that I am making now I am not using any evidence at all except the evidence that was given by the department's own witnesses, with only an incidental reference occasionally to the witnesses that were called at my request.

Opposition of the Secretary of the Navy to an efficient organization of the Navy Department.—Since the time of the Spanish War the officers of the Navy have been in almost unanimous agreement that the organization of the department was not adequate for the conduct of war operations and that, while its machinery functioned after a fashion in times of peace, it was not of the type required by any military organization and would not be able to stand the test of any great war. President Roosevelt and the Secretaries of the Navy who served under him ultimately came to recognize this condition, and at the instance of President Roosevelt a commission was formed, presided over by Justice Moody, of the Supreme Court, composed of a number of leading naval officers and other experts, including Admiral Mahan, to consider the reorganization of the Navy Department in order to insure the military efficiency of the Navy. President Roosevelt realized keenly this necessity, as is illustrated by an incident which he often related:

At the time of the Spanish War, after the outbreak of hostilities, one of the leading officials in the War Department was thrown into a condition of great distress because of the outbreak of war, and in explanation of his distress he said:

Just when my department had gotten to going nicely along came the war and upset everything.

Our experience in the Spanish War should have made this perfectly clear.

As a result of the report of the Moody Board, the department was partially reorganized under the administration of Secretary von Meyer. The offices of aids for operations, material, personnel, and inspections were created to coordinate the activities of the various bureaus and divisions of the Navy Department. But still no general concentration of military authority and of responsibility for preparation for war and for the conduct of operations was provided for, although this was recommended by the Mahan-Moody Board, and although all naval authorities agreed that this should be done by the appointment of one naval officer, who would be given authority over and held responsible, under the Secretary of the Navy, for the military side of the department; that is, preparation for war, the formulation of war plans, and the direction of operations.

When the present Secretary of the Navy came into power he was from the first inclined to view with disfavor any such proposal, in the belief that it would diminish his own authority and hamper his activities in the control of the Navy. His naval advisors from the first urged upon him the advisability of concentrating the responsibility for the military side of the Navy's activities in the hands of a responsible naval adviser, but the Secretary consistently rejected this idea.

In his testimony before this committee Admiral McKean, for example, stated, page 3415, that when the Secretary visited the Naval

War College in May or June, 1913, he asked the officers there for recommendations, stating that he could get no clear idea in Washington of what was needed. He went on:

What I wish you would tell me is the first and most important single act which I can perform to most help the Navy.

I may say that I happened to be at the War College at that time and heard all this conversation. According to his own statement, Admiral McKean then interrupted me as I started to make a suggestion and said:

Pardon me, Mr. Secretary. You do not want to appoint a board. The Navy Department's cellars are full of boards' reports never acted upon. As I understand it, you wish to know what single executive act of yours will do most good to the Navy. My recommendation is that you send a wire to the aid for Operations informing him that hereafter he, the aid for Operations, will be your sole military adviser, and that his duties will be to coordinate the activities of the other aids, for Personnel, Matériel, and Inspection, in the same way that they coordinate the activities of the various bureaus and divisions under each of them.

This recommendation met the approval of those officers present, but the Secretary demurred; said he could not do that without grave consideration, as he feared he would be giving up too much of his authority and avoiding what should be his responsibilities. After some discussion in an attempt to show the Secretary that he was not giving up any authority and that he could not possibly avoid his responsibility, his recommendation was passed over.

In nearly all of his annual reports since that time the Secretary of the Navy has repeatedly emphasized his objection to any such step as that which Admiral McKean pointed out in 1913 to be the single act of the Secretary of the Navy which would do the most good to the Navy.

Results of lack of responsible technical advice during present administration of the Navy Department.—Under the present administration the Secretary himself has continued to be the sole coordinating agency of the various bureaus and divisions of the Navy Department. The chiefs of bureaus still continued to be responsible only to the Secretary. No means was provided for coordinating the activities of the various bureaus in the preparation and maintenance of the fleet, except for such sporadical uncertain coordination as the Secretary himself could provide. It is, course, readily apparent that no civilian could possibly possess a sufficient technical knowledge of naval and military matters to direct or coordinate intelligently the operations of the various branches of the military service, and it must be equally clearly recognized that any Secretary must be guided very largely in his decisions and in his coordinating activities by the advice and assistance of naval officers. The only question at issue consequently is whether this advice shall be responsible advice, or whether the Secretary shall be forced to depend upon the often irresponsible opinions, however sincerely held, of differing naval officers.

Capt. Pratt brought this point out very clearly in his testimony. In answer to questions of Senator Trammell as to whether or not the Secretary did not make use of such naval advisers and did not co-operate with the naval officers, Admirals Badger and McKean, as well as Capt. Pratt, referred to the case in 1915, when the Secretary insisted that the General Board withdraw its recommendation for an increase of 19,600 men in the personnel of the Navy, and later ob-

tained from the Chief of the Bureau of Navigation an estimate showing that at that time the Navy had some hundreds of men more than were actually needed instead of being 20,000 short. The testimony has clearly shown that the General Board was right, because their estimate was based upon a definite plan and took into account the future needs of the Navy, while that of Admiral Blue provided only for the manning with partial or "peace" complements of such vessels as were actually in commission.

Capt. Pratt said that the Secretary was not to be blamed for accepting advice from naval officers, but there are two quotations from Capt. Pratt, which I submit for the record. If the committee will excuse me, I will not read them.

(The quotations here referred to are printed in the record, as follows:)

That is just where we kick. He accepted the advice of Admiral Blue, and almost every naval man thought that Blue was dead wrong. * * * I hold Blue very responsible for the advice he gave, * * * but the system is wrong. Where you can cooperate first with one naval officer then with another naval officer and another chief of bureau, and get just as many different ideas as you talk to men that ought to be coordinated under the head who is charged with the policy and plans, so that you do not get this diffusion of ideas, but do get one concentrated effort.

Again, Capt. Pratt said (p. 3999):

As the system of organization stands, we have not any actual military head who is responsible. The responsibility in a degree rests upon the Secretary, because he is the head. * * * The Secretary, no matter how wise a man he may be in his own particular affairs, must accept the advice of his naval counselors; but if somebody is not charged with the responsibility for the advice he gives and the head man does not know the details, the result is an indifferent state of affairs, which, to my mind, is responsible largely for any unsatisfactory condition which we might say existed.

THE OFFICE OF OPERATIONS CREATED AGAINST OPPOSITION OF THE SECRETARY.

After the Great War began in 1914, the necessity for having a military head for naval operations was even more strongly felt than ever before, but the Secretary still insistently opposed any effort in this direction.

Finally, as the testimony has shown, a number of the most capable and conscientious officers of the Navy entered into what might be called a conspiracy—and the Secretary has himself used this term—with the Hon. Richmond P. Hobson, a Member of Congress from Alabama, an ardent friend and supporter of the Navy's best interests, and obtained the passage through Congress of a section in the act of March 3, 1915, creating the Office of Naval Operations, under the Chief of Naval Operations, who was charged with the preparation of plans for war, and, in the original draft of the bill, with responsibility for these plans and their execution. At the instance of the Secretary of the Navy, however, the word "responsible" was eliminated from the act, and thereby much of the effectiveness of the measure was lost.

As Admiral McKean pointed out in his testimony (p. 3418):

This essential step was, I believe, made law under the urgency of the Hon. Richmond P. Hobson, Member of Congress from Alabama. * * * It gave to

The Office of Naval Operations was thereby created, and Admiral Benson was appointed the first Chief of Naval Operations. Under his direction and guidance an earnest and sincere endeavor was made to keep the Navy in a condition of readiness for war with the means and within the limitations provided by the Secretary of the Navy, by circumstances, and by congressional appropriations.

Admiral Badger, Admiral McKean, Capt. Pratt, and Admiral Benson have all testified in considerable detail as to the efforts which they, acting individually and as members of the General Board and of the Office of Operations, made to get things done, so as to prepare the Navy for war. Admiral Benson has told you that he believed the Navy should always be prepared for war and that this had been his guiding consideration. These officers have testified that without the Office of Operations the department would have been in absolute chaos at the beginning of the war in 1917, and that, imperfect as was the organization of the department at that time from a military point of view, it was only the work of the Office of Operations and the voluntary cooperation—and I accentuate the word “voluntary”—which it obtained from the various bureaus and divisions of the department that made possible such effort as the Navy Department did succeed in putting forth in the early months of the war.

The limitations of the activities of the Office of Operations had made it impossible, however, to obtain the maximum of efficiency. The Chief of Naval Operations was given no authority over the bureaus, even in matters concerning the preparation for war. He was not given the responsibility of preparing plans for war, and the General Board continued still, practically speaking, to be the only part of the Navy Department which concerned itself to any great degree with war plans.

THE WAR EFFORTS OF THE NAVY HANDICAPPED BY INADEQUATE AND
INEFFICIENT ORGANIZATION OF THE NAVY DEPARTMENT.

As Capt. Pratt testified (p. 3411) at the time of our entrance into the war every detail of operations had still to be approved by the Secretary.

When we started in this war matters of detail did have to be arranged through the Secretary. * * * but later on we used to handle operations a little but more directly. The Secretary could not attend to all such matters of detail. It would be impossible.

Again, Capt. Pratt said (p. 2871) that when we entered the war—note particularly that after the war started the assistant Chief of Operations made this statement:

The reorganization and expansion of the Office of Operations and of the bureaus had to be undertaken; the coordination of the bureaus with this office had to be developed; the methods of administration had to be divested of their prewar conservatism; the red tape abolished and more authority given to subordinates in matters of detail. * * * (p. 2872). The organization of the

various bodies which acted as the cooperating agents between the Navy Department and the other departments and with the allied representatives on this side of the water had to be undertaken.

That is to say, had to be undertaken after the war was declared. Now, an organization that has to be reorganized, reformed, and divested of its inconveniences after war is declared is a danger to the country.

Again, in referring to the work of the Office of Operations in the early months of the war, Capt. Pratt said (p. 3832) :

Thanks to the voluntary and hearty cooperation of every distinct departmental organization, including the Secretary, the Navy was able to pull itself together and to work exceedingly well in the war. If any lack of preparation existed within the naval service prior to our entry into the war—if any lack of harmony existed then, or exists now, within our Navy—it can be laid more justly to the system of organization the department labors under than upon the shoulders of any individual.

I am perfectly willing to subscribe to that. If the outcome of all this business is a business organization, just a plain business organization of the Navy Department, you will not put the strain on the naval officers in another war that you did in this.

Again, Capt. Pratt said (p. 3937) :

I would have liked nothing better than to have had a thoroughly organized plan for the department. It would have made the work very much easier.

Page 3039 :

I think the organization is not fitted to conduct war efficiently.

Capt. Pratt (p. 3940) also stated that it was not a wise step on the part of the present Secretary to destroy and discard the Mahan-Moody report and return to the bureau system, with only an aid for operations, with no authority to coordinate the work of the bureaus.

Page 3941 :

It is a return to an older order of things, which was not as wise.

The results of this failure to establish within the department such an organization, with such a delegation of authority and responsibility as to conduce to military efficiency, was considered by practically all the witnesses as one of the chief causes responsible for the unpreparedness of the Navy in 1917 and for the delays of the department in getting immediately and actively into the war. Many things were done between 1915 and 1917 to obtain a greater readiness for war on the part of the Navy, but the execution of these measures were individual and sporadic instances of activities by the Office of Operations or by various individual officers in the department, and were not part of any general plan, so far as the testimony has shown.

CREDIT DUE TO INDIVIDUAL OFFICERS IN THE DEPARTMENT FOR RESULTS ACHIEVED IN SPITE OF DEPARTMENTAL INDECISION AND DELAYS.

Too much can not be said in praise of the efficiency and devotion with which the officers who served in the department, as a rule, discharged the duties assigned to them. Admiral McKean and Admiral Badger have told you at great length of their own efforts, first, in improving the matériel condition of the vessels of the Navy and, second, in attempting to plan for the development and possible operations of the Navy in the future. Admiral Badger submitted a long

list of recommendations from the General Board, which apparently have been introduced in testimony as being the plans of the department, although Admiral Badger clearly showed that in the great majority of cases the General Board had no knowledge of whether any action had been taken on any of these recommendations. In a few cases some of the recommendations had been officially adopted and put into effect. In some cases they had been officially disapproved. In the majority of instances they had been officially ignored.

THE FAILURE OF THE SECRETARY TO ADMIT OR CONSIDER POSSIBILITY OF WAR OR TO PREPARE NAVY FOR WAR.

The various witnesses called by the department have been almost all in agreement in stating that as a result of the peculiar interpretation of the policy of neutrality which the Secretary considered it his duty to enforce in the Navy Department no adequate steps were taken between 1914 and 1917 to prepare the Navy for a possible war with Germany. According to these witnesses the words "war" or "preparedness for war" were practically never used by the Secretary or his advisers. The Secretary displayed very great interest in the expenditure of funds from the point of view of economy alone, often without regard to military considerations, in the peace-time activities of the Navy, in providing for a new and larger building program, in looking out for the welfare of enlisted men, but he consistently rejected or failed to act upon recommendations which were made to him to prepare the Navy for war, to draw up adequate and officially approved plans, or to provide for the increase of personnel necessary for the war complements of the vessels of the Navy or to insure the carrying into effect of definite plans intended to prepare the Navy for immediate and effective intervention in the war, should war come. These officers also testified that from the time of the sinking of the *Lusitania* on May 7, 1915, they believed that sooner or later the United States would be compelled to enter the war. There is no record, however, of any action whatever having been taken to prepare the Navy, especially for such an entrance into the war, until after the breach of diplomatic relations February, 1917. No official steps to meet the peculiar conditions of naval warfare in the Great War were taken until March, 1917.

Some officers who testified concerning this defended this action by stating that such preparations would have been an overt act on the part of this Government. Such a contention must appear quite untenable, however, as even those witnesses admitted that we alone are the judges as to what ships we should build, as to how we shall man them, and as to the state of readiness for war in which they shall be maintained, and that so long as the Navy respects the state of neutrality no foreign power can rightfully consider any development of the Navy to be an overt act, whatever it may think of our intentions.

The fact remains, as all these witnesses testified, that little or nothing was done between 1914 and 1917 to prepare the Navy for war beyond what would have been done in the normal course of events. So far as the policy of the Secretary was concerned, the European war and the possibility of our being drawn into it was officially ig-

nored. The result inevitably was, as Admiral McKean, Admiral Badger, Admiral Benson, and Capt. Pratt have testified, that the Navy as a whole was not in a state of matériel readiness for war in 1917, that it lacked many essential types of ships, and that its personnel was hopelessly inadequate, so inadequate, indeed, that Admiral Niblack has stated to you that the chief problem of the Navy in the first six months of the war was to train men rather than to fight.

THE NAVY ENTERED THE WAR WITHOUT DEFINITE PLANS TO MEET
EXISTING WAR CONDITIONS.

The same condition existed with regard to the formulation of plans to govern the possible activities of the Navy in the event of war. All these witnesses have called your attention to the base plan of the General Board for a war in the Atlantic. Such a base plan, of course, existed, and was, doubtless, as those witnesses testified, kept up to date from time to time. This base plan related, however, not to any action on our part in the present war, but rather to the general strategical situation in the Atlantic and the steps which the Navy would have taken to mobilize, and the general strategy that would have been followed in event of our being engaged single handed in war against a European power. This plan was drawn up on the basis of the assumption that the primary mission of our capital fleet would be to meet and engage the enemy capital ships, probably in the western Atlantic. This plan provided in detail for the organization of the fleets, for the establishment of bases, communications, supply services, etc., but based altogether on the assumption already stated that we would be engaged alone in a war with a European power and that our Navy would have to meet alone the main fighting force of the enemy. All of the witnesses agreed that this base plan was not referred to or used in the present war. Nor has any evidence been presented to show that this base plan of the General Board was ever officially approved by the department. The witnesses have agreed that so far as they know no definite official plan for war which we actually fought against Germany was prepared and put into force, at least until many months after war began.

Admiral Benson has told you that our only plan when we entered the war was to cooperate with the Allies; that we knew too little about what was being done and about war experience and about what would be required of us to draw up any such plan ourselves; that consequently the plan of the Navy was to ask the Allies what they wanted and to give as much as we could, after such requests of the Allies had been fully and carefully deliberated upon in Washington and the requests of the Allies were granted.

WHAT SHOULD AND COULD HAVE BEEN DONE BUT WAS NOT DONE TO
PREPARE THE NAVY FOR WAR.

These same officers have testified that, at least after the Battle of Jutland, and probably since 1915, it had been perfectly apparent that if we entered the war at all we would enter it on the side of the Allies and would be fighting Germany, not alone, but in cooperation with the Allies. They have testified that in their opinion this was

attle of Jutland, it was perfectly apparent that the British fleet, and there seemed no possibility that the German fleet would ever successfully attack the British fleet. Such being the case, it should have been apparent that we would not be called upon to use effectively the fleet in the war, except perhaps for such divisions as might be sent as a reinforcement to the allied forces to insure still further the preponderance of the British fleet.

The German submarine campaign against merchant shipping in 1915. It had assumed serious proportions after the Battle of Jutland practically the only navy which were taking place apart from the support of the British German submarine campaign against merchant shipping the allied antisubmarine effort. It should, too, have been apparent that, in the event of the United States entering the war, transports would be sent abroad to reinforce the Allies on the continent. Every naval officer knew that the transports and their supplies would have to be assured by the Navy, in order to protect the belligerent vessels of the Navy, in order to maintain the marine force. Such being the case, it would seem that in 1916 on, plans should have been prepared for such action of the Navy. The department's witnesses have a testimony that it was apparent at that time that the only kind of a navy would be called upon to fight against Germany in the event of a war that we did fight when we came into the war in 1917.

Admiral Benson has testified that if the Navy Department had taken this attitude in 1916, if it had drawn up any plan for naval operations for use in the event of our entering the war on the side of the Allies, it would have been possible to have entered the war immediately with a very much larger force than we did in 1917. That is the statement of the Chief of Naval Operations that if we had had a plan which we could have had in 1916, we could have gone into the war much earlier and with a larger force than we actually did. The same steps that we took in 1917 could as well have been taken in 1916. The vessels suitable for antisubmarine operations could have been in a condition of material readiness for war. Personnel could have been obtained and trained, so that these vessels would have been ready to have entered the war almost immediately after the declaration of war.

Arrangements could have been made for the immediate use of other light craft, such as yachts, tugs, etc., which would have made it possible to have had them equipped and ready for operations within a very short time after the declaration of war. The steps which were taken in 1917 for postponing the construction and completion of major ships and for accelerating the construction of minor ships.

of destroyers, submarines, mine sweepers, and tugs could have been put into effect also. Admiral Benson has estimated that probably 50 additional destroyers could have been ready in 1917 if these steps had been taken.

It would seem from that testimony of the Chief of Operations that if we had laid down plans and followed them in 1916, we could have gone into the war immediately with probably 50 more destroyers than we had when the war broke out.

REASONS WHY NO STEPS WERE TAKEN TO PREPARE NAVY FOR ITS PART IN THE GREAT WAR.

Nothing of this sort, however, was done. The department witnesses testified that the reason why it was not done was twofold: First, that the organization of the Navy Department was not such as to insure the Secretary receiving responsible military advice and such as to give the Chief of Naval Operations the authority and the responsibility for so coordinating the military activities of the Navy as to make such steps possible.

Second, the Secretary, in directing the department's policy, refused to approve the increase of personnel necessary to man the existing vessels and which would have been required by such a plan. He refused to permit any steps to be taken which might be considered steps in the direction of readiness for the kind of war which it was apparent we would have to fight if we entered the war, and which we actually did fight in 1917 and 1918. Every recommendation to Congress necessarily had to be made by the Secretary of the Navy, and he used his own judgment in approving or presenting the recommendations made to him by the various officers in the department.

No single officer was responsible for the advice given to the Secretary as to the policy which should be followed in building up the Navy, in manning it, and in preparing it for war. The officers who have testified—Admiral Badger, Admiral Benson, Admiral McKean, and the others—have reported instance after instance of recommendations which they made which were ignored or disapproved by the Secretary and on which no action was taken. None of these officers could recall any single instance in which the Secretary himself had called for any preparation of war plans or had asked for any special efforts to be made with regard to preparing the Navy for war, though in a few instances he had signed letters prepared by these officers. In fact, according to their testimony, already reported, the Secretary conscientiously avoided any reference to a possibility of war in his plans and recommendations for the guidance of the Navy Department. He apparently consistently refused to admit that the Navy existed to fight, and that there is no excuse unless it is maintained at all times in such a state of fighting efficiency that in the event of war the country can depend upon it to strike the enemy, not half-heartedly and after many months' delay, but immediately, effectively, and victoriously.

Thus it is easy to understand why the Navy did not have plans to meet the situation which existed when we came into the war; that is, the necessity of throwing practically our whole available

force into the war against submarines. It also explains why vessels of the Navy were not materially ready for war, and why, as Admiral McKean testified, it took six months to get them prepared after the actual date of the declaration of war. It also explains why the Navy was so greatly handicapped by the lack of personnel after the declaration of war and why it became necessary seriously to impair the battle efficiency of our dreadnaughts by taking skilled gun crews from them to use as armed guards for merchant shipping, leaving their places on the dreadnaughts to be filled up by raw recruits.

FAILURE OF DEPARTMENT TO TAKE EFFECTIVE ACTION AFTER THE BREACH OF RELATIONS IN FEBRUARY, 1917.

After the breach of diplomatic relations with Germany, and even after the declaration of war, direct steps were not taken to meet the situation, except in so far as was possible by the individual officers in the department and in the fleet. There was no general, well-directed, carefully thought out, systematically coordinated plan of activities. All the witnesses have given substantial confirmation of this point. As Capt. Pratt explained in detail, as the war progressed, these defects were gradually remedied. But by bit and piecemeal the coordination of the activities of the Navy was brought about. War plans, or what might be called war plans, came into existence through the coordination of various individual recommendations of various officers in the Department on the General Board and in the Office of Operations.

As Capt. Pratt stated in his testimony (p. 2832):

At the outbreak of war neither the organization nor the administration of the department at home was such that it lent itself to the most efficient handling of the Great War. * * * These conditions were true when we entered the war and they lasted until the defects could be remedied, but by April, 1918 * * * the organization of the Office of Operations had been modified and the methods of administration changed.

And it took one year to get it in working order.

PRIVATE MEMORANDA OF INDIVIDUAL OFFICERS ONLY WAR PLANS PREPARED IN DEPARTMENT.

The various witnesses who have appeared have given you a long account of the efforts which they and their associates made to get things done in the absence of any such well-defined plan. Capt. Pratt has submitted a list of some 30 memoranda which he drew up himself. Although in presenting these as evidence he has labeled each one at the top in capital letters "PLAN," he admitted under cross-examination that these "plans" were in reality only his personal memoranda; that they were not even dated; that he did not know in most cases whether or not they had ever been officially approved even by his immediate superior. In some cases he knew they had been carried into effect, but only because later he, himself, had become assistant chief of naval operation and had himself carried them into effect.

Similarly, Admiral Benson testified that there were no plans drawn up to meet the situation which we faced in April, 1917; that the

only plans which existed were the ideas which he had in his own mind; that he imparted those ideas to his subordinates, and that they carried them out. Thus, when asked whether any memorandum or recommendation could be considered a plan until specifically approved officially by the head of the department, Admiral Benson admitted that technically this could not be considered a plan, but that he thought that it amounted to the same thing, for, as he said (p. 4779):

I was a member of the General Board, and there were a good many of those things, as well as many others, that I carried out without reference to the Secretary, and then informed him—tried to keep him informed. I felt that the Secretary had confidence in me, and I told him I would go ahead and try to keep him informed as well as I could, but I frequently did things without reference to the Secretary and informed him afterwards of what I had done.

As has already been indicated by the quotations from Admiral Benson's testimony already given you, Admiral Benson indicated to his subordinates the policies that he desired carried out, and he assumed that they drew up the plans by which these policies could be carried out, but he had no definite knowledge of any such plans, nor has any other department witness who appeared shown any great familiarity with these plans than Admiral Benson himself.

I might invite attention to the fact that when the Chief of Naval Operations himself admits that he did not know anything about any plan that might have been possibly drawn up by his subordinates, that none of the subordinates who have testified here knew of any such plans, we may consider the case proven that there were no plans that would fit in this war.

FAILURE OF DEPARTMENT TO ACT ON RECOMMENDATIONS OF THE GENERAL BOARD.

Thus, for example, there have been submitted in evidence a number of recommendations made by the General Board in 1917. Those have been presented to the committee as being the department's plans. One of these was a memorandum of the General Board of February 4, 1917, pointing out a number of specific steps which should be taken to prepare for a possible war against Germany. This was never officially approved by the department, and, so far as Admiral Badger knew, it had not been carried into effect, though he assumed that some of the things recommended had been done. He did not know whether this recommendation of the General Board had had anything to do with the things which were actually done. Much has also been made of a plan submitted by the General Board on February 17, 1917, for the war against Germany, in response to a request from the department.

With regard to this, Capt. Pratt said (p. 3407):

The letter of February 10, 1917, was prepared by Capt. Chase, was signed by the Secretary, and was sent to the General Board. * * * They submitted an answer, which was disapproved.

This is the "plan," which has since been so mysteriously lost from the files of the department.

The CHAIRMAN. Then it was not used?

Capt. PRATT. Oh, no. I did not use it, and I do not know of any other persons who did.

When it came to the question of arming merchant ships, in March, 1917, Capt. Pitt Scott drew up a memorandum of how this should be carried out, and, acting in cooperation with Capts. Pratt and Schofield, got the approval of Admiral Benson and of the Secretary. Thereupon Capt. Scott proceeded to take his recommendations and carry them into effect himself.

I would like to say in connection with the business of arming merchant ships that it was one of the severest blows to the commander of the forces on the other side to be notified, after having been trying three months to persuade the Navy Department to assist with the convoy system, to be informed that they considered that ships having armed guards on them were safer when sailing independently. To me it was a mystification. The explanation of this thing came later in the form of an estimate of the situation, which was a purely logical document in all respects. The premises of that document were that a vigilant armed guard will always see a submarine in time to shoot it down, and based upon that premises they formed the conclusion that vessels sailing independently were safer than in convoy. You can not blame officers for making a reasoned estimate of what they believed to be true, but the grave error that was made by the Navy Department during the war was that they repeatedly did that same thing. They drew up perfectly logical estimates of the situation upon what they believed to be the facts in the case, and they did not refer over to the other side to see what the facts were.

When that astonishing statement reached us on the other side we immediately submitted by telegraph the facts in the case, which showed that their premise was all wrong. I could cite numerous instances where that was done. You have heard the statement of Admiral Benson, and we should consider his responsibility as such that it was up to him to make such decisions. There can be no more serious or grave violation of military principles that Admiral Benson's making decisions in Washington as to fighting submarines in the front.

The CHAIRMAN. Admiral Sims the question of the signature of that letter has come up before the committee.

Admiral SIMS. I will come to that thing presently.

The CHAIRMAN. And you will explain that later on?

Admiral SIMS. Yes. I will come to that presently. In March, the General Board submitted several recommendations, on none of which was any official action ever taken, so far as the records indicate.

On April 5, 1917, the General Board submitted two recommendations, one relating to the use of the Navy in cooperation with the Allies; the other relating to the sending of officers abroad to obtain information from the Allies. The first of these plans was indorsed on June 8 by an officer in the office of Operations with the statement to the effect that, so far as possible, these recommendations were being carried into effect. There is no indication that this recommendation was ever accepted and officially approved as a general plan, and it is at least certain that most of the recommendations were not followed, as a mere examination of the letter shows. In the case of the second plan, the General Board pointed out how great was the importance of getting immediately all available information from the Allies,

and recommended that 10 officers including myself, should be sent to London, and 6 officers under Admiral Rodger to go to Paris. They explained that this number of officers was necessary in order that the available war information, vitally and immediately needed by the department, could be obtained within two months. No action was taken on this recommendation of the General Board. I had already gone abroad with my aid, and, during the first four months of the war the Navy Department expected me, with only one officer to assist me, to send over the information which the General Board had estimated it would take 16 experienced and technically qualified officers two months to accumulate. Comment seems superfluous as to whether or not this recommendation of the General Board can be considered as a departmental plan.

Similarly, on May 3, 1917, the General Board submitted recommendations to the department, based on reports which they had received from allied officers, upon and on my early messages, in which recommended substantially the same policy and measures that were recommended from London after full conference and agreement with the allied naval chiefs. They urged that all available light craft should be sent abroad immediately, pointed out that about 200 light craft could probably be requisitioned and put into service within two months and sent abroad. Unfortunately no more action was ever taken on these recommendations than on the recommendations which I was sending from abroad at the same time.

HOW ACTION OF INDIVIDUAL OFFICERS SAVED SITUATION CREATED BY THE HOPELESS INACTION OF DEPARTMENT.

None of the officers who served in the department during the war, and who have testified before this committee, have attempted to maintain that any definite plan was formulated before or during the early months of the war to provide for the most effective carrying on of naval operations. The officers have confined themselves to relating how, in the absence of any such plan, they did their very best each in his own sphere to accomplish the efficient prosecution of the war. I have never questioned this, nor in my opinion is it questionable.

The more I review the situation as it was in 1917 the more I am amazed at the extent of the achievements which the Navy really accomplished. The fact that the Navy was able to do as well as it did was undoubtedly due to the efficient and unsparing efforts of these officers in the department. They had recognized the real conditions long before war broke out and had endeavored to take such steps as they could to get ready for war.

After war broke out, I think there can hardly be a doubt that practically every single individual in the department was actuated by a common motive and by the desire to make the forces of the American Navy felt in the war as effectively as possible. But, as I have already pointed out, the efficiency of the Navy or the efforts of individual officers has never been questioned. It has, however, nothing to do with the question as to whether or not the organization of the department was of such a nature, and the direction of the department was so administered, that the individual efforts

of all these officers accomplished the most effective results. On this point, too, there seems to be little possibility of doubt. Every one of the department's witnesses has been in agreement in testifying that steps which could and should have been foreseen had been neglected; and that the heads of the department, instead of providing the effective organization, the enthusiastic leadership, and the will to victory which would have made a unit of the Navy Department organization, failed to bring about that cooperation and to provide that leadership. The individual officers had to do, by their own personal efforts and by personal cooperation and conference with other officers, what should have been foreseen and provided for in the organization of the department and in its war plans. Consequently, the testimony that I have given, instead of being construed as a criticism of these department officers, was in reality quite the contrary. Their testimony, instead of refuting my criticisms, have served to confirm and accentuate them.

REVIEW OF ACTIVITIES IN DEPARTMENT AFTER FEBRUARY, 1917, DISCLOSES FAILURE TO MEET THE EMERGENCY CREATED BY WAR.

A general summary of the steps which were taken by the department from February, 1917, on, shows how completely the organization and direction of the department failed to meet the situation. Between the time when the German ambassador was given his passports, February 2, 1917, and the declaration of war, practically no official steps were taken by the department to provide for what the Navy should do in case we should be forced to enter the war. During this period, however, individual officers in the department were very active. The General Board submitted a series of recommendations as to steps which should be taken. A number of officers who had had the War College course and who were then in the Office of Operations appreciated full well the steps which should have been taken. Admiral McKean, Capt. Pratt, Capt. Chase, Capt. Schofield, and Capt. Scott, individually and collectively, used every means at their disposition to impress upon the department the necessity of taking some steps. On the 3d of February, 1917, Admiral McKean—page 4126—submitted a memorandum covering the material condition of the Navy in which he pointed out that the Navy's mission under the existing condition was: First, to prepare all ships now built for war service at once; and, second, to complete the new ships as rapidly as possible. In order to accomplish this, he recommended that 17 different steps should be taken. In his testimony he stated that he did not know what action, if any, had ever been taken on any of these 17 points. Similarly, Capt. Chase, assistant to the Chief of Naval Operations, prepared a letter to the General Board, asking them to prepare a plan as to what the Navy should do in case the United States entered the war against Germany.

The General Board, as Admiral Badger and other officers have testified, prepared such a plan and sent it to the department. Both Capt. Pratt and Admiral McKean testified that they had never seen this plan; that it had never been adopted; that they did not know what it recommended; and Capt. Pratt definitely stated that the

plan had been disapproved by the department. Admiral Badger, in commenting on this, said that the General Board had discharged its full duty and had drawn up plans which would have enabled the Navy to have operated much more effectively, but that the trouble was that "the critics" were not satisfied. He also testified that he did not know definitely whether any action was taken as a result of the memoranda submitted by the General Board.

At the beginning of March Congress showed its disposition to authorize any action necessary in the national defense and appropriated an emergency fund of \$115,000,000 for the Navy Department. The officers in the Office of Operations, realizing the importance of developing a systematic plan for the use of the Navy in entering the war, and especially for the wise and efficient spending of these emergency funds, drew up memoranda. These were combined into what would have served as a complete and specific plan to govern the Navy's activities. All the witnesses have agreed that no such plan was ever officially adopted and put into force by the department.

As Admiral McKean said (p. 4362) :

There was no special plan to meet the issue that arose in 1917, except the General Board plan modified by the plan of 1917 (which was lost).

The CHAIRMAN. And yet no plan was ready at that time, February, 1917, for such an event?

Admiral McKEAN. I do not think there was a detailed plan for the special conditions; no. I never saw one. We worked up the details of the plan as the situation developed.

Again, when Admiral McKean was asked whether he could give the committee the general base plan on which the department was working in 1917, he said (p. 4365) :

Impossible. There is no such thing in existence.

ACTIVITIES OF INDIVIDUAL OFFICERS IN ATTEMPTING TO SAVE THE SITUATION.

Unable to get the department to approve and put into force any such war plan, these individual officers, feeling keenly their responsibility, endeavored to do by individual acts what they could not get the department to do officially. Capt. Chase, Capt. Pratt, Admiral McKean, Capt. Schofield, Capt. Laning, and other officers not only devoted their efforts to their own particular duties but also drew up many memoranda on many phases of the situation. These memoranda were of the kind they had been trained to make at the Naval War College. They involved a careful estimate of the various situations which might arise, a survey of the problems to be met, and recommendations as to the best use of the resources available to meet those problems. Capt. Pratt has submitted a large number of these memoranda. The fact that he has labeled them "plans" means nothing more than that for the purposes of this investigation the officers who served in the department naturally desired to give a full account of their own activities. In the absence of any real plan, all these memoranda and the activities of these different officers taken together undoubtedly and necessarily took the place of the non-existent official plans.

Thus Capt. Pratt, in discussing the situation in 1917, admitted that while there was no specific detailed war plan, these memoranda

were drawn up to accomplish the purpose which would have been, normally speaking, accomplished by such a war plan. He said of the officers in the Office of Operations (p. 3838):

They were a little band of brothers, united together in their thoughts and in their studies, so that they spoke a common language. * * * We had all been students of the Naval War College * * * and so in talking things over we had rather a definite idea of what we thought should be done.

Capt. Pratt went on to say that in regard to the memoranda:

I think most of those that I submitted I wrote myself.

When questioned as to whether there were any definite plans, he explained:

It is very difficult to draw the line where policy melts into plan and where plan passes from its general aspect into definite action. Those plans that I outlined looked behind, looked at the time we were in and tried to look ahead; and a great many of them passed from the atmosphere of policy into definite action. * * * They passed because I afterwards became the operator. * * * Every one of those I made out I laid on Capt. Chase's desk, and he took them home with him and studied them and we used to talk over the subject a great deal.

These plans, Capt. Pratt explained—

were more or less in the nature of suggestions and memoranda for him (Capt. Chase). * * * That is exactly what they were intended to be.

HANDICAPS IMPOSED BY LACK OF PLANS AND INTELLIGENT DIRECTION.

Capt. Pratt said also that none of these memoranda of his were officially put into force as plans by the department, and he had no knowledge as to whether they were used by the department.

We can only determine that by the event.

Capt. Pratt gave a full account of how the other officers were similarly presenting similar memoranda for consideration. In only two cases did Capt. Pratt know of any definite action that had been taken on his memoranda, and he only knew of these because in each case, after having drawn up the memoranda, he was told to go ahead and do things he had recommended.

Admiral McKean gave exactly the same testimony as to the state of affairs at this time. He said that there were no detailed and complete plans (p. 3219):

* * * The personnel who could work out such detailed plans was not available nor was the information.

When asked as to the steps he took himself in February, 1917, to get action, he gave substantially the same account as Capt. Pratt.

Thus, he was asked (p. 4297):

The CHAIRMAN. Did you not make the suggestion yourself that a regular plan be drawn up to meet the special conditions of a war with Germany?

Admiral McKEAN. Yes; I think probably in conference with Capt. Chase I suggested it. I talked it over with him. * * * I do not know where the suggestion came from, but that was probably the cause of that letter of his (of Feb. 10, 1917) to the General Board, asking for a plan.

The CHAIRMAN. And was such a plan approved and put in force?

Admiral McKEAN. There was such a plan received. * * * That is going back again to the lost one. I do not recall. Senator, ever having seen that plan or what it looked like, or what it contained; but I do know the lines that it was worked along and we were working along those lines both before and after and all the time.

It would hardly be possible to conceive a greater confusion in reference to plans.

Admiral McKean agreed that it would have been of great advantage to have had such a plan (p. 4399) :

It might have relieved me of doing some administrative planning work myself.

In discussing the way in which the office worked, he said (p. 4364) :

Pratt * * * would pass a plan or a part of a plan over to me orally and we would discuss it and discuss it sometimes with our chief, and if it needed the Secretary's approval he would take it up with the Secretary, but it was often, as I say, disposed of orally, and they would say "go ahead and furnish the material at such and such a date."

Admiral McKean also testified that at no time was he given any general plan as to how the United States naval forces would be employed during the war, or any general instructions as to what ships should be prepared for war or what their duties would be. Instead, whenever a decision was reached to send over any individual units, he would be informed and told to get them ready immediately and send them off. This happened both in the case of the antisubmarine forces and of the battleships sent, but Admiral McKean was not sure, in his testimony, that he needed any such general instructions, because he believed that, knowing as intimately as he did the other officers in the department, he could accomplish by informal agreement and direction, memoranda, and conferences what would ordinarily have been provided for by such instructions.

Thus, for example (p. 4372) :

The CHAIRMAN. After our entry into the war, were you given any general plan of operations to guide your activities?

Admiral McKean. I did not need any.

In another place: Admiral McKean said that the method by which the officers worked (p. 4365)—

was as specific and as complete in details as was necessary for the officers concerned to operate under effectively and efficiently.

There was no base plan to provide the manner in which vessels should be used—

but I knew what vessels * * * I was called upon to get ready materially for use overseas or for use at home or for use otherwise.

It was true that there was no specific plan in writing—

but I had it in my head and I was working on it every day * * *.

The CHAIRMAN. That is, there were a lot of ideas and a lot of memoranda, but undigested?

Admiral McKean. They did not have to write them down in order to digest them. We digested them at the time and got action. We would have a discussion as to a certain part of the plans * * * and they would say, "What will that require in material?" and I would ask, "What is it you want, when do you want it, and what type of ship?"

Admiral McKean also testified that he had prepared many memoranda with regard to improving the matériel condition of the vessels, and had submitted these memoranda in his testimony. When asked what became of these and whether they were approved or not, Admiral McKean said (p. 4130) :

They were not always approved in tota, but, like other things, the suggestions came from different sources of what we should do to get ready for war, and

they were taken to the chief. The chief took them up, or took them up with the Secretary; and I only cite those to show what we were thinking about and what we were trying to do; and I want to say that I succeeded in getting most of them done on time. * * * We would take them up with the chief and we would discuss them in conference. Some of them would be changed a bit, but we did get most of it through. This is illustrative of the lines we were working along, and I did have the sympathetic support of my chief in this business, and, within limits, also of the Secretary. He thought that I was a very extravagant individual. * * * If I did not get some action on a memorandum at that time. * * * I followed it up pretty close.

In further explanation of the methods used in the department, Admiral McKean said (p. 4448) :

We kept our plans in our heads, and when we discussed them we told people and burned the notes. It seems to me there is a good deal of misunderstanding about the necessity for detailed plans. I think the accent on the plan business is placed too strong. I did not miss the plans so much during the war.

The CHAIRMAN. Admiral, we will adjourn now until 2.30 o'clock this afternoon.

(Thereupon, at 12.45 o'clock p. m., the committee took a recess until 2.30 o'clock p. m.)

AFTERNOON SESSION.

The subcommittee reconvened pursuant to the taking of the recess at 2.30 o'clock p. m., Senator Henry W. Keyes (acting chairman) presiding.

TESTIMONY OF ADMIRAL W. S. SIMS—Resumed.

Senator KEYES. The committee will come to order. I am sorry to say that the chairman of the committee is detained in the Senate this afternoon, but it is his wish that we go on with the hearing, and you will therefore proceed, Admiral Sims, with your statement.

Admiral SIMS. Admiral Benson, in his testimony, confirmed absolutely the statements of Capt. Pratt and Admiral McKean as to the methods used in the department. According to Admiral Benson's explanation, no general plan was ever adopted. Such plan as might have existed was only that which existed in his own mind. He would receive from his subordinates all sorts of memoranda and suggestions, would reach his own decision, would take up the matter with the Secretary, and, often after some delay and much difficulty, would get a decision. Then, the policy having been decided, he would announce it to his subordinates and give them instructions to do some particular thing. He assumed that in the execution of the operations thus ordered the subordinates prepared and carried out their own plans, although he did not know, but at any rate these were the only plans which the department had, and upon which it based its operations. That, I should say, was entirely conclusive evidence as to whether the department had plans of the kind we were talking about; that is to say, plans for carrying on the particular and peculiar warfare.

RESULTS OF METHODS OF DEPARTMENT IN 1917.

What actually happened in the early months of 1917 shows how this method worked. In March the officers of the department still found a determined opposition on the part of the Secretary to any

steps looking toward the preparation of the Navy to intervene in the war. Toward the middle of March the officers succeeded in getting the armed-guard policy approved, and Capt. Scott thereupon proceeded to carry out his own memoranda, and with the assistance of various other officers went ahead with the arming of merchant ships. At the end of March, after the declaration of war seemed inevitable, the approval of the department was obtained for the organization of the patrol force, and Admiral Wilson was ordered to Washington to take command of this force as soon as war should be declared. The so-called plans for the use of this force, submitted by Capt. Pratt, were in reality nothing but a list of the ships to be included in the force and the campaign orders issued by Admiral Wilson himself to his force. No evidence was given of any departmental plan of which the formation of the patrol force was a part.

Similarly, no definite plan was made for the expenditure of the emergency fund or for utilizing it to fit the Navy for the antisubmarine warfare in which, according to Capt. Pratt, Admiral McKean, and other officers, it was obvious that the Navy's effort would be chiefly occupied. Instead of devising some such plan for the most effective and economical utilization of this money, the matter was kept by the Secretary entirely in his own hands, and he himself determined how the money should be expended, without regard to any departmental plan, he himself having disapproved the efforts to obtain such a plan.

There could hardly be a greater contradiction than that between the situation as it actually existed in April, 1917, and that which the Secretary has described to you in his testimony and which he has expressed in his report to the President. Admiral Benson, Admiral McKean, Admiral Badger, Capt. Pratt, all agreed that his expression that the Navy was ready from stem to stern on the day we declared war, was not accurate from their profession viewpoint, and explained that it was probably a journalistic phrase and that they did not know what the Secretary meant to imply by it.

THE CONDITION OF THE NAVY IN 1917 WAS ONE OF UNPREPAREDNESS FOR WAR.

For three years the department's policy had prevented any adequate preparation to meet a situation such as that presented on April 6, 1917, when it became necessary for the Navy to play its part in the war. As has already been pointed out, the only parts of the Navy that were at that time in an efficient state as to matériel and personnel were the dreadnaught divisions and some 20 destroyers which were with these divisions. All the other vessels of the Navy were in varying states of matériel depreciation and were all short of crews. In spite of the fact that it should have been apparent for at least a year that when the Navy entered the war its chief effort must necessarily be directed against combatting submarines, no plans had been prepared for this. The type of vessels that were needed were not ready. No effort had been made to provide additional vessels of this type or to provide the necessary crews. In spite of the fact that the submarine effort was necessarily concentrated in the waters of Europe where the supply lines of the Allies focused, there had apparently not even been any consideration of the possibility of sending naval craft overseas.

DEFENSIVE POLICY OF DEPARTMENT IN 1917.

The whole of the plan of the Navy, at this time—April, 1917—as revealed by the department's own witnesses, was to mobilize the fleet, to defend the Atlantic coasts ports, and to provide for an off-shore patrol by sending out the available light forces of the Navy on arduous patrol duty along the Atlantic coast, 3,000 miles from the nearest submarine. Admiral Benson has testified that on entering the war our policy, and the plan for our cooperation with the Allies, was to find out from them what they wanted us to do, and then to do it after we had first carefully considered our own defensive needs, and subjected their requests to deliberation in Washington, where, as all these officers fully agreed, there was at the time no information upon which any intelligent deliberation or discussion of these requests could be based.

It is true that, as a result of a request from Ambassador Page, I had sailed at the end of March for London, but I had received no instructions beyond that which I have already described in my testimony. I had not been informed as to whether or not the Navy would send any vessels abroad. I had received no inkling of what the policy or plans of the department might be. I was simply to get what information I could on the other side on the subject of cooperation.

DEPARTMENT INFORMED BEFORE WAR WAS DECLARED OF ASSISTANCE
NEEDED IMMEDIATELY BY ALLIES.

The first indication that the department received as to the help which the Allies would require from them was not that given by the French and British admirals in the conference of April 10 and 11, 1917, as might be implied from the testimony of the Secretary. On the contrary the department had received two weeks previously a statement of the suggestions of the Allies which provided not only for defensive cooperation far from the war zone, but also for active offensive intervention against the submarines in the critical area of the war zone.

The naval attaché in London on March 29, 1917, cabled to the Navy Department as follows:

The highest authorities hope unofficially that we might find it possible to cooperate as follows:

1. Hold on the Pacific coast to the Canal and later the South Pacific to Cape Horn.
2. Keep our Asiatic forces intact.
3. Base our destroyers on Ireland and operate as soon as we find our Atlantic seaboard free.
4. Except for the east side, hold the Atlantic north and south.

Of course, at the time this message was received in the department the United States was not yet at war, but within a week Congress, in response to the President's stirring message, had officially declared war. As soon as this happened the allied British and French naval authorities instructed their respective commanders in the western Atlantic to get in touch with the Navy Department and to arrange for cooperation with the Navy Department specifically in the patrol against raiders in the western Atlantic. The British authorities had

two weeks previously informed our naval attaché in London, however, as to the help which the Allies expected from us, and in the message quoted above one of these requests had been that we "base our destroyers on Ireland." There was no suggestion that we send two destroyers for the moral effect. On the contrary, judging from the attitude I found on arrival in London, it was expected that we might immediately send abroad all our destroyers.

MISINTERPRETATION BY SECRETARY OF AGREEMENT MADE WITH LOCAL ALLIED COMMANDERS IN APRIL FOR DEFENSIVE PATROL IN ATLANTIC.

The Secretary in his testimony seemed to think that Admiral Browning and Admiral de Grasset had come to the Navy Department as naval plenipotentiaries to discuss the whole question of co-operation between the United States and the Allies, but the officers from the department who testified did not agree with this.

Thus, Admiral Badger said (p. 2665) :

On April 11 Vice Admirals Browning and de Grasset, respectively commanding the British and French cruiser and patrol squadrons in the western Atlantic, with members of their staff, met in the General Board room in conference with the Secretary, the Assistant Secretary, and a considerable number of our leading naval officers, to discuss the war situation and set forth the ways in which in their opinion the United States could best render assistance to the Allies. While a discussion of the general subject was had, the British and French admirals were particularly concerned as to the patrol of the east coast of North and South America, for which their forces were considered inadequate. * * *

Page 2676 :

Admiral BADGER. I was concerned because it was their duty to look out for the patrol of the western Atlantic. What they wanted us to do was to give assistance there for the moment, so that to them for the moment that was the most important thing. * * * (P. 2677.) I think the gravity of the situation was touched upon by these officers and touched upon very strongly * * * but these particular men were interested in the duty which was assigned to them, and that was the protection of British and Allied commerce against raiders upon the east coast of the Americas.

Admiral Badger (p. 2793) :

No definite agreement was made on sending forces abroad to the submarine campaign. The definite agreement we made was for the patrolling of the east coast of North and South America.

I quote that thing for the purpose of refuting the statements made that the agreement was that we send two destroyers to the other side to show the flag. It is such an absurd statement that it requires to be refuted.

Similarly, Capt. Pratt said :

Admirals de Grasset and Browning did not go very definitely into the submarine situation. * * * Their point of view would be apt to be colored a good deal by conditions outside the war zone. Very frankly, I would consider that after a man had been outside the zone of operations for any length of time his opinion would not be as good as that of a man who was sitting right on the job day by day. (P. 3859.)

It is true that Admiral Browning spoke of the submarine situation. He may have had some direct instructions from the Admiralty which possibly he did not show to us.

It would appear from the above testimony that there is no ground for the assumption that these officers wished to convey the impres-

sion that they had come to discuss the whole subject of cooperation in the war zone, as well as on the eastern coast of America, or that their Governments would be completely satisfied by the agreement which they made. It has even been stated that one of the officers asked that two American destroyers be sent only for the moral effect, to show the American flag in European waters, and that he apparently considered this a sufficient contribution from the United States.

HESITATION AND DILATORY METHODS OF DEPARTMENT IN EARLY MONTHS OF WAR.

As the Navy Department had no plans for the use of American naval forces in the submarine campaign, and as apparently no real study had been made of the situation by responsible authorities, it is not surprising that the department did not at first hear with enthusiasm the appeal of the Allies for assistance in the war zone. In the absence of any plan, every individual act had to be considered individually. No policy having been decided upon, other than that of meeting each situation as it arose, it became necessary to spend long hours in deliberation and discussion of each and every individual request for forces. Naturally, too, it is only to be expected that it would be somewhat difficult for an administration which had been for three years devoting itself insistently to opposing any effort looking toward successful war operations on the side of the Allies, to change its spots overnight and to suddenly throw itself with full vigor into the battle line alongside the Allies. Every suggestion as to the employment of forces abroad during the first few months, as the various department's witnesses have testified, was subjected to long deliberations and discussions. They state that it was not sufficient for the Allies to say that the forces were needed, the Allies must first explain in detail all of their own plans and policies, justify their own conduct of the war, and explain every conceivable circumstance connected with their request for reinforcements.

I will invite attention again to the fact that that is one of the main contentions we made in these criticisms, that they insisted upon the handling of these details 3,000 miles away.

In the meantime the Navy Department, as the department's witnesses have all testified, were concerned, not primarily with defeating the enemy, which, so far as the Navy was concerned at this time, was the German submarine, but their chief concern was that of defense. Fifty-five light craft had been gathered together to form the patrol force, and already they had begun their futile patrol up and down the Atlantic coast, wearing out the matériel and the personnel in a search for an enemy which was 3,000 miles away. Having no officially approved plans to meet the situation, and with no prevision which would have enabled them to enter into the war intelligently and effectively, when war was declared, the heads of the department struggled against the greatest difficulties, not only in getting the Navy ready to fight after war had begun, but also in making up their mind as to where the fighting was.

DEPARTMENT'S FAILURE TO FIND RECORD OF AGREEMENT OF APRIL, 1917,
IN ITS OWN FILES.

I might say there that after any war of considerable length it usually happens or often happens that the files are in disorder, and it is often not easy to find things, because they dip into each other's files during the war for various papers and they do not get them back again.

The Navy Department's witnesses and the Secretary had referred a number of times to the message which I included in my testimony before this committee, which was sent on April 13, 1917, by Vice Admiral Browning to the Admiralty. It is rather interesting as a commentary upon the department's view of the situation at that time that apparently the agreement was considered of so little importance that no copy of it, or no full statement of it, was to be found in the files of the Navy Department. Capt. Pratt, in his testimony, and the Secretary of the Navy likewise in his turn, in referring to this agreement with the allied admiralities, quoted the copy of a message from Admiral Browning to the Admiralty setting forth the clauses of the agreement I had obtained from Admiral Jellicoe in April, 1917, and, as I have already stated, the department never informed me of the agreement or even intimated at the time that any such agreement had been made. It appears that the copies which they introduced had either been taken from my own testimony or from the documents which I supplied to the historical section in London and which are now in the files of the Navy Department. The copy introduced by Capt. Pratt was in fact marked "supplied by the historical section."

SIGNIFICANT OMISSION FROM MESSAGE READ BY THE SECRETARY OF THE
NAVY.

The Secretary, in quoting this message of Admiral Browning to the Admiralty, omitted what, from the point of view of this committee, should be the most interesting sentence in the whole message, in view of the Secretary's assumption that the allied admirals were completely satisfied with the agreement and that we had done everything that they expected. After giving the various points upon which agreement had been reached as to what the United States Navy would do in assisting the French and British in defensive and antiraider patrols in the western Atlantic and elsewhere, Admiral Browning said, with regard to the supplying of forces by the United States for service in the war zone, and this was the sentence which the Secretary of the Navy omitted when he included the message in his testimony before you: "Too much reliance should not be placed, however, in early success."

It is obvious from this sentence that Admiral Browning cherished no illusions as to the degree of whole-hearted cooperation to be expected at that time from the Navy Department. That his doubt as to the extent of cooperation to be expected was justified is fully borne out by what actually happened, by the delay of many months in getting the available light craft into the war zone, by the consistent policy which the Navy Department followed in the early

months of delaying action on practically every request from the Allies, whether submitted directly or through me, and by the refusal of the Navy Department to supply reinforcements requested until every detail and every circumstance leading to the request should be explained fully and to the satisfaction of the Navy Department, and until the Navy Department in its turn should not only be satisfied as to the reasons for the request but should have made sure that it would not interfere with their own plans for patrolling areas 3,000 miles from the nearest submarine, and with their paper policies explained by Admiral Benson and the Secretary for fighting the next war.

Admiral Benson, in deed, in his testimony said:

I think we did exactly what was the right thing to do at the time with what we had. As a principle of warfare I believe in active offensive warfare, but—

And the next sentence is especially significant of the department's attitude (p. 4510):

This was not altogether our war.

DEPARTMENT'S DELAYS DUE TO GRAVE MILITARY ERRORS.

An attempt has been made by the Secretary and by some of the witnesses called at his request to justify the delays of the department on the ground that the department could not act without mature reflection, and that they could not accept any recommendation made by me until it had been fully discussed in Washington with the Allies's representatives there. It has been implied that I assumed that the Navy Department, as the Secretary expressed it, should become merely a rubber stamp to register and approve the recommendations I sent in. Anyone who has read my testimony, or my original letter, must realize what a misinterpretation of my whole attitude such an insinuation is. Of course, the Navy Department had to decide all questions of policy. I never for a moment assumed or thought that the ultimate decision rested anywhere but in the Navy Department. I did assume, however, that the primary mission of the Navy in the war was to help to win the war, regardless of any other consideration. All the officers who have appeared before you have declared that in April, 1917, information was not available in Washington upon which decisions could be based, and that very little was actually known about the conditions of the warfare against submarines. All of these witnesses, therefore, agreed in testifying, as did Admiral Benson, when he said (p. 4671):

Our plan in general was to send vessels over as fast as we could get them ready, and so on. To act, to cooperate with the Allies in any plans they had, that was our general plan.

In another place Admiral Benson again emphasized the fact that when we came into the war our policy was to find out what the Allies wanted and to act in accordance with their requests and recommendations.

Capt. Pratt, in admitting that I had received no information as to the department's policy or plans until July, 1917, stated that the policy letter which was cabled to me at that time, and which in substance assured the Allies of the full cooperation of the United States

Navy in the war, was the policy which had, in fact, been followed from the beginning, and Capt. Pratt was positive that at all times every officer in the department was not only willing but anxious to cooperate in every way with the Allies.

I assumed that this would be the policy of the department, in the absence of any definite instructions or specific information. It was so obviously the only thing that we could do that there was no question or dispute about it. I, therefore, considered it my duty to get in touch at once with the heads of the allied admiralities, and, after a full discussion of the situation with them, to recommend to the Navy Department such steps as the situation warranted, which were within the means of the Navy Department to undertake and which were in agreement with the policies of the allied navies. This I did, and from the time of my first message in April, 1917, I endeavored to supply all the information concerning the situation which was physically possible with but one aide. For three months, however, my efforts seemed almost futile. Nine-tenths of my messages were not even replied to. I received no indication of any sort as to what the department's action was going to be. The Allies, believing that I was the accredited representative of the Navy Department, naturally looked to me for information as to the action the Navy Department intended to take on the recommendations made, and during all those first months I practically never was able to inform them as to what the Navy Department's plans or policy might be, or as to what forces might be sent immediately or ultimately.

Meanwhile the Navy Department was holding the 55 vessels of the patrol force together with many destroyers of the fleet on the Atlantic coast. They were consistently disregarding or disapproving the Allies' requests for assistance. They were in constant communication and discussion with the allied officials in Washington as to the steps which they would take; but, as I pointed out in my previous statement before this committee, in most cases I was not even informed of these discussions, or of the decision reached, and had to learn, in most cases accidentally, of these activities of the department through casual remarks of allied naval officials or through seeing on their desks messages from Washington conveying essential information about plans, movements, and disposition of forces, etc.

All of the department's witnesses have agreed that I was the Navy Department's representative abroad; that most of the information received by the Navy Department came through me; and that my recommendations were almost without exception ultimately followed, after the period of delay, running often into months. I do not desire to deal longer with this point except to invite attention to one rather significant feature of the situation.

**ASSUMPTION OF OMNISCIENT WISDOM BY THE DEPARTMENT NOT JUSTIFIED
BY FACTS AND RESULTS.**

The Secretary has laid great stress upon his statement that all decisions had to be made in Washington. By that he implies that the officials of the Navy Department, who testify that they had very incomplete information as to the war experience of the Allies, were more competent with the advice and assistance of only a few subordi-

nate allied naval officers, to judge the complicated submarine situation, and to determine what should be done, than were the heads of the allied navies themselves, who had had nearly three years' of experience in the war, who had the benefit of the advice of hundreds of trained antisubmarine officers, and who had the full and complete information on every conceivable subject relating to the war within arm's reach.

**WHY CRITICISM BY THE SECRETARY THAT MY INFORMATION CAME FROM
BRITISH SOURCES IS UNTENABLE.**

The Secretary has specifically stated that my information came chiefly from British sources, and has assumed that because I got my information from British sources it was necessarily of little or no value, and that for this reason all of my recommendations were open to suspicion and had to be viewed with great care. Inasmuch as I had been sent to London by the Secretary of the Navy himself to obtain information, chiefly from British sources, because as he recognized at this time, and until his testimony before this committee the British Navy was necessarily playing the chief part in the war at sea, I may be permitted to inquire from what sources I was expected to acquire information if not from the British, to whom I had been accredited, and from the chiefs of the allied navies when we met in conference? Inasmuch as the whole allied experience in the submarine war was known only to the allied officials, from whom did the Secretary expect me to get the information upon which my recommendations were to be based if not from these sources? It must be added also that, although my information was necessarily from these sources, and although in some cases I transmitted requests made to the Navy Department through me by the British or French or Italian Navy Departments, in almost all cases my recommendations were based upon a thorough review of the situation made in conference not only with British but usually with the responsible French and Italian naval officials as well.

FALLACY OF POSITION MAINTAINED BY THE NAVY DEPARTMENT.

It was obviously the Navy Department's function and duty to determine our policy in the war. The policy having been determined, the steps taken to carry out that policy obviously depended upon a knowledge of the exact situation and full information as to how our available forces could be most effectively used. The Secretary's attitude is nothing less than that he and his advisors in Washington, with information which all of his own witnesses have admitted, was inadequate and incomplete, were better able to decide as to how a certain number of the naval units could best be employed abroad than was the combined experience and naval wisdom of all the allied leaders, even though such employment might depend upon information not 12 hours old and of such a nature as to demand immediate action.

In reviewing the delays of the Navy Department in sending forces abroad and in sending me additions to my staff of one line officer, it is apparent that these delays were due to the lack of any consistent

plan and to the inability to realize the situation and to perceive the steps which were necessary to meet it. Practically all of the department's witnesses, Admiral Benson, Admiral Badger, Capt. Pratt, Admiral McKean, have admitted that it would have been better to have sent the forces abroad earlier.

CONTRAST BETWEEN BOLD WAR POLICY OF THE PRESIDENT AND THE TIMID AND HESITANT INACTION OF THE NAVY DEPARTMENT.

It is interesting in this connection to contrast the bold, offensive policy which inspired the President from the time that we entered the war with the policy of inaction, hesitation, and delay on the part of the Navy Department, which has been revealed by the testimony of the department's witnesses. The President, as the speech to the officers of the fleet, on the *Pennsylvania*, in August, 1917, and his message to me on July 4 plainly indicate was in favor of acting boldly and disregarding the possibility of loss if the victory might thereby be hastened. He stated that he would willingly sacrifice half the American and British combined fleets to accomplish this end. Yet, at the very time that the President was expressing these sentiments, the Navy Department was subordinating the sending of assistance to the Allies to local defensive measures, was considering, not the winning of the war but the saving of the few American ships which might have been sunk if two or three submarines had visited the Atlantic coast in 1917 or the small amount of American shipping which could have been protected to a certain degree through the sole policy which the department consistently carried out in the early months—that is, of arming American merchantmen. It apparently made no difference to the department that for every ton of American shipping that was thus being saved ten, or one hundred, or one thousand tons of allied shipping was being lost.

THE POLICY OF THE NAVY DEPARTMENT IN THE EARLY MONTHS OF THE WAR.

Admiral Benson has very clearly explained what the policy of the department was in this connection in the early part of 1917. His policy was not to do everything possible to win the war, but to follow his natural inclinations and safeguard American interests and the American Navy and help the Allies with the forces left over.

He said, for example (p. 4778) :

Mahan was writing general principles for ordinary war. Mahan also says a great deal about cooperation with allies which has not been brought in, and I am not prepared to bring it in. * * * This war was a very unusual one. The conditions were very unusual. It was a condition, and not a theory, that we were facing, and we had to meet it as rapidly and efficiently as we could with what we had.

Page 3743 I :

Admiral BENSON. Mine was the responsibility. I had to exercise my judgment; and my first thought in the beginning, during, and always was to see, first, that our own coast and our own vessels and our own interests were safeguarded. Then, when I was satisfied that that was done as far as I could with what we had, then to give everything we had and to do everything we possibly could for the common cause.

Senator Pittman asked some questions which bring out the same thought:

Senator PITTMAN (p. 4743 H). If we had sent our fighting ships immediately to the war zone, they would have been placed in danger of destruction immediately, would they not?

Admiral BENSON. They would while in the submarine zone, certainly.

Senator PITTMAN. The loss of every one of our major ships during the war would have weakened our permanent Navy, would it not?

Admiral BENSON. It would.

Senator PITTMAN. The General Board, as had you as Chief of Operations, had those things in mind, did it not?

Admiral BENSON. Yes.

Senator PITTMAN. And, as you have testified, your first thought was for the protection of our own coast and the preservation of our own Navy?

Admiral BENSON. Absolutely, sir.

Page 4778:

Admiral BENSON. You always have one chance out of two, Mr. Chairman, to be right. * * * I had to act on my judgment; I could not take chances; I had to view the situation and act according to my judgment and my natural inclination and my duty, as I saw it, to safeguard American interests, and I did that; and, whether I was right or wrong, I should do the same thing again.

It would be difficult to imagine of more convincing evidence of a lack of whole-heartedness in supporting the cause of the Allies, which was apparently not recognized as the common cause at this stage of the war.

VIOLATION BY NAVY DEPARTMENT OF PRINCIPLES LAID DOWN BY THE PRESIDENT.

In view of these statements as to the safety-first policy which governed the department at this time, it seems hardly necessary to point out that at the same time that the Admiralty and the British Navy were being criticized for inactivity by the President, the Navy Department was holding back our own forces 3,000 miles from the war zone, and was not giving its representative abroad the support either in personnel or in ships which every one of the department's witnesses has recognized was possibly necessary, and which they agreed should have been given. The Navy Department was also at this time insistently resisting the adoption of the very measures which ultimately proved most successful in putting down the submarine menace; that is, the use of convoy and the employment of numerous antisubmarine craft within the war zone—and not 3,000 miles from the war zone—to protect the shipping needed to maintain the allied lines of communication and to safeguard the transport of troops and supplies and to attack submarines whenever they attempted to interfere with the convoy.

The measures which are successful in war are often not those bold and spectacular strokes which appeal so keenly to the imagination. Practically every witness who has appeared before this committee has given it as his professional opinion that the methods which were recommended in April, 1917, and which were employed, and which ultimately proved successful in defeating the submarine campaign, were the only ones which under the circumstances could have been successful.

As the President very rightly pointed out, the situation was so desperate in the month of July, 1917, that it was not a time for caution or for the employment of military forces on secondary and unimportant measures (such as the patrol of our coast). It was most certainly a time for quick and effective action, for throwing all the strength that we had, or that we could immediately obtain, against the enemy in the war that would prove most effective. The President himself in his speech to the officers of the fleet pointed out that the question of what measures should be used against the enemy would necessarily have to be determined by naval experts on the basis of the information and resources available, and, it should be added, upon the consideration of the all-important element of time. In other words, the situation which confronted the department in 1917 was not that of safety first for American interests, or of determining how the United States Navy might ultimately be made the most effective, or of how its strength could ultimately be thrown in on the biggest possible scale, but the problem was that of using immediately the forces that were immediately available in order to defeat the submarine campaign, to save allied shipping, and thereby make possible a continuation of the war, and the utilization against the enemy of the vast resources, wealth, man power, and material which America could throw into the scale and thus bring about a speedy victory.

REMARKABLE COINCIDENCE BETWEEN DATE OF PRESIDENT'S MESSAGE AND
BEGINNING OF EFFECTIVE ACTION BY NAVY DEPARTMENT.

There is one point to which I should like to invite your attention, which I hesitated for obvious reasons to bring to your attention when I appeared before you last March, and that is the remarkable coincidence between the time at which the President himself intervened directly in naval matters and the time at which the department began to heed the requests from the Allies for reinforcements, and to adopt and put into effect measures concerning which they had been delaying action. In my previous testimony I referred to the fact that I obtained no favorable answer to my requests for assistance in April, 1917, until after I had gone to Ambassador Page and he had sent an urgent personal message intended for the Secretary of State and the President, setting forth the urgency of the situation. Five days after his message was sent I received the first message which I had had from the Navy Department, giving any indication that they were intending to send forces abroad in any considerable number. This was the message of May 3, in which the department announced its intention ultimately to send 36 destroyers.

Similarly, practically all of my urgent dispatches of May and June went unheeded or were disapproved. In them I was insistently requesting officers to enable me to obtain the information so vitally needed by the Navy Department, repeating requests for antisubmarine forces, and urging the immediate adoption of the convoy system as a means by which the submarine campaign could be checked. In my direct testimony I related to you my appeal to Ambassador Page at the end of June, and I read you the letter which I sent him, asking him again to intervene directly in the endeavor to get action from

the Navy Department. I pointed out to him at the time that the department was ignoring my own message. At the end of June, therefore, Ambassador Page sent another urgent personal message to the State Department, intended for the Secretary of State and the President, calling their attention to the very serious condition of affairs, and to the necessity for immediate action along the lines which I had been recommending for two and one-half months.

At the same time the British Government sent a message to the British high commissioner in Washington, then Lord Northcliffe, asking him to present the same issue to the American Government. I, of course, am not at liberty to quote this message, as it would be a violation of a diplomatic confidence to publish a copy of a confidential dispatch between another Government and their ambassador. I learned later in London that the British ambassador had taken up this matter with the State Department and had presented the message sent to him by his Government.

Capt. Pratt has told you how, after the message from Ambassador Page was received in the State Department, that department wrote asking the Navy Department to outline its war policy, and, apparently, calling attention to the fact that the Allied Governments had received up to that time no definite indication of the policy governing the Navy Department or of the extent of the cooperation it was prepared to give to the Allies. When this request was received in the Navy Department, Capt. Pratt, as he has already told you, drafted himself a letter to the Secretary of State, which was sent to the State Department over the signature of the Secretary of the Navy, and was cabled to me on July 9, 1917, and which was the first definite statement of the department's policy for cooperating with the Allies, which I had received.

Thus, after I had failed to obtain action from the Navy Department, the message of Ambassador Page had succeeded in bringing forth a definite statement of the department's policy, prepared by Capt. Pratt. I think that that makes it clear that there was no policy at all to the Navy Department, and there is no telling how long such a policy would have been delayed if it had not been for the request from the State Department to the Navy Department to outline some policy.

THE PRESIDENT'S MESSAGE OF JULY 4, 1917.

At the same time, the messages from Ambassador Page and from the British Government had doubtless been communicated to the President; for immediately afterward—that is, on July 4—he sent me the dispatch which the Secretary of the Navy has read to you. I consider this message to be, in effect, not so much a criticism of the British Admiralty as an indictment of the inaction and delays which had characterized the Navy Department's activities during the early months of the war, and which I commented upon a few moments ago. The Secretary of the Navy quoted to you only certain parts of my reply to the President, stating that it consisted of generalities. It was so far from being a statement of generalities, that it not only defined very explicitly what, in my opinion, the Navy Department should at once do, but it presented recommendations which were

put in force and continued throughout the remainder of the war. I should, therefore, like to read you the President's message and my reply in full, and to comment upon them in order that the subject referred to therein may be clearly understood. The President's message was as follows:

[Received July 5, 1917, American Embassy, London, from State Department. July 4, 7 p. m. Strictly confidential. For Admiral Sims. Confidential, from the President.]

From the beginning of the war I have been greatly surprised at the failure of the British Admiralty to use Great Britain's naval superiority in an effective way. In the presence of the present submarine emergency they are helpless to the point of panic. Every plan we suggest they reject for some reason of prudence. In my view this is not a time for prudence, but for boldness, even at the cost of great losses. In most of your dispatches you have quite properly advised us of the sort of aid and cooperation desired from us by the Admiralty. The trouble is that their plans and methods do not seem to us efficacious. I would be very much obliged to you if you would report to me, confidentially of course, exactly what the Admiralty has been doing and what they have accomplished; and added to the report your own comments and suggestions, based on independent thought, as to the whole situation without regard to the judgments arrived at on that side of the water. The Admiralty was very slow to adopt the practice of convoy, and is not now, I judge, protecting convoys on an adequate scale within the danger zone, seeming to prefer to keep its small craft with the Grand Fleet. The absence of craft for convoy is even more apparent on the French coast than on the English coast and in the channel. I do not see how the necessary military supplies and supplies of food and fuel oil are to be delivered at British ports in any other way within the next few months than under adequate convoy. There will presently not be ships enough and our own shipbuilding plans may not begin to yield important results in less than 18 months. I believe that you will keep these instructions absolutely and entirely to yourself, and that you will give me such advice as you would give if you were handling the situation yourself and if you were running a navy of your own.

Of course, when one considers the tremendous burden which the President was carrying during those critical months of 1917 it is not to be expected that he should have had any intimate detailed knowledge concerning what the Navy Department was doing. It is at least to be presumed that his estimates of the Navy Department's activities were based chiefly upon reports made to him by the Secretary of the Navy. We can only surmise the character of those reports. The fact, however, that the Navy Department had been resisting the adoption of the convoy method for over two months at the date of this message; that they had failed to send light craft abroad for the very reason of prudence, which the President so strongly condemned; and that they were acting with incomprehensible hesitation and delay make it apparent that the criticism which he applies to the Admiralty apply with even greater force to the attitude of the Navy Department at that time.

ACTION OF NAVY DEPARTMENT IMMEDIATELY FOLLOWING THE DATE OF THE PRESIDENT'S CABLE MESSAGE.

It is a rather curious and significant fact that the Navy Department accepted the convoy system and cabled me announcing its acceptance the day following this message sent by the President to me, or on July 5, 1917, although as late as June 20, 1917, the department had cabled me that—

In regard to convoy, I consider that American vessels having armed guards are safer when sailing independently.

cruisers to convoy duty, has already been read to you a number of times. It is also interesting to note that in the week following the sending of this message by the President I received more information from the Navy Department as to their plans and intentions than I had received in the previous three months and was cabled the first statement of their policy that had been sent me. The department in the week following July 4 decided not only to adopt the convoy but to send 11 autisubmarine craft to Gibraltar, to bring 5 destroyers from the Asiatic Fleet to the Mediterranean, and to send various other light craft. It was at this time also that the department finally took action to accelerate the destroyer program and to postpone the 1916 building program, in order to build destroyers more rapidly.

It was from that time—that is, from July 4, approximately—that the Navy Department began to act with a certain amount of promptness upon the requests from the Allies. It was from that time that I began at least to receive answers in most cases to the messages that I had been sending. It was three days after that the President sent his message to me that my request for a chief of staff, that had been repeatedly disapproved in the previous two months, was finally granted, and I was informed that other officers were to be sent me, in accordance with my often-repeated requests. It is, of course, possible that this sudden change of front in the Navy Department was due to other causes of which I am not aware, but it certainly is a striking coincidence that this almost unexpected series of favorable decisions by the department should come in the week immediately following the sending of this dispatch from the President to me.

REPLY TO THE PRESIDENT'S MESSAGE.

It will be recalled that Mr. Daniels said that this statement was a statement of generalities. I would like to invite the committee's judgment as to whether it is not an exceedingly specific dispatch.

This coincidence appears all the more striking when the full text of my message to the President is considered.

The quotations made by the Secretary of the Navy were, very unfortunately, so disassociated from their context as to give an almost completely erroneous impression of the nature of this message. I am therefore quoting it in full, as follows:

JULY 7, 1917.

From: Admiral Sims, American Embassy, London.
Via: State Department.
To: The President.

I have sent by the last mail to the Secretary of the Navy an official paper, dated July, and giving the present British naval policy, the disposition of the vessels of the fleet, and the manner and method of their employment.

This will show to what extent the various units of the fleet, particularly destroyers, are being used to oppose the submarines, to protect shipping and escort convoys.

It is hoped and believed that the convoy system will be successful. It is being applied as extensively as the number of available escort cruisers and destroyers will permit. The paper shows also that there remains with the main fleet barely sufficient destroyers and auxiliary forces to meet on equal terms a possible sortie of the German fleet. The opposition to submarines and

the application of the convoy system are rendered possible solely by the British main fleet and its continuous readiness for action in case the German fleet comes out or adopts any operations outside the shelter of its fortifications and its mine fields.

I am also forwarding by next mail copy of a letter, dated June 27, from the minister of shipping to the prime minister, showing the present shipping situation and forecasting the results of a continuation of the present rate of destruction. Briefly, this shows that this rate is more than three times as great as the rate of building. A certain minimum amount of tonnage is required to supply the allied countries and their armies. This letter shows that at the present rate of destruction this minimum will be reached about next January.

That is, January, 1918.

This is not an opinion. It is a matter of arithmetic. It simply means that if this continues the Allies will be forced to an unsatisfactory peace.

The North Sea is mined by British and German mines for more than 100 miles north and west of Heligoland up to the 3-mile limits of Denmark and Holland. Over 30,000 mines have been laid and additional mines are being laid.

It is through these neutral waters that almost all submarines have been passing.

A sea attack alone upon German ports or any heavily fortified ports could not succeed against the concealed guns of modern defences.

I have just been informed that preparations are now being made by a combined sea and land attack to force back the German right flank and deny the use of Zeebrugge as a destroyer base, though not yet definitely decided by the War Council; that this would have been done long ago but for disagreements between the Allies.

The German fleet has not left the neighborhood of Heligoland for about a year.

I am aware of but two plans suggested by our Government for preventing the egress of German submarines. These were contained in the department's dispatches of April 17 and May 11, and were answered in my dispatches of April 18 and May 14, respectively.

These same suggestions and many similar ones have been and continue to be made by people of all classes since the beginning of the war. I have been shown the studies of the proposed plans and consider them impractical.

It is my opinion that the war will be decided by the success or failure of the submarine campaign. Unless the allied lines of communication can be adequately protected, all operations on shore must eventually fail. For this reason, and as further described in my various dispatches, the sea war must remain here in the waters surrounding the United Kingdom. The latest information is available here and can be met only by prompt action here. It is wholly impossible to attempt to direct or to properly coordinate operations through the medium of communications, by letter or cable.

Therefore, as requested by you, if I had complete control of our sea forces with the success of the allied cause solely in view, I would immediately take the following steps:

First. Make immediate preparations to throw into the war area our maximum force, prepare the fleet immediately for distant service. As the fleet, in case it does move, would require a large force of protective light craft, and as such craft would delay the fleet's movements, we should advance to European waters all possible craft of such description, either in service or which can be immediately commandeered and put into service; that is, destroyers, armed tugs, yachts, light cruisers, revenue cutters, minelayers, minesweepers, trawlers, gunboats, and similar craft.

Second. Such a force, while waiting for the fleet to move, should be employed to the maximum degree in putting down the enemy submarine campaign and in escorting convoys of merchant ships and troops, and would be in position at all times to fall back on our main fleet if it approached these waters.

Third. Prepare the maximum number of supply and fuel ships and be prepared to support our heavy forces in case they are needed.

Fourth. Concentrate all naval construction on destroyers and light craft. Postpone construction of heavy craft and depend upon the fact, which I believe to be true, that regardless of any future developments, we can always count

upon the support of the British Navy. I have been assured of this by important Government officials.

Fifth. As far as consistent with the above building program of light craft, particularly destroyers, concentrate all other ship building on merchant tonnage. Divert all possible shipping to supplying the Allies.

Sixth. As the convoy system for merchant shipping at present affords better promise than any other means for insuring the safety of lines of communication to all military and naval forces on all fronts, we should lend every support possible to insure success to this, and we should cooperate with British authorities in the United States and here who are attempting to carry out the convoy system.

I believe the above advice to be in accordance with the fundamental principles of military warfare. The first step is to establish here in London a branch of our War Council, upon whose advice you can thoroughly depend. Until this is done, it will be impossible to insure that the part which the United States takes in this war, whether it is won or lost, will be that which the future will prove to have been the maximum possible. It is quite impracticable for me, nearly single-handed, to accumulate all the necessary information, and it is not only impracticable but unsafe to depend upon decisions made in Washington, which must necessarily be based upon incomplete information, since such information can not be efficiently communicated by letter or cable.

This can be assured if I be given adequate staff of competent officers of the required training and experience.

I urgently recommend that they be selected from the younger and most progressive types, preferably War College graduate men, of the type of Twining, Pratt, Knox, McNamee, Stirling, Cone, Coffee, Cotton, King, Pye.

I wish to make it perfectly clear that my reports and dispatches have been in all cases an independent opinion, based upon specific and official facts and data which I have collected in the various Admiralty and other Government departments. They constitute my own conviction, and hence comply with your request for an independent opinion.

That is the message which the Secretary of the Navy characterizes as one of generalities. I should say that not only did I define everything we should do, but that message laid down a policy which was exactly the same as that I laid down in my first dispatch of April 4, 1917; and it was the policy and the means that were carried out for the remainder of the war and upon which we won the submarine campaign.

I think it hardly necessary to comment further upon this message. Every one of the six steps which I recommended to the President in this dispatch could have been and should have been part of the primary war plan which should have been and could have been put into effect on the day we declared war. With the information then available, every one of these steps could have been and should have been foreseen; and if there had been an adequate planning section in the department and if the head of the department had approved the action of such a planning section, some such plan would have been formulated and would have been put into effect at once. The department's witnesses, especially Admiral Badger and Capt. Pratt, have testified that they recommended practically the same measures in March, April, and May, but without success. I had been recommending these very same measures since April 14, 1917, equally without success. Within a very short time after the President had sent this message to me and I had replied the department had acted in the manner recommended in my reply to him, and had adopted the various recommendations as being essential to a successful prosecution of the war against the submarines. It is frankly absurd to claim that I have been contending that I was the only officer in the Navy whose judgment should have been accepted; but it so happened that

I was the officer sent abroad to represent the department and to obtain from the allied admiralities, and from the British Admiralty principally, the information upon which the department could base its action.

It was, therefore, inevitable that the information which I sent should come from British or allied sources. It was, therefore, equally inevitable that the recommendations which I made, and which were in complete agreement with the war experience of the Allies, should be more sound than those made by any other officer, no matter how intelligent or how highly trained, who did not possess this same information, and who did not have this same opportunity of discussing the situation with the responsible heads of the allied navies. No plan, based on insufficient information and incorrect premises, can ever be successful, no matter how logically based upon false premises, how striking, how bold, or how spectacularly attractive it may seem. I am not contending that the officers of the Navy Department were inefficient, or that they failed in any respect to do their duty according to their lights. I am trying simply to make clear that they necessarily could not have had the information that was wholly essential to make decisions involving the details of operations in the war zone, and, for the same reasons they could not intelligently review such decisions. My criticisms are not directed against these officers, who I am confident in every instance were putting forth their best efforts, but against the condition in the department which made it impossible for them to work as efficiently as would otherwise have been possibly the case.

THE PRESIDENT'S MESSAGE WAS IN REALITY AN INDICTMENT OF THE POLICY PURSUED AT THAT TIME BY THE NAVY DEPARTMENT.

I regret extremely that the Secretary of the Navy has seen fit, in introducing this message of the President, to reflect upon the services of the British Admiralty to the allied cause. It was a personal and confidential message, addressed to me, which I had guarded with the greatest secrecy. I would have considered myself guilty of a grave breach of confidence if I had brought the matter before this committee. I am also surprised that the Secretary of the Navy should introduce this message as evidence against me, when the facts which I have just related show that the criticisms of the President bear with even greater force against the Navy Department, as it was then conducted, than against the Admiralty. We can only assume that the President, from the moment that we entered the war, was trying to carry into effect a vigorous and successful prosecution of the war. It seems very probable that the President himself was not familiar at the time with the extent to which the Navy Department was violating the very principles which he laid down; principles which were accepted by the Navy Department almost immediately after his message was sent; principles which were in complete accord with the recommendations which had been made by the department's representative abroad during the previous three months; principles which had been insistently but vainly urged upon the department in these months by the General Board and by Capt. Pratt and other officers in the office of Operations.

The very fact that the department almost immediately took favorable action on many matters which had been recommended long before, shows how the head of the department at that time regarded the President's message. It is hardly possible that there could have been no connection between the President's insistence on boldness and offensive action and the sudden abandonment by the department of its timid, prudent, and defensive policy for one of cooperation with the Allies in the war zone in the measures which alone could and did meet the issue of the submarine campaign.

THE NAVY DEPARTMENT'S ANNOUNCED WAR POLICY.

I have already referred to the fact that one of the consequences of my appeal to Ambassador Page for assistance in presenting the situation in European waters to the department was the announcement by the Navy Department of a policy to govern its action in the war.

Capt. Pratt in his testimony told you how this policy came to be framed and stated that, although not previously formulated, it had been in substance the policy which had governed the department since the beginning of the war and remained its policy until the end. Capt. Pratt also stated that, in response to a request from the State Department for such an announcement of policy, he had himself prepared this letter, and that finally the Secretary's signature was obtained and the reply sent to the State Department. On July 9, this letter was cabled to me for my guidance. This message has already been quoted, but I should like to refer to it again at this time.

The following is a copy of the letter sent by the Navy Department to the State Department:

NAVY DEPARTMENT,
Washington.

Confidential.

SIR: Referring to the cablegram from Ambassador Page in London dated June 23, 1917 (copy attached). After careful consideration of the present naval situation, taken in connection with possible future situations which might arise, the Navy Department is prepared to announce as its policy in so far as it relates to the Allies—

(1) The heartiest cooperation with the Allies to meet the present submarine situation, in European or other waters, compatible with an adequate defense of our own home waters.

(2) The heartiest cooperation with the Allies to meet any future situation arising during the present war.

(3) A realization that while a successful termination of the present war must always be the first allied aim and will probably result in diminished tension throughout the world, the future position of the United States must in no way be jeopardized by any disintegration of our main fighting fleets.

(4) The conception that the present main military rôle of the United States naval forces lies in its safeguarding the lines of communication of the Allies. In pursuing this aim there will, generally speaking, be two classes of vessels engaged—minor craft and major craft—and two rôles of action; first offensive, second defensive.

(5) In pursuing the rôle set forth in paragraph (4), the Navy Department can not too strongly insist that in its opinion, the offensive must always be the dominant note in any general plan of strategy prepared. But, as the primary rôle in all offensive operations must perforce belong to allied powers, the Navy Department announces as its policy that, in general, it is willing to accept any joint plan of action of the Allies, deemed necessary to meet immediate needs.

(6) Pursuant to the above general policy, the Navy Department announces as its general plan of action the following:

(a) Its willingness to send its minor fighting forces, comprised of destroyers, cruisers, submarine chasers, auxiliaries, in any numbers not incompatible with home needs, and to any field of action deemed expedient by the joint allied admiralities, which would not involve a violation of our present State policy.

(b) Its unwillingness, as a matter of policy, to separate any division from the main fleet for service abroad, although it is willing to send the entire battle-ship fleet abroad to act as a united but cooperating unit when, after joint consultations of all admiralities concerned, the emergency is deemed to warrant it, and the entire tension imposed upon the line of communications due to the increase in the number of fighting ships in European waters will stand the strain upon it.

(c) Its willingness to discuss more fully plans for joint operations.

Sincerely, yours,

JOSEPHUS DANIELS.

The honorable the SECRETARY OF STATE.

I do not desire to discuss this policy at length, and will content myself with reading you the reply which I made to the Navy Department on the 16th of July, 1917. It will be noted that my reply to the department of this date contained practically the same recommendations as the message which I had sent to the President a week before. My reply was as follows. That document is perfectly well known, and has been inserted in the record. It is a letter from the Navy Department defining the policy which the State Department asked them to define. I do not desire to discuss this policy at length, but I will read this paragraph from the letter:

17. One of the greatest military difficulties of this war, and perhaps of all allied wars, has been the difficulty of coordination and cooperation in military effort. I am aware of a great mass of information in this connection which it is practically impossible to impart except by personal discussion.

That is an exceedingly long reply, and as I have stated all that is in it I do not think it is necessary to read it, but I should like to have it included in the record.

I should, however, like to refer to an unfortunate omission in a quotation made by the Secretary of the Navy in one of the paragraphs, in discussing or explaining to the Navy Department the necessity for an allied centralization of control. I stated:

It is unquestionable that efficiency would be greatly if any one of the Allies—Italy, France, England, or the United States—were selected to direct all operations, the others merely keeping the one selected fully informed of their resources available, and submitting to complete control and direction in regard to the utilization of these resources.

That is simply in explanation of the necessity for allied control. Unfortunately the Secretary of the Navy has used that message to support a statement to the effect that I was in favor of turning over the entire control to Great Britain. He quoted only the first two lines, which are as follows:

It is unquestionable that efficiency would be greatly improved if any one of the Allies—

And that is as far as he quoted, and then added to it the words: were given complete control of our operations.

Omitting from it the words "Italy, France, England, or the United States were selected to direct all operations."

All that I can say is that the Secretary in numerous instances has been equally unfortunate in making quotations from my letters.

From: Vice Admiral Sims.

To: Secretary of the Navy.

Subject: Concerning policy of United States naval cooperation in war and allied subjects.

1. The department's cablegram quoting a letter which had been addressed to the Secretary of State concerning naval policy in relation to the present war was received on July 10.

In view of the nature of certain parts of the policy set forth therein, I wish to indicate the general policy which has heretofore governed my recommendation.

2. I have assumed that our mission was to promote the maximum cooperation with the Allies in defeating a common enemy.

All of my dispatches and recommendations have been based on the firm conviction that the above mission could and would be accomplished, and that hence such questions as the possibility of postwar situations, or of all or part of the Allies being defeated and America being left alone, were not given consideration.—In fact, I can not see how we could enter into this war wholeheartedly if such considerations were allowed to diminish in any way the chances of allied success.

3. The first course open to us which naturally occurs to mind is that we should look upon our service as part of the combined allied service, of which the British Grand Fleet is the main body, and all other allied naval forces disposed throughout the world as necessary branches thereof.

The conception views our battleship fleet as a support or reserve of the allied main body (the British Grand Fleet), and would lead to utilizing our other forces to fill in weak spots of and to strengthen allied lines, both offensively and defensively, wherever necessary.

Such a course might be used as a disintegration of our fleet, and it is only natural, therefore, that hesitation and caution should be left in its adoption.

4. I have felt, however, that it was possible to accomplish our mission without in any way involving the so-called disintegration of our fleet as a whole.

In the first instance I have assumed that our aim would be to project, or prepare to project, our maximum force against the enemy offensively.

5. An estimate of the situation shows clearly that the enemy is depending for success upon "breaking down the Allies' " lines of communications by virtue of the submarine campaign.

A necessary part of such a plan is to divert strength from the main fleet and from antisubmarine operations by such means as coastal raids, threats of landing operations, air raids, and attacks on hospital ships, which last necessitates destroyer escort for such vessels.

The submarine campaign itself, while it is of necessity concentrated primarily on the most vital lines of communications, is, nevertheless, carried out in such a manner as to lead the Allies to disperse and not concentrate their inadequate antisubmarine forces.

The Allies are, of course, forced to contemplate at all times and hence provide against the possibility of another main-fleet action.

6. A study of the submarine situation, the number of submarines available to the enemy, and the necessary lines of the Allies' communications for both army and navy, as well as civil needs, shows clearly that the enemy must direct his main effort in certain restricted areas.

These areas, as has repeatedly been reported, are included, approximately, in a circle drawn from about Ushant to the north of Scotland. The most effective field for enemy activity is, of course, close into the Irish Sea and channel approaches, where all lines must focus.

But, as stated above, the enemy also attacks occasionally well out to sea and in other dispersed areas with a view of scattering the limited antisubmarine forces available.

It therefore seems manifest that the war not only is but must remain in European waters, in so far as success or failure is concerned.

7. Speaking generally, but disregarding for the moment the question of logistics, our course of action in order to throw our main strength against the enemy would be to move all our forces, including the battleship fleet, into the war area.

8. In view of the nature of the present sea warfare as affected by the submarine, such a movement by the battleships would necessitate a large force of light craft—much larger than our peace establishment provided. In addition to all destroyers, adequate protection of the fleet would require all other available light craft in the service, or which could be commandeered and put into service; that is, submarines, armed tugs, trawlers, yachts, torpedo boats, revenue cutters, mine layers, and mine sweepers, and in fact any type of small craft which could be used as protective or offensive screens.

9. In view of the shipping situation as affected by the submarine campaign. It has been impossible to date to see in what way our battleships could be supplied in case they were sent into the war area. This refers particularly to oil-burning vessels. It would therefore seem unwise to recommend such a movement until we could see clearly far enough ahead to insure the safety of the lines of communication which such a force would require.

10. It is to be observed, however, that even in case the decision was made to move the battleships into the war area it would unavoidably be greatly delayed both in getting together the necessary screening forces and also in getting such craft across the Atlantic.

In the meantime, and while awaiting a decision as to the movements of the battleship fleet, the submarine campaign has become so intensive and the available antisubmarine craft have been so inadequate to meet it, that the necessity for increasing the antisubmarine forces in the war area to the maximum possible extent has become imperative.

11. As long, therefore, as the enemy fleet is contained by the stronger British fleet in a position of readiness, it would not seem a disintegration of our fleet to advance into the war area all the light craft of every description which would necessarily have to accompany the fleet in case it should be needed in this area.

Such movements of the light craft would not in any way separate them strategically from the battleships, as they would be operating between the enemy and our own main body, and based in a position to fall back as the main body approached or to meet it at an appointed place. This advance of light forces, strategically, would mean no delay whatever to our heavy forces; should the time come for their entry into the active war zone.

12. Another very important consideration is the fact that, pending the movement of the battleships themselves, all of the light forces would be gaining valuable war experience and would be the better prepared for operations of any nature in the future, either in connection with the fleet itself or independently.

It is also considered that it would no constitute a disintegration of our fleet to advance into the war zone, in cooperation with the British grand fleet or for other duty, certain units of our battleship fleet. These would merely constitute units advanced for purpose of enemy defeat, and which would always be in a position to fall back on the main part of our fleet or to join it as it approached the war zone.

It is for this reason that I recommended on July 7, 1917, that all coal-burning dreadnaughts be kept in readiness for distant service in case their junction with the Grand fleet might be deemed advisable in connection with unexpected enemy developments.

It would, of course, be preferable to advance the entire fleet, providing adequate lines of communication could be established to insure their efficient operation. At the present time there is a sufficient coal supply in England to supply our coal-burning dreadnaughts, but the oil would be a very difficult problem, as it must be brought in through the submarine zone.

When notified that the *Chester*, *Birmingham*, and *Salem* were available for duty in the war area I recommended, after consultation with the Admiralty, that they join the British light cruiser squadrons in the North Sea, where there is always a constant demand for more ships, especially to oppose enemy raiding and other operations aimed at dispersing the allied sea forces.

In view of the department's reference to the Gibraltar situation, and also in consideration of the sea-keeping qualities of the seven gunboats of the *Sacramento* class, it was recommended that they be based on Gibraltar for duty in assisting to escort convoys clear of the straits, and particularly as

It would seem to be sound reasoning that the most effective defense can be afforded to our home waters is an offensive campaign against enemy which threatens those waters. Or in other words, that the place which protection is necessary—that is, where the enemy is operating and continue to operate in force.

has been stated in numerous dispatches, it is considered that home waters threatened solely in the submarine zone; in fact, are being attacked solely in that zone and must continue to be attacked therein if the enemy is to be met against us as well as against the European Entente.

The number of available enemy submarines is not unlimited, and the difficulties of obtaining and maintaining bases are fully as difficult for submarine as surface craft.

The difficulties experienced by enemy submarines en route and in operating far from their bases as they now do are prodigious.

Operations on our coast without a base are impracticable, except by very small numbers for brief periods, purely as diversions.

In view of our distance from enemy home bases, the extent of our coast line, the distances between our principal ports, it is a safe assumption that if we could induce the enemy to shift the submarine war area to our coasts his operations would be assured, and his present success would be diminished more than in proportion to the number of submarines he diverted from the more accessible areas where commerce necessarily focuses.

The department's policy refers to willingness to extend hearty cooperation to the Allies and to discuss plans for joint operations, and also to its readiness to consider any plans which may be submitted by the joint allied admiralities.

I submit that it is impossible to carry out this cooperation to discuss plans with the various admiralities, except in one way, and that is to establish what might be termed an advance headquarters in the war zone composed of department representatives upon whose recommendations the department can depend. This would refer to exactly the same procedure as is now carried out in the Army; that is, the general headquarters in the field being the advance headquarters of the War Department at home, and the advance headquarters must of necessity be in a certain area of discretion and freedom of action as concerns the details of measures necessitated by the military situation as they arise.

The time element is one of the most vital of all elements which enter into military warfare, and hence delays in communications by written reports, together with the necessity for secrecy, render it very difficult to discuss plans over long range. The enemy secret service has proved itself to be of extraordinary efficiency.

Moreover, I believe it to be very unsafe to depend upon discussion of military matters by cable, as well as by letter. The necessary inadequacy of written or verbal communications needs no discussion. The opportunities for misunderstandings are great. It is difficult to be sure that one has expressed clearly his meaning in writing, and hence phrases in a letter are very liable to misinterpretation. They can not explain themselves.

One of the greatest military difficulties of this war, and perhaps of all modern wars, has been the difficulty of coordination and cooperation in military operations. I am aware of a great mass of information in this connection which it is practically impossible to impart except by personal discussion.

It is unquestionable that efficiency would be greatly improved if any one of our Allies—Italy, France, England, or the United States—were selected to direct all operations, the other merely keeping the one selected fully informed of their resources available, and submitting to complete control and direction in regard to the utilization of these resources.

If the above considerations are granted, it then becomes necessary to decide as to the best location in which to establish such advanced headquarters that might be called an advance branch war council at the front; that is, an advanced branch upon whose advice and decisions the war council itself largely depends.

It is fully realized that the pressure and the influences which must have been brought to bear upon the department from all of the Allies, and from various and possibly conflicting sources.

I also realize that my position here in England renders me open to suspicion that I may be unduly influenced by the British viewpoint of the war. It should be unnecessary to state that I have done everything within my ability to maintain a broad viewpoint with the above-stated mission constantly in mind.

19. From the naval point of view it would seem evident that London is the best and most central location in the war area for what I have termed above the advance branch of our naval war council.

The British Navy, on account of its size alone, is bearing the brunt of the naval war, and hence all naval information concerning the war therefore reaches and centers in London.

It will be quite possible for all of our advanced headquarters' staff, or parts or divisions thereof, to visit Paris and other allied admiralities at any time.

I wish to make it quite clear that up to date it has been wholly impossible for me, with one military aide, to perform all of the functions of such an advanced branch of the department.

As stated in my dispatches it has been evident for some time, that I have been approaching a state in which it would be physically impossible to handle the work without an increase of staff.

The present state of affairs is such that it is quite within range of possibility for serious errors to occur which may involve disaster to our ships, due to the physical impossibility of handling the administrative and other work with the thoroughness which is essential to safety.

20. I consider that a very minimum staff which would be required is approximately as follows. More officers could be well employed with resulting increase of efficiency.

(1) One chief of staff, who should be free to carry on a continuous estimate of the situation, based upon all necessary information. He would be given the freedom of the operations department of the British and French admiralities.

(2) An officer, preferably of the rank of commander, for duties in connection with shipping and convoy to handle all the numerous communications in relation to the movements of American shipping, particularly military shipping, and also other shipping carrying American troops.

(3) An officer, at least a lieutenant commander, for duties in connection with antisubmarine division operations in order to insure perfect cooperation in that field of work between our service and other allied services.

(4) An officer of all-around ability and discretion for duties in connection with general military intelligence. He should be in constant touch with the secret service departments of the admiralities to insure that all military intelligence which in any way affects the Navy Department or our forces is properly and promptly acted upon.

(5) At least two lieutenants or lieutenant commanders of the line in my own office in connection with general administrative questions in addition to the one now available. The necessity for these additional officers is imperative.

(6) One communication officer to take general charge of codes and communications both with the department at home, the allied admiralities, and with the various bases of our forces in the war area (at present Queenstown, Brest, Bordeaux, St. Nazaire, London, and Paris).

(7) A paymaster, to have complete charge of all financial matters connected with our naval organization abroad. This officer should be in addition to Paymaster Tobey, who is performing necessary and invaluable service on my staff in connection with all logistical questions.

WM. S. SIMS.

CONTRAST BETWEEN PRESIDENT'S POLICY AND NAVY DEPARTMENT'S POLICY IN JULY, 1917.

Before going further, I should like again to contrast certain features of the policy announced by the President and the policy of the Navy Department.

The President, for example, said:

In my view this is not a time for prudence but for boldness, even at the cost of great losses.

The Navy Department's policy included the following:

(1) The heartiest cooperation with the Allies to meet the present submarine situation, in European or other waters, compatible with an adequate defense of our home waters.

(2) A realization that while a successful termination of the present war must always be the first allied aim and will probably result in diminished tension throughout the world, the future position of the United States must in no way be jeopardized by any disintegration of our main fighting fleets.

Contrast this latter expression with the President's declaration to the officers of the fleet on August 11, 1917, when he said that he would be willing to sacrifice half the combined American and British fleets in order to accomplish the destruction of the "nests" of German submarines.

The emphasis in the President's mind, as it can be judged from his utterances which have been introduced by the Secretary of the Navy, was upon immediate offensive action against the enemy. He rightly conceived the military mission of the Navy to be the defeat of the submarine campaign, and clearly indicated his desire that no effort and no sacrifice be spared to bring about this result.

The Navy Department, however, even in this definite statement of policy, clearly set forth that any cooperation with the Allies was conditioned on two things; first, an adequate defense of our own home waters; and, second, that the future position of the United States must in no way be jeopardized by any disintegration of our main fighting fleets. That is to say, the President was decidedly not for safety first, but the department was decidedly for safety first.

IMPRACTICABILITY OF BLOCKING GERMAN BASES.

It is entirely beside the point that the specific operation suggested by the President for blocking in the German submarines should have been impracticable of accomplishment under the circumstances, because there were many very technical elements governing the situation concerning which he could not be expected to be accurately informed. However, the aggressive policy advocated was, of course, the correct one. The sacrifice of half the combined British and American fleets would not have been too great a price to pay if it would have suppressed the submarine and ended the war; but the attempt, of course, would have been unwise if, in the opinion of the responsible naval experts concerned, it would certainly have failed. In September, 1917, these experts discussed this very question at a meeting of the Allied Naval Council, which was attended by Admiral Mayo, commander in chief of the Atlantic Fleet, who, in his report of September 8, 1917, states as follows. That is a long, rather technical quotation, which I will ask permission to include in the record, and I will ask permission to read a significant part of it.

Senator KEYES. Very well.

Admiral SIMS. I may say that in order to block the submarine ports it required about 40 old battleships and 40 old cruisers to be dismantled and filled with concrete and sunk in the ports. Admiral Mayo's report discusses this question, and it finally winds up in a cable dispatch which he sent on September 5, 1917, in addition to his report, in which he expresses his opinion of the project as follows: The Allies were asked, each one of them, if they would supply

their quota of these old ships, the British to supply 18 old battleships and 13 cruisers, the French 5 battleships and 12 cruisers, the Italians 3 battleships and 3 cruisers, the Japanese 2 battleships and 7 cruisers, and the United States 12 battleships and 8 cruisers, and Admiral Mayo says:

Request information whether United States willing in case there appears reasonable prospect success supply 12 oldest battleships and 8 oldest cruisers out of total of 40 battleships and 45 cruisers to be sunk together with large number hulk and barges in blocking German channels.

Admiral Mayo continues:

Personally believe nothing will come of this proposition, as consider full examination of difficulties will show impossibility of success.

The quotation from the report of Admiral Mayo referred to, submitted by Admiral Sims, is here printed in full as follows:

Item 1. The question of a close offensive in German waters.—8. (a) The first sea lord stated in general terms that an offensive operation against German bases in the Helgoland Bight had been for some time under consideration by the British Admiralty, and said that it was essential to know, before going further, whether the powers represented would wish to have proposed in detail a scheme which would involve the sinking of approximately the following allotments of old ships, as merchant vessels could not be spared for the purpose:

Governments.	Battle-ships.	Cruisers.
British.....	18	13
French.....	5	12
Italian.....	3	3
Japanese.....	2	7
United States.....	12	8
Total.....	40	43

(b) It was further stated that the operation in mind was a very difficult one and that he would not go into details at this time. The primary object was to block submarines in by blocking up the German exits into the North Sea, no other object being worth the risk involved. It was repeated that further development of such a scheme was wholly dependent upon the willingness of the Governments concerned to furnish the vessels indicated, which were to be loaded with concrete before sinking and were to be supplemented in the shallower parts by hulks and barges either made of concrete or partly filled with concrete.

(c) The United States representative was unable to state the views of his Government. The French representative thought it might be possible. The Russian representative made a plea for a vigorous offensive in order to relieve the pressure now being put upon Russia by the enemy. The Japanese representative thought his country might be willing. The Italian representative demurred, as he thought his Government considered that the Italian ships mentioned were of very great use in their present employment.

(d) The conference, after discussion, agreed that the question should be carefully considered by the Governments concerned, and that they should indicate in due course to the British Admiralty the contribution of old warships which they would be prepared to furnish should the contemplated operation appear practicable after due consideration of all the difficulties involved.

IRRELEVANCY OF CRITICISMS OF THE BRITISH ADMIRALTY.

In this connection let me say, too, that I am in no way disposed to defend the errors and mistakes of the British Admiralty. Anyone who has read the literature which has been published by eminent British officers about the conduct of the war by the Admiralty will

have no doubt at all that the Admiralty made many mistakes, in some cases violated military principles, and were responsible for delays which were perhaps as long and as serious as those caused by the mistakes and delays of our Navy Department. This is not, however, an investigation of the conduct of the war by the British Admiralty. The mistakes committed by the Admiralty can hardly be brought forward as a justification for the same or similar mistakes by ourselves. We were in a position to have profited by their mistakes, instead of repeating them, and if the department or the Secretary now alleges that our mistakes are justified because we only made the same kind of mistakes that the British did he is merely saying in another way that we failed to profit by our opportunity. We failed to learn by the mistakes of others and had to acquire by the bitterest kind of experience and the most serious kind of blunders the knowledge of how we should conduct our activities in this war. This could have been learned immediately and quickly if an adequate force of officers had been sent to the other side, if the Secretary had showed a greater appreciation of the meaning of cooperation and had been a little less confident of the ability of himself and his own advisers, many thousand miles from the war zone, without detailed or intimate knowledge of the situation or of past war experience, to make the detailed dispositions of our forces abroad and to direct from Washington the details of their operations.

Of course, the British Admiralty made mistakes. I undoubtedly had difficulties with the Admiralty in getting them to recognize points which seemed self-evident at the time. I found in many cases there was the same conservatism, the same overcautious prudence and hesitancy to realize new conditions, which characterized the action of our own department in the early months of the war, but I also found in the Admiralty a spirit of willingness to listen to criticism, to face facts frankly, and to cooperate whole-heartedly, which I usually found lacking in my relations with the Navy Department. The Admiralty at least were willing to learn by their own mistakes. In the first months of the war I could hardly escape the conviction that the department at home refused to believe that they could make mistakes and refused to profit by the experience in the war zone. This conviction has only been confirmed by the testimony which the Secretary has given before you and in which he has tried to make it appear that the department was infallible, that it was possessed of superhuman wisdom, that it had a broad viewpoint, which the officers who were in the war zone, possessed with full information, with the advantage of full discussion with the allied naval leaders, could not possibly have.

When this broad viewpoint, of which a number of witnesses have spoken, is examined and when the Secretary's own testimony is examined, it appears to resolve itself into three concrete things:

First. A policy of particularism, designed to protect the American coast and American shipping against an enemy that was 3,000 miles away, and to hold back craft needed in the war zone in order to patrol the Atlantic coast 3,000 miles from the enemy, and to safeguard the Atlantic Fleet in its anchorage in the Chesapeake Bay.

Second. An unwillingness to regard the winning of the war as the main issue, but a desire to look forward to some future war and to subordinate the naval activities in the war against Germany to what

it might consider the requirements might be in this future war, although it was evident at the time that the victory of ourselves and the Allies over Germany and the enhanced prestige that that would give us would make any such future war most improbable, at least for a considerable period of time.

Third. A secret submission to the hypnotic seductiveness of the fallacy of a "royal road to victory" of discovering some new, and hitherto unsuspected, weapon or means of warfare which would at one fell swoop put an end to the submarine campaign, reduce the enemy to hopeless confusion and bring a triumph of victory to American arms amid the enthusiasm of the crowd and the fanfare of the beating tom-toms.

I leave it to the judgment of this committee to determine as to the wisdom or the significance of this so-called broader viewpoint of which the Secretary has spoken.

CONDITIONS IN THE DEPARTMENT IN THE FIRST THREE MONTHS OF THE WAR.

Delay of the department in building new destroyers.—Before going on to deal further with the cablegram which the President sent me on July 4, 1917, and with the incidents connected therewith, I should like to review briefly one essential feature of the policy of the department during the early months of the war, because it is so strikingly typical of the conditions under which the department was attempting to carry on operations.

As I have already pointed out, it should have been possible for at least one and possibly two years to have foreseen that, in the event of our entrance into the war, our naval activities would be chiefly devoted to combatting submarines. All the officers who have appeared before this committee have so testified, and have also testified that, in their professional opinion, it was very probable, at least after 1916, that the United States would be drawn into the war. Consequently, it must follow logically that, if any effort had been made in the Navy Department to prepare the Navy especially for this war, steps should at once have been taken to increase the number of available antisubmarine craft. Capt. Pratt, in his testimony, stated (p. 2947):

I think it was fairly well understood by all naval men that practically the only useful type * * * was the destroyer.

A moment later the chairman asked him:

After the Battle of Jutland should we not have intelligently considered the situation and emphasized * * * the antisubmarine warfare.

Capt. PRATT (p. 3948). Yes, sir; I think it would have been wise to have looked forward in that direction.

He then went on to explain that if we had begun in 1916 to get the existing naval vessels ready for action, and had laid down antisubmarine forces—

We could have quickly driven a strong force against the German submarines in April, 1917.

He did not know, however, that the Secretary had ever sought to impress on Congress or the department the importance of any such steps.

The General Board's building program, approved by Congress in 1916, provided for the building of 50 destroyers in addition to dreadnaughts and other craft. No effort was made even to accelerate the building of the destroyers authorized in this program. After the breach of relations, in February, 1917, a number of officers in the department began almost immediately, as they have testified, to urge the necessity of increasing the number of antisubmarine craft. Until the month of July, 1917, the General Board, Admiral McKean, Capt. Pratt, Capt. Schofield, and many other officers were constantly submitting memoranda urging the necessity of increasing the number of such antisubmarine craft, and particularly destroyers. This was included in the General Board's recommendations of May 3, 1917, in which no action was taken. Inasmuch as the German major fighting force was successfully contained in the German ports, it must have been apparent that we would have had no real need during the war for any additional major forces; and it should have been the part of wisdom from the first, if any such policy as that outlined by the President were to be carried out, to have postponed the building of these capital ships and concentrated all effort upon the building of destroyers and other light craft. But it was only with the greatest difficulty that the officers in the department, who realized the situation, were able to get this done.

I can not say too much, incidentally, for those officers of the department that fought from the beginning of the war against the forces we were criticizing, to try and get something done to prepare this navy for war. Their testimony shows it very clearly.

Vain efforts of officers in department to secure early decision on building program.—Capt. Pratt, for example, in his testimony, submitted the memorandum which he drew up on June 7, 1917, making these recommendations. He said, in his testimony, that this report was ultimately accepted, and that the building program was revised in accordance with the suggestions made therein. He went on to say, however (p. 2834):

My views were adopted because I was very soon after appointed to * * * the section which carried out the execution of these very matters.

Page 2838:

I know it was carried out.

In this memorandum, also, Capt. Pratt referred to (p. 2839):

The importance and seriousness of this subject, together with the necessity of arriving first of all at a correct naval policy—

Note that this is July, 1917, he is talking about arriving at a correct naval policy—

which shall coordinate its efforts with the efforts of those engaged in supplying the tremendous wastage in the cargo tonnage, caused by the submarine campaign * * *. There is a decided difference of opinion as to the naval policy to be pursued. This letter is not in accord with the general views of the office.

There we have a distinct statement from the Assistant Chief of Naval Operations with the recommendation that they shall push forward the building of submarine craft, in accordance with the general views of the Office of Naval Operations, but still they tell us that they had adequate working plans for carrying on this work.

In other words, two months after the war had begun, Capt. Pratt was still striving to get the department to adopt a correct naval

policy, and he indicated that, in his opinion, not only had no such policy been adopted, but that the policy which was ultimately adopted was at that time only a minority opinion, held by himself and a few other of the younger officers in the department. In his testimony, as well as in the testimony of the other officers who served in the department during the war, it was made clear that everyone was overwhelmed with administrative duties; that there was little time for thinking or for planning; that those plans which existed were chiefly ideas which had been formulated in the minds of a few of the officers in the department, such as Admiral Benson, Admiral McKean, Capt. Schofield, Capt. Pratt, and others. These plans were carried into execution, not by having them officially approved, by establishing them as a guide for the whole of the activities of the department, but they were carried into effect by the individual efforts of these individual officers. Consequently, it inevitably resulted that each one of these measures, which might be considered a part of the department's war plans, were carried into effect individually in piecemeal, and there was very little coordination, or very little systematic thinking and planning as to the activities of the department as a whole. This is particularly apparent in the case now under discussion of the building of the new destroyers.

I would like here again to apologize to the committee for the repetitions that appear in this paper. So crowded were we for time in getting up this rebuttal statement, that it was only finished and off the mimeograph at 4 o'clock yesterday, and I had to leave at 4.30 o'clock for Washington, and I had never read it before except in the rough.

In a personal letter which Capt. Pratt addressed to me on June 11, 1917, he spoke of his difficulties in trying to get this plan through, and said:

I am busy, but do not like administrative work, but, unfortunately, you can not separate the two in this office. I have had several powwows with Chase and other authorities. My ground is that we should strictly confine ourselves to the decision of the mission and then, in the order, look out for the details of the execution. The principal trouble is that at the moment one gets mixed up too much with administration * * * and that is fatal, for it takes the initiative from the place where it belongs. I have had many a discussion over that very point, and if I have any criticism to make of this office that would be it. There is such a thing as being too damned efficient and wanting to do it all yourself, or rather thinking that nobody can do it quite as well, or, what is as bad, thinking that it won't be done well unless you lay out the details of the scheme. I have tried to handle personally all the cables that came in from you. * * * Everybody seems so damned pessimistic, the Germans are going to win, and so forth, and so forth. It is all tommyrot. They can't so long as we do our best.

I apologize for the expressions used by Capt. Pratt, but this is a personal letter. It shows, however, the condition that the Navy Department was in.

In his testimony, Capt. Pratt related how, during the months of June and July, 1917, he himself, and the other officers in Operations, continued to use every means they could to obtain the approval of a plan for building new destroyers, and for accelerating the construction of those already authorized. All the officers who appeared in the defense of the department, testified that the Congress at all times displayed a willingness to appropriate any money that might be needed, and to authorize such construction as should be recom-

mended. If the program was not adopted earlier, and if new vessels were not laid down sooner than they were, the responsibility therefor can not be laid on Congress, but rests on the department for its failure to recommend earlier this plan which the General Board, Capt. Pratt, and Admiral McKean have testified that they had been recommending for some months. Capt. Laning, in his testimony, gave you the memoranda which he and Capt. Schofield submitted to the Secretary of the Navy on June 21 and 22, 1917, calling attention to the vital necessity for building more destroyers as rapidly as possible. In his testimony before the committee, Capt. Pratt implied that this was ultimately done by the department in accordance with these recommendations. He was careful to go on and say, however, that it was done only because he and the officers who were associated with him in the department kept hammering on it insistently, in spite of all opposition and every discouragement.

How the decision to build destroyers was finally obtained.—The evidence introduced before this committee shows in detail how the department's decision to build additional destroyers was finally obtained.

In his testimony, Capt. Pratt also submitted the report of the Board on Devices and Plans, of which he was the head, and which was composed of younger officers in the department. He said (p. 2844) :

We did not submit our plans finally until July 6, 1917 * * *. In doing so we went beyond our instructions a bit and took into consideration everything which could be done in every way. We put forth a plan which the Secretary signed immediately, adopting a very extensive plan for the shifting of the entire battleship program to a destroyer program.

In this report to the Secretary of the Navy the board stated, among other things (p. 2845) :

The board now considers it a duty to bring to your attention the urgent need of immediately securing an adequate supply of material required by an aggressive antisubmarine campaign and of the formulation of plans to impress into service at the earliest possible moment all available United States vessels that will be of use in offensive operations against enemy submarines.

Again I invite attention to the fact that here in July they are writing a report to the Secretary urging him to take an aggressive antisubmarine policy and to bring about the formulation of plans to handle those destroyers.

In regard to this matter, Capt. Pratt wrote a letter to me, which I will not read as it repeats a good deal of what has been said before.

Senator KEXES. Do you wish that put in?

Admiral SIMS. Yes. It simply tells the number of destroyers called for and other ships. It is rather technical.

(The letter referred to is here printed in the record as follows:)

Another thing McKean, Schofield, and I have been fighting tooth and nail is to get our building program modified so that our building efforts will be directed at putting in the water at the utmost speed as many ships, similar to the 750-ton destroyers, or something like that, as possible. In other words, every effort was to be directed at producing antisubmarine craft at the expense of every other type * * *. The General Board was for a speeding-up program only. The bureaus did not approve; but I was appointed the head of a board whose mission was "To consider all plans and devices concerning the submarine war." The upshot of it was that this board, with a lot of youngsters on it, recommended 200 submarine destroyers, and, somehow, the Secretary approved it. We had already prepared the letter for his approval and the forwarding letter

to the bureaus. They went up in the air when the blow descended * * *. A joint letter (from two of the bureaus) followed in which we were discredited. But it was fought out, and the admiral went to the mat on it yesterday, with the result that our building program calls for 116 destroyers of the standard type and 180 of the type we recommended. In other words, 256 craft. I wish they were in the water right away, but it is better this than nothing. I did not think we would get it, but there you are.

In other words, it was not until July 20, 1917, that the approval of the department had been obtained to switch the building program to a concentration on destroyers. That is four months after the war started. In his testimony before this committee, Capt. Pratt, and it may be added also Admiral McKean, gave interesting details as to how this result was accomplished. On July 14, 1914, the board of which Capt. Pratt was the head, submitted—

Its recommendations as to efforts which should be made in the endeavor to put an end to the submarine menace, with particular reference to the recommendation for the construction of 200 destroyers.

These recommendations were forwarded to the Chief of Naval Operations, in response to his verbal instructions of July 14, asking for the reasons for such recommendations (p. 2854).

Even at this late date, it was therefore still necessary for the department to be convinced of the reasons for concentrating its efforts on a program designed to meet the German submarine campaign. In its report of July 14 the board gave the reasons for these recommendations (p. 2854b, Capt. Pratt's testimony).

I should like to include those recommendations for the technical people who read this, but I do not think it is necessary to take up your time with them.

Senator KEYES. Very well.

(The recommendations referred to are here printed in the record as follows:)

In making the above recommendations, the board was actuated by the following reasons:

(a) The seriousness of the present situation. Every report from abroad indicates that the present submarine situation is extremely serious. This is a matter of fact.

(b) The statements from abroad that vessels of the destroyer type * * * are the best antisubmarine craft afloat.

(c) The reiterated statements, both from our own officers operating abroad and from foreign officers, that one of the most important factors is time, necessitating speed in building and speed in placing these ships, which can be successfully operated against submarines, in the war zone.

(d) The information received from abroad that, while the 110-foot chasers will be used against the submarine, as will also be any type of craft which can keep the sea and is not too valuable, still it is not an unqualified success. It is more of a than it is a desirable sea-keeping antisubmarine craft.

(e) The belief that the standardized type can be developed which can outspeed the present destroyer policy.

(f) That what was needed now was speed in construction and standardization, not improvement (with an eye to the future).

(g) The knowledge that England has been forced to develop a type especially for antisubmarine work.

(h) The belief that drastic and perhaps novel methods would have to replace conservative estimate if we were to grasp the present situation in time.

(i) The conviction that the antisubmarine destroyers * * * would be extremely useful not only now, but in the future.

(j) The conviction that the present established naval building policy would have to be modified; that a new policy would have to be decided on and established; and that no policy could succeed unless the will to drive it through at all cost were there.

Page 2854c. In further substantiation of these reasons, the board quoted, or embodied, practically the whole of Capt. Pratt's memorandum of June 7, 1917, already mentioned; or, that is, five weeks after this memorandum was presented no action had yet been taken upon it. On July 19, 1917, Admiral McKean submitted a memorandum for the Chief of Naval Operations and the Secretary again pointing out the necessity for pushing the destroyer program at all costs. The tone of this was exactly the same as that of the memoranda referred to by Capt. Laning in his testimony, which were submitted on June 21 and June 22, 1917, by Capt. Laning and Capt. Schofield.

Hence, in spite of the urgency of the situation and the clearness with which this situation was set forth by the officers in Operations in June, 1917, it was still necessary for Admiral McKean a month later in almost the same terms to urge on the responsible heads of the department the adoption of the same identical policy. This is the more singular as the policy was one so obviously wise that it is hard to understand why it had not been adopted on the day we declared war, three and one-half months before, if, indeed, it can be considered justifiable on the part of the department to have postponed so necessary a step of preparedness for the kind of warfare we would have to fight until the time of the actual declaration of war. This memorandum prepared by Admiral McKean on July 19, 1917, was quoted by Capt. Pratt in his testimony before this committee (p. 2854P).

Among other things, Admiral McKean wrote:

With an earnestness beyond expression, backed by a conviction that has endured from the first, I ask that we meet this great world crisis by contributing our maximum national effort in building, manning, and fighting destroyers to drive enemy submarines from the sea. * * * The question of types may rest for the moment while we make the great decision to do our utmost. Let it not be said by posterity that we, seeing our duty, hesitated until too late, or that we failed to distinguish essential from incidental effort. Two hundred destroyers would mean victory for us. They may be had within a year and a half. The power to accomplish will follow the decision to accomplish. Let us decide.

You can hardly imagine anything more energetic than that.

Here Admiral McKean states what is, in brief terms, the whole point of the criticisms directed against the department's conduct of the war. They did fail to distinguish essential from incidental effort. They failed to act upon the very policy which Wilson so forcibly set forth in his message to me and in his speech of August 11, 1917, quoted by the Secretary of the Navy. This failure was not due to any lack of effort on the part of officers serving in the Office of Naval Operations. They have explained in full detail with what energy and with what persistence they struggled to secure this decision. Congress, too, was perfectly willing to grant the money necessary. Yet it was not until July 20, 1917, that the contracts were let for the 76 destroyers which were built from funds authorized by Congress on March 4; that is, four and one-half months had passed after Congress had made the money available before the destroyers were contracted for by the department.

Results of the delay of the department in reaching a decision.—In view of the testimony given by the department's own witnesses, it seems hardly necessary to state that these contracts should have been let in March, 1917. As a matter of fact, the contracts for 15 destroy-

ers were let in March, and some 15 others were approved at various times in May and June. But the greater part of the 106 destroyers, either authorized in 1916 or on March 4, 1917, were not contracted for until the 20th of July, 1917. Similarly, as Congress did not appropriate the money for the additional program of 150 destroyers until October 6, 1917, it is a fair assumption that this delay was due to the failure of the department to state its needs earlier. The contracts for these 150 destroyers were let between October 9 and October 15, 1917. (These dates are taken from Admiral McKean's testimony, p. 4386.) The results of this long delay of seven months are indicated in the following quotation from the testimony of Admiral McKean:

The CHAIRMAN. Were any of your destroyers that were in that list available during the war?

Admiral McKEAN. I do not think, sir, any of those were * * * I do not believe any of those were completed in time to be available during the war.

As I said in my direct testimony, practically none of these new destroyers had reached European waters at the time of the armistice, and, therefore, so far as this war was concerned, the greater part of the new construction of destroyers was useless, because of those tragic months of delay in 1917, which Capt. Pratt and Admiral McKean have described to you in such detail and with such energy.

Departmental delays occurred in spite of individual efforts of officers in operations.—Many other instances could be given of exactly the same kind of delay in the department in those early months of the war, delays which any kind of an adequate war plan, or which even the most elementary military survey of the situation and of action based on that survey, would have made impossible. Nothing could be more strongly in contradiction of the spirit and terms of the President's war policy, as outlined in his message and in his letter, than this kind of inaction on the part of the Navy Department.

Apparently, in the desire to defend themselves, although they were never attacked, individual officers have appeared before you and have given long accounts of their own efforts to meet the situation and have tried to give the impression that these individual efforts were the official and responsible action of the Navy Department; but the most casual examination of their testimony shows that this was not the case. It reveals, on the contrary, how desperately they had to struggle and against what obstacles they had to work in making possible any activity on the part of the Navy in the early months of the war.

Admiral McKean said, for example, that the lack of plans and systematic organization of the Navy Department (p. 4348)—

Had increased the load, already heavy, that each of us were carrying. This load killed our best man, others broke down from time to time and had to be given a rest, but I never heard one of them squeal.

Admiral McKean sums up (p. 3437) the purpose in a number of paragraphs, which I would like to include, but I do not think it is necessary to read them to you.

(The summary referred to is here printed in the record, as follows:)

The preceding narrative is intended to show:

First. That Operations was awake to the situation before the war and was doing its best within the appropriations to prepare the fleet for war and to prepare the shore bases to maintain it in fighting trim during the war.

Second. That even before we became a belligerent the difficulties and prices were increasing daily, making progress slow and getting less for every dollar appropriated; and

Third. That when funds became available, practically without limit, the demands on the material and labor markets were such that new facilities had to be built up to provide the material, and that unskilled labor had to be trained by hundreds of thousands to perform jobs calling for high skill and long training.

The above explains why it was impossible for the Navy Department * * * to instantaneously, or even in what under normal conditions would be considered a reasonable time, meet the infinite number of demands made upon it.

Similarly, in his testimony Admiral Benson pointed out that the shortage of officers had made it impossible for him to build up the Office of Operations previous to the war so as to provide for a planning section, which would have made possible the elimination of long delays and the avoidance of the errors into which the Navy Department inevitably fell during the early months of the war in attempting to carry on war without plans and without adequate and intelligent provision.

Testifying with regard to this same point, Admiral McKean said (p. 3417):

We never had sufficient personnel to have an adequate staff of officers abroad collecting information; and of the small number we have had, few of them were selected solely because of their superior training for the job.

Admiral McKean in another place also called attention to the fact that this same shortage of trained officers had made it impossible for Operations to have any real planning section.

It seems to me that Admiral McKean admirably summed up the situation when he said (p. 4215):

We might have done more; we might have done it sooner; we might have done it better; but we did the best we knew how with the brains and energy God gave us to work with.

One is tempted to refer to Whittier's lines in this connection:

For of all sad words of tongue or pen,
The saddest are these, "It might have been."

Of course, the officers in the department did the very best they could, and, of course, it is true that, under the circumstances, they accomplished miracles. The achievements of the department are astounding when one reflects upon the conditions under which these officers had to work, with an inadequate organization, with a Navy unready for war, with a shortage of trained personnel, and with no plans and no directing force competent to handle the situation.

Capt. Pratt's personal letter of July 2, 1917, and my reply.—Capt. Pratt, in his testimony, introduced a personal letter which he wrote to me on July 2, 1917. This letter was an expression of his personal views as to the situation then existing, and his ideas as to what should be done. As he has introduced the letter, however, as being an official statement of the department's policy and plans at that time, it seems to me necessary, for a proper understanding of it, to consider the reply which I addressed to him on July 28, as well as certain other letters which were exchanged between us at about the same time. I am introducing these letters in order to show more conclusively what a wide divergence there was between the policy outlined by the President in his telegram to me on July 4,

1917, and the policy followed by the department previous to that time, and, also, to indicate to what an extent the department's policy was modified after July 4, 1917, and to what an extent the recommendations I had been insistently making for two or three months were approved almost immediately after the President had sent his message to me and I had replied. My letter to Capt. Pratt, of July 28, 1917, dealt with almost every principal point in his letter. There are paragraphs in it which are of a purely personal character, which referred to other officers in the Navy, or dealt with confidential matters concerning other nations, which I have omitted from the copy which I have here.

I do not think it is necessary to read that letter because it is a very long one and goes a great deal into detail, but I should like to make this statement regarding it, and that is this: That his letter to me showed that the information that they believed at the department as to the antisubmarine campaign and the submarine campaign was very largely in error, and my letter was designed to correct those errors and to point out what I thought ought to be done. It is a letter of perhaps 25 or 30 pages. I am quite sure you would all go fast asleep if I should read it, because it is very technical.

(The letter referred to is here printed in the record as follows:)

LONDON, July 28, 1917.

MY DEAR PRATT: Your letter of July 2 was received some days ago, and I will try and answer some of your odds and ends. I will have many criticisms to make of a good many of your remarks and theories, especially in reference to the alleged facts upon which you have based almost all of your conclusions.

Please get the copy of your letter and place it by you for reference while you read this.

Please remember while you are reading this, and remember it all through, that I am writing to you from the point of view of a man who is handling a very big and very responsible job, with the assistance of one military aid. Just keep this fact in your mind about this one military aid.

In order to bring out this point, which is really the essential point, I will just make a little list of the extremely useful things which you would like to have me do over here. Quoting from your letter:

1. "It would be wise for you to lay down certain general requisites in the matter of type and armament for submarines which we ought to consider in any building program.

"As you are on the spot, such recommendations would be of extreme value."

There is no doubt at all about the above, but how much time, study, and investigation do you think it would require to get out that one item alone?

Nothing would please me more than to send you complete and authoritative information on this point; and I could do it on this and dozens and dozens of other things if you would give me the necessary tools to work with.

2. "Possibly you may wonder why so many schemes which on the face appear unsound are sent over to you." (I should say I did wonder.)

"The face value of the articles presented is frequently nil, but in every case there has appeared to me to be an underlying principle which would bear scrutiny."

How long do you think it would take to make the necessary investigation in the various departments that concern the above? And how do you think all of these could be handled without assistance?

3. "I feel that we do not get enough of the point of view over here."

I can assure you that you get all of the point of view that it is physically possible for one man and one assistant to dig out in the time available from doing vitally necessary work in connection with the force, the movements of convoys, etc.

4. "Write home some of your newsy, gossip letters."

Nothing would give me more pleasure and satisfaction than to do so, but how do you think it can be managed, except for an occasional letter, when my time

is taken up with a hundred things that must be attended to, and when I have but one aid? My recent telegrams have told you what is the result of trying to carry this great weight without sufficient assistance. There is a very considerable amount of correspondence, questions, etc., banked up which it is wholly impossible to get at because our time is completely occupied by matters which can not be neglected.

5. "Not only must the fleet be trained to the minute, but those who are concerned with the intimate direction of its affairs must constantly have the most unlimited information, in order that any moment it may be able to adjust itself to changed conditions or to increased activities."

Of course, I recognize the extreme importance of this, but this alone, as you must well know, would require an amount of work and investigation that would keep one man occupied for a long time in order to get information that was sufficiently complete to be valuable.

Ever since I have been here I have recognized the extreme importance of getting the information indicated in the paragraph above, and I have recommended, urged, and implored the department to send over the necessary people to dig out this information and send it in constantly—that is to say, continuously—as the information becomes available to fit the "changed conditions or increased activities."

I have recommended that officers who are as expert as possible in the various kinds of information you want be sent over to serve not only in the Grand Fleet, but in other types of vessels, and these officers return from time to time with information, and be replaced by other similar officers.

Not only would this be of the greatest benefit to the department and to the fleet, but to the officers themselves.

It is a matter of the utmost astonishment to the people over here that I am left without a staff commensurate with the heavy responsibilities and the complicated duties that I have to perform.

It goes without saying that no other official of any other navy or army is in such a position.

Even the Belgians have a field officer here with a large staff of specialists in the various departments.

6. "In order that the fleet may be in closest touch at all times with every phase of the situation, not only this side of the water, but also abroad, the admiral has endeavored to establish the closest sort of cooperation and information service between the fleet and this office; and I feel sure that he would view with favor any effort on their part to establish permanent relations, even to a desk here, between this office and grand staff of the commander in chief."

All of the above is manifestly the correct dope. You can establish the closest sort of cooperation and information service between our Navy Department and the fleet, but how are you going to establish the same kind of relation between the forces on this side and the Navy Department, in order that the information may be transmitted thence to our fleet? Manifestly, you can not do this without a staff on this side any more than you can do it between the Navy Department and our fleet without a staff being attached to the latter.

I am wholly at sea in this matter. I assume that the Navy Department must have some sufficient reason for leaving me without a staff, but I have no idea at all what that reason may be.

7. "There is a question pending of sending the commander in chief, with a part of his staff and a representative of this office, to discuss the various questions with the admiralty, and get first-hand information and impressions."

This would doubtless be a good thing. Anything of this kind would have a good effect. It is in line with what I have been recommending—namely, that you send officers to this side in whose opinions you have confidence; but I have the most serious doubts—in fact, I have an absolute conviction—that the above suggestion would not accomplish the necessary results unless they were prepared to stay here on the job and keep up what you have stated to be necessary—that is, to constantly convey the most unlimited information.

The admiralty has recently requested that four of our coal-burning dreadnaughts be sent to join the Grand Fleet. If you will refer to my cablegram on the subject you will see that I have pointed out the extreme benefit this would be to our Navy, particularly if the officers that I recommended were sent along with the force from our fleet to cooperate with the Grand Fleet.

8. "Asking you to outline the character and extent of operations in the air, which our naval forces might at some near time be called upon to undertake in the service of the allied operations."

This is another example of the things that I am asked to do without having the force to do it. If I had a man here who understood all this business and whom I could put on the job to run down the necessary information, I could answer the question promptly and fully. As it is, I must pick up the information as well as I can from time to time in the few and short intervals that occur between items of work which can not be put off for an hour.

9. "It (the air service) is one effort which can be intensified most rapidly, etc."

The boss of the commission who came over here on this service told me with great pride that they expected to be able to place a certain number of thousands of aeroplanes on the western front about August, 1918.

The above are only a very few of the things which I have been asked to attend to, and which it is wholly impossible for me to attend to, with the rapidity and thoroughness which are necessary to efficiency. Bear in mind that the above are really only samples of what come through to me.

In connection with the above, please bear in mind the nature and extent of the administrative work which flows in a constant stream to us. As you were a member of the staff of the old flotilla, you know something about this. At that time we handled our own affairs directly, and not through cooperation with allies. At that time we had approximately a sufficient staff to handle the flotilla work by all hands working hard and attending to business.

My present position is similar to what it would have been if they had taken all of my staff people away from the flotilla except one, and then sent the flotilla over to this side, and given me all of the extra work, like the above indicated, in addition.

Can you wonder that things have happened as they have? Can you wonder that I can not for the life of me understand what is behind all this? Can you wonder at the astonishment of the people over here, who see me carrying out my present work without a staff?

You know me well enough to believe that I have never at any time been at all touchy about the dignity of my rank. But I will admit that I am more than a little bit touchy about the dignity of our Navy Department. I am obliged to go from one department of the Admiralty to another, consulting officers of all ranks to dig out information about details that could be done much better by officers who are better acquainted with the technical details I seek. Moreover, by officers whose ranks would be commensurate with that of the officers from whom the details of the information must come, and who, in consequence, could much better get the information than it could be gotten by a vice admiral.

I note that in your letter you tell me that everybody is in sympathy with the work that I am trying to do. You tell me that everybody is trying to send me help as fast as it can be spared. Then you recite to me why it can not be spared. It is because you need so many officers for so many different things—trawlers, motor boats, converted yachts, etc.

Did it ever occur to you that this must necessarily sound to me as though you were trying to make fun of me. Is there any billet in the Navy to-day, barring a few, that is more responsible or more important? Is not the success of the work that I am trying to do more important than the existence or the efficiency of one or two converted yachts?

Why is it that you could not turn it around the other way and say to those concerned that you are sending to the converted yachts as many officers as can be spared, but that you have been obliged to send an adequate number of officers to a more important position; that is, to assist me in doing what the department urgently needs to have done?

You have also specified that you were sending me officers "who can be spared." Does not your training indicate to you that that is not the kind of officer for a job of this kind? If there is any place in the Navy to-day where officers of special training, special ability, special temperament, etc., are required, it is in this billet over here.

I sometimes doubt whether any one particular person on the other side who is concerned with making these decisions has ever read all my dispatches wherein I have specified the above requirements.

I am insisting upon all this, because I am perfectly conscious of the fact that by reason of purely physical limitations, I am utterly unable to send in the in-

formation which both I and you believe should be constantly flowing into the department.

In this connection I may say that it is very generally recognized over here that America's coming into this war is going to be the salvation of the Allies.

In Paris this week, there were conferences held between the naval representatives of Italy, France, Great Britain, and the United States.

There were similar conferences held between the military representatives of the same powers.

At the conclusion of these conferences the admirals and the generals came together to talk over their mutual interests. The result is contained in cables, which I am sending to-day, quoting a resolution of the combined conference, and asking that similar representatives for the United States be sent here by August 10, if possible, to take up the whole matter; for this question of shipping is the crux of the whole situation.

The British want all the mines they can get put down in the ocean. They would therefore be glad to have us manufacture these mines of the latest type and send some vessels to help them put them down.

These are being used for various purposes.

As frequently reported in my cables, the North Sea is pretty thoroughly mined within a radius of about 100 to 120 miles from Heligoland. This area has been successively mined by the British against Germans, and the Germans against the British.

The northeastern area of the Dogger Bank contains a great mine field, over which the Germans repeatedly tried to draw parts of the British fleet. It was through or alongside of this mine field that the German fleet retreated after the Battle of Jutland.

I have always believed this to be the case, but did not know until I had seen the mining charts here.

The area above described is a dangerous area for both the Germans and the British. This is dangerous because of the fact that the positions of the mines are not very accurately known by either party. Although all practical precautions were taken to determine the position in which they were laying down the mines, these positions remain so uncertain that neither the British nor the Germans will go within 6 miles of the position in which they believe the mines to be laid down. The longitude positions of the ends of the mine fields are pretty accurately known, but the latitude positions are all in considerable doubt. This is due to the fact that the mines were laid necessarily in the night time, so that enemy scouts, Zeppelins, etc., might not see the operations. The longitude was more accurately determined than the latitude, because the mine layer in leaving a known position on the British coast, spun out behind her a piano wire. This gave the longitude with very considerable accuracy; but it did not inform them as to how much they might have been drifted north or south by the varying tides of the North Sea.

STRATEGIC FIGHTING AREAS.

It is not necessary to try to analyze all that you say under this headline. I agree with it all without exception, provided your premises are correct.

Perhaps some light may be thrown upon this by asking you a few questions on the subject.

If the various schemes you propose for offense action against the German fleet and bases and the comparatively simple plans you suggest have not been carried out by the allied admiralities, what do you think must be the reason? The answer to that question must necessarily be extremely uncomplimentary to the Allies, provided your premises are correct.

As a matter of fact, not only has everything that you suggested been tried in blood and tears, but a great many other schemes which you have not suggested, and the present situation has been forced upon the Allies by a succession of very bitter circumstances.

Of course, everybody knows that the very best way to defeat an enemy is by a strong offensive, and that this offensive would be more effective where the enemy is the most dangerous; that is to say, in the North Sea and the Adriatic. It is the same old business of digging the rats out of their holes or stopping the hole in the wasps' nest instead of fighting the wasps individually after they are out.

You are correct in saying that the mine in some form or other, whether planted on the bottom, dropped from the stern of a destroyer, or thrown by howitzer

gun, or in the form of the torpedo itself, is the principal means of offense against the submarine.

The aircraft is an auxiliary of considerable value, but unfortunately its rôle must always be a secondary one by reason of its very limited and uncertain radius of action. Its uncertainty of radius is largely due to the question of weather conditions.

There can be no doubt whatever that the mine fields are a very considerable embarrassment to the enemy submarines.

I am glad that you realize the silent pressure of the British Fleet: that is, its effect on controlling the sea and making it possible for the war to be carried on.

You say that the "North Sea and the Adriatic must be offensive mine areas." They are the most offensive mine areas that you can imagine. In many of my cables I have described the extent to which the North Sea is mined, and I have referred to it above in this letter.

You say that I do not accept as a valid excuse the statement that the "Fleet must be in readiness to repel an attempt by major ships of the enemy to raid the east coast." It has never been so held, and is not now so held. Its mission has been to be ready to attack the German fleet in case it came out in force. The British have never been particularly apprehensive that there would be any serious raid on the east coast. Their estimates of the kind of raids that might be expected have been correct, and they have held in readiness a force south of the Grand Fleet to repel these raids. You know what these actions have been.

I entirely agree with you and the rest of the gang in the insistence that local tactics should never be allowed to cloud correct strategic conception. To the best of my knowledge, they never have done so.

You refer to some decision of the Admiralty "that certain areas can not be mined because it will interfere with the operation of the High Sea Fleet." You believe this to be wrong, and state that you are going to stick to it "like a stubborn mule." There is no reason why you should not do so, though I do not think that any member of the War Board should take the attitude of a stubborn mule on any question. The misapprehension in the whole matter is that the Admiralty has never rendered any such decision. They did not have the decision. The enemy can plant mines as well as they.

In this letter, or in some earlier letter, I have referred to the very extensive mining that was done on the northeast end of the Digger Bank by the Germans and their repeated attempts, after raids, to draw the British pursuers across these mine fields.

Naturally, the Allies have countered by planting mine fields which would embarrass the Germans. This was rather early in the war. Since that time mining has been going on vigorously on both sides—particularly on the part of the British, and this to such an extent that the North Sea is now mined over an area extending over 100 miles in a circle from Heligoland.

PERSONNEL.

Under this heading I think I have said all I care to above. I have tried to point out that the success of this mission of mine is a little more important than the existence or the efficiency of one or two armed yachts. If you had taken a couple of these armed yachts out and painted them red and sunk them in the ocean and given me their commissioned officers, you would not now be calling for masses of information which it has been physically impossible for me to get and send in.

I may say also, in this connection, that it is perfectly easy to send me officers who would be of almost no use in this particular kind of work and that is the reason that I have specified the type of educated and experienced officers that I need.

I may, of course, be quite wrong about this, but it is my idea that, barring the officers in Operations, there are no billets in the Navy that are more important than those upon which we must necessarily depend for the completeness and accuracy of the information coming from this side.

ESTABLISHMENTS STATIONS FOR UNITED STATES FORCES ABROAD.

In my cables I have tried to make it clear that in this submarine campaign the battle line is necessarily stretched across the approaches to the British Isles and France. I am, therefore, at a loss to understand the scope of what you mean by "Our home needs."

It is true that in the future there may be some needs there; but it is difficult to see just what they may be. I do not think any estimate of the situation made from the German side could possibly conclude that any considerable force would be sent to operate 4,000 miles away from their base, in an attempt to cut dispersed lines of communication, instead of using the same force to attack these concentrated lines as they approach this side.

It has been a matter of astonishment to me that in the very beginning of our entry into the war the Germans did not send one or two submarines to the other side to alarm the good citizens of the Atlantic coast and, through the pressure of public opinion, force the department to retain forces on the other side which they have, or intend to, send to his side. That they did not do so would seem to indicate that they hope that the peace propaganda in America would either succeed or at least would diminish the amount of activity that we would take in the war.

Both in your letter and in other communications there has been reference to the possibility of the Germans establishing submarine bases on the other side. This to my mind is a most extraordinary conception. The kind of bases referred to could not be anything more than a place that a submarine could slip into and get supplies of oil or provisions.

I have discussed this matter long ago with those officials of the Admiralty who are handling the submarine situation and with those who are responsible for their extraordinarily efficient secret service. (Right here let me say that I am unable to tell you much about this secret service, because the sources from which it is derived are so important that it would be not only dangerous to put it on paper but even to tell anybody else about it. It is, in fact, not important that you should know details, but I ask you to believe that the service is of extreme efficiency.)

To return to the question of basis, the above-indicated officials point out that if the Germans have such a base on the other side it would be approximately no use to them unless it provided additional torpedoes and mines and efficient repair facilities. Of course, that sort of base is impossible.

These officials also point out that there has never been any such bases on the coast of Ireland or Spain; that such bases not being able to supply torpedoes, mines, repairs, and relief crews would be of no use to the Germans; and this for the simple reason that the limitations of the submarine's activities are determined by the number of torpedos or mines she carries and by the endurance of the crew. That is to say, if they had bases on the west coast of Ireland they would not need to use them, because the above limitations force them in any case to return to port for supplies, repairs, and relief crews.

I am very glad, indeed, to note the list of vessels which it is now expected will be sent soon to this side. Menhaden fishing boats will be of the greatest service to France, as she is short of this type. She needed them for dragging for mines and that sort of thing.

As for the escort service on the French coast, the yachts will be of great use. Of course, you know that there is a tremendous traffic up and down the French coast of vessels going from England to France and Italy with coal and returning from Spain with ore and other products.

The service of escorting these vessels is very well done. Out of something over 6,000 trips, the loss of vessels has been less than one-tenth of 1 per cent. It is the most successful of all operations in protecting vessels.

The five destroyers from the Philippines will undoubtedly be of use within a limited radius, probably based on Gibraltar.

You speak of the "twelve destroyers ordered to get ready for distant service." This is the first information I have had that any other destroyers are to be sent.

The other yachts that you mention as now being got ready can be used to great advantage.

Whether or not we should undertake operations in the Mediterranean is, as you say, "another question." In this connection it may be well to remember that our operations in the Mediterranean would be necessarily restricted by the fact that we are not at war with Austria.

You are correct in saying that "Our submarines could do good work in the North Sea area." I entirely agree with you in this, and I hope that they can be sent at the earliest possible moment. Boyd believes that our present submarines could be used successfully in the same kind of service that the British submarines now perform. He has been on patrol in some of the latter.

ARMED GUARDS.

Your remarks under this heading make it impossible for me to believe that you can have read my explicit cables on the subject, or Admiral Jellicoe's cablegram giving the results of their experiences with a cruiser operating against their own submarines.

It will not be necessary for me to go into this matter again; but I would be obliged if you would look up my cables on the subject and note particularly the fact that a great many armed vessels, even a number being escorted by destroyers, have been torpedoed without the periscope of the submarine having been seen at all until after the torpedo struck the ship.

You might also note the fact that regular cruisers operating on patrols I have indicated have been torpedoed without seeing the submarine. Also the fact that experience has driven the Allies to the necessity of escorting all important men-of-war by destroyers.

The reason of this is that the present size of the upper end of the periscope is so small that it is wholly impossible to make it out until it is away inside of the distance at which a hit is practically certain.

If you want to carry out some experiments in this line, drop a few hooks overboard and see at what distance you can pick them up by the exercise of the utmost vigilance. The present periscope is no bigger than the handle of a boat hook.

As far as I can see, all of the conclusions about the effectiveness of arming merchantmen is based upon the assumption that if the crew is sufficiently vigilant they will almost always see the periscope in time to drive the submarine under water. This is wholly and grotesquely in error. Even if it were desirable to arm merchant vessels in the way you describe our armament, it would be wholly impossible to do so for all of the vessels of the Allies. There are some thousands of them, and they have not either the guns or the personnel to do so.

As it is, the British Navy is many hundreds of officers short. About 5,000 new guns are being built, but this will necessarily take some time. The Admiralty has asked the gun builders of America for assistance in this line, but it could not be given. This request was made in the long telegram from Admiral Jellicoe to Mr. Schwab.

In respect of armed merchantmen, the British are doing what is possible for them to do considering all of the other necessary activities. They have schools for the instruction of British merchantmen in the best methods of handling their ships. They have a corps of some fifty-odd officers who make trips on merchant vessels for the purpose of instructing the crews.

Inspections are made of the records of ships that have been attacked either successfully or unsuccessfully, and in those cases where it is shown that the master has not handled his vessel in accordance with instructions he loses his job by having the insurance authorities notified that no insurance will be given to any vessel he commands.

ANTISUBMARINE DEVICES.

The most hopeful of all these devices is that which was recently installed on the *Wilkes* and three other destroyers that recently arrived from America.

This is acknowledged to be the most promising principle, and it only remains to make it sufficiently effective for use against the submarine. You may or may not have seen the report of the experiment carried out on this side. My cablegram was based upon the report made to me by Lieut. Commander Castle. Both the British and French scientists are also working on this problem—that is to say, the improvement of our device—and it is earnestly to be hoped that they can make it effective.

COOPERATIVE OFFICERS.

Under this head you make a remark that positively gives me goose flesh. You say, "If the increase of your personnel is actually given you, then you will have a force to work with composed of some very fit men, even if taken from the Naval Reserves."

The above refers to liaison officers. There is no officer in any navy in the world, and there never will be, who is competent to be a liaison officer. Such a man, to be as efficient as we would want him to be, would be a wonder. He must not only have accurate and extended experience but sound judgment in

military and nautical matters. The idea of having officers from the Naval Reserve on this duty is what gives me the goose flesh.

You suggest that everything would be all right if you had over there a representative of the Admiralty General Staff. If this were carried out in respect of the various Allies, it would imply officers of such capacity that they would not only be able to tell you everything that you wanted to know about actual conditions, but would also be able to keep you up to date as these conditions changed.

All of this without opportunity on their part of discussing with their own admiralty the various questions as they arose, except by cable and mail. It is hardly necessary to say that no such extraordinary officers exist. It would seem to me that you have got things the wrong way round; that what is required is representatives from each one of the Allies concerned all working together in some central place.

The conclusions of such a body of officers would not be materially affected by the place in which they worked, provided they had access to all of the multitudinous information they would require. As this information would be wholly essential, it would seem logical that these officers should work at the center in which this information is most completely available.

Lest you think I exaggerate the qualities of the officers referred to, please note that you state that he should be a "master tactician and also a master of policy and strategy." You say, "Those are rare qualities to combine in one man," but still you suggest that Great Britain should send out such men to cooperate with the navy departments of her various allies.

Instead of doing so, she has requested the Allies to send such men to her to discuss with her war board the various measures to be taken, and she intrusts these officials with the duty of keeping their own admiralty informed. This is what I have been recommending in respect of our Navy Department ever since I came here, it being understood, of course, that such an officer should have the necessary assistance to make it physically possible for him to perform his task.

This is the only way in which the Admiralties of the various Allies can keep a "close scrutiny" on the work that is going on. This is about the only way for "each to give and learn from the other."

You have asked repeatedly as to what the Admiralty's policies are in respect of the war, and particularly as to the antisubmarine campaign.

My various cables should have made this entirely clear. I sometimes doubt whether you have ever seen them all. I do not know how the cables are handled. I can only judge from the results on this side—particularly from my lack of information—as to what is proposed and what is being done, even in the handling of what I might call current events.

You say that you always try to keep me sufficiently informed. In this connection I may point out, only as a sample, a few of the things that occur to me wherein I was left without sufficient information.

For example, I did not know that any destroyers were coming over with the first convoy. When I found out this fact I did not know their names or how many of them there were, and I did not find this out until they had arrived at Queenstown and could be counted.

I did not know that there were any naval colliers with the convoy or that these colliers had carried coal and other supplies to France.

I did not know of the sailing orders of the destroyers that were sent to the Azores, and I do not know under what orders they are operating, and consequently whether my wires are crossed with theirs.

I did not know of the movements of the *Kanaicha*. I was informed that she was coming with the convoy. I assumed that it was with one of the merchant convoys from Hampton Roads. I did not know what her orders were, and I do not know now.

I was not informed that a collier was being sent to Bordeaux with coal, and I do not know whether other colliers are to follow her.

I learned from my people in France that a collier arrived in Bordeaux with coal for Fletcher's forces and under charter to return to Hampton Roads for more coal. This would seem to be an extravagant use of tonnage, as this vessel could do much more effective work if she were chartered to carry coal from Cardiff to Bordeaux.

I am not yet aware whether Admiral Wilson's force has sailed for Gibraltar and when it may be expected.

The above are just a few samples of the lack of information on this side.

You say "It will be won all right; England can do it herself, but we can shorten the process."

In view of the information I have been sending in since my first cable, about the middle of April, this is a most extraordinary and discouraging statement.

There is not a man in England in a position to know anything about the situation who believes that England can win the war without a great deal of assistance.

No extensive analysis is necessary to show this. It can be shown without the necessity of any accuracy of figures, but simply by a statement of the relation of certain figures to certain others.

It is a matter of arithmetical computation that a certain amount of supplies are required to support England, France, and Italy, and their armies at the front. The submarine losses are very much greater than the possibilities of building to restore these losses, at least until after the expiration of a year or 18 months. Whether the destruction is two, three, or four times as great as the replacements, it makes no difference in the final results: it affects only the time when the reduction of tonnage will begin to go below that which is wholly necessary for continuing the war.

If we assume that the rate of destruction will continue at the present rate, you can easily do a sum and find out how long it will be before the total tonnage is reduced to the danger point. There is no possibility of England alone being able to do the necessary amount of building to save the situation. Therefore, it is not true that "England can do it herself."

Upon this point I have obtained and cabled the official figures derived from the ministry of shipping and other departments, and they have shown that the embarrassment referred to can not be long deferred unless extraordinary measures are taken.

One of my recent cables indicated that one of these measures is the withdrawing of 80,000 shipwrights from the British Army, in order to increase the building of tonnage to 3,000,000 tons a year, which is about half of the necessary amount assuming that the submarines continue to destroy 500,000 tons a month.

There is no deception about the above. It is a matter of arithmetic.

I am in great hopes that the improvement in the means of offense against the submarine, and particularly the convoy system, will so diminish the losses as to make things look a great deal better—but this is not very certain. It certainly is encouraging to know that of all the convoys that have arrived from America, only one has been attacked, and only one ship struck by a torpedo, and this did no more than damage her rudder.

Of course, it is to be anticipated that the Germans will change their tactics when the convoy system is more completely in operation. One of their changes in tactics will be the sending out of what might be called submarine raiders. These are submarines of the *Deutschland* class, though larger. They are believed to be about 2,500 tons, and they will carry a couple of 5.9 guns. It is said that they will operate in the same manner as the one that I reported by cable, well out in the ocean, in the latitude of Gibraltar. She seized a Norwegian ship and used her for a considerable time as a base. It is said that the new large boats will carry sufficiently large crews to put prize crews on board of captured vessels that it is desired to try and send in—of course, particularly, during the long winter nights.

Some British officers, notably Admiral Bacon, who commands at Dover, are of the opinion that Germany may even send out some of her cruisers as raiders during the winter months, in the hope of being able to destroy the escorting cruisers of convoys, and then destroy the convoy.

It is for this reason that I would recommend the employment of some of our reserve battleships for escorting convoys—that is, to escort them up to the point where they are met by the destroyers from this side.

Once the convoy is under escort of the destroyers, I believe the danger of destruction to be small. I believe that all the submarines can do is to make Browning shots at the convoy from a long distance.

Please note, as I have previously stated in letters and cables, that the convoy system enabled the Allies to make concentrated offensive attacks against submarines that are necessarily widely dispersed in order to have a chance of finding the convoy.

TRANSPORT SERVICE.

It is the best possible news that the Army has now turned over the transport service to the Navy. I supposed that they would do so as soon as they

realized the dangerous nature of this business of transporting troops through the submarine zone.

I have a cable acknowledging receipt of my letter about handling transports, and I am glad to know that the suggestions contained therein have been adopted.

During the recent naval conferences in Paris I had a long talk with Gen. Pershing and with the chief of staff of the French Navy on the subject of communications relating to convoys. As a result of this conference, I have sent a cable pointing out the necessity of keeping all communications on one line. It seems to me essential that there should be only two people—one in Washington and one on this side—who handle all communications relating to the movements of convoys.

Gen. Pershing and the French Navy Department agreed with me absolutely on this matter; so does the British Admiralty. I gave a copy of my cable to Gen. Pershing, and he said he would send a similar one to his War Department.

The French chief of staff told me he would have instructions sent to the French official on the other side to the same effect.

Admiral Jellicoe sent yesterday a similar telegram to his people.

I was horrified to find during my visit to Paris that information about the convoys coming to this side was known in official and social circles even before Gen. Pershing knew about it himself. It appears that the French naval attaché and the chiefs of certain French missions, and the Lord knows who, have been sending in by cable all of the information they happened to pick up about these convoys.

The same has been true in reference to our War Department. They have been telegraphing endless stuff to their various representatives.

I do not know whether you would be able to stop all of this flow of information or not; but if you can not do it from the other side, you must clearly understand that you are incurring a risk of disaster which may shock the entire Nation.

You will recognize that my responsibilities in this matter are very great. You know whose neck will be out if anything happens, though it may be the fault of some more or less irresponsible official who has been sending information that the enemy has gotten hold of.

If you can keep all of the information on one line, I think there will be comparatively little danger.

Gen. Pershing has even agreed that when he wants information about convoys he will hand it to Jackson in Paris, who will transmit it to me for transmission to Washington; and that any information that the War Department at home wants to send to Gen. Pershing should go to the Navy Department to be sent to me to be transmitted to those concerned. This is the only safe method, and it should be carried out with the whole power of our Government behind it.

I do not know enough about the Army affairs to know how much transport service would be necessary per 100,000 men to support an army at a distance of 3,000 miles away from its base of supplies.

Gen. Pershing told me that to support an army of a million men on the western front would require 50,000 tons of freight a day. This seems so extraordinary to me that I invited his attention to the fact that this would mean five 10,000-ton ships arriving every day. Assuming the passage was 9 days, this would require a procession of 45 ships coming and 45 ships returning at all times, and another 50 or 60 loading, discharging, coaling, and so forth.

Please make a little arithmetical computation as to how many destroyers it would take these in, assuming that they had to go 400 miles to sea to meet them. After you make this computation, see if you can remain cheerful.

It is apparent that we must come to some understanding with the Allies as to the amount of shipping that can be assigned to the support of an army in France, without thereby crippling the Allies in some other direction in their own supplies. This can only be done with certainty by the conference in London, which was suggested in my cable of yesterday.

ESCORT AND CONVOY.

Under this heading you have explained a scheme which would work very much better than the convoy system, provided your premises are correct.

Unfortunately, they are very much in error—so much so that all your arguments fall to the ground, as viewed in the line of experience that the British have had in handling convoys.

They have found it to be absolutely impracticable to collect a convoy at sea in mid-ocean.

Even some of the best commanded vessels are late at the rendezvous, due to various conditions.

This is a fact or it is not a fact. If you are not willing to accept the experience of the British in this respect, you may theorize to your heart's content. If you are willing to accept it, you must drop the idea of a possibility of collecting these vessels at sea.

There is also another consideration, and that is that in order to bring a convoy successfully through the submarine zone it required a continuous zigzagging. It is therefore necessary that they should receive a sufficient amount of training in this more or less difficult maneuver on their way across the ocean.

It is also entirely necessary that there should be a vessel with them through which safe communication can be had with officials on this side, who are steering the convoy in accordance with the known position of submarine activity.

Of course, you know that the merchant shipping is supplied with a code. Perhaps you do not know that there is never any certainty that this code will remain safe for even a week. If one copy gets out, and I fancy there is a large reward for such copies, any information sent in the code, broadcasted as you suggest, to merchant shipping, simply acts to inform the submarines as to where to find the convoy, or as to where to find the rendezvous which you propose.

Of course, the assembling of a convoy at sea assumes that there are no raiders. As soon as the long nights of winter come on this question of raiders will become a serious one. They can not easily get to sea from German ports when there are only a few hours of night. In fact, there is no real night at all in the latitude of the Scapa Flow. It is a vastly different matter, however, when there is practically no daylight. We may reasonably expect that the Germans will take energetic measures to oppose convoys.

We already know that they are completing what might be called submarine raiders, such as I have mentioned above, and that those may be capable of doing great damage to a convoy before it is joined by the destroyers.

These new submarines carry no less than 30 torpedoes.

As to the present danger from raiders, there are some at sea and their position is not now known. The trouble about a raider is that he can do a vast deal of damage before his presence in a certain part of the ocean is known. This for the simple reason that he sinks vessels and takes their crews on board, and does not have to reveal his activities until he is forced by the accumulation of prisoners to make a landing.

In reference to the forces you were sending abroad, I am much flattered by the remark that "In all these matters we must be guided by your judgment."

I cabled that, after consultation with the British Admiralty (and after the latter had consulted the commander in chief of the Grand Fleet), they requested that our three scout cruisers be sent to join the Grand Fleet. The next news I had was that they were to be sent to Gibraltar.

I have repeatedly and very urgently pointed out the great necessity for tugs on this side. Up to date I have not received any reply from the other side concerning this subject.

In reference to the 110-foot submarine chasers, they could undoubtedly be put to good use in certain localities on this side, provided they can be supplied with the necessary gasoline. As you know, they consume gasoline at an alarming rate.

I have recently received a telegram from the Assistant Secretary stating that about 300 wooden chasers of 120 feet in length could be built without interfering in any way with any of the other building programs, and asking my opinion on the matter.

I have replied that I will send this opinion as soon as I can finish consulting those who have had the most experience in such matters.

Lieut. Commander Castle has just returned from a trip around various ports and to the Grand Fleet. He is very seriously impressed with the deficiencies of our fleet in certain respects that he advises me to order him home at once, and I have done so.

I hope you will have a good talk with him because I believe he could tell you many things which we should know, and which you would have known long ago if you had only sent me the necessary people to dig it out. Castle and Robinson should be sent back as soon as they have unloaded their very important dope.

Castle agrees with me that if the four coal-burning dreadnaughts that the British have requested should be sent over here, with the staff officers recommended in my cable, it would be of the greatest possible benefit to our fleet and the Navy Department.

As to aircraft operations, I have taken such measures as I can to get the information that is requested on this point, and it will be sent in as soon as possible. I am recommending that the Admiralty send over a competent man to explain the situation.

Don't take this to be a deliberately prepared letter. I have had to dictate pieces of it from time to time, and I will not have time to go over a rough copy and add the many things which I know would be suggested to me. I have not the time for writing such letters. You must take it for what it is worth, and try and read between the lines.

Write me, when you can, and give me all the information which you think would be useful.

I can not quite understand why it is that information is not sent over to me as it should be, and that many serious things are allowed to happen without my being notified. It seems to me that there should be an officer whose sole duty it would be to see that telegrams are answered. I would suggest that he might properly be called the "nuisance," and that his duties be to make himself a nuisance to the people who have not answered essential telegrams.

Please be so kind as to remain as cheerful as you can.

I am inclosing a clipping from August number of the London Magazine, entitled "Digging out tactics." This was written by Mr. Percival A. Hisslam. You doubtless know who he is. I hope you will read this article prayerfully and circulate it where you think the information is most needed.

Always sincerely, yours,

Capt. W. V. PRATT,
Navy Department, Washington, D. C.

This was not the first letter that I had written Capt. Pratt. I may say that these letters were exceedingly long and were exceedingly in detail, because we were making an earnest effort to get proper information on the other side.

THE DEPARTMENT'S DELAYS AND MISTAKES IN 1917.

This was not the first letter, however, that I had written Capt. Pratt. After I had been two months abroad I could not help but feel that the department was paying little or no attention to the recommendations I was sending. My cables remained unanswered; the recommendations which I made had been, so far as I knew, completely ignored. In writing to Capt. Pratt, with whom I had previously been closely associated, I therefore dealt very frankly with the situation as I saw it at that time. In a letter of July 3, 1917, for example, I set forth an untarnished view of the situation.

That is another letter of the same nature. It sets forth the view as we saw it on the other side, based upon the information we had on the other side.

(The letter referred to is here printed in the record, as follows:)

LONDON, S. W., July 3, 1917.

MY DEAR PRATT: My last letter to you, written from Queenstown, will have reached you by this time. I hope that they will give it earnest consideration, particularly in reference to the point I make about the war being on this side. I want to speak quite frankly about that matter in this letter, but it is for your ear only.

It would be very funny, if it were not so tragic, the spectacle of many dozens of ships, destroyers, yachts, and so forth, parading up and down the American coast 3,000 miles away from where the vital battle of the war is going on.

How is it that they can not see that this is as wrong as it possibly can be from a military point of view? In other words, why does not America send her forces to the front instead of keeping them 3,000 miles in the rear? If there were any danger on our coast or if dangers should develop later, you could send the forces back again, or such as were needed, before any considerable number of the enemy could get over there.

If you have been reading my recent cables, you will realize, at least I believe, that this situation over here is a very dangerous one. To understand this you need only to be in possession of some very simple arithmetical facts. They are as follows: The Allies are losing about 500,000 tons of shipping a month. The building capacity of the available yards within the next year are not more than 130,000 tons a month. This means that when the available shipping is reduced below the amount of tonnage that will land a certain amount of freight in England and France the war will be lost. The necessities are about 32,000,000 tons of imports a year. It requires a certain amount of tonnage to accomplish this. When it falls below it, it will be wholly impossible to maintain this population and to maintain the armies in the front. It would be impossible to import the wholly essential ore that is necessary for munitions and to export the tremendous quantities of coal that are required for both France and Italy.

In order to find out how soon the pinch will come all you have to do is to make the arithmetical calculation as to when the available shipping will be reduced to the point indicated. I have seen a study of this made out by the appropriate department of the British Government, and it shows that the pinch will come in December, if a certain rate of destruction is assumed, something like 300,000 tons a month, and by September if a certain greater rate of destruction is assumed, a little over 400,000 tons a month.

These incontrovertible facts show what I mean when I state in my messages that the situation is very critical. The truth about the matter is that the enemy is winning the war, and all of the help that we will be able to give in the way of increased shipping facilities, money, and so forth, a year or even six months from now will be of no value. When the pinch comes on the western front it would be impossible to provide reinforcements, because you can not feed them, and the end will then be very near. This opinion is founded upon absolutely reliable information, and it is held by all the responsible British officials that I know. I do not include in these responsible officials those politicians who, for fear of their own personal losses, do not dare to tell the truth. I realize, of course, that my reports on this subject are made to appear pessimistic by the speeches which are made here by politicians for their own personal purposes. They do not dare to tell the truth for fear of trouble in this country and for fear of losing their jobs.

Now, these latter statements may seem to you to be exaggerated. If you think they are, I would like to have you read a cable dispatch that the ambassador has just shown me and which goes forward to-day to the Secretary of State and the President. It points out this very thing, and announces that in his opinion there is danger of a serious explosion.

There is only one way in which disaster can be avoided, and that is by diminishing the effectiveness of that feature of the campaign which is necessarily influencing all others; that is to say, the submarine campaign. God knows, I have said everything which I could say in official communications on this subject; so has the American ambassador. I therefore went to him the other day and told him that in my opinion our statements, which can not be successfully disputed, should be verified directly by the British Government. He agreed that this was so, and he therefore took me to call upon Mr. Balfour. I explained the whole situation to him, and he agreed with me that an acknowledgment of the seriousness of the situation should be made by their Government. He therefore requested me to go to Admiral Jellicoe and between us draw up the dispatch which we would suggest that he send. We did so, and it was sent practically in the same words. I assume that this will be brought to the attention of the Navy Department. You will note, of course, that the language of this dispatch is not as energetic as I have been sending in. The reason of this is the fear that it might leak out and do damage. But you can read between the lines and see that it is a very strong statement and very frank acknowledgment of the necessity for help to be sent by one great Government to another.

There is one other thing that I would like you to understand, and that is the embarrassment and the delay which is caused by the insistence of our people on the other side trying to advise these people over here in the direct lines in which they have had the most experience. My last letter concerning the

convoy business indicates what I mean. These people over here are really intelligent; the things they are doing now and the methods they are employing are the result of much bitter experience which has been learned in blood and tears. I do not know, therefore, that you can conceive the impression that was made by recommendations as to different methods which amounted in effect to a statement that these people here are really not intelligent at all. I can understand that it is perfectly natural that such recommendations should be made, but the point I want to make is that when any such subject is taken up for discussion that the first thing to do, and the only logical thing to do, is to ask the people on this side what their experience has been, so that your estimate on the situation on the other side will be founded on real facts and not upon facts as you suppose them to exist.

A most flagrant example of this was the astonishing statement received from the other side to the effect that the best protection of the merchant ships was a thoroughly trained and efficient gun crew. I subsequently learned that this opinion was based upon an estimate of the situation by Schofield. This estimate was a clear and concise piece of reasoning based upon wholly false premises. He assumed that with sufficient training men of character who were sufficiently vigilant would always see a periscope of a submarine in time to drive her below water by gunfire. If this were true, the estimate of the situation would be perfectly correct, because the reasoning is sound in all respects.

Unfortunately, it is practically wholly untrue, as I have tried to show by the information I sent in immediately by cable and as Admiral Jellicoe has shown by the cable he sent to his attaché to be shown to Admiral Benson. You folks could have avoided placing yourselves in this position by a few simple inquiries as to what the actual experience had been on this side.

I do not know, but I suspect that this estimate of the situation has been the cause of holding up the introduction of the convoy system, particularly from New York. If this is true, it has cost the Allies some hundreds of thousands of tons of shipping, assuming that the convoy system is going to prove effective. That it will probably prove effective, at least against the present tactics of the submarines, seems to be sufficiently proven by the fact that it has been successful up to date. I have been devoted to this convoy system since the first week I got here in London. I have been putting it up to our Navy Department as strongly as I knew how and supported it with all the arguments that there were, and not until yesterday was there any reply on the subject. I leave you to imagine what sort of a position this places me in and how seriously it affects my relations with the people over here. I am happy to say that our Government has now expressed its willingness to help out with the convoy. I really believe that this will have the desired effect on the submarine campaign; that is, that it will at least reduce the losses well below the rate of building.

But in order to put this generally into operation it will be absolutely necessary to have more antisubmarine craft both for the purposes of handling the large convoys in question as well as for the purpose of convoying especially valuable cargo ships that make over 12 knots through the dangerous part of the submarine zone. This is why I have been so insistent that America should get a move on, not some time in the future, but just as soon as it is materially possible. If they would send over every single destroyer, including those of 400 tons, and every vessel that would serve the purpose of antisubmarine craft, and also all of the ocean-going tugs they could muster, I am very sure that within a short time I would be able to report that the Allies are winning the war: that is to say, that the submarine menace has been reduced below dangerous proportions.

You have been sending me your letters by vessels of ours that have been coming over, and you seem to imply in one letter that this is the only safe means. This is an error. You can send me your letters any week by passing them over to the O. N. I. and ask them to have them put in the pouch, in the same way that this will reach you.

I think you will understand that I do not wish to be offensive in any of my criticisms. I believe you will recognize that they have invariably been constructive. I am sending the information in this letter for your ear alone, but I hope you will be able to use it to good advantage. Of course, if at any time you should think proper to show this letter to anyone, that is entirely up to you. Remember only that I do not wish to endanger my relations with our own people by criticisms which are of such a nature that they could not, or should not, properly be put into official communications.

We were all distressed to hear through a cable from the British naval attaché in Washington of the sudden death of Capt. Chase. I assume that

this will mean that you will take his place, at least for a time. I also assume that it is the end of my hopes that you may come over here to assist me. For this latter reason I am now cabling requesting that Twining be sent as my chief of staff, and that Cone be sent as representative of the Navy Department in the submarine and convoy section of the Admiralty. Cone would be invaluable in this job. He is very anxious to come.

Always sincerely, yours,

P. S.—There is another point of grave importance. Nothing that I have been able to say has apparently convinced you people that there was great danger in continuing to send vitally important messages through the naval attaché's code and other similar codes that have been in use for over a year. It is a fact that is perfectly well known to all people familiar with the ordinary invariable code that if the enemy can get hold of a couple of thousand groups that have been sent, they could rapidly work out enough of the code to be able to read your messages. There is absolutely no deception about this. Any expert can do it. I was not speaking without the book. I got my information from the coding department of the British Admiralty. These people withdraw their codes and ciphers sometimes at intervals of three weeks. I asked them about the chances of our codes being secret, and they informed me it was not at all necessary for the enemy to have the code book. I could give you in this connection an extremely important piece of information if it would be at all proper for me to put it on paper or to mention it to anybody whatever until after the war.

The inclination to trust your own judgment and to disbelieve what I have to say on the question of codes has been the cause of very grave danger to our forces. It was a matter of luck only that we did not lose some destroyers of each group that arrived and also the *Melville* and *Dirie*. They were saved by the thoroughness of the precautions that were taken by the commander in chief at Queenstown. There is not the slightest doubt that the enemy knew all about the movements of these forces from the day that cables first began to be sent about them.

The same applies to the much more dangerous case of the troop transports that recently arrived in France. I implored the department not to send any messages concerning them in any other than the British Admiralty's secret code. They did so, with the result that the enemy was able to send a submarine to the westward of the rendezvous given and attack convoy before it was joined by the destroyers. She took advantage of being out that far (long. 25° 30' W.) to attack a British merchant ship, and Admiral Jellicoe has just told me that she is now (July 4) bombarding the Azores.

I am going to send over a recommendation as to the manner in which all future troop convoys should be handled, and I think that if you will look into it carefully you will see that it is an ironclad, providing the recommendations are accepted; and I ask you, if you have any influence, for God's sake get them accepted if you want to avoid a disaster which will bring humiliation upon our entire Nation.

Several merchant convoys have come in escorted by British antisubmarine vessels. Not only were no vessels lost but the convoys were not even attacked. Two vessels were lost from a Gibraltar convoy insufficiently escorted by French vessels.

The decision in this matter and the whole responsibility should be put upon the man—

- (1) Who is in charge of the escorting forces—the destroyers.
- (2) Who is informed from day to day of the position of the enemy forces (subs).
- (3) Who is in touch with all experience to date on this subject.

I am willing to take the responsibility. But it must be the whole responsibility if we are to avoid risk of a shocking disaster. It will always be extremely dangerous to give detailed directions from the American side which must subsequently be changed on this side (to avoid the enemy) at the expense of a dangerous amount of wireless. In this respect the last convoys made an awful exhibition.

The scheme, which will probably be sent in this mail, will render wireless messages wholly unnecessary, except possibly some with very low power if the escorting destroyers have difficulty in picking up the convoy, due to bad weather, etc.

THE SITUATION IN THE NAVY DEPARTMENT IN JULY, 1917.

In view of the attempt that has been made, by emphasizing the success achieved by the department in the later months of the war, when the early mistakes had been corrected and the department was working more effectively, to imply that this same condition obtained from the outbreak of war, I should like to read you a part of a personal letter which I received from an officer in a responsible position in the Office of Operations in August, 1917. This gives a truer picture of what the real situation was at that time than the testimony which has been introduced here in the hope of obscuring and excusing, after a lapse of nearly three years, the errors and delays of those early months of the war. The length of time that has passed, and the inevitable human tendency to read back into the past things which were accomplished later, is doubtless responsible for this attitude on the part of the witnesses, for, as this letter shows, there was hardly any misunderstanding in July, 1917, in the minds of these officers as to the condition in the department.

In response to my letter of July 3, 1917, which I have just inserted, Capt. Pratt wrote to me on July 22, 1917. I will read you only those paragraphs of the letter relating to the condition in the department and to the general situation at that time, omitting those paragraphs concerned with the personal direction of various situations and personalities, which I would consider it improper to publish [reading]:

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS.
Washington, D. C., July 22, 1917.

DEAR SIMS: This is practically the very first chance I have had to answer your interesting and most important letter. The one from Queenstown has in it the human touch which makes it not only most interesting now, but a bit of paper worth keeping and reading over later in life, when the damnable Boche is put away to sleep forever. The last one is one of the best pleas for assistance that has ever been made. I took a great many liberties with both of them. The first I showed to Benson, Mayo, Palmer, and Franklin Roosevelt. I wanted them to get in touch, so to speak. Schofield and McKean also read it. The second I showed to Benson, Schofield, Earle, and Pye, who happened to be here representing the fleet. And Winston Churchill, who is here, had it for two hours. In that time I think it went high up. Churchill is on the level and is working his very head off to bring about some very necessary reforms. When this war is over I expect a pretty fine book as the outcome, but right now he is devoting himself to the practical methods of getting action. He is very close to Roosevelt and to McAdoo, I think. As far as I can see it now, he is the one writer that naval men will trust to put the thing before the public in terms of the truth. He told me he was sent for to come to write up the Navy, and was given the hint, either by the Secretary or Mr. Creel, that laudatory articles would be appreciated. As he told me, he hadn't the stomach for that sort of thing, and, as he didn't have to do it, he started probing after the truth. He went to a lot of men and finally he came to me. I told him the straight truth, nothing more nor less. The size of it is the Navy has not been playing entirely fair or has a very mistaken idea, I fear. Anyhow, I think things are in the air, and I strongly suspect that is the reason why we have been having trouble in putting more drive into things, for I can assure you, from personal knowledge ever since I relieved Chase, that the admiral stands for the most offensive kind of stuff, and again and again he has personally tried to bring to a decision and action the plans I personally put up to him.

The CHAIRMAN. Who was the admiral?
Admiral Sims. Benson, his admiral.

especially in the matter of getting craft abroad. * * * I don't know about anything that happened before I took over, but I do know now that the admiral

seeks the advice of some of us; that he personally consults me I think in almost everything of moment; and that I have never for a moment had to feel that there was any drawback on his part. On the contrary, I have seen him pretty discouraged sometimes, but buckle on his armor and go after it again.

There have been a great many unfortunate things happened, some of them our fault and some of them difficult to avoid. It isn't easy, even when you try your best to get active measures taken to produce the results. For instance, in order to get a consolidated policy to work on, in which we could say to the district commandants, "We stand for this and will give that," I felt it necessary to call a conference here of the leaders. You must realize that we are up against public opinion to a certain extent, a very defensive attitude in many respects, and business interests, which will be interfered with if we take too drastic measures, always working against you. So it was necessary to get the district commandants in touch with the broad point of view and try to have them work with us. To begin with, I am distinctly disappointed with who is in complete charge of this service and who has the commandeering power, under the Secretary, in his hands.

I do not think it is necessary to read any more of that paragraph, but I would like to read the next paragraph.

(The balance of the letter is here inserted in the record as follows:)

He is the type of man too inclined to say no right off, and he is not inclined to be a liberal spender. It is hard to pry stuff out of that type, though his intentions are the best in the world. Naturally this policy pretty well fits in with the Secretary's on personal views, I suspect. Well, they came, the district commandants, and I personally prepared a set of questions, intended to get their views and to indoctrinate them with the big aspect of the situation. You would be surprised to find out how hard a time I had to get even small concessions. However, I think they went away wiser, and I feel sure it helped the cause.

ATTITUDE OF DEPARTMENT TOWARD REPRESENTATIVE ABROAD.

I think our—

When he says "our," he refers to officers associated with the department—

most grievous error has been in making too many suggestions. I have been a prime offender myself that way, but once the direct act has been put up, I have always been the first to say, "Accept what the fellow on the spot says, even if he is wrong." It does not follow that one can always agree, because the sources of information are not the same. However, it is wrong to persist in a certain line of conduct which is not in accord with your policies, because you are on the fighting front. And they should be agreed to, even if we think they are wrong. Your point is well taken. Much of the difficulty could have been cleared away had there been personal contact.

I do not think it is necessary to read any more of that letter, but I should like to have it included for technical people who may want to read it hereafter.

The CHAIRMAN. That is a letter from Capt. Pratt?

Admiral SIMS. Yes, sir.

(The balance of the letter referred to is here printed in the record, as follows:)

↘ The question of the convoy plan nobody here prides himself on. I think, and did, that only the grace of God pulled us through. * * * We, or I, or some of us, will probably have a hard half hour in the near future, and have it shown clearly to us how we nearly jeopardized the lives of the entire bunch. It isn't a soft job this one I am trying to hold down. I get many discouraging hours. Little credit, lots of faultfinding—no sea duty, which is going to count against me, but I think I am playing the game—and I feel that right now I can do better work for the cause, if what I do is in any way worth while, right here than anywhere else, and I don't like it either, for my health suffers from the work and the strain.

You can rest assured that all I can do personally to remedy the situation will be done. Cone's orders were made out once, and then held up. Long ago, when the decision was first made to hold me up, I said you should have somebody and suggested Twining then. That was two months ago. I rather think that in accord with the recommendation of the Admiralty to send some of our officers over to work with them, you may get some more. * * * No doubt about it, you have been up against it. Some of us saw it, but it was awfully hard to make others see it. And you can't pull everything through in this game over here. I started in this work with absolutely no personal pull with my chief. Hadn't even called on him. Why he ever chose me I don't know, unless it was because Chase wanted to hold on to me. Little by little he is beginning to have more confidence in my judgment, I hope, and up to date he seems satisfied. * * * In the matter of sending craft abroad we are a unit, and the admiral is with us. Naval districts are less than lukewarm. We had a conference the other night—four of us—and the outcome was the sending of more forces to you. You know it by this time. There will be another in a few days. I want all the coal burners, the Coast Guards, some tugs, and a lot of the fishing craft, schooner rig with a kicker in, make about 10 knots, sent over, besides all the yachts which are able to get across. But if you could see the difficulties and the objections raised, not from the admiral but other sources.

RESULTS OF PREWAR POLICY OF NAVY DEPARTMENT.

The next move on the program for preparedness is the outline of the characteristics we intend to stand for in submarines, and the policy in regard to them. * * * As a first starter and to show how the defensive policy we have stood for the last few years has caused the material, and particularly the personnel, to degenerate, a verbal order was given to prepare 12 subs, latest type, for distant service. An elaborate estimate of the situation was the result showing what the Germans could do and what we couldn't. This was followed by a drastic order to fit them for distant service and the date was set for the middle of August. It was pitiful. The admiral signed it like a little man, but the walls! They will sail if they go to the bottom, and if they do it will be and exposé of our past submarine policy which will bring hell a-popping around some of us; but they will go, if we can get it through. The next step was to put a very unfavorable indorsement on some of the fleet recommendations about bases in sheltered places. The whole idea savored too much of the defensive. They could not catch the idea that even if by the movement of our fleet we enticed several subs over here it was a distinct gain in the whole campaign. They wanted to train behind nets, nets, nets, and we feel that any such procedure is subversive of the proper fighting spirit. That the fleet must go to sea, certainly sometimes. The whole howl to keep the destroyers has been to guard the fleet. I maintain this isn't necessary, with our huge coast line, with an efficient information service, with an efficient sweeping organization. * * * So the fleet was directed to submit a program which called for a certain amount of time away from a base and spent on the high seas. * * * Admiral Benson signed it. So you can see how nobly he is backing up his assistants. I had rather take a loss in a dreadnaught or two than to break up the fighting spirit, especially as it is possible to carry out such a program scientifically if it is studied. I think that some oil burners will have to stay on this side and I will tell you why.

We are tied up hand and foot in this convoy of troops overseas. I don't, in face of the fact that submarines can attack beyond the power of your forces to give destroyer escort think it quite wise not to give our troop ships the benefit of some destroyer protection all the way across. That can be arranged for without bringing up too many destroyers, and the oiling arrangements can be met. * * * So it isn't the fleet or the defense of the coast which has held a minimum of oil burners back, but the convoy proposition of troops. All the coal burners should go to the European side, I think, and perhaps that will happen; you can't tell. Three of the *Worden* type in addition to the five *Prestons* are on their way to the Azores.

DEPARTMENTAL MISTAKES AND VIOLATIONS OF MILITARY PRINCIPLES.

Now, for the convoy proposition. We are handling the New York end, and eight ships of the *Denver* class are devoted to that work exclusively. Marbury Johnson is the senior officer for that task, and his instructions are to work in

instructions that all our naval cargo vessels going to British routed either with the N— Y— or H— convoys, and tions from the offices at those places. If any ships be ladports they will route with a convoy, if there be one. Otherwise to form one and sail together accordingly. I can't see how w any more heartily. If you have any further suggestions please we will be guided. I suppose you didn't like the cable you sending messages in the B. A. code.

Do you know the reason for the order? I suppose not. W Secretary did not like the fact that the British Admiralty coul your comebacks, which he felt could be construed as a direct s sonally. You should have read the first cable that was made. If ever a violation of the principles of war was perpetrated, th fortunately the coding officer showed it to me. I said this never c held it up overnight. In the meantime I prepared the one which after discussion it was accepted. If you will read closely it re creation. But when you give us hell, you don't always realize the are up against.

COOPERATION WITH THE ALLIES.

Everybody over here is proud of the work you and the bunch everybody wants to get to the front. Few, however, realize the t of the task confronting the allied forces, and many think that over there the problem would be solved. It won't be, and a lon before us all. But if England's Navy can hold out and if worst it can make a get-away to this side, I honestly think the Ameri aroused and intend to see this fight out to a finish, and Fritz is finished. I can't, bad as the outlook is, see any other outcome. one long year England fought against Bonaparte unaided, and t the Anglo-Saxon puts up his best fight against odds. Honestly, great change come over the spirit of this country, and I feel t voice of this people is with England to the end, and that end will Germany is humbled.

SENATOR PENROSE'S COMMENTS ON THE NAVY DEPARTA

In the course of his testimony, the Secretary of the attention to a speech of Senator Penrose, then a member c Affairs Committee, in August, 1918. I have never met from Pennsylvania, nor ever heard of his speech, before tary referred to it. In this connection, a statement to t Tuesday, May 18, 1920, by Senator Penrose is of unus especially because of his reference to the business side c of the Navy Department in these first months of the wa

I will submit an extract from the New York Times of May 19, 1920, "Coincidence of fact and truth," says P assume that the committee has read it probably in the will not be necessary to take up the time reading it.

(The extract referred to is here printed in the record a

Mr. Penrose said:

I have no desire to mix in the controversy over the conduct of th Navy Department. The war is over, and with it the vast aggre competency, extravagance, and inefficiency which characterized th of the administration.

I am not acquainted with Admiral Sims, and have never had any tion with him. If his statements bear any resemblance to mine

because we were both stating facts and the truth. I believe I did say casually, during the course of a debate, that the greatest inefficiency had prevailed in the administration of the Navy Department, not only during our preparations for war, but during the preliminary stages.

This ignorance and incapacity at times was almost incredible, and, in my opinion, it can be mathematically calculated that delays incurred thereby resulted in actual waste or loss of several hundred millions of dollars and several thousands of lives of American soldiers. The detailed figures of these were given by me in the brief speech referred to.

These delays arose chiefly because of infirmity of purpose and absence of business knowledge and ability on the part of the Secretary of the Navy. The facts are familiar to all men who had business with the Navy Department during those days. Contracts for iron and steel products and other necessities connected with the Navy were carried home night after night without decisions being rendered.

The delays were due to sheer ignorance and incapacity, and I know of no problem concerning the department—and I knew details pretty well—that could not have been promptly and honestly disposed of, and with full advantage of the Government, by a conference of any half-dozen business men in the country taking the matter up for deliberation and determination.

Later on the Navy Department functioned much better, and the chief reason for the change was the leadership of Samuel M. Vauclain and his associates on volunteer boards, whose decisions came to be followed promptly and without question.

BASIS OF CRITICISM OF THE CONDUCT OF THE WAR BY THE NAVY DEPARTMENT.

Admiral Sims. In view of the fact that conditions such as have been described by the department's own witnesses and in Senator Penrose's statement as existing in the Navy Department were existing in the Navy Department, it was, of course, inevitable that exactly the kind of blunders and mistakes were made which should have been carefully avoided. My testimony and the testimony of the various witnesses, including those called by the department, has given ample proof of these mistakes. In a personal letter which I wrote to Capt. Pratt on August 11, 1917, in answer to his letter of July 22, 1917, which I have just quoted in part, I made certain comments on the situation which are of interest in considering the question of the justification and origin of such criticisms as have been made.

That is a letter of the same nature that I have been reading, and I think that while it should be included for the benefit of people who read this from the technical point, I do not think it will be necessary to read it now.

(The letter referred to is here printed in the record as follows:)

Let me say again, once for all, that no reflection of mine in these letters to you are intended to be disagreeable to anybody. They are not intended as criticisms, but as suggestions. Of course, the language I use in them is not of the official kind; but don't let that worry you. I believe that the department is doing the best it can under very serious difficulties, some of which I believe I know, but many of which I know that I do not know, so remain as cheerful as you can.

I know a good deal about the pressure of public opinion and the pressure of business interests, and I think I can imagine the rest. In a word, you fellows in the Navy Department have my entire sympathy.

Now, let me say some more disagreeable things.

In accordance with the ordinary principles of warfare, I have been notified that the disposition of the forces on this side will be up to me. Immediately thereafter, and sometimes in the same message, I am informed that certain forces are to go to certain places. I assume that the reason of this is that

political considerations are those which govern. Can you be on the other side that you would know the effect of these political considerations as well as I would, after discussing them with the people concerned? Can you be sure that you have made the best disposition of the forces? You may have done so, but I do not believe it. I would give an upper right front tooth for the opportunity of redistributing some of the forces over here. I have not the slightest doubt in the world that a certain redistribution would result in the saving of a very considerable amount of shipping.

There is no doubt in my mind, or in that of anybody over here, that the destroyer forces now in the Azores are being wasted. They could not even be used with safety to escort troops, because they know nothing about this difficult job, which can only be safely carried out by those who have had sufficient experience, and those who are on to the method of communication that we use, etc. For this reason I have asked that these destroyers be sent at once to Queenstown, at least to remain there long enough to be indoctrinated.

There are other recommendations that I would make about the distribution of forces that have been assigned to certain stations by the department without my opinion having been asked. For example, the six revenue cutters would be of the greatest use during the coming winter weather off the coast of Ireland. I do not think that they are necessary at Gibraltar, where that force will be principally occupied in escorting convoys clear of the danger zone. I hope there is no question of personal considerations in the assignment of these forces.

I note by the organization of the Atlantic Fleet which we have just received, that Wilson is put down as the commander of the patrol squadrons. As he is stationed at Gibraltar, and in that neighborhood under the command of the British admiral of that station, he could not also be in efficient command of the forces on the coast of France, who are under the direction of the French ministry of marine. The question of communications alone would render it impracticable to carry out any efficient direction.

I have therefore written a letter to meet Wilson at Gibraltar, and placing him in command of the forces in that neighborhood, but not in command of those on the coast of France.

We have been doing our work in two rooms in one of the embassy buildings, but now that we have so many people, and now that we have consolidated our communication (coding department) with that of the naval attaché, we have been obliged to move into another building. The staff is now rapidly becoming organized, and the strain has been eased up very greatly.

We can carry on the current business, but you must understand that there is a lot of stuff waiting around to be done which can not possibly be done without the kind of officers that I have indicated. To cite but a single case, you say that you need information as to the type of a submarine that we should build. This is a very serious question, and should be gone into very thoroughly by a very competent man. If I had the man I could produce the goods. Without him, I could not produce anything in which I would have very much confidence. The same applies to other branches, as, for example, aviation. If you want reasonably complete and reliable information on the subject, and kept up to date, you must send a competent man on the job.

Do not forget that everything is not only wide open, but the British seem to be anxious to give us every possible thing that we want. It is up to you to send over for this if you really want it.

One of the most encouraging things in your letter is the information you give about the laying down of 106 destroyers of the standard type, and 150 of the special kind. What a pity these are not now in the water. If we had begun our preparations for war three years ago they would be in the water and the submarine would no longer be a menace. We could convoy everything both ways, and put him out of the business of destroying commerce.

As for our submarines I am glad to know that the department has taken the attitude that they must sail for this side. They can be of the greatest use. It was a very hard jolt to us to be informed that none of them were fit for duty on this side.

Admiral Jellicoe said he would like to have Pye give them a hand in the solution of a problem which is now being worked out by a body of officers under the direction of Admiral Jackson, president of the War College. This problem is an estimate of the situation as to the possibility of "digging the rats out of their holes." Of course, everybody who understands these matters at all knows that the rats can not be dug out of their holes until these holes are uncovered by the Army—that is to say, that a successful attack on modern forti-

fictions, protected by mines, submarines, etc., is impossible. The object of the study is really to arrive at conclusions that can be passed out to the very numerous suggestions that are made in this line. Many of these are by such prominent people politically that they can not be neglected. A study of this kind will save the trouble of making individual explanations to every civilian who thinks that he knows more about naval warfare than the admiralty. However, such a study necessitates the collection and presentation of all of the means that would or could possibly be available for such an expedition. It will also throw light on the means that would or could or should be made available for blocking the rats in their holes.

Of course, these studies have been made since the beginning of the war, but they were made by naval officers for naval officers. The object of the present study is to present the matter in the form which will be intelligible to the civilian.

I am inclosing you a copy of an intrabureau order issued by the Paymaster General. This is a very extraordinary document. The only thing he has neglected to say that if the man on the spot does not succeed in carrying out his mission he should promptly be executed. McGowan's order is based upon the most fundamental of all military principles. If all those connected with the administration of our Navy would be guided by the same principle, we could undoubtedly end this war a good deal sooner.

Let me give you a warning about setting too much store upon the opinions of officers who come over here for a short visit, or who come over in charge of armed guards, etc. Of course, it is human nature to form an opinion, even if you have not got any reliable information to base it on. It is also human nature to express this opinion when questioned about it. People who have been over to Washington and come back again have brought us weird tales of the opinions expressed and the information supplied by such officers. I do not know that this does us very much harm unless it is in an official form, but here is a case in point which is more serious.

Once again, let me repeat, that nothing in this letter is intended in a critical or carping spirit. Anybody is likely to make a mistake. That is why they put a bit of rubber on the other end of a lead pencil. We can not get together (and keep together) unless we point out what we think to be errors. If we nurse our differences in sullen silence we will drift farther and farther apart.

We have had an unnecessarily hard and anxious time over here, and it would be a wonder if we had not made mistakes that perhaps would not have been made under less strenuous pressure; but you fellows have not been wholly without sin—though theoretically you must always be blameless.

However, we are of a forgiving spirit, for we know that your trials must have been many, heavy, and perplexing, and you have our sympathy (if you care for it).

But, as I said before, there is every advantage in speaking our minds and keeping the slate clean. It is simply your misfortune that I have selected you to take the brunt of my growls—or what you doubtless call my ill humor.

Do not for a moment assume, however, that I do not understand the difficulties under which you have had to work, or that I do not fully appreciate all you and the gang are doing. I do appreciate it, particularly the trouble you have taken to pound out your illuminating letters. They have been invaluable. They have cleared away many misunderstandings. They have given me my first clear idea of conditions on your side, and I can assure you that I am profoundly grateful. Not, however, to the extent of refraining hereafter from pasting any of your ideas and arguments that I consider to be punk. I consider it no unimportant part of your job to put up these arguments, and no less an important part of my job to swat them in my retiring and modest way whenever I can show that they are full of large ragged holes. I believe you have done, and are now doing, admirable work. I do not envy you your job.

In all this, you must give me credit for being reasonably honest. You must not assume that because I am pro-British and pro-French and pro all the rest of the Allies, I am necessarily anti-American. I have lived a long time in the United States (46 years). I have shown some interest in the efficiency of our Navy. I am 59 years old and have a modest reputation for reasonable independence of thought. So do not assume in the pride of intellect that I am owned by the British or any other admiralty. If you do not think a pro-ally is the right kind of a man for this job, they should have sent a pro-Prussian with a trunk full of bombs.

So, if you can give me credit for just plain common sense and some little knowledge of the art of war, and if you can continue to hold up your end with good humor, I will manage to remain cheerful.

May the Lord be with you. Remain as cheerful as you can. Give my best to Admiral Benson and the gang in the office.

CONSIDERATION OF MOTIVES.

Admiral SIMS. In concluding this review of the conduct of the war by the department during the early months of 1917, I desire to call attention to various statements which have been made before this committee as to the motives which actuated me in inviting attention, in my official letter to the Secretary of the Navy of January 7, 1920, to these mistakes of the department. Of course, after the testimony that has been given by the department's witnesses there can be no question whatsoever that these mistakes were committed. There can also be no question but that they were well-known in the service. There equally seems to be little doubt but that official and authorized statements of the department had revealed an inclination to bury and forget the past. Nothing could be more dangerous to the future administration of the Navy and the efficiency of the first line of national defense in the future than any attempt to conceal such mistakes, or to pretend that none were committed.

It is quite true that at various times previous to my letter of January 7, 1920, I had referred, in letters to officers in the department, to what took place in the early months of the war. I have just read you parts of my letter of August 11, 1917, concerning this very matter and at later times I frequently reverted to the same subject. It seemed to me necessary that these months should be carefully reviewed in order that in the future should the country ever again be forced into war we could get our Navy into the field more quickly and more effective than we did in 1917. Thus, on August 13, 1918, I wrote another letter to Capt. Pratt, which the Secretary of the Navy has introduced before this committee—or at least he has introduced the first paragraph. For the sake of accuracy, I think that the other paragraphs should also be included, and I will therefore read you this letter in full.

Only the first paragraph of this letter was quoted by the Secretary :

AUGUST 13, 1918.

MY DEAR PRATT: When history of this war comes to be written there will be a number of features that will not be very creditable to the United States Navy. If hearings are held on the conduct of the war, a number of rather disagreeable facts must inevitably be brought out. Without going into details, I may say that, as far as the Navy is concerned, we will have fought this war with the bulk of our experienced personnel of the Navy on the side of the ocean where there is no war. We will have to be able to show that it was entirely necessary that we should have had to fight the war over here with a large proportion of reserve officers who did not have the necessary experience.

The rest of the letter was not quoted by the Secretary.

With this little preface, I invite you to read the inclosed paper prepared by Lieut. Commander Carter entitled "Set a Thief to Catch a Thief." See if you can find any holes in the argument.

I am not writing you much these days because I send you always a copy of my letter to the Admiral, which contains all of the items I wish to touch on outside of the general report.

I am naturally very much interested that you are really attempting to get up a staff organization in the department. It is rather a curious reflection that the Navy Department should have watched a war for three years and been in a war for one and a half years without having organized a practical piece of machinery to carry on its work.

However, cheer up!

Verys sincerely, yours,

SIMS.

Capt. W. V. PRATT.

*United States Navy, Office of Naval Operations,
Navy Department, Washington, D. C.*

SENATOR PENROSE'S CRITICISMS OF THE DEPARTMENT IN 1918.

The Secretary of the Navy in his testimony in referring to the speech by Senator Penrose in the United States Senate in August, 1918, in which criticisms very similar to those which I made in my testimony were directed against the Navy Department, by his manner seemed to imply that there was some underground connection between his criticisms and my testimony. But, as I have already stated, I had never heard of his speech and until the Secretary included it in his testimony I was not aware that any such criticism had been made.

Moreover, I do not know Senator Penrose. To the best of my knowledge I have never seen him, and I have never communicated with him, nor has he with me, by letter, telegraph, telephone, through a third party, or by any other means whatever. Also, I may add that, to the best of my recollection, before this investigation was begun, I had had no communication upon this or any other subject with or from any Senator or Representative, or any other persons occupying a similar position, or with any persons affiliated with such officials; and since the beginning of this investigation, my communications with the officials indicated have been confined to necessary correspondence with the chairman of the committee. Far from indicating collusion between myself and Senator Penrose, it seems to me that the Senator's speech is an indication, rather, of how well known, in informed circles in Washington, were these early mistakes and delays of the Navy Department. It is not therefore surprising, but inevitable that any one informed concerning the situation should describe it in very similar terms. It merely serves to indicate that well-informed men, who are interested in a certain subject, are apt to arrive at the same inevitable conclusions. Senator Penrose had been a member of the Naval Affairs Committee of the Senate, and doubtless from the information which he had gained in this capacity he was, in 1918, fully aware of the conditions which this investigation has revealed.

DEPARTMENTAL SUMMARY OF NAVAL OPERATIONS IN THE GREAT WAR— CAMOUFLAGING THE COMMISSIONS, ERRORS, AND DELAYS OF 1917.

It has been more than implied that my criticisms of the Navy Department are of a recent origin and are inspired by ulterior motives. I have already shown you by letters written in 1917 and 1918 that my views are of long standing. In order to correct still further any such notion, I should like to invite your attention to

another of my letters to Capt. Pratt. Capt. Pratt in his testimony has included a memorandum which he, as Acting Chief of Naval Operations, submitted to the Secretary of the Navy on the 15th of November, 1918, after the armistice, as the official summary by the Office of Operations of the Navy's activities in the war. On January 28, 1919, I wrote him the following letter, commenting upon his memorandum and making practically the same criticisms which I have placed before this committee in my testimony and which were included in my official letter to the Navy Department of January 7, 1920.

That is to say, my letter to Capt. Pratt contains substantially the same criticisms as in the letter which I officially submitted to the Secretary of the Navy. I do not think it is necessary to read the whole of it to you, but I should like to call attention to the closing paragraph.

(The letter referred to is here printed in the record as follows:)

JANUARY 28, 1919.

MY DEAR PRATT: I received a few days ago a copy of the letter from the Chief of Naval Operations to the Secretary of the Navy, dated November 15, 1918, entitled "General character of the operations of our naval forces during present war."

It is wholly impossible for me to pass this letter over without comment, to you at least, but I would impress particularly upon you that this comment is made not in anger but in sorrow. It is very difficult for me to believe that you consider the letter in question as being either an adequate, and in many respects a just, official review of the part we have played in the war and, particularly of the policies which have governed the department.

Let us take paragraph 2, entitled, "The general character of the war," which states that the present war had been going on for so long before we entered it that it was possible for the department to make a fairly accurate estimate of the exact part we should take in it, were we called upon to enter the conflict.

This to me is a very remarkable statement, because if I had been asked for my opinion, it would have been quite the opposite. At any rate, does it not seem a bit strange to you that, if anything approaching an estimate of the exact part we should take in the war was in existence, in anyone's mind at the department in March, 1917, it was not in any way imparted to their representative whom they chose to send abroad to consult with the Allies?

I was called to Washington at that time and saw the principal dignitaries of the department, including the Secretary and the Chief of Naval Operations, and the only instructions given to me were to guard against allowing us to be drawn into "pulling the British chestnuts out of the fire."

The same paragraph of the letter goes on to refer to the comparative degree of security with which we were permitted to carry on our preparations, in view of the command of the sea held by Great Britain, and reaches another startling statement to the effect that "it therefore became the principal mission to throw the whole of our naval forces into those operations which would tend to strengthen the points in which the Allies were weakest."

I can only comment in regard to that statement that, if the department really had such a mission, it was very slow in carrying it out: and, furthermore, that I wasted a surprisingly large number of cable words and mental energy. In fact, the dictionary was found rather inadequate in those days in furnishing us with words which would carry sufficient weight. I fear an impartial judge would find it difficult to reconcile your paragraph 2 with the cablegrams exchanged between the department and myself during those first months after we entered the war. In this connection I attach a copy of a letter which I thought it was necessary to submit to the department on July 16, 1917, with the sole view of attempting to convince the department that the mission set forth in this letter of yours of November 15 was the proper mission.

I also would refer you to the voluminous personal correspondence which I carried on with you during those critical months in question. Stated briefly,

I am laboring under the impression that it was necessary to put up a very severe and protracted scrap indeed with the department in order to get them to send over available destroyers, small craft, tugs, and even battleships, in order to carry out the mission, as stated in this recent letter of throwing all the force we could "into such operations as would tend to strengthen the points in which the Allies were weakest."

The fight, and it was a fight, to get destroyers over was the principal one, and, of course, you know that I finally had to appeal to the ambassador here to lay the matter before the President. I did not feel that this was going over the head of the department although perhaps it might have been so construed. It seemed impossible to get the desired action out of the department, and the situation was so extremely critical. We were losing the war; in fact, at such a rapid rate that I finally felt it my duty to lay the entire situation before my immediate superior here abroad, the ambassador.

After those trying days and efforts in appealing for small craft on what I considered to be our "home front" over on this side, where the war was going on, I also, after a thorough consultation with the commander in chief of the Grand Fleet and the head of the British Admiralty, recommended on July 21 that four battleships with six destroyers be sent to reenforce the British Grand Fleet.

It was fully four months later, and then only after the Chief of Naval Operations had come abroad to see the situation for himself, that that battleship force actually sailed from home.

Let us now turn over to paragraph 4, entitled "Arming of our merchantmen." This is an astounding paragraph, indeed, and it is solely with sorrow that I refer you to the cablegrams exchanged and the personal correspondence carried on in those early days of the war. I recall that the department in June, 1917, saw fit to tell me in a very decided manner that the arming of merchantmen was not to be viewed in any sense as a minor measure, but, on the contrary, was the most effective measure to be taken against the submarine menace.

I fully realized, and so stated, the importance of the arming of merchantmen as one of the many measures to be taken against the submarine. The point upon which I did violently take issue with the department was the department's assertion that arming merchantmen was the principal measure, and that it was a solution of the antisubmarine campaign. It was, of course, a minor though a necessary measure.

I recall finding it necessary to point out to the department as late as June 28, 1917, that in the Queenstown area alone during the previous six weeks 30 armed ships had been sunk by torpedoes without a submarine being seen; also that three mystery ships, heavily armed, manned by expert naval crews with much previous experience in submarine attack, had been torpedoed without warning; also citing numerous cases in which a submarine had made successful gun attacks from an advantageous sun position against armed ships, further pointing out that, regardless of size of armament, caliber of guns, or skill of gun crews, ships were practically helpless against submarine attack. The arming of merchantmen was distinctly a minor measure, no matter how justified it might have been. It was to be classed with "efficiency of lookouts" and many other necessary but minor measures.

The principal issue, or rather the point of view of the department which gave me great concern (and the note of which I still see sounded in this recent paper) was that any measure taken with our own merchant fleet seemed to be sufficient measure for the time; that is, at that time. I seemed to me in those days that I could not get the department to realize that it was necessary to view the situation broadly, to look upon the protection of allied merchant ships with as much importance as the protection of our own. That statement may be challenged by some, but I only wish that anyone who sees fit to challenge it could have been over here in those critical months of April, May, and June, 1917; could have been in the Operations room down at Queenstown at night and seen the ships going down like ninepins. It was nothing less than heart-rending, and it was difficult to have patience with any talk about arming merchant ships or any other measures which did not promise more effective and quicker relief.

I do not wish to convey an erroneous impression to the effect that I even, or even now, belittle in any way the value of arming merchantmen. The point I so earnestly desire to bring out is that it was impossible to receive with any degree of patience any arguments on the merits of this measure, and others, as

long as the one all-important measure was allowed to run day after day without action; that is, of sending destroyers and light craft of every description and sending them immediately without a moment's delay.

Also, without any intention of picking technicalities in this present letter of the department, I do object to conveying the general idea that, after entering the war, the arming of our merchantmen had any material effect at all upon the success the enemy was enjoying in those critical months of the summer of 1917. I also fail entirely to follow the reasoning that the arming of our relatively few merchantmen is what obliged Germany to develop the cruiser type of submarine. I, personally, have always considered the cruiser submarine a mistake from Germany's point of view, but undoubtedly what led her to develop it was the fact that we made it too hot for her with our escort craft, and other measures, in the so-called submarine zone; that is, within reasonable radius of her bases; and she seemed to think that she would have more success by building larger submarines which could go farther afield and remain there for much longer periods.

I now turn to paragraph 5 entitled "The sending of destroyers." It is, to say the least, a rather startling statement, contained in the opening sentences, to the effect that the demands to send destroyers abroad was in the first instance in any respect sentimental, and based upon a desire that our fleet should be seen on this side of the ocean. I note further that it was soon discovered that the destroyers had a very distinct use abroad apart from any sentimental value.

I arrived in England on April 9, and on April 14, after taking time to make sure of my grounds, I sent my first report of the situation. Up to this time I had heard nothing from the department. A copy of this dispatch is attached in case you may not be able to locate it in the department's files. It was very comprehensive, and I have never had any reason to change my mind in regard to any of it. You will find that I did my best to make the seriousness of the situation known, and pleaded that the maximum number of destroyers, accompanied by any smaller antisubmarine craft available, should be sent at once, together with repair ships and staff for bases. I also pleaded for a continuous augmentation and antisubmarine craft to reinforce such advance forces as you found it possible to send. I note that I even pleaded for tugs in that first message, and you will find that, from then for practically the next twelve months, I continued to plead for tugs. I have never been able to believe that, if the seriousness of the situation had been realized, and if it was the intent at home to really throw our maximum forces into the war, we could not have produced many tugs.

The whole trouble seemed to have been the inability of you people at home to adopt and play up to the very mission that you now state in this letter; that is, to treat our service and our facilities and material as "reserves," and to throw them in wherever we could bolster up in any way a weak spot in the forces of our allies over here. It meant nothing else but disintegration of our fleet, and those bald words seemed to be the stumbling block. We did not seem to be able to get away from our habits of peace; the fleet must have its train, although there were excellent navy yards there which could easily have taken the place of the train—navy yards which were unmolested by the enemy in any way. Even to this day, with one or two outstanding exceptions, our forces have not been thrown into the game as they might have been.

Speaking very broadly, I can not look back with any warm feelings toward the way the Navy Department went into the game the first six or eight months of the war. To enumerate a few of the outstanding points in which they failed to support me, and mind you, which subsequent events have forced them to adopt, are as follows:

First. The attitude was that at the end of a cable 3,000 miles away, I must prove every statement I made. Some months after we had been in the game the department actually came at me with a message to the effect that they were always willing to consider any plans which might be proposed, implying that no plans had been submitted, and apparently expecting the Allies or myself, I don't know which, to argue and submit long studies and estimates of the situation by cable.

Second. Forces were not sent as rapidly as they could have been, in fact, there was a distinct reluctance to send them. I assured the department that we were able to keep comparatively accurate track of where all submarines

were at sea. I found after the destroyers got over here that they had been strenuously engaged in high-sea patrols as far south as the Caribbean. It would seem that the only reasonable course to pursue, as soon as it was even possible that we were to enter the war, would have been to have sent all the destroyers to the yards to have everything put right, all machinery thoroughly overhauled, and the ships prepared in every respect for long distance and arduous service far from their bases. This was not done, however, speaking at least in the majority of cases. If my memory does not fail me, many destroyers landed up over here almost direct from futile cruising in the Atlantic and down south, the personnel at the time all convinced that they were wasting their energies. I recall one destroyer captain relating an experience of receiving an urgent message, down somewhere in the vicinity of Cuba, to proceed north to prepare for distant service, and how he was rushed to the yard and constantly besieged with telephone messages as to when he could get out.

Third. It is, of course, needless for me to elaborate upon the fact that I was left over here for four months with but one aid, and the fight that I carried on, even after that four months, to get a proper staff in order to discharge my responsibilities to the service.

Fourth. I might point out here that at no time have I been given any choice in the selection of my subordinate commanders (although I repeatedly asked that I be consulted), and that on the few occasions when I have particularly named men no action resulted. I was told that I did not want this or that officer whom I requested because of this or that incident of his past, or because he was "not available." What more important duty could there have been than enabling me to touch with the bewildering game that was going on over here, in order that the department might at all times be correctly informed? The point I tried to make was that the department should hold me absolutely responsible, thus having but "one throat to cut," and hence, if I asked for a convict out of Sing Sing, why not give him to me?

There are many other points in the paper which I might comment on as I have above. My principal objection to the paper is that it is almost wholly misleading. For example, it would lead one to believe that it took very little time for the department to decide to support the convoy system and to withdraw from other parts of the world our fighting ships which could in any way aid. This was certainly not the case, even after definitely agreeing to go in on the convoy system, requests for cruisers and other ships to help out were constantly met with statements that the ships were "not available."

As to your paragraph 12, on the operation of our forces abroad, I fail to note two very important items. The first, I really believe, is the outstanding accomplishment of our service in the war, and that is the character of cooperation which we have accomplished with the other naval services engaged. I am quite sure that it is unique and without precedent in the history of allied warfare, either afloat or ashore, and it has not been a path strewn with roses.

I will not go into the details here. In fact, it would not be proper for some time to come to tell of all the troubles which have beset my path in this particular, to say nothing of the troubles and difficulties which have confronted all of the various officers who have served under me.

The other item is the mine barrage in the North Sea. Entirely apart from any effect which it may have had in the campaign against the enemy, I consider it one of the finest feats of emergency organization and seamanship which has ever been pulled off in any service. I also see no note, or at least no adequate recognition of the remarkable spirit of the officers of the destroyers who have worked in the war zone. Under the most dangerous conditions, they have stopped at nothing; they have sized up favorably with destroyers of any other service, and all this they have accomplished so magnificently, under a very tremendous handicap, but without a word of complaint.

I refer to the fact that they have constantly turned over their personnel, accepted wholly untrained and inexperienced men and officers, not once, but time and time again. Just stop and remember the howls that used to go up from the destroyers in the old days when you tried to take this or that man away, or to shift men around to even things up. Unquestionably one of the principal factors in efficiency of naval vessels is that of permanence of personnel, but these small craft over here, who have borne the brunt of the work, have cheerfully and without a single instance of complaint sacrificed this all-important requisite almost completely.

There are many other points in the letter of the department which it is hard to resist commenting upon, but I think I have gone far enough to show you that, if I am ever called upon, I can not support any such paper as the one in question. Your paragraph 20, on the planning section of the department and of my staff, is particularly trying.

Please understand that I am not in this letter criticising you. I have been too far away, and I know the intricacies of the working of the department too well, to think for a moment that you deserve any lion's share of the credit or discredit which is coming to all of us some day.

I know that the department is not now and never has been properly organized. During the war it has not had the semblance of a general staff organization, and hence the majority of the difficulties which have confronted us.

I attempted, within a very short while after I arrived abroad and saw what was ahead of us, to build up something of the nature of a general staff, believing that I could in some measure at least fill in a much needed defect of the department at home, but it has been an uphill fight. Now that the war is over, I have the necessary officers and facilities.

And now, after all the trials due to lack of support in time, and due to all the blundering, I receive a copy of this letter, from Operations to the Secretary, setting forth to him (which probably means to the outside world) the claim to have always foreseen everything, planned everything, and supported us up to the handle. Even claiming that the department had foreseen everything even before we came into the war, and had put all necessary measures into operation immediately.

Mind you, I do not say that the letter specifically says that they were the plans of the department, or that they were put into operation immediately, but I do say that the letter is very misleading; that it certainly would lead anyone who was not posted to believe that such was the case. Is it any wonder therefore that I can not pass it by without comment?

All the above, not to mention the stinging injustice such a letter does to the personnel on this side.

Admiral Sims. I will read the last paragraph [reading] :

However, the war is over and apparently we have won, and so I suppose the skeleton in our closets should be moved down into the basement and not again disturbed.

I am quite ready to adopt such a procedure, but I must strenuously object to misleading those to whom the service is justly accountable.

I trust that there will be no post-mortem examinations as there have been in all past history, but, if there are, the cablegrams exchanged between the department and me during the first four months of our participation in the war will be, I think, pretty damaging testimony to the game played by the department, and will make this departmental letter, dated November 15, 1918, look pretty sick.

Always, very sincerely, yours,

W. S. Sims.

Capt. W. PRATT, United States Navy.

REVIEW OF CONDUCT OF THE WAR BY THE NAVY DEPARTMENT.

The testimony of the department's own witnesses which has been quoted, together with other evidence that has been brought before this investigation of this committee, seems to me to have established conclusively the following features of the manner in which the Navy Department functioned during the war:

First. In the years before the war, no real effort was made to get the Navy in a condition which would make possible immediate and effective operations under the conditions which would obviously prevail in the event of war with Germany, though this war had seemed probably after 1915.

Second. That the Navy Department was responsible for the shortage of personnel, which made it impossible adequately to man the

vessels of the Navy in 1917, or to provide the necessary officers and men required for the war expansion of the Navy.

Third. That although the war had been in progress long enough for the probable activities of the United States Navy to be foreseen, in the event of America's entrance into the war, no plans whatsoever had been made to meet the special conditions under which the Navy had to fight.

Fourth. That the Navy Department's organization was not adequate to meet the situation which developed after we entered the war. The Secretary not only seems to have failed to initiate an effort to improve or correct the inadequacy of the organization or the lack of preparedness and plans, but also strenuously resisted such efforts as were made. A makeshift reorganization to meet war conditions had to be devised by the individual effort of many individual officers, working for the most part independently, and often without any coordination whatever of their efforts. Only their own initiative and voluntary cooperation made possible the achievements of the Navy in the war.

Fifth. That for at least the first three or four months after we came into the war, the Navy had no consistent policy, or if it had any, failed to carry it out. It had no adequate war plans or, if such existed, they were not put into effect.

Sixth. That during this time, the Navy Department's representative abroad was ignored and his recommendations in practically every case disregarded. Requests from the Allies for reinforcements in many cases were unheeded. No organization was created by the department to meet the situation, by gathering the necessary information and by taking the steps to meet the situation revealed by this information.

Seventh. That during these months, the activities of the Navy Department were inspired not by the announced policy of cooperating wholeheartedly with the Allies and defeating the submarine campaign, but were dictated essentially by avowed motives of prudence and self-interest; by the desire to defend the American coast, American shipping, and to maintain intact the American battle fleet, regardless of what fate might be overtaking the Allies. This defensive policy was carried to such an extent, that, to cite only one example, naval vessels were sent to patrolling the North Carolina Sound in waters impregnable by submarines.

Eighth. That at the time the President sent his dispatch to me, July 4, 1917, the policy which he announced had not been followed by the Navy Department. On the contrary, that its action had been in contradiction to the very principles which the President laid down.

Ninth. That after the President's message was sent to me, the department suddenly displayed a new spirit in its attitude toward the Allies and toward my recommendations; immediately adopted the convoy system; sent many additional antisubmarine craft abroad; provided me with additional officers; adopted a new destroyer program; and took many other steps looking toward an active prosecution of the war, all of which measures could and should have been put in force at least three months earlier.

Tenth. That these conditions were well-known in the Navy Department at the time; that the officers in the department themselves com-

mented upon and criticized them; and my letter of January 7, 1920, was written only because I feared that these errors would be so completely forgotten that their repetition in future would be more than probable; and that I considered it my duty officially to invite the department's attention to them.

The CHAIRMAN. I think probably you have had enough for to-day.

Admiral SIMS. Well, I am all in as far as my voice is concerned.

The CHAIRMAN. The committee will stand adjourned until 9.30 to-morrow morning.

(Thereupon, at 4.35 o'clock p. m. the committee adjourned until to-morrow, Friday, May 28, 1920, at 9.30 o'clock a. m.)

NAVAL INVESTIGATION.

FRIDAY, MAY 28, 1920.

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE
ON NAVAL AFFAIRS,
Washington, D. C.

The subcommittee met, pursuant to adjournment, at 9.30 o'clock a. m., in room 235, Senate Office Building, Senator Frederick Hale presiding.

Present: Senators Hale (chairman), Ball, Keyes, and Trammell.

The CHAIRMAN. The committee will come to order, Admiral Sims, will you please continue?

TESTIMONY OF REAR ADMIRAL WILLIAM S. SIMS, UNITED STATES NAVY—Continued.

The CHAIRMAN. You may proceed, Admiral Sims.

Admiral SIMS. Causes of unsatisfactory conditions in the Navy Department. The testimony of the department's witnesses.

In the general classification of the testimony of the department's witnesses which I made in beginning this statement, I referred to their opinions as to the causes for the conditions prevailing in the Navy Department in the early months of 1917.

In the review which I have made of the testimony of these witnesses as to the conduct of the war by the department, I have referred, at various times, to their opinions as to what was responsible for the mistakes and delays revealed.

I will confine myself at this time to a brief general analysis of these opinions.

In my preliminary statement, I said:

The department's witnesses, in testifying with regard to the responsibility for the conditions which have been brought to light, are in general agreement that these are due primarily to three causes.

First. Faulty organization of the Navy Department.

Second. The policy governing the department's action previous to our entrance into the war and during the early months thereof.

Third. The failure of the responsible head of the department to direct the action required, both before and after the outbreak of war, to meet the urgency of the situation to prepare the Navy for war, and to strike at once on the fighting front with all available forces.

Faulty organization of the department: There has been a unanimity in the expressions of opinion by the department's witnesses concerning the organization of the department. All agreed that the organization, as it existed in 1917 and as it exists now, is faulty; that it is not adapted to meet war conditions; and that in the early

months of the war, whatever errors were committed were probably due, to a large extent, to the faults in organization.

Admiral McKean and Capt. Pratt, whose positions and responsibilities in the Office of Naval Operations during the war were such that they had perhaps a better opportunity than any other naval officers to view at close range the workings of the organization under war conditions, were especially emphatic on this point. They pointed out the fact that while the creation of the Office of Naval Operations provided the nucleus around which a war organization was ultimately built, this office did not have sufficient authority or adequate personnel to handle efficiently the formulation of plans for war and the material preparation of the vessels of the Navy for active operations nor to direct those operations. They were also in agreement in stating that it was only the voluntary cooperation which they obtained from the various bureaus and divisions of the Navy Department that made possible the ultimate successful conduct of the Navy's operations in the later period of the war.

Lack of adequate plans due partly to defective organization: These witnesses explained the lack of adequate plans at the outbreak of war by showing that previous to our entrance into the war there had been in the Navy Department no one body constituted to make plans and responsible for making plans, nor had any machinery been provided by which such plans would be automatically reviewed by the higher authorities and put into effect as official departmental plans, to govern the action not only of a few officers who happened to be in Operations and were willing to cooperate together voluntarily but also of the various bureaus who were under the authority of the Office of Naval Operations and who were subject to direction only by the Secretary himself unless they voluntarily chose to cooperate with Operations and follow out the suggestions and recommendations of the officers of Operations.

Previous to the creation of the Office of Naval Operations the only planning body in the Navy had been the General Board: but the General Board, because of its nature, had always been more concerned with general policies than with plans. Most of its recommendations can not be considered as being plans in the real sense of the word. In the absence of such plans, however, these recommendations necessarily were the only substitute the department had.

After the Office of Naval Operations was established the Chief of Naval Operations was charged, among other things, with the preparation of plans, but was not held responsible for so doing: nor was he given any authority to approve plans that could have any binding effect on any other part of the Navy except his own office. The plan-making function, therefore, was divided, between 1915 and 1917, between the General Board and the Office of Naval Operations.

Results of the lack of an adequate plans division: After the war began, as Admiral Benson's testimony and that of his assistants clearly shows, such plans as they described were in reality only informal agreements made in the Office of Naval Operations and carried out by the bureaus in voluntary cooperation. Such plans were never officially approved, and in most cases were not even set on paper, but were merely communicated verbally in conferences or discussions or in informal memoranda to the various bureaus and

divisions of the department, which had to carry out the details. No real planning section was established in the Office of Naval Operations until August, 1919.

Capt. Pratt, in his testimony, in referring to the planning work of Operations, attempted to maintain that there was a planning section from February, 1917, on, but under cross-examination explained that this planning section was in reality only a more or less voluntary group of officers whose main duties were administrative and whose plans were chiefly concerned with the detailed execution of their own administrative duties. Each of these officers was absorbed in the administrative details of the duties assigned to him, and found these so heavy a burden that he had little time for any planning except to provide for the detailed carrying out of the decisions made concerning each particular situation as it arose. There was a general agreement among the witnesses that there was no attempt to provide beforehand a general estimate of the whole situation and to proceed from this estimate to decisions affecting the whole Navy's operations in the war, so as to coordinate all these operations as part of one unified, general war plan. On the contrary, the method used during the war by the department was exactly the opposite, and the unified, general war plan actually came into existence only as the result of the coordination of all the various individual efforts, individual decisions, and individual operations which took place in the early months of the war. This coordination was not achieved until the Navy had been months in the war, and the general plan, built up piecemeal in this fashion, never was given any definite or official form, but remained only as a loose coordination of activities worked out in the manner described.

The planning section of the forces abroad: The officers who served in the Office of Naval Operations have also testified that after a planning section was established in the London headquarters the Navy Department came to depend more and more upon the work of this section to provide their own plans. Capt. Pratt in his testimony included a large number of the plans drawn up by this section, and told you how, throughout the latter part of the war, problems affecting the whole Navy, or even those relating to the Navy Department at home, to the Navy's building program, or to the organization of the department, were transmitted to this planning section in London in order to have a careful study made and a plan arrived at.

Admiral Benson, in his testimony, freely admitted that previous to the war he had not built up any planning section in Operations or taken any steps to provide for the preparation of definite plans. In explanation of this he called attention to a point emphasized also by Admiral McKean and Capt. Pratt, that it had been difficult to do this because of the lack of adequate personnel. He made it clear that, in his opinion, it had been difficult to get the department to realize the importance of ordering properly trained officers to Operations for this duty, as they would thus have been taken from other administrative duties or from the command of certain units of the Navy. It was apparent from his explanation that the official policy of the department previous to the war had been opposed to building up the Office of Naval Operations in such a way as to permit it to meet adequately war conditions.

How the plans division of Operations came to be organized: It is interesting in this connection to note that when the department finally decided on the necessity of having a planning section in the Office of Naval Operations, it should have looked to the planning section in London for guidance.

On the 17th of July, 1918, I received the following message from the Navy Department, dated July 17, 1918—not 1917, but 1918—more than a year and three months after the declaration of war:

JULY. 17, 1918.

Origin: Opnav., Washington.

Cs: July 17, 1918.

48, A. D. R.

Secret.

Simsadus.

When I agreed to principle of the establishment a joint-plan section in London, England, I consented at the same time to send you immediately two officers who were undertaking planning work in Navy Department, namely, Capt. Schofield and Capt. Knox. Since that time there has been no planning section in the department, and the need of it is so great that any further delay in reestablishing it on broad lines and as a permanent part of this organization can not be considered.

I feel that in carrying this work along it is most necessary to keep the ideas developed in Europe and those developed here working along the same lines. I therefore desire to order Capt. Yarnell from your office to Operations, for duty with other captains in this work, and to replace him I propose sending you Capt. McNamee, who has continued planning with administration work in this office.

I realize the importance of permanent personnel in your organization as well as in the Navy Department, but I feel that the work of a planning section here is equally as essential to the success of your operations as to the success of any other work which we may undertake.

This policy is in accordance with your own and my view regarding an interchanging of personnel.

BENSON.

Three days later I received a second dispatch dealing with the same matter:

Rec'd July 20, 1918.

Origin: Opnav., Washington.

Simsadus, London.

In view of the experience of your planning department in war zone, submit outline of organization they would recommend, together with a list of general subjects to be handled, keeping in mind both the present and future.

BENSON.

As a result of this request, the planning section in London drew up an outline of the organization which would be necessary in the Office of Naval Operations, and a plans division was afterwards established there and the organization put into effect very largely along the lines recommended by the planning section in London.

There can therefore be no doubt that the failure of the Navy Department to have adequate plans in 1917 was largely due to the lack of this essential part of the organization of the Office of Naval Operations, and that this was remedied only after the war had come to an end.

I invite particular attention to the fact that the initiative taken in establishing a planning section in the Office of Naval Operations in London was more than a year after the war began, and that that planning section was not eventually formed in the Office of Operations until after the war had ended.

Unpreparedness due partly to faulty organization and the lack of a responsible military adviser for the Secretary. Similarly, the testimony of the officers who served in the department conclusively demonstrates the fact that the matériel unpreparedness of the vessels of the Navy for war and the shortage of personnel can be, at least, partly attributed to these same defects in the organization of the department. Under the existing organization, there was no central naval authority charged with coordinating the various measures in the preparation of the shore establishments and vessels of the Navy for war, nor with the general supervision of the personnel of the Navy in order to insure having the properly trained officers and men necessary for the carrying out of any coordinated plan of operations. The 13 bureaus, boards, and divisions of the Navy Department are at present coordinated only by the personal direction of the Secretary of the Navy himself.

The Chief of Naval Operations can only advise him as to what the bureaus should do. There was no single professional adviser responsible for reviewing the activities of all the different divisions of the Navy and for making recommendations and giving responsible advice to the Secretary as to the carrying out of a systematic and carefully coordinated plan to prepare the Navy for war.

The Secretary of the Navy was naturally free to seek advice from any quarter he chose. No single officer was responsible for reviewing the whole situation and for giving advice based on a systematic estimate of the whole situation. The greater part of the recommendations made by individual officers were based only upon their own conception of the needs of their own particular departments, divisions, or bureaus. No civilian could ever possibly have a technical understanding of naval problems sufficient to warrant translating such advice in such a way as to coordinate the individual recommendations into a general, well-balanced program.

As the testimony shows in repeated cases, the Secretary of the Navy acted, not upon the advice of the General Board or of the Chief of Naval Operations, but upon the advice of an individual bureau chief. The result was inevitable. No matter how sound any particular piece of advice might be, its value to the Navy depended, not upon its soundness taken by itself, but upon its relation to the activities of the other bureaus and divisions of the department. In following the advice first of one naval officer then of another, first of a chief of bureau then of the General Board, and then of the Chief of Naval Operations, a great variety of different kinds of projects were undertaken; different measures were approved, which were more or less at cross purposes and which did not harmonize or, taken together, constitute any well-devised and intelligent plan for conducting the work of the department in preparing the Navy for war.

Efficiency of Atlantic Fleet in 1917 not a proof that Navy as a whole was prepared for war: So it happened that in 1917 the only important vessels in the Navy which were prepared for war were the active vessels of the Atlantic Fleet—that is, the dreadnaught divisions and some 20 destroyers. While it is perfectly true that this fleet, taken by itself and disregarding the fact that it lacked many wholly essential units—and consequently was only partially effective as a fighting unit—had very probably reached the highest state of

efficiency that any similarly constituted fleet of the United States had ever attained, still at this time the other vessels needed to make up a fighting fleet were in a lamentable condition. Many of them were in a very bad material state and practically all of them were without full crews. The peace-time efficiency of the so-called Atlantic Fleet in February, 1917, had therefore little to do with the question of preparedness for war. In fact, a declaration of war would in itself have broken down this efficiency. The well-balanced and trained organization and personnel of the fleet would have had to be broken up immediately on the outbreak of war and even before, in order to put into commission and operation the other vessels of the Navy which had not been made ready. This was exactly what happened in 1917. The trained personnel of the fleet had to be taken to arm merchant ships and to provide crews for the cruisers, destroyers, and other light craft. Their places in the fleet were taken by raw recruits, enrolled or enlisted after the outbreak of war. Consequently, however efficient the so-called fleet may have been in February, 1917, the Navy was not and could not be ready at once to enter the war effectively. It did not enter the war effectively until about six months passed, which Admiral McKean testified was necessary before the vessels of the Navy could be made materially ready for war and before the personnel enrolled after war began could be given sufficient training. Naturally, even then the crews, made up to a very great extent of raw recruits, could not possibly be in a high state of efficiency.

There is a general agreement, therefore, that the material unreadiness of our vessels and the lack of personnel to make the Navy efficient under war conditions, as distinguished from peace conditions, was chiefly due to a lack of adequate organization in the department and to the failure to take action in time to prevent the mistakes and confusion which necessarily occurred after war began.

The point about the whole business is that if you have not got sufficient personnel to man the ships that you have got to fight with when war breaks out, then it does not make any difference how efficient the ships are that you have got in commission, because their crews have got to be dismembered in order to furnish some trained men to put the others in commission. So immediately when war breaks out that efficiency disappears and can not be brought back for six months or so.

The department's interpretation of the policy of neutrality—Does neutrality prevent preparation for war? The department's witnesses were in general agreement that a second cause of the mistakes, where any were made, and of the failure to have the Navy ready for war in April, 1917, was the national policy of neutrality, as interpreted by the Navy Department. Admiral Badger, Capt. Pratt, and others have expounded the very novel and, in my opinion, entirely untenable theory that after the Great War began in 1914 any act of preparation for war would have been an overt act. It seems hard to reconcile this theory with any accepted interpretation of neutrality. It was admitted that the United States was the only judge as to its own naval needs; that its building program in 1916, although a radical departure in policy, could not have been considered an overt act by any nation; that the United States was the sole judge as to what ships it would build and as to how large a personnel it should maintain.

It was agreed that any acts considered necessary for the national defense could be undertaken by the Navy Department and carried through without any fear of having them considered overt acts by any belligerent.

In this explanation of the lack of preparedness the witnesses have succeeded only in exposing the department's official interpretation of neutrality. This apparently consisted, to state it briefly, in entirely disregarding the possibility of our being drawn into an unusual kind of naval warfare, requiring special type of vessels and weapons, and of going ahead with a general program which would have given us, in 1925, a navy as large as that of any in the world.

The mission of the Navy in its relation to national policies: Practically everyone of the witnesses commented at length on the policy of neutrality, and declared that the department thought that the country did not want to go into war; and that therefore the department did not consider it wise to take any steps which might make the Navy ready for war. This conception seems in complete contradiction to the true mission of the Navy. As Admiral Mayo so clearly pointed out in his testimony, the development and activities of the Navy depend entirely upon our national policies. The Navy is merely one of the instruments by which the Nation carries out these policies. Its particular mission is to be ready at all times to strike quickly and effectively in the event of the policy of the country resulting in war. These same witnesses have testified that, after the sinking of the *Lusitania* on May 7, 1915, there was little or no doubt in their own minds that we would ultimately be drawn into the war. They agreed that while our national policy was one of neutrality, our Government was also committed to the policy of protecting certain American interests. It must have been apparent that, if these interests were continuously violated, the only possible way to enforce them would be by war. Consequently, if the department had been actuated by what is believed to be the mission of the Navy it would, under the conditions which existed between 1915 and 1917, have based its activities upon the conception that the Navy should be so prepared as to be ready, in case the continued violation of American rights and interests should lead to war, to strike immediately and effectively in defense of those interests.

The department's witnesses have testified that, after 1915, and certainly after 1916, it should have been apparent to any intelligent and informed officer that if America entered the war her efforts would be chiefly confined to reinforcing the main allied naval force, in maintaining the command of the surface of the seas, and in engaging on as large and effective a scale as possible in combating the only naval menace to the allied cause; that is, the operations of the German submarines.

If there had been in the Navy Department a true appreciation of the mission for which the Navy exists, every effort would have been made during 1916, and perhaps during 1915, to man and prepare for war the existing light craft, and to hasten the construction of as many additional craft as possible of the type which, in the opinion of the professional observers, would be needed if war became necessary.

Departmental interpretation of neutrality based on wrong conception: The witnesses have agreed that for reasons which seemed mysterious to most of them the Navy was directed by a pacifistic interpre-

tation of the policy of neutrality, and that the policy of the department was largely responsible for the unpreparedness which existed in 1917.

Responsibility of the head of the department: The Secretary alone is at present responsible for the action of the department. All of the witnesses in referring to the conditions prevailing between 1915 and 1917, and in the early months of the war, have also agreed that, under the existing organization of the Navy Department, the only responsible authority is the head of that department.

Inasmuch as no naval officer was given responsibility under his direction for the coordination of the military activities of the Navy, no single naval officer can be held responsible for what happened. The responsibility must rest where the authority rests, that is, with the head of the department. All of the officers have testified that such is the case.

Policy and methods of the Secretary of the Navy: These same officers, in commenting upon the department's methods, have pointed out many instances in which the Secretary followed in many cases a variety of advice given him by bureau chiefs, or by other officials who were not concerned with any subjects other than those of their own division or bureau, and whose recommendations, in many cases, were not based upon the general needs of the Navy, but upon the conceptions of those individual officers as to what those needs might be or as to the wishes and needs of their own divisions.

The witnesses have testified, as did Admiral Benson, Admiral McKean, and Capt. Pratt that, in their conferences with the Secretary of the Navy, the term "war" was practically never used. In substance they substantiated the testimony of other witnesses, such as Capt. Laning and Admiral Plunkett, who called attention to the Secretary's unwillingness even to consider the idea of war having anything to do with the administration of the Navy. Those officers pointed out repeated cases in which action was held up for long periods by the failure of the Secretary of the Navy to take action himself or permit the Chief of Naval Operations to take action which seemed, in the opinion of that officer, to be necessary.

There has never been any disposition to question the good intentions of the Secretary of the Navy. It could hardly be doubted that he has the welfare of the service keenly at heart. But it also seems perfectly clear and perfectly well established, by the testimony of the department's witnesses, which has already been quoted that, in the very essential matter of preparing the Navy for war by drawing up war plans, by insuring material readiness, and by providing and training adequate personnel, the Secretary either failed or refused to consider or act upon the conception that the chief function of the Navy is to be prepared to carry out the national policies in time of war. Sufficient testimony has been introduced on this point to place it beyond the possibility of reasonable doubt. Our Navy was not ready in April, 1917, to enter immediately the campaign against the German submarine and to exert its full force in protecting the overseas communications of the allied forces or in transporting and supplying our own forces to be sent overseas. No adequate steps had been taken to meet the particular situation which we faced when war began, and it took many months after the actual declaration of war before the Navy was permitted to act effectively in this campaign.

I now take up Part V. This has been touched upon in a number of other places in my statement, largely due to the fact, as I explained yesterday, that the whole had to be gotten up very hurriedly. I will not read all the quotations, simply making mention of the fact that the statements already made in the beginning of this paper are substantiated by the testimony of witnesses taken from the record.

The CHAIRMAN. But you will include the quotations in the record? Admiral SIMS. Yes.

I will now take up the subject of the unanimous recognition of need for reorganization of the Navy Department.

UNANIMOUS RECOGNITION OF NEED FOR REORGANIZATION OF NAVY DEPARTMENT.

Agreement of department's witnesses on necessity of remedying defects:

In the preliminary part of this statement, I referred to the fact that an essential part of the testimony of all the departmental witnesses consisted of their recommendations for such a reorganization of the Navy Department as to prevent a repetition of the sad experiences of 1917, with which these officers were personally so familiar.

In this connection I said:

There was an almost unanimous agreement in their expressions as to the necessity for a reorganization of the department so as to make it a military organization, able successfully to prepare for and conduct war operations. The officers most closely connected with the department's organization during the war were those who have testified most strongly with regard to the need for this reorganization. Further comment seems superfluous.

I do not desire or intend to go into any details as to the suggestions made in this respect by the various department witnesses. The significant fact to bear in mind is that, whatever general expressions of indorsement they may have given to the department's conduct of the war; however they may have attempted, by statements of personal opinion and by generalizations, to "defend" the Navy—which has never been attacked—or the conduct of the war by the Navy Department, with which in most cases, as they themselves have testified, they were completely ignorant, they yet were all agreed that a reorganization of the department is necessary in the interests of military efficiency and national defense. Furthermore, their recommendations were in most cases very similar, and were such as would be considered necessary only in the event that the criticisms which I have made in my testimony were in reality believed by them, consciously or subconsciously, to be true and well founded.

In other words, the unconscious assumption upon which their recommendations have been based has been necessarily the fact that the Navy Department's organization in 1917 was not adequate to the conduct of war; that the Navy was not as well prepared as it should have been to take part in the war; and that its conduct of the war was faulty and open to well-merited criticism. It would be impossible otherwise to understand or explain their insistence on the necessity for the kind of organization which they have recommended.

Recommendations of Admiral Rodman as to reorganization of department:

In order that the trend of the recommendations of the department's witnesses for reorganization of the department may be more clearly understood, I will refer briefly to their statements before this committee.

For example, Admiral Rodman said (p. 2101):

I believe that it would be for the best interests of the Navy, that we might avoid mistakes in future, to entrust the Chief of Naval Operations with the responsibility of preparing plans for any future work and to keep the Navy in a state of preparedness; and, more important still, to give him the authority to carry them into execution when the war is declared, following the policy that is laid down by the Federal Government.

In answer to questions, Admiral Rodman pointed out that in the bill containing the provision for the creation of the Office of Naval Operations, the word "responsibility," as applied to the preparation of the Navy for war, was struck out of the bill at the instance of the Secretary of the Navy, although in Rodman's opinion the Chief of Naval Operations "should have the responsibility and the authority."

In cross-examination, Admiral Rodman again reiterated this opinion as follows:

The CHAIRMAN. Do you consider the organization of the Navy Department, as now existing, satisfactory?

Admiral RODMAN. No, sir (p. 2140).

The CHAIRMAN. What changes would you suggest other than those you spoke of?

Admiral RODMAN. None others, sir. I am not very familiar with the intimate organization of the Navy Department (p. 2141).

Admiral Rodman also stated the further opinion that:

With the recommendations I made in regard to the Chief of Operations being given more responsibility and authority, the continuation of the General Board as it exists is most important. Beyond that I have no recommendations to make.

In explanation of his opinions Admiral Rodman said that no civilian Secretary, without expert advice and assistance, could be expected to prepare the Navy for battle. He would have to depend almost altogether on expert advice, and to follow that advice in order to get good results. He thought that there should be only one responsible military advisor, the Chief of Naval Operations, who would be authorized to exercise supervision over the bureaus and offices of the department as required to secure coordinated action.

So far as carrying out war plans is concerned, and in the matter of preparedness, and in the execution of the plans, I think it should be entrusted to the Chief of Naval Operations (p. 2142).

Admiral Rodman also stated emphatically his belief in centralized control over policies and plans, and a decentralization of responsibility and authority in their execution. He thought the Chief of Naval Operations should be given this responsibility and authority, especially as under existing circumstances "he has not got it" (p. 2143).

Furthermore, Admiral Rodman stated that he was prepared to agree with "anything that Admiral Mayo would recommend," and would give a general indorsement to any of Admiral Mayo's opinions. This is of especial interest, in view of Admiral Mayo's recommendations, which will be considered in a moment.

Admiral Rodman also (p. 2144) stated that he believed that a planning division in Operations was absolutely necessary, and that the officers assigned to that duty should perform that duty alone during their service in Operations. He admitted that this had not been done previous to the war.

Admiral Wilson's recommendations:

Admiral Wilson was just as emphatically in favor of such a reorganization as was Admiral Rodman.

For example, to quote from his testimony (p. 2224):

I said in my statement that I had read the summary of recommendations of Admiral Mayo on the subject of the policy of reorganization, and that I was heartily in accord with that. * * * I could not go any further. * * * I would like to wait for that plan and I would probably be just as much in accord with him in that as I am already, because Admiral Mayo is a man in whose judgment I have the greatest confidence.

Admiral Wilson also testified that he did not consider the present organization of the Navy Department satisfactory.

I think that the Secretary of the Navy should have a naval advisor, now called the Chief of Naval Operations; that he should be the advisor to the Secretary on all matters concerning the preparation of the Navy for war, and that he should be held responsible for the execution of the plans.

Admiral Wilson did not mean that he should take the place of the Secretary. He should always be a civilian, in accordance with our governmental traditions, but Admiral Wilson did believe that the civilian Secretary should select carefully his naval advisor and should then (p. 2225) "place responsibility upon him and naturally give him the authority that goes with responsibility." The Chief of Naval Operations should not mix in details with bureau affairs, but should coordinate his efforts in times of peace, as was actually done in the latter part of the Great War.

The law should be such that in peace times they will have the same cooperation in order that they can be prepared for war.

In Admiral Wilson's opinion the Chief of Naval Operations should also have:

The responsibility of drawing plans and for getting the Navy ready for war and the responsibility for the execution of the plans; and the man who has the responsibility for such a thing should have the authority that goes with it (p. 2226).

The Chief of Naval Operations should be given authority and "charged with responsibility, and the law should be made such that the work that was done during the war by cooperation will be made the practice during peace times."

Furthermore, in Admiral Wilson's opinion:

A civilian Secretary needs the advice and assistance of expert naval officers. * * * The Secretary does not need naval knowledge to be an administrator. That is what you want, an administrator there as Secretary of the Navy; a man who handles policies, is on good terms with Congress, and such things as that; I do not think it was ever expected * * * that the Secretary * * * should go down and do the details and say how war should be carried on.

All plans for military operations should be drawn up by military experts, and the general direction of such operations should be in their hands, according to Admiral Wilson's opinion.

I think everyone recognizes that, sir, even the Secretary of the Navy. The trouble with this business is that it is not the system, it is the individual, and

if he gets in there and tries to make his job too big, at the expense of everybody else and not to the best interests of the service * * * they ought to get somebody else who can keep within his limits and keep happiness there and not discord. * * * I believe in a centralized control of getting ready for war and carrying on war.

Admiral Wilson summarized his opinion as to the Secretary's position when he said that after the war plans were decided upon the Secretary "ought to occupy himself with big things; not meddling with navy yards and trivial things of that sort."

ADMIRAL FLETCHER'S RECOMMENDATIONS.

Admiral Fletcher's ideas as to the reorganization of the Navy were very similar to those expressed by Admirals Wilson and Rodman.

For example, Fletcher said:

I am prejudiced in favor of the Meyer organization as tentatively put into effect by Secretary Meyer in regard to heads of divisions.

Admiral Fletcher, in another place, said that he still was of the opinion which he had expressed before the House Naval Committee in 1916, in discussing the organization of the Navy Department; that he thought that the existing organization was unsatisfactory.

It is not the organization that I would have there or all I would like to have were I Secretary of the Navy (p. 2291).

In Admiral Fletcher's opinion, the Chief of Naval Operations should have authority to sign all orders with regard to the operations of the fleet, should be made responsible for the preparation of war plans and for the conduct and operations of the fleet in time of war. In 1916 Admiral Fletcher recommended that this be done, and especially that the Chief of Naval Operations be given authority, "to issue and sign orders concerning the operations of the fleet." So far as he knew, the Secretary of the Navy had never approved this. The Chief of Naval Operations "should have full authority to do that, subject to the approval of the Secretary of the Navy."

The Chief of Naval Operations should exercise his authority under the general direction of the Secretary of the Navy. The Secretary should be authorized to veto or disapprove any orders, but should not be the one required to sign them (p. 2290).

ADMIRAL NIBLACK'S RECOMMENDATIONS.

Admiral Niblack was quite convinced that the investigation by this committee will have the beneficial results, for the very reason that it may lead to a reorganization of the department.

In this connection, for example, he said (p. 2437):

It is believed that a possible valuable result of the investigation now being conducted by this committee may be the development of means for accurately fixing responsibility for preparation for war. * * * This can be accomplished by the enactment of legislation which will make the Chief of Naval Operations responsible for making to the Secretary such recommendations * * * as will maintain the Navy in an adequate condition of preparedness to meet any probable enemy; and which will also make the Chief of Naval Operations responsible for the execution, during peace and war, of all plans that have been approved by the Secretary of the Navy. * * * All estimates for naval appropriations should be based on approved plans and should, when presented to Congress, be accompanied by written comment and recommendations by both the Chief of Naval Operations and the Secretary.

In another place, in referring to the efforts which the General Board had made previous to the war to get things done, Admiral Niblack said that the General Board often recommended things which were for the good of the Navy, but which might not be in conformity with the policy of the head of the Navy.

Specifically, what I mean is that the administration may have a program based upon expediency or upon the financial outlook or upon the next election, or whatever you choose. * * * There ought to be on record what the General Board recommends in addition to what there is in writing from the Secretary of the Navy concerning the administration's plans (p. 2456.)

With regard to the bureau system, Admiral Niblack testified that he thought that it had achieved splendid results and had stood the test of war, but he did believe that the operations of the bureaus should be coordinated and should be under the general direction of the Chief of Naval Operations.

He said:

Personally, I never wanted to see it (the bureau system) modified except to be materially controlled in the recommendations they made by the central responsible person, the Chief of Naval Operations (p. 2457.)

In order to insure Congress receiving a full statement of various naval problems and recommendations made to meet them, Admiral Niblack said that, in his opinion, "The General Board and the Chief of Naval Operations should be entitled to present their views to Congress * * * as well as the Secretary."

RECOMMENDATIONS OF CAPT. PRATT.

The officers who were most closely associated with the administration of the Office of Operations during the war presented the most drastic recommendations as to the necessity for increasing the functions of that office, in order to give it a real military control over the military side of the department's activities. Capt. Pratt, Admiral McKean, and Admiral Benson were exceedingly emphatic on this point.

Capt. Pratt, for example, said, with regard to the condition in 1917 (p. 2832):

Nor was the organization or administration of the department at home such that it lent itself to the most efficient handling of a great war * * * at the beginning. * * * These conditions were true when we entered the war and they lasted until the defects could be remedied—but by April, 1918, * * * the organization of the Office of Operations had been modified and the methods of administration changed.

In another place, Capt. Pratt said that when we entered the war (p. 2871):

The reorganization and expansion of the Office of Operations and of the bureaus had to be undertaken. The coordination of the bureaus with this office had to be developed. The methods of administration had to be divested of their prewar conservatism; the red tape abolished, and more authority given to subordinates in matters of detail. Habits of quick and accurate thinking and quick decision under stress of war had to be formed.

With regard to the specific question of the organization of the department, Capt. Pratt said (p. 3831):

No organization is sound unless you give the power where it rightly belongs and fix the responsibility for its proper administration. You have by law

appointed a head but have not definitely placed responsibility. As the head of an organization, there is the perfectly natural inclination to perform such acts as he in his judgment deems wise, but upon these acts depends the entire present and future of our naval establishment, its development, maintenance, and operations. To effect this efficiently requires the most intimate knowledge of the Navy, and particularly in coordinating its many activities. * * * To administer the duties of the chief executive of this department, there is called a civilian * * * who, in this capacity, is best able to coordinate the Navy's activities with Congress, and who in his person is the strongest connecting link between us and the people. He comes to the office as an individual, a splendid man, able, efficient, highly trained in some subject, but not technically trained in the activities of the Navy nor a student of the art of war. This system functions after a fashion in peace but does not function when preparation for war becomes necessary, nor does it function in war. It is necessary now that at the outbreak of hostilities the military head should assume the direction of and responsibility for the conduct of military operations for whose preparation he had had by law no direct control nor authority to coordinate in peace. Such is the system we work under to-day, and did at the outbreak of the war.

In referring to what happened during the war, Capt. Pratt said (p. 3832) :

Thanks to the voluntary and hearty cooperation of every distinct departmental organization, including the Secretary, the Navy was able to pull itself together and to work exceedingly well in war. If any lack of preparation existed within the naval service prior to our entry into the war; if any lack of harmony existed then or exists now within our Navy, it can be laid more justly to the system of organization the department labors under rather than upon the shoulders of any individual.

In Capt. Pratt's opinion, the department would have fallen to pieces during the war without the Office of Operations to coordinate activities. This coordination was accomplished only by the voluntary action of the bureaus in practically placing themselves under the control of the Office of Operations, but in Capt. Pratt's opinion (pp. 3933-3934) the Chief of Naval Operations should have legal authority and responsibility for doing this at all times.

If, then, he does what he ought not to do, the Secretary can replace him by another man, and should replace him. If, on the other hand, he finds that he is not being supported by the Secretary, he can bring his opinions directly before the proper authorities.

With regard to the General Board, Capt. Pratt said (p. 3934) :

I further believe that the General Board should be created by law and should not be a board appointed by the will of any person * * *. It would have a great check upon the Chief of Naval Operations in case he overstepped his authority.

In referring specifically to the interior organization of the office of Operations, Capt. Pratt said (p. 3935) :

Without a division of material we would have fared badly. Without the planning section, once we got into the war, we would have had to depend very largely on Admiral Sims's planning section, and as a matter of fact that is what we did do except for matters that occurred in the United States.

In referring to the handicap imposed upon the officers in the department by the lack of any effective organization, Capt. Pratt said :

I should have liked nothing better than to have had a thoroughly organized plan for the department. It would have made the work very much easier.

The organization of the department as it existed prior to the war, and as it exists now, Capt. Pratt considered was imperfect and should be changed.

I think the organization is not fitted to conduct war efficiently (p. 3939).

With reference to the report of the Mahan-Moody Board, Capt. Pratt said that he was in general agreement with its principles, but that the work of the various aids for material, personnel, etc., should be coordinated directly not under the Secretary but under the Chief of Naval Operations. He thought that it had not been wise for the present Secretary to destroy or discredit the Mahan-Moody report and to return to the old bureau system, with only an aid for Operations, with no authority to coordinate the bureaus and divisions of the department, leaving this coordination to be handled only by the personal direction of the Secretary of the Navy.

He said (p. 3941):

It is a return to an older order of things, which was not as wise.

Capt. Pratt, in commenting upon the operations of the department in the war, made it clearly apparent that many difficulties were encountered, and that, to a large extent, the responsibility for these rested upon the Secretary.

Thus, for example, he said (p. 3399):

As the system of organization stands, we have not any actual military head who is responsible. The responsibility in a degree rests upon the Secretary, because he is the head. * * * The Secretary, no matter how wise a man he may be in his own affairs, must accept the advice of his naval counselors; but if somebody is not charged with the responsibility for the advice he gives and the head does not know the details, the result is an indefinite state of affairs, which, to my mind is responsible largely for any unsatisfactory condition which we might say existed.

In illustration of this point, Capt. Pratt referred to the fact that, as it now stands, the Secretary can always justify any action that he takes, however unwise it may be in the opinion of the majority of the service, or however mistaken events may show it to have been, by stating that he was following the advice of a naval officer, of one of his own advisers.

In this connection Capt. Pratt referred to the case in 1914, when the Secretary of the Navy disapproved a recommendation of the General Board for an increase of 19,600 men in the personnel and directed that this recommendation should be removed from the report of the General Board; and, at a later date, after the General Board's report had been considered, obtained from his then Chief of the Bureau of Navigation, Admiral Blue, another statement to the effect that the Navy had more men than it needed at the time. Admiral Blue's statement, of course, was based not upon any consideration of future needs, but upon providing minimum peace complements only for such ships as were at that time actually in commission. In discussing this incident, Capt. Pratt said that he did not know whether the Secretary was to blame or not for accepting Admiral Blue's advice rather than that of the General Board and of the other officers in the department, and then went on to say (p. 3400):

That is just where we kick. He accepted the advice of Admiral Blue, and almost every naval man thought that Blue was dead wrong. * * * I hold Blue very responsible for the advice he gave; * * * but the system is wrong, where you can cooperate first with one naval officer, then with another naval officer and another chief of bureau and get just as many ideas as you talk to men. That ought to be coordinated under the head who is charged with policy and plans, so that you do not get this diffusion of ideas but get one concentrated effort.

METHODS USED DURING WAR TO OVERCOME DEFECTS IN ORGANIZATION.

Capt. Pratt also confirmed the testimony given by other officers before this committee, such as Capt. Laning and Capt. Palmer, to the effect that during the war many of the successes which attended the operations of the Navy were achieved only because, practically speaking, the officers in the department went ahead and on their own initiative carried things through, often without the approval or the knowledge of the Secretary of the Navy.

In this connection, Capt. Pratt said (p. 3411) :

When we started in this war, matters of detail did have to be arranged through the Secretary; but later on we used to handle operations a little more directly. The Secretary could not attend to all such matters of detail—it would be impossible. So I think in many cases we acted directly, after the policy was once established. * * * After the Secretary had approved a general policy Operations carried it out without further reference to him or approval of details.

In other words, during the war, by the methods which were developed, the Office of Naval Operations succeeded in temporarily gaining for itself those prerogatives which every officer who has testified considers necessary, and which alone, in their opinion, made possible the successful prosecution of the war in its later stages, and also made possible those achievements in which the Secretary of the Navy has recently expressed such pride. The Secretary, however, still continues to oppose the very organization which, created informally, and probably without his knowledge at the time, was alone responsible for the happy results which the department was able to obtain.

The officers who served in Operations have told you how, after the war had been proceeding for a number of months, they succeeded in establishing a practical method of working which, in general, was in accord with the principles of their present recommendations for the reorganization of the department.

Admiral McKean's recommendations: . .

Admiral McKean in his testimony presented a complete outline for the reorganization of the department, which was very similar to that proposed in the testimony of the officers thus far quoted.

The following quotations from his testimony indicated the basis of his suggestions:

Page 4436:

The CHAIRMAN. Could not the Navy Department have been better organized between 1915 and 1917 had we anticipated and prepared for war?

Admiral McKEAN. Yes. I always had very distinct views on the defects of the organization—war brought some of the modifications that in peace would require laws * * * a gentleman's agreement in peace might not do. In war it is the essential duty of all the country to control all the little jealousies and friction. They just dropped out and we got busy. Never mind bureau system or anything else. * * * I think the organization ought to be changed.

In another place, Admiral McKean said (p. 4331) :

There have been many criticisms of our system. I agree with Capt. Pratt that whatever faults and whatever shortcomings there might be or might have been or will be in the future, it is more the fault of the system than of any individual or individuals. * * * It is my opinion that the responsibility of the Chief of Naval Operations should be definitely stated in the law and that the authority conferred upon him should be coextensive with these responsibilities. It is further my opinion that there should be only one naval adviser on military matters, this to prevent confusion and friction, and to permit the

Congress and the people to fix the responsibility for the preparation of the fleet for war and its operation in war.

From nearly three years' experience in the office of the Chief of Naval Operations, and having held both of the leading assistant positions, and having also acted as chief for seven months, I am convinced that the law creating the office should be revised so as to make the Chief of Operations fully responsible, under the direction of the Secretary and the President, for the fleet's development, maintenance, training and operation, and that he should be given the necessary authority and the necessary assistance to enable him properly to meet these responsibilities (p. 4332).

Admiral McKean submitted drafts of legislation which he considered would meet the situation. These provided for carrying into effect substantially the recommendations noted above: That the Chief of Naval Operations should be made the sole military adviser of the Secretary; that the responsibility and the authority of preparing plans for war, of directing the execution of those plans, and of coordinating the activities of the bureaus in doing this should rest upon the Chief of Operations; and that in time of war, and in time of peace, he should direct the operations of the fleet; of course, at all times under the direction of the Secretary of the Navy, and in accordance with the policies laid down by the Secretary of the Navy. He also provided for the establishment of the General Board as a body of the more experienced officers of the Navy charged with preparing general naval policies. The policies having been determined in this way, and having been approved by the Chief of Naval Operations and the Secretary, the work of preparing detailed plans to carry them out should be turned over to the planning section of the Office of Operations, under the direction of the Chief of Naval Operations.

Similarly, the execution of the plans would be directed by the Chief of Naval Operations, with the assistant of aids for material, personnel, inspections, etc., who would be officers of high rank, and who would assist the Chief of Naval Operations in coordinating the activities of the various bureaus and divisions of the department. These bureaus would be placed directly under the military authority of the Chief of Naval Operations, of course, under the general direction of the Secretary.

ADMIRAL BENSON'S RECOMMENDATIONS.

Admiral Benson if anything was more emphatic in urging the necessity of such a reorganization than were even his chief assistants during the war. In discussing the causes for whatever mistakes occurred during the war, Admiral Benson said, page 4486:

As you know, so long as I have been in the service, 48 years now, we have studied the question of preparing the Navy for war, and from time to time the things that were necessary for this preparation have been submitted, and they never have been fully complied with. The reason in my opinion is this, that the technical officers in the service who are educated by the Government for a special purpose, and for no other particular purpose, have never been permitted to exercise fully the responsibilities, as I see them, that should be placed upon them. They study these questions. They prepare what they believe is necessary for proper preparation of the Nation's Navy for war, and these recommendations have never been fully carried out.

In dealing with many of the specific acts of the department in the early part of the war and before the war, Admiral Benson pointed

out that he himself was not in many cases responsible, that his advice was disregarded by the Secretary. He stated that under the law, the Chief of Naval Operations did not have the responsibility (p. 4492) "except for certain things; the preparation of plans and things of that kind, but he unquestionably should be responsible for it."

Admiral Benson in testifying displayed a very generous inclination to assume responsibility for as many things as he could, for he said, page 4493:

Putting it on the ground of a strict interpretation of the law, of course the Secretary is ultimately responsible for anything, but I do not want to be put into the position of trying to shake any of my responsibility as Chief of Operations and putting it onto the Secretary of the Navy.

In dealing with the organization of the Office of Operations as it existed at the time of the war, Admiral Benson said that it was short of personnel and not adequately organized, page 4541:

The Office of Operations, so far as the organization was concerned—I mean by that the different divisions, etc.—was more or less in skeleton form. We were short of necessary personnel and we had to build up.

In expressing his opinion as to the reorganization of the department, Admiral Benson said, pages 4541, 4542, 4543:

My opinion is that the Office of the Chief of Naval Operations should have the responsibility for the preparation of the Navy as a whole. He should be responsible for that, but he should have the authority that enables him to discharge that, all, of course, under a civilian Secretary of the Navy. He should have the authority to coordinate all the technical activities of the Navy Department, and he should be held responsible for their efficient coordination and cooperation. He should be free to give his views to Congress, and there should be some arrangement by which he should be kept fully informed as to the policies of the Government. I mean the political policies of the Government; what international problems were pending; what the international policy of the country is at the time; any changes that might involve distribution of forces; but he should be particularly held responsible for the proper and efficient coordination of all the naval activities. He should have the authority, and it should be so understood. For instance, he should be able to give directions to all the bureau chiefs. In addition to material and operations, he should particularly have directly under him the question of personnel. I think he should have a voice in the selection, and be almost responsible for, the selection of all officers for prominent positions, both in the Navy Department and in the fleet. * * * Of course I do not want to sidetrack the Secretary. He, as the head of the department, of course, is responsible to the country for the department, but it should be so well established that he has this right, that the Secretary should not go counter to it, unless there were most excellent reasons.

You might possibly get a Chief of Naval Operations that was not efficient, or he might have prejudices, and he might have all kinds of things, and there should be some check on him, and the Secretary should have that authority, because in the last analysis the Secretary is responsible; but I do think that in order to have the organization what it ought to be that change ought to be made. I think I can illustrate my point. If you will remember, the administration came into power on the 4th of March, 1917; that we went to war on the 6th of April. If you had had an entirely new Secretary come in on the 4th of March, with the old organization before the Office of Operations was established, you would have had practically nothing to coordinate the technical activities of the department, except a new Secretary of the Navy.

Admiral Benson was firmly of the opinion that the only thing that saved the day in the Great War, as far as the Navy was concerned, was the fact that the Office of Operations did exist, and that it did succeed in establishing, by the voluntary cooperation of the bureaus, the sort of organization which he recommended should be made permanent, but only after long delay.

The following quotation is pertinent, page 4549 :

CHAIRMAN. Would you say that the Office of Operations, as it was organized at the commencement of the war in April, 1917, was as adequately prepared for carrying on the war as it should have been or could have been?

Admiral BENSON. No; it was not, but I would like to add, if I may, that it did carry it on, and very successfully.

CHAIRMAN. You mean that the war was won?

Admiral BENSON. Yes; the war was won, and I do not think any serious mistakes were made.

Senator BALL. It would have been carried on just as successfully and at much less cost probably if we had been adequately prepared?

Admiral BENSON. At a very much less cost; yes, Senator, very much.

In another place, Admiral Benson said (p. 4550) :

I think that with what we had we were making the very best of it; but, as I have said, I think the office should have been differently organized and at least had more authority.

Admiral Benson gave as the reason for the lack of plans the shortage of personnel in Operations. He admitted that, however excellent may have been the services and recommendations of Capt. Pratt and other individual officers, these did not constitute a real planning section (p. 4564) :

But I say that under the situation, with the shortage of officers and the situation we were facing, it was the best we could do and that we got out sufficient plans or memoranda, or whatever you wish to call it, to meet the situation. * * * In a well-completed organization under different conditions, I would insist on a planning section; and as soon as it was possible to organize this planning section we did organize it, and it did function.

RELATIONS BETWEEN THE OFFICE OF OPERATIONS AND THE SECRETARY OF THE NAVY.

As illustrating how difficult it was for the Office of Operations to work under the conditions which prevailed, and with the organization that existed in 1917, Admiral Benson made some very interesting comments.

When asked by the chairman as to what the attitude of the Secretary was with regard to the situation in 1917, Admiral Benson said (p. 4633) :

I do not know what the attitude of the Secretary was.

The CHAIRMAN. You do not?

Admiral BENSON. I do not.

The CHAIRMAN. I take it you were in conference with him on such matters?

Admiral BENSON. That may all be, sir, but I can not state to you what the Secretary's attitude was.

In explaining how the Office of Operations worked under the Secretary, Admiral Benson still further confirmed the point brought out by the testimony of other witnesses, to the effect that Operations could only be successfully carried on by eliminating many details from consideration by the Secretary.

For example, he said (p. 4779), in discussing the carrying out of plans:

As I say, I was a member of the General Board, and there were a great many of those things, as well as many others, that I carried out without reference to the Secretary, and then informed him or tried to keep him informed. I felt that the Secretary had confidence in me, and I told him that I would go ahead and try to keep him informed; but I frequently did things without reference to the Secretary, and then informed him afterwards of what I had done.

Thus, in substance, Admiral Benson's account of the difficulties under which the Office of Operations had to struggle at the beginning of the war, because of the lack of a proper organization in the department, confirms the testimony of the previous witnesses who have been quoted. It is equally significant that Admiral Benson's recommendations for the department reorganization are exactly in line with the suggestions of these other officers. All are avowedly based on a desire to prevent, in future, any repetition of the conditions which existed in the early months of 1917, after we entered the war, and in the years immediately preceding our entrance into the war. These recommendations for the reorganization of the department are in substance an admission of the truth of the criticisms to which I have invited the attention of this committee in my testimony.

ADMIRAL MAYO'S ANALYSIS OF CAUSES OF DEPARTMENTAL ERRORS AND DELAYS.

It seems interesting also in this connection to refer to the testimony of Admiral Mayo, who was the commander in chief of the Atlantic Fleet during the war. In appearing before this committee he confirmed in substance the main criticisms to which I have invited attention, and his recommendations as to the prevention of similar errors in the future involved exactly the same type of reorganization of the department that every witness thus far quoted has indicated.

Thus, Admiral Mayo said, page 1540:

In my opinion there are three faults which were the principal causes of our failure to support the Allies more promptly and with great efficiency.

It is my opinion that the material unpreparedness of the vessels in reserve and out of commission and the shortage of personnel was due primarily to the national policy of strict neutrality and its resultant effect of the failure to prepare against war. It should be recalled that Holland and Switzerland remained neutral during the war. They were ready to defend their neutralities. War is the ultimate resource of foreign policy, by which the Nation seeks to impose its will against the enemy. The armed forces of the Nation are the instruments by which the national policies are supported and enforced. * * *

Page 1543:

The next more serious detriment to efficient preparation is the organization of the Navy Department. The laws and regulations under which the Navy was operating during the war, and is operating to-day, are unsatisfactory. Under the present regulation:

(a) The General Board is charged with devising measures and plans for the effective preparation and maintenance of the fleet for war.

(b) The Chief of Naval Operations is responsible for the preparation and readiness of plans for the use of the fleet in war.

(c) The General Board is charged with the preparation of plan campaigns.

(d) The Chief of Naval Operations is responsible for the operations of the fleet.

The Chief of Naval Operations has no authority to coordinate the work of the bureaus, whose business it is to supply and maintain the matériel and personnel. The General Board has no effective function.

Under such regulations coordination of the various offices, boards, and bureaus can be obtained only by voluntary coordination or through the civilian Secretary.

So long as the present organization exists, the maximum efficiency whether in preparation for war, in the conduct of war, or in economical development of the Navy in peace can not be obtained.

In the present organization responsibility for the readiness of the Navy for war can not be placed anywhere but with the Secretary of the Navy, who, under the present organization must coordinate 13 offices, boards, and bureaus.

Every dollar spent on our Navy should be spent with a view to the accomplishment of a definite plan of preparation for war. The Navy is built for war, and unless the Chief of Naval Operations, under the Secretary of the Navy, is held responsible for the preparation, readiness, completeness, and effectiveness of plans for national defense, including plans for development of the Navy, plans for its maintenance, and plans for its use, and is given power through the Secretary of the Navy to exercise supervision, through the bureaus, boards, and offices, over all naval activities, the maximum efficiency can not be obtained.

In my opinion the faulty organization of the Navy Department, and the absence of definite foreign policy, except that of strict neutrality, were the primary causes of failure to prepare the entire Navy for war.

After definite policies and plans were definitely settled on, after money was appropriated, and after the bureaus voluntarily coordinated with the Chief of Naval Operations, the work was pushed with energy and vigor, the accomplishments were excellent. But our delay would, no doubt, delay our assistance to the Allies at a critical time, and if such conditions regarding our preparation for war exist in the future they may result in disaster.

My statement also includes criticism of another nature, namely, that I was not kept informed of policies, nor properly consulted with regard to operations in the western Atlantic.—In my opinion authority was so centralized in the department that it resulted in the lack of the principle of due subdivision of labor and due centralization of responsibility. Centralized control over policy and general plans is sound, but centralized control over details of execution most often result in loss of efficiency.

ADMIRAL MAYO'S RECOMMENDATIONS FOR DEPARTMENTAL REORGANIZATION.

Admiral Mayo submitted, in accordance with the request of this committee, a statement of his recommendations for the reorganization of the Navy Department, which has dealt with the various problems in considerable detail. It is not necessary to review them at length here. It is sufficient to call attention to the fact that they are in fundamental accord with the recommendations which have been made by all the other witnesses quoted. In this statement he has called attention to the defects in the present organization and has outlined methods by which they may be remedied.

Fundamentally, his recommendations are:

(1) The Chief of Naval Operations should be responsible to the Secretary of the Navy for the preparation and readiness of the Navy; and for the completeness and effectiveness of plans for national defense, including plans for the development of the Navy, plans for its maintenance, plans for its use, and plans and recommendations for cooperation with other Government departments.

(2) The Chief of Naval Operations should have authority to assign for preparation such portion of these plans as he may deem appropriate to any part of the Navy organization.

(3) After the approval of policies and general plans by the Secretary of the Navy, the Chief of Naval Operations should be responsible for their execution. He should act as the executive of the Secretary in carrying them into effect and should be authorized to exercise, through the bureaus and offices of the Navy Department, the commanders of naval forces, districts, or bases, such supervision over all activities of the Navy afloat and ashore as may be required to secure coordinated and efficient execution.

(4) The General Board of the Navy should be relieved of all administrative duty and should be assigned such duties as experience might prove wise.

(5) The above provisions are not intended to limit in any way the authority of the Secretary of the Navy. The idea governing these recommendations is only to provide an experienced technical subordinate to the Secretary, who can be held responsible for the making of plans and, on their approval by the Secretary, for their efficient execution. The relation between the Secretary of the Navy and the Chief of Operations should be the same as that between the president of an industrial corporation and its general manager. The Secretary of the Navy should be responsible to the Government for the policies and general plans which he approves, but after approval should hold the Chief of Naval Operations responsible for their execution. Control of policies and plans is effective control over all activities only when responsibility for their execution can be definitely fixed. Operations and administration are so intimately related that the control over both types of activities must be centralized under one responsible head.

(6) The exercise of such supervision would in no way restrict the large activities of the bureaus. Interference with the administrative work of the bureau would be contrary to the principle of subdivision of labor and responsibility. The exercise of such supervision as is indicated, would have as its result the coordination of the work of all bureaus, other shore activities, and operating forces in the accomplishment of definite plans.

PERSONAL RECOMMENDATIONS FOR REMEDYING CAUSES OF DEPARTMENTAL
ERRORS, DELAYS, AND OMISSIONS.

In accordance with the request of the chairman of this committee, I have prepared certain recommendations of my own, which are in substantial agreement with those of the department's witnesses. With the permission of the committee, I would like to include at this point a brief summary of these recommendations. In so far as the testimony has shown, it is clear that the unfortunate conditions which existed in 1917, the lack of preparedness for war, the failure to have adequate plans prepared, or to carry on a vigorous prosecution of the war in the early months can be attributed in part to the faulty organization of the department. These faults can be remedied by some such reorganization as that of the type already suggested. Of course, the details of any reorganization would have to be worked out carefully after exhaustive study of the individual problems involved, but the general principles, I think, can be laid down, in view of the experience gained in the recent war and after a review of the testimony presented before this committee.

Comments concerning legislation relative to organization of Navy Department.

Major objective: In keeping with the "check and balance" doctrine of our form of government to insure to the Congress the maximum efficiency of the Navy; to insure the maximum return to the country for Government funds allotted by Congress for the Navy.

Important considerations not at present adequately provided for: Congress provides the means of creating a body of expert professional personnel to handle the Navy.

Purely from a standpoint of business efficiency and of insuring return on money invested, it is evident that Congress should require the maximum utilization of the expert knowledge which it creates.

Experience has shown the necessity of specifically requiring by legislation the method by which the above expert knowledge should be utilized.

The above-mentioned expert knowledge refers solely to subjects commonly termed "military" or to "the profession of arms." In the Navy military questions concern those of the following types:

(a) Determining military characteristics of men-of-war and their equipment.

(b) Methods of inspection and supply of the above.

(c) Providing and training of personnel of the Navy.

(d) Disposition and employment of ships and men.

(e) Preparation and execution of military plans.

(f) Internal organization and management of the Navy, and of its ships and supporting shore establishments.

(g) Discipline of the Navy, etc.

All of the above and kindred questions must be based upon national policy, but once that policy is determined and laid down, the Congress should see to it that it is carried out in accordance with the responsible advice of trained military (naval) experts.

Acceptance of such military measures, of course, rests with the President or his authorized representative, but Congress is entitled to know upon what grounds such decisions are based.

The present laws go into too much detail as regards the various essential but subordinate parts of the Navy Department organization, without providing for the coordination of those parts and without insuring accomplishment of some of the principal considerations above set forth.

Suggestions as to the organization of the Navy Department. From the standpoint of the Congress, the following should be laid down by legislation:

1. A Cabinet officer (civilian appointed by and with the advice and consent of the Senate) should act as the direct representative of the President in charge of the Naval Establishment, charged with insuring that the Navy is prepared and conducted in accordance with national policy.

2. This Cabinet officer should have but two principal subordinates:

(a) A civilian assistant secretary to whom should be delegated all civil questions connected with the Navy, such as detailed dealings with Congress, labor, contracts, appropriations, etc.

(b) Military assistant to whom should be delegated all questions of a strictly military nature.

3. In order to relieve the above assistants of undue burden of details, the law should recognize certain other subordinates, such as the present chiefs of bureaus, who should be empowered to expend and be accountable for expenditures of funds; but the activities of these subordinates must be entirely controlled and directed by the above two principal assistants of the Secretary. The coordination of their individual activities is of far greater importance than any of the activities themselves, which activities are in a large degree

futile and inefficient unless properly coordinated. It is to the lack of this coordination that is due the inefficiency of the Navy Department.

4. Experience has shown the necessity of further congressional action in order to insure the accomplishment of the considerations set forth above. The following are suggested:

(a) The military assistant shall be held strictly accountable, subject to the supervision of the Secretary as regards national policy, for the military efficiency of the Navy, its preparation for war, and its conduct in war.

(b) All measures of a strictly military nature must, of course, be in accordance with general political policies laid down by the Secretary, but the law should specifically require that the responsibility as regards military consequences shall rest entirely with the military assistant, unless he is clearly and definitely overruled by higher authority. Having the responsibility for military results placed squarely upon him, the military assistant must have the necessary authority to enable him to insure that such results will be satisfactory. In other words—

The Congress should require by law that when the expert advice and assistance which it provides are overruled or disregarded the fact can in no wise be obscured as a matter of official record; and when such occurs the fact should always be known to the Congress, when acting in the discharge of its constitutional duty of supervision over the Navy.

The present system allows great chances for obscurity of responsibility. Witness the present senatorial efforts to fix responsibility.

It is submitted that the above provisions are all that should be recognized by law. Any attempt to go further may do more harm than good.

The only possible addition that might be suggested it for Congress to require, with all estimates for appropriations, the military plans upon which they are based. This would of necessity require measures of secrecy.

ANALYSIS OF THE TESTIMONY OF THE SECRETARY OF THE NAVY—GENERAL NATURE OF STATEMENT BY SECRETARY.

I have already referred to the character and general nature of the testimony which has recently been given before this committee by the Secretary of the Navy.

Perhaps it would be well, Mr. Chairman, to state that the statement I am now putting in is based only upon the records of the hearings which I have received up to the present time. There are some 600 or 700 pages of testimony given by the Secretary on cross-examination which I have not seen, and I would like to have the permission of the committee to submit a further statement in writing to the committee if I find, on examination of his evidence given on cross-examination, that such is necessary.

The CHAIRMAN. I think that would hardly be fair, because it would not leave any chance for cross-examination.

Admiral SIMS. I do not know that there is anything essential.

The CHAIRMAN. When we adjourn to-day you can look over this testimony to which you refer and then, if there is nothing more in

it which you wish to answer, let it drop at that, and if there is anything, you can go on again.

Admiral Sims. In my preliminary statement, for example, I said:

You have listened to a long statement from the responsible head of the Navy Department, remarkable alike for its mistakes and misinterpretations, and for its unrestricted assault upon my services during the war, upon my motives, and upon my ability and credibility as an officer.

Before proceeding any further, I wish to state very clearly, and once for all, that in all the comments that I shall have occasion to make upon the mistake and misinterpretations in question, I do not desire in the slightest degree to imply that they were intentional or that the Secretary was not sincerely convinced of the fairness and correctness of his conclusions, * * * but he has dealt at length with many technical questions, and in doing so has almost invariably drawn conclusions therefrom reflecting upon my conduct and upon my motives, not only during the war but during a large part of my naval career.

I also stated in beginning that I did not desire to enter upon personalities, and that I had no intention of doing so, as I did not consider that the question of my personal character is the subject under investigation before this committee.

In reviewing the lengthy statement of the Secretary of the Navy, the general outline of his method of defending the conduct of the department during the early months of the war becomes perfectly clear. As in the case of the other witnesses who appeared for the department, nine-tenths of the material that he introduced had no bearing on the questions before this committee. The reading of such a statement is inclined to confuse these issues rather than to meet them. Large masses of documents have been introduced, stressing the Navy's achievements; giving a lengthy history of the activities of the Navy Department since 1913, and even before; and introducing extraneous matter which has no bearing whatsoever on the investigation. They seem to be designed solely to serve as the basis of reflections or attacks upon myself. In the few instances in which the Secretary attempted to answer specific criticisms his testimony is based upon remarkable misconceptions and misinterpretations of fact.

In taking up the Secretary's testimony I shall deal with it under six main heads:

1. The Secretary has dealt voluminously with the Navy's achievements during the war. This stressing of the Navy Department's successes tends to gloss over its failures and withdraw attention from the latter by arousing enthusiasm over the former.

2. He has reviewed at length the acts of his administration and has bestowed unrestrained praise upon these acts. He has gone into great detail in pointing out the achievements of the Navy during his administration, and in calling attention to the expansion of the naval service in the last seven years. However meritorious these things may be, it is obvious that they, too, have no bearing upon the issues, except once again to withdraw attention from failures by putting the emphasis upon obvious successes.

3. The Secretary has attempted to meet certain of my criticisms. He has repeated the contentions of some of the department's witnesses. For example, that plans for all possible emergencies were in existence; that the Navy had never been so well prepared; and that

no department of any Government had ever been so well administered as the Navy Department during the war. He has based this contention upon the assertion that my criticisms had been completely refuted by the witnesses called by the department. He had apparently failed to read the testimony of these same admirals or he would have noted the rather curious fact that, whereas the witnesses called seemed in many cases quite willing to state in general terms, subject to different interpretations, that the Navy was all right, had always been all right, and would always be all right, they had yet in every case, where they had any intimate knowledge of detailed facts or of the specific issues under investigation, almost invariably confirmed my criticisms.

4. The Secretary has attacked the whole policy followed by the Allies in the conduct of the war upon the sea, apparently believing that this demonstrated the infallibility of the Navy Department. He has referred enthusiastically to the bold and audacious policy that inspired the department, and to his own inability to persuade the professional heads of the allied navies to adopt his interpretation of such policies. He has evidently introduced this contention in the belief that the test of a war policy is not its effectiveness or its practicability, but is its boldness and audaciousness. He has even assumed that the department had practicable plans by which such a policy could be written into action, although, as will be shown, there is no basis in fact for his assumption, and the department itself admitted, after they had given sufficient study to these very bold and audacious plans in the early months of 1917, that they were impracticable and impossible of execution.

5. The Secretary of the Navy has seen fit in his statement to make reflections and direct charges against my personal character, against my professional services, against my ability as an officer, and against my loyalty to my country. These have no bearing whatsoever upon the facts, except in so far as they may serve, by discrediting the source of criticism in the uninformed public mind, to result in discrediting also my statements, even though they have been established by official documents and confirmed by the testimony of the department's own witnesses.

6. In defending the Navy the Secretary has also seen fit to introduce matters reflecting upon the war services of the navy of a friendly nation with whom we were associated in the war. He has charged that this navy was ineffective, that it had no plans, and he has quoted the President's assertion to the effect that in the crisis it was helpless to the point of panic. He has further charged that I was so hypnotized by this service that I gennucted continuously to its policies and leaders; that my dearest hopes were bound up with such trivialities as decorations, that I consistently depreciated the efforts of my own service, ignored my own department, attempted to deceive the head of my own Nation, and endeavored to use the forces under my command in the interests of Great Britain and contrary to the interests of the United States. These charges are, of course, so baseless, so thoroughly in contradiction to the established facts, that it seems hard to understand how they could be seriously made.

Taking up these points in succession: 1. The Navy's achievements in the war. I will take up briefly the first point. A review of the Secretary's testimony shows that the following sections of it are de-

voted entirely to an appreciation of what was accomplished by the Navy:

	Pages.
Praise of the United States Navy by allied officials.....	32
Review of war activities, Bureau of Ordnance.....	50
Review of main activities of Navy Department during war.....	20
Statistical magnitude of Navy's task.....	10
The work of the transport force.....	10
The Naval Overseas Transport Service.....	10
Reports of engagements of United States vessels with submarines.....	50
The work of the Naval Consulting Board.....	10
Report of the House Naval Committee in 1918.....	40
The war activities of the Bureau of Supplies and Accounts.....	205
Reports of engagements of armed guards with submarines.....	15
War activities of other bureaus, Marine Corps, etc.....	30
War activities of the Bureau of Navigation.....	80
Efficiency of the Atlantic Fleet in 1917.....	10
Summary of statements of other witnesses in praise of Navy.....	80
Total.....	652

It may be added that the Secretary's testimony, exclusive of the cross-examination, amounts to a total of 1,400 pages in the official record.

The CHAIRMAN. Does this take in all of the statements or tables that he put in?

Admiral SIMS. Only up to the time that I reviewed his testimony. These 1,400 pages include only the part of the statement which I have seen, and do not include 600 or 800 pages of the cross-examination that I have not seen.

I made a statement yesterday which perhaps I had no business to make, in reference to the cost of an investigation of this kind. I know nothing about what that would be; but I should like to say this, that I do not care what it costs, if it costs half a million dollars, it is the cheapest thing that has ever been done if it succeeds in remedying even any single one of the defects that have been pointed out.

The CHAIRMAN. As a matter of fact the cost, as far as this committee, is a very small matter.

Admiral SIMS. It is a matter that is not worthy of consideration at all in view of the issues that are at stake, in my estimation.

The CHAIRMAN. The cost, as far as the committee is concerned, will be under \$5,000 or \$6,000.

Admiral SIMS. Nearly 50 per cent of the Secretary's statement was, therefore, devoted purely to a consideration of what the Navy succeeded in doing during the whole period of the war. This has, of course, absolutely no bearing upon what the Navy Department failed to do in preparing for the war during the early months of the war.

We can perhaps understand better the reason the Secretary had for devoting 50 per cent of his testimony to matters which have nothing whatsoever to do with the investigation by referring to a statement which he made before this committee on the 10th of May, 1920.

The Secretary said (p. 4794):

I feel, however, that the charges against the Navy are so scandalously unwarranted by actual facts and conditions that it is my duty to give you gentlemen the benefit of the fullest possible statement, covering, of course,

only those activities which constitute the outstanding achievements of the American Navy, which from top to bottom did its full duty during the war and measured up to the highest standards that can be conceived.

Leaving out of consideration the failures of the department itself, of course, I agree entirely with the Secretary's statement concerning the achievements of the Navy. When we contemplate the handicaps under which the Navy had to work, handicaps growing out of the mistakes, the lack of action, the unpreparedness for war of the Navy Department, these achievements seem all the more admirable.

Since there never has been any question of the achievements of the Navy, it is hard to understand why the Secretary, in defending the conduct of the department during the early months of the war, should have considered it necessary "to cover, of course, only those activities which constitute the outstanding achievements of the American Navy."

HISTORICAL REVIEW OF ACTIVITIES OF NAVY DEPARTMENT SINCE 1913.

The Secretary of the Navy has given you a full review of the activities of his administration since 1913, introducing many matters which have no connection, however remote, with the subject of this investigation. No one has ever doubted that the Navy has grown and developed in the last seven years; but a statement of what has been done in this respect is not an explanation or a defense for what was not done. A mere statement of achievements is hardly an excuse for failures, especially where those failures were of such a nature as seriously to affect the nation in a time of great crisis. It is hardly a defense of the unpreparedness of the Navy in 1917 to point out that the department had a policy intended to make the Navy as large and as effective as any in the world in 1925. It would seem, therefore, that the testimony introduced by the Secretary under this heading has only the remotest possible bearing upon the subject at issue. In going through his testimony we find the following sections which can be classed under this heading:

	Pages
Steps toward preparedness in gunnery.....	10
Discussion of the Battle of Jutland.....	10
Admiral Grant's discussion of submarines.....	5
Work of the Advisory Council in the Navy Department.....	5
Appropriation act of 1913.....	12
Letter written by the Secretary of the Navy to President Garfield, of Williams College, calling attention to the achievements of the present administration of the Navy Department.....	13
Speech of Admiral Benson at Naval Academy, 1915.....	10
Departmental and General Board recommendations as to preparedness, 1915 and 1916.....	15
Discussion of 1916 building program.....	45
Discussion of the order abolishing the wine mess.....	25
Personnel situation in the Navy before 1917 (creation of Naval Reserve, education of enlisted men, increase of officers since 1913, praise of Admiral Blue's administration).....	65
Total.....	210

Or a total in all of 862 pages of matter which has no bearing whatever upon the issues in this case.

Thus another 15 per cent of the testimony given by the Secretary has no real bearing on the issues. This shows that, in all,

nearly two-thirds of the Secretary's statement was devoted to matters, the presentation of which could have no other effect than tending to obscure the only issues in question. What, for example, has the prohibition of wines on board ship to do with this investigation?

METHOD FOLLOWED IN ANSWERING CRITICISMS OF NAVY DEPARTMENT.

The Secretary has repeatedly declared in his statement that he would not go into the details of operations during the war, as all my criticisms in this respect had been answered by the witnesses whom he had called. He stated that of 12 admirals who held important commands during the war 11 appeared before this committee, and 10 of these 11 devoted themselves to attacking the unfortunate eleventh, who happens to be myself. He therefore stated that he considered that the testimony of these 10 admirals was sufficient to discredit anything I had said, might have said, or ever could say. It is, of course, quite true that the 10 admirals displayed in many cases great indignation that anybody should ever criticize anything about the Navy. It is also true that many of them seemed to labor under a mistaken assumption that I had attacked their personal services as well as the Navy's services in the war, and explicitly stated that the only reason that they had for appearing was to refute these attacks upon the Navy. I have already quoted the testimony of a number of these admirals on this point.

It is true that many of them made general statements indorsing the department's conduct of the war, and expressed their personal opinions as to the efficiency of the department during the war. I have already revised the testimony which these witnesses gave, however, and have called attention to the fact that whenever these witnesses were speaking of specific matters of which they had personal knowledge their testimony was in general absolutely confirmatory of my own testimony.

Four of the admirals referred to by the Secretary held subordinate commands in European waters, one at Gibraltar, two in the North Sea, and the fourth on the coast of France. All of them testified that they knew nothing whatsoever of the relations between myself and the department, or of the actions of the department during the early months of the war. Any testimony they gave was, therefore, a mere statement of personal opinion, unsupported by evidence of any kind.

Two of the admirals who served on the General Board during the war, or in other positions in Washington, testified that they had no administrative duties in the Navy Department, and that they were not familiar with the administrative action of the Navy Department in the early months of the war. Both of these admirals called attention to many of the recommendations which they had made to the department, but had no knowledge whatsoever as to whether these recommendations ever had any effect upon the action of the department. Their personal opinions, too, concerning what the department did were unsupported by any definite evidence.

Admiral Mayo in his testimony took issue with a few detailed points that I have raised, but in general his criticisms of the policy followed by the department during the war were just as strong as

mine. He pointed out that exactly the same unsatisfactory condition prevailed in his relation to the department, as that to which I have invited your attention with regard to the relation between the department and the forces in Europe.

The other two admirals, who served in the Office of Operations during the war, similarly made strong statements condemning me personally, one expressing great indignation that I should criticise the Navy, and the other stating that my actions were such as might be expected from an insane patient at St. Elizabeths. Both of these officers, however, in dealing with the condition of the Navy Department during the war pointed out, in confirmation of my own testimony, that the Navy entered the war unprepared, that during the early months of the war it had no officially approved, definitely coordinated plan of activities, and that it made mistakes.

The tenth admiral, who was in charge of our naval railway batteries in Europe during the war, made criticisms of the administration of the Secretary which were much more forceful than anything that I have said.

Thus, an analysis of the attitude of the 10 admirals, whom the Secretary says have refuted my testimony, shows that 6 of them knew nothing about the issues and were merely stating personal opinions; and that they did not attempt to introduce any evidence in refutation of the detailed and documentary evidence which I introduced in support of every point of my testimony. Two of the admirals were in general agreement as to the facts of any testimony, but devoted their efforts to an attempt to excuse and explain why these facts should have occurred. The remaining two were, in general, in complete agreement with my criticisms.

When, therefore, the Secretary bases his refutation of my criticisms upon the assumption that these witnesses refuted everything I said, his statement can be explained only upon the assumption that he is entirely unfamiliar with the testimony of these witnesses, particularly on cross-examination, or that he believes that personal opinions are of more value in arriving at the truth than facts based upon official documents and an intimate knowledge of what actually happened.

In whatever effort he made to answer any one of the specific points of my testimony, he followed in general the same method as the witnesses called before this committee at his request. Thus, for example, he introduced a 60-page statement with regard to the war plans of the department and the steps taken to prepare the department for war. He insisted that we had war plans, which, of course, is quite true, but without attempting to show that these plans applied to the wholly unusual war in which it was evident, after 1915, that we were most likely to be engaged; nor has he, nor any of the other department witnesses, shown that these plans, if such existed, were known to anybody who had anything to do with the actual conduct of the war. I received no plans or statement of policies during the first few months. Admiral Mayo also testified that he had received no plans or policies. None of the officers who were sent overseas to serve in the European forces received any indication or information as to what these plans or policies might be. Admirals Rodman, Strauss, Niblack, Wilson, all testified that they received no instructions or plans whatsoever from the department, except to act as circumstances might dictate as cooperating with the Allies.

efficiency and had well trained officers and men actuated by a splendid morale, the whole Navy was similarly prepared, manned, and ready for war; although, as the testimony of all the department witnesses has shown, the only part of the Navy in 1917, which could be considered ready for war, was just that part of the Navy which it was least probable we should use in the event of war, as should have been apparent since 1916.

In taking up various detailed points of my testimony, such as the department's delay in acting upon recommendations made from abroad, and in getting into the war in the early months, the Secretary reviewed the actions of the department and showed that in most cases my recommendations were ultimately accepted.

I would like right there to invite the attention of the committee very specifically to that point, that no essential recommendation that I made from the other side failed of adoption by the Navy Department after these killing delays which have been put in evidence.

He admitted the delay in accepting them, and his testimony, like that of some of the department's witnesses, was designed merely to explain a way to excuse this delay. He even went to such lengths as to minimize the part our Navy did play in the war, insisting that it would have made no difference to the progress of the war, or to its length, if our forces had gotten into action earlier. If his argument was followed to its logical conclusion, it would necessarily mean that our forces played no part at all in bringing about the victory. The inconsistency of this is shown by the fact that in another place the claim is made that the Navy had shortened the war seven or eight months by reducing the submarine menace and making possible the transport of troops to Europe. If the Navy, after it got into the war, was able to shorten the war by seven or eight months, it would seem that no stronger proof could be asked of the claim I made, namely, that if the Navy had gone into the war promptly, instead of after a delay of many months, a delay which the Secretary and his witnesses have admitted, the war would have been further shortened by an additional four months.

DELAY IN ADOPTING THE CONVOY SYSTEM.

In dealing with the convoy system, for example, the Secretary maintained that the action of the department had not delayed the introduction of the convoy system. His argument seems to be as follows:

First. The Allies had already failed for three years to introduce the convoy system.

Second. The President and the General Board suggested convoys even before we came into the war.

Third. The United States used convoy in sending troops abroad in June, 1917.

Fourth. That our forces got into European waters as soon as they could be used with the convoy.

which depended so largely upon reinforcements from America, until they could be assured that those reinforcements would be forthcoming; and at least a part of the delay of the admiralty in putting the convoy system into effect was undoubtedly due to the inability to get any decision from the department for two months on this very vital question, or to get any assurance from the Navy Department that the necessary reinforcements which were available on the Atlantic coast would be sent to European waters to make possible the escorting of convoys in the danger zone.

Similarly, the Secretary's contention that the President and the General Board had recommended convoy before we entered the war, bears not at all upon this delay of the department in accepting the convoy in 1917. It is not the recommendations which were made to the department before the war which are of any importance so far as this investigation is concerned. What does matter is the action taken by the department upon the request of the Allies for help in putting the convoy into operation, and the reason why this help was so long delayed.

Similarly the fact that the department convoyed troops over in June, 1917, has nothing whatever to do with the question under discussion of convoying merchant ships carrying vitally essential supplies. The Allies had been convoying troops since 1914. Consequently, it is absurd to contend that the Navy Department was the first to suggest convoy or that the Allies had been unwisely delaying its adoption for three years. The Allies had long been using the convoy system where it was considered advantageous to do so; that is, in the convoying of troops and supplies to their armies.

In connection with this defense of convoy the question as to when it should be put into operation is a comparatively simple one. That may be illustrated by the fact that I think almost without exception the great steamship companies on the other side resisted convoy, for the simple reason that freights were high and vessels sailing independently could make the voyages much quicker, and the company could make more money without the convoy than with them. I remember hearing one of them make the statement that their statistics showed that before the introduction of the convoy they could count upon a vessel making 12 or 13 voyages without being sunk, and that on that basis they would prefer to send all of their vessels unescorted and take the loss of one out of 13, and make more money than they would if they went in a convoy and no vessels were lost at all. You can therefore see that when the responsible military authority and Navy authority come to discuss the question of a convoy what they had to consider from a military sense is the flow of freight into the country; that is to say, food, munitions of war, etc. They had to decide whether it is better to let the vessels sail independently, and thereby get a greater flow of freight into the country at that time or to put the vessels in convoy and thereby diminish immediately the flow of freight by, say, 20 per cent. When, however, the destruction by submarines becomes so great that the available tonnage is approaching the point where they can not allow

it to be increased any more, then, and then only, does it become advantageous from a military point of view to put the convoy in operation. The whole matter is perfectly simple. The only trouble is that the public considers it without their technical military knowledge and with only their historical knowledge of the convoys that have been put in operation in old times.

ATTEMPT TO JUSTIFY DEPARTMENT'S DELAYS.

The Secretary of the Navy in his testimony dealt casually with various of the specific facts which I had included in my original letter and in my testimony and for which I introduced extensive documentary proof. The line of his defense was apparently fourfold:

First. In some cases he denied categorically the facts, without introducing any evidence to back up his statement other than the assumption that the departmental witnesses had disproved my criticisms. In this connection I think I have already shown you that exactly the contrary is the case; that, in fact, my criticisms are proved by the department's witnesses alone; and, as I have previously stated in the beginning, I intended to and have confined my rebuttal statement solely to the evidence given by the department own witnesses.

Second. The Secretary insisted that everything was done that could have been done, and that if any delays occurred it was not the fault of the department, but was due simply to the fact that the things requested were not available. In this connection I need only state that with regard to the sending of antisubmarine craft, for example, Admiral Wilson has testified that 55 vessels were operating along the Atlantic coast patrolling for submarines within a month after the declaration of war. Most of these vessels were afterwards sent abroad, and if the department had desired to do so most of these 55 vessels together with some 30 additional destroyers could have been sent to Europe in the first month of the war if the Navy had been properly prepared when war began. Consequently, the Secretary's contention that the vessels were not available was just as much refuted by the department's witnesses as his contention that officers were not available.

Third. The Secretary has insisted that I was not in reality the authorized representative of the Navy Department overseas, that I was only a liaison officer sent over to get certain specific information, that the responsibility for the successful operation of my forces rested with the department. If anything had happened, we would have seen where the responsibility rested all right.

He implied that my recommendations could not be given any particular weight because, as he says, I genuflected to the British, was so thoroughly "hypnotized" by the British, that I attempted "to lure the President" into dangerous misconceptions of the attitude of foreign Governments. In other words, the Secretary has attempted to justify the delays, which the department's witnesses have confirmed, on the ground that their representative abroad was thoroughly unreliable and could not be trusted; that every recommendation he made was therefore subject to suspicion, and the department in determining upon its action generally decided to do things, not in

line with his recommendations but in spite of them. Note the fact, however, that they always did follow all the recommendations.

The Secretary in his testimony has reviewed the different steps taken by the department. He has definitely stated that I was not responsible for initiating any policy or plan followed by the department in the war. He apparently has implied that my recommendations had nothing to do with the action of the Navy Department. It seems hardly necessary for me to comment on this statement. If the assumption that he now makes, that the department held up my recommendations in 1917, because they distrusted me, is true, the Secretary is convicting himself of having retained in power for nearly two years in European waters, in command of all of our naval activities in Europe, and acting as the department's representative in the allied naval council, an officer whom he considered untrustworthy and almost treasonable in his attitude toward his own country. No graver breach of the most fundamental principles of warfare could be imagined than that.

Fourth. The Secretary has contended that, even if there were delays, they were of no consequence. It must be assumed, therefore, that, if a delay of two or three or four or six months in getting our forces into action was of no importance, and had no consequence in the prolongation of the war, the whole of our naval intervention in the war must be assumed to have been futile, for we were doing the same things in the later months that we could and should have done in the earlier months. If our intervention at the most critical time, in the period from April to September, 1917, when the submarine losses were heavier than at any later period, would have had no effect on the situation, then certainly our intervention when it did come must have had no greater effect; and, consequently, so far as the war is concerned, if one accepts the Secretary's assumptions, the whole of our naval activities can be dismissed as unnecessary; and yet the Secretary accuses me of belittling the activities of our Navy in the war.

The chief point involved here seems to be as to whether the intervention of our naval forces was of any value in a war such as the Great War. Most of the witnesses who have appeared before you have agreed with my contention that our Navy rendered very great and very valuable services indeed to the allied cause; that it contributed, out of all proportion to their numbers, to bringing about the final victory and to shortening the war.

NAVY DEPARTMENT'S DELAYS PROLONGED THE WAR.

The point in my testimony which has received the most violent criticism from the Secretary himself, and from many of the leading officers in the department, is my estimate of the prolongation of the war by the delays on the part of the Navy Department. My estimate has been called a "gross and wanton attack" upon the whole Navy, and an outrage upon the service. It almost seems that the stock of epithets and denunciatory adjectives in the English language has been exhausted in the effort to show how illogical and unreasonable my estimates were.

This is, of course, a familiar and well-recognized method of meeting unpleasant facts. It is always easier to criticize the critic than to answer his criticisms.

In considering this question of whether or not the delays, omissions, military errors, and lack of preparedness for war on the part of the Navy Department, prolonged the war and increased the losses, it is hardly necessary to enter into any extensive review of the evidence. It is true that many distinguished admirals have commented rather pityingly on my intelligence. It is also true that they have not hesitated to condemn my estimate as being 57 different varieties of foolishness and misrepresentation. The commander in chief of one of our Pacific fleets made the illuminating remark that there are three kinds of lies; lies, damn lies, and statistics, and that my estimate falls into the latter class. But, unfortunately for the department's case, practically all of these witnesses, while stating firmly personal opinions in contradiction to the results of my estimate, in their testimony confirmed in fact the premises upon which my estimate was based.

Manifestly their inability to draw a logical conclusion from these premises has no bearing upon the chief contention which I made; that is, that the Navy Department's delays and lack of preparedness did result in postponing the active intervention of our full naval force for many months; that this naval force, when it did exert its power, contributed out of all proportion to its numbers to the victory, and consequently resulted in shortening the war. The Secretary of the Navy, Admiral McKean, and other witnesses, have themselves told you that the war was shortened from six to nine months by our activities when once we did begin fighting whole heartedly. If our naval force after it got into action by assisting very materially in combating the submarine menace, by making possible the safe transport of any army (principally after March, 1918) shortened the war, it must be equally apparent that if this naval force had been in the field from April, 1917, on, the submarine menace would have been checked and gotten in hand much sooner; the transport of troops overseas could have been expedited, and the war could have been shortened still further. In my previous estimate before you, I merely assumed that, if our intervention had been effective from four to six months earlier than it actually was, we would have shortened the total duration of the war not only the 6 or 9 months mentioned by these witnesses, but 10 months or a year. The Secretary and Admiral McKean have told you that in 1917, and even in 1918, it was believed that the war would not be ended until the summer or fall of 1919. They ascribed the victory of 1918 to two causes, which are very intimately connected: First, to the breakdown of the morale of German's population; and, second, to the effectiveness of the American intervention. They have all admitted that the American intervention had a tremendous effect in depressing the morale of the Germans, and convincing them of the futility of further prolongation of the war. From their own arguments, therefore, it appears that, if our intervention had been effective earlier, the German morale had similarly broken down earlier; that, therefore, the victory of the Allies would inevitably have been accomplished earlier than it actually was.

It should be clearly understood in all this discussion that I have not at any time condemned the Navy for prolonging the war. I have not insisted that the sacrifices of blood and treasure, to which I referred, could be rightly charged to the Navy itself, or, indeed, that the responsibility rested upon any individual in or out of the Navy. I merely stated an obvious military conclusion—that mistakes and delays in warfare are detrimental; that even if they do not bring defeat they cause unnecessary losses and unnecessary prolongation of the warfare. Every student of military history, however amateur he may be, is, of course, thoroughly familiar with this fact. He knows as well as I that the price one pays for unpreparedness for war and incompetence in the conduct of war, for delays and military mistakes in the face of the enemy, is either military disaster or unnecessary losses.

Fortunately, conditions were such in the Great War that we escaped military disaster. We escaped any very great losses of men. But it does not follow at all that our sacrifices in bringing about the victory were not unnecessarily great because of the delays and errors which marked the early months of the war in 1917. There is, of course, ample room for very great differences of opinion as to the extent of these delays and the resulting sacrifices. So far as this investigation is concerned, it seems to me that the size of the estimate is a matter of no particular consequence. If as a result of mistakes and delays the war was delayed a single day or a single thousand of lives were lost unnecessarily, I should consider my criticisms more than justified, if they had as their result such a careful analysis of the causes as to make impossible the repetition in the future of similar mistakes and the consequent danger of disaster.

Practically all of the department's witnesses, as I have already stated, agreed with my premises.

The following can, therefore, be stated as proven:

First. That our naval forces contributed very greatly to victory, and by their intervention shortened the war.

Second. That our naval forces did not intervene immediately and in their full strength. Admiral Wilson told you of the 55 vessels in the patrol force held on the Atlantic coast in 1917. Capt. Pratt told you that if his advice had been followed the 51 destroyers of the Navy could have been sent abroad on the first day of the war. All department witnesses have agreed in substance that if the Navy Department had desired to do so a very much larger force could have been sent abroad in the early and critical months of the war. There has been no attempt to disprove my statement that, although the Navy Department was advised on May 1 to accept the convoy system, and informed that the success of the system depended upon their cooperation, no indication of their willingness to cooperate was received by me or the Allies until July 5, 1917, and that as a result the convoy system did not become fully effective until the month of September, whereas it would have been fully effective by the end of the month of June.

Consequently it can hardly be denied that the Navy Department's actions, however they may be explained or excused, did result in holding back essential antisubmarine forces for many months and did result in delaying the full use of the convoy system for at least three months.

Third. That the American intervention, as it became effective and in proportion as it became effective, depreciated the German morale, and thus hastened the breakdown of the German military power.

Fourth. That the intervention of our Army in France depended entirely upon getting sufficiently in hand the submarine menace to make possible the safe transportation of our troops, and particularly to make certain that the enormous volume of the supplies could also be transported continuously. Therefore the sending of an army and its support in the field was dependent altogether on success in combating the submarine menace.

Fifth. That after our forces did become effective the sinkings of merchant tonnage by submarines declined almost immediately from over 600,000 tons a month to an average of less than 400,000 tons a month. By the time the main body of our Army came to be transported overseas—that is, after April 1, 1918—the losses had fallen to an average of only 250,000 tons per month.

Sixth. Our earlier intervention would have resulted in checking the submarine menace earlier, thus saving a great many ships and thus making possible the earlier transport of American troops.

Seventh. Generally speaking, in any war the value of the services of a military force depend upon the extent to which they contribute to the final victory, to a shortening of war, and to the reduction of losses. Any delays in making such forces effective result inevitably in unnecessary sacrifices.

Quite a number of the officers who have appeared before you have agreed in substance with my estimate, although disagreeing as to the exact figures. Most of the witnesses recognized that unnecessary losses had occurred, but did not believe that these losses were as great as I had estimated them. Various efforts were made, by introducing to you various kinds and conditions of statistics, to refute conclusions which I reached. Many of these statistics were based on the assumption that the proportion of unnecessary losses which should be rightly debited against the Navy Department should be in the ratio of the proportion of our naval forces overseas to the total of the allied naval forces.

That is a conclusion which is unworthy of the fourth grade of arithmetic in school, as I will show you later.

That is, if the Allies had 1,000 vessels and we had 50, we should only be credited with 5 per cent of the unnecessary losses. My point was, rather, that we should be charged with losses not in proportion to the forces we had in the field, but in proportion to the forces we could have had, and should have had, and did not have. If by having 100 vessels in Europe, instead of 30, by July 1, 1917, the sinkings by enemy submarines could have been cut in half, obviously the amount of tonnage that would be estimated as being unnecessarily sunk could not be proportioned among the various Allies in proportion to the number of vessels they contributed to combating the submarines, but the whole responsibility would have rested upon us, even though we had only held back 70 vessels that might have been sent, whereas the Allies might have had several hundred in the field.

There is one consideration which has apparently been entirely overlooked, which I may be able to illustrate by one or two simple examples.

When you are weighing an object in a balance, the scale does not tip until the last ounce weight is put into the balance, though of course, an ounce may be only 1 per cent of the whole weight.

Similarly, a bridge is of no value until the last span is put in place although it may contain 50 or 100 spans.

I reported in my first dispatches that the situation in Europe in 1917 was such that the allied navies were strained to the limit after almost three years of continuous activity. The number of destroyers and effective light craft available was pitifully inadequate to meet the demands thrown upon them by the intensive submarine campaign that began in February, 1917. The responsibility which fell upon the British Navy of containing the German high seas fleet, required that the British should keep continuously with the Grand Fleet a sufficient number of destroyers and other light craft to make it possible at any time to meet successfully the German high seas fleet. The command of the sea, and consequently the whole of the responsibility for making possible the ultimate victory of the Allies, rested upon the Grand Fleet. This was the primary mission of the British Navy, and consequently it was absolutely necessary that these light craft should be available with the Grand Fleet. Even so the number of destroyers with the Grand Fleet was much less than the number which the Germans had. It should be unnecessary to point out that the Germans could always pick their moment for a high sea engagement. Consequently, it would have been suicidal had the Admiralty withdrawn from the Grand Fleet any destroyers absolutely essential to the efficiency of that fleet.

Similarly, the British Navy and the French Navy had many other absolutely essential duties. The maintenance and reinforcement of the allied armies on the western front, and in the other theaters of war, required that a large number of light craft should be used exclusively for the convoy of troops and their vital supplies across the Channel and to and through the Mediterranean. The number of vessels required for these essential military services, upon which the whole of the fighting power of the Allies depended, left pitifully few vessels available to meet the submarine campaign against merchant shipping which in the early months of 1917 assumed such alarming proportions.

All of the department's witnesses have agreed that it would have been a good thing to have sent forces over sooner if we could have done it. Those in the best position to know, such as Capt. Pratt, assistant to the Chief of Naval Operations, said that the vessels could have been sent, and that he would have sent them but that the decision did not lie with him. Admiral Fletcher, Admiral Benson, Admiral Badger, and others, all admitted that this was true, but that the department feared that a German submarine or perhaps two or three of them even, might come over and sink a few ships on the American coast, in order to scare the department and the American people. Therefore, for fear of being scared, the department considered it necessary to hold back its forces for the motives of prudence which Admiral Benson has so emphatically expressed to you. These forces therefore were held back, and the adoption of the convoy system was delayed. Heavy and unnecessary losses of shipping were the inevitable consequence. One of the admirals who appeared

before you, in a long statistical analysis, called attention to the fact that I estimated that something under 40 per cent of the total unnecessary loss was due to the failure of the Navy Department to enter the war effectively and immediately. I think that this is probably not an unreasonable estimate.

A few quotations from the testimony of the department's witnesses will show that their disagreement is not with the principle of my estimate, but is one of details as to the exact figures to be arrived at.

For example, Admiral Rodman made the following lucid statements (p. 2150):

Let us assume that there were a certain number of vessels of the Allies engaged in trying to get the submarines. Our percentage of that number, if we had sent every ship that was available for submarine combat in the infested area, would have been only a small percentage, say 10 per cent. * * * Therefore * * * 10 per cent of that amount of shipping and that amount of lives that were lost by the submarine menace * * * give us 10 per cent, if you like maybe; but let us make it our proportional to the number of ships that you have sent there and that statement ought to be knocked into a cocked hat. That is my opinion. I have no figures.

In continuing his testimony, Admiral Rodman again said (p. 2154):

The CHAIRMAN. You think he [Admiral Sims] was stating it [the losses] too high?

Admiral RODMAN. Let us assume that that number of men and that amount of tonnage were lost. That is a fair assumption. I assume they were. There were others in the war besides us, and there were others combatting the submarine menace. * * * Now, we could not have sent more than 5 or 10 per cent of the vessels that were then, or were to be, engaged in combatting the submarines. Give us 10 per cent of that number and you will give us our fair allowance in any conditions.

Page 2081:

There is no question whatever in my mind * * * but that our Navy did its full share most efficiently and splendidly in helping to bring the war against the Huns to a successful and victorious conclusion.

Admiral Wilson's opinion in the matter is given in the following quotations.

When tasked by the chairman whether the American naval forces contributed materially to the winning of the war, Admiral Wilson said:

I know they did. * * * There is no question about that, and I have had many, many prominent French people tell me the same thing.

When asked by Senator Pittman if my estimate of losses was correct, Admiral Wilson said (p. 2234):

I do not believe this to be true. On the contrary, I believe that our naval forces from the first cooperated in a most successful manner with the naval forces of our associates in many portions of the seas, and by their splendid and efficient work materially aided in shortening the war and in this manner saving untold life and property.

When asked by Senator Hale if the war would not have been materially shortened if we could have had our naval vessels in European waters sooner, Admiral Wilson said (p. 2237):

It would have had a wonderful effect. * * * The evidence on that is clear. If they could have flown them right across, of course it would have its effect.

Similarly, Admiral Fletcher (p. 2367) admitted that the Navy did very active and efficient work in combatting the submarines; that they had a great deal to do with checking the losses; and that the sooner our intervention could have occurred the better. He said that if our ships could have gone over in the first two months "it would have done a great deal. The sooner we got into it, of course, the more shipping there could have been saved."

Admiral Fletcher (p. 2475) :

If there was any unnecessary delay in sending our craft abroad when they were not needed on this coast, the responsibility for that is fully up to the Navy Department. * * * It is a question of policy * * * and the operation of the fleet, and that, of course, would be up to the Chief of Operations and to the Secretary of the Navy. The ultimate responsibility would be with the head of the department.

Similarly, Admiral Niblack (p. 2460) admitted that our forces played a very great part in combatting the submarine, a part out of all proportion to their numbers, and said :

The sooner we could have gotten our forces over the better, provided we decided to send them over.

The CHAIRMAN. Do you think they did more than their share; more than 3 per cent of the work of checking the submarines?

Admiral NIBLACK. I certainly do. * * * At the very time that Admiral Sims was saying we had only 3 per cent of the submarine forces there were in Europe 90 per cent of all the shipping that was going between Great Britain and the Mediterranean was escorted solely by American ships under my command at Gibraltar. * * *

The CHAIRMAN. And any advantage there was in sending those forces over, if the plan could have been followed out sooner, would have been greater?

Admiral NIBLACK. I have no doubt. I would have been glad to have gone over much sooner myself. * * *

Admiral Strauss, in his discussion of this same question of the prolongation of the war, said that he believed that the Navy had a great deal to do with putting down the submarine menace.

Admiral Strauss (p. 2599) :

Much more than 5 per cent. * * * I think the true figures lie somewhere between the 5 per cent that Admiral Sims told the House committee about and the 38 or 39 per cent that he accuses us of negligently losing.

In the same way Admiral Badger agreed that the time element was one of the greatest importance in war, and that if there was any delay in sending forces abroad, it was a military error.

Admiral Badger (p. 2738) :

The vessels were sent by the Navy Department * * * by the directing head of the Navy Department * * * and if they, knowing the conditions * * * thought at the time that the delay should take place in sending out any type of ships abroad, it was their duty to act in the way that they did. * * *

Page 2739 :

The officers who were responsible for the delay will have to justify themselves. * * * I can not say what their action was. * * * The final responsibility rests upon the head of the organization.

Admiral Badger admitted that the vessels were needed abroad and would have been very effective abroad, but that "the action of the department in not complying immediately (in sending them) may have been based on perfectly just and sound reasoning * * * at least they did not act immediately on the requests of Admiral Sims."

It seems unnecessary to quote further from the department's witnesses, as the testimony all was more or less along the same lines. They all admitted that the American forces, once they entered the war, did very effective work, and that it would have been very much better, and greater results would have been accomplished, if we could have gotten our forces over sooner. These officers have also testified that, in their belief, the Navy, when it did get into the war, shortened the duration of the war from six to nine months. In view of this fact it seems that my own estimate, that if we could have been in the field in the first month in adequate numbers we would have still further shortened the war, has been abundantly confirmed. Therefore, in order that my estimate may be less distasteful to some of my critics, let me state it in this way: The Navy in the war performed splendid and magnificent services to the cause of the Allies. By their efficiency and because of the ability, initiative, and enthusiasm with which their personnel performed their duties, they contributed to the victory out of all proportion to their actual numbers. As a result of their efforts the war ended in November, 1918, instead of running until the following summer. The Navy, therefore, was to a great degree responsible for shortening the war from six to nine months.

If the Navy had been permitted to get into action from the first month of the war, if the Navy Department had been adequately prepared for war, if it had had plans for the kind of war that the Navy had to fight in 1917, if it had cooperated whole-heartedly with the Allies from the very beginning, our Navy's achievements would necessarily have been even greater. Having gotten into the war earlier it would in that earlier period have done just as much and just as splendid service as it actually did do later. The Navy, therefore, instead of having the credit for shortening the war six to nine months would have had the credit of shortening it from 10 months to a year. This estimate is, in effect, the same as my original one, but I imagine that, stated in this way, it may be more agreeable to those who are apparently concerned more with the form than with the substance of criticism.

THE SECRETARY'S ATTACK ON THE ALLIED NAVAL WAR POLICY.

One of the chief features of the testimony of the Secretary of the Navy has been his criticism of the policy followed by the Allies in the conduct of the war—although this was the policy followed by the Navy Department throughout the war, and the policy which had as its result the defeat of the German submarine campaign: which made possible the transport of the American Army to Europe and made possible the victory of the Allies over the Germans, which came practically as soon as that Army got into action. The Secretary in his testimony, for example, said (p. 4787):

During the conduct of the war in several important particulars I felt that he (Admiral Sims) did not fully measure up to expectations in certain particular ways, of which six may be mentioned:

(1) He lacked the vision to see that a great and new project to bar the submarines from their hunting grounds should be promptly adopted and carried out, no matter what the cost or how radical the departure from what ultra-prudent men regarded as impracticable * * * (p. 4708). As to the North Sea barrage, the department felt it necessary, so much importance did it attach to the enterprise, to send Admiral Mayo over to convince our British naval

associates of its feasibility after Admiral Sims had accepted the view of the British Admiralty that it was impracticable and had tried to induce the Bureau of Ordnance and the department not to press it.

Again the Secretary of the Navy said (p. 4897) :

If this mine barrage, Mr. Chairman, had been laid in 1917 instead of 1918, it would have done more than all the other measures put together to curb the submarines. Millions of tons of shipping would have been saved, and with the other barrages laid the German U-boat warfare would have ended.

In his discussions of the bold and audacious policy which he personally favored, the Secretary has identified this policy with the northern mine barrage by contending that the northern mine barrage was the measure by which this policy could have been carried into effect. Disregarding completely all the facts in the case which have been presented before this committee, both in my own testimony and in the testimony of Capt. Pratt, the Secretary stated (p. 2938) :

It was six months after we proposed the laying of this barrage before it was definitely and finally approved by the Admiralty. There is every reason to believe that if Admiral Sims had favorably presented the proposition to the British authorities and had urged the view of the Navy Department, instead of airing his own personal proposition, it would have been accepted by the Admiralty six months earlier.

From the Secretary's testimony in regard to this question it would appear that, in his opinion, the northern mine barrage was the one big offensive antisubmarine measure that the Navy Department wanted to see carried through; that it would have been possible with the matériel available to have laid this barrage in 1917; that the Navy Department proposed this definite barrage on the 16th of April, 1917, and that I opposed it and refused to present the department's ideas to the British Admiralty; that, finally, the department, in despair at my insubordinate disobedience, sent Admiral Mayo to England to propose again this mine barrage to the British; and that in spite of my opposition the mine barrage was approved by the British, and was then carried out as a joint operation. In view of the absurd and total inaccuracy of each of these points, it is necessary to pause for a moment and consider them in turn.

THE DEPARTMENT'S "PLAN" OF APRIL, 1917.

In the first place, let me review briefly the facts concerning the mine barrage. Secretary Daniels has told you that this plan was first proposed to the department in a memorandum of the 15th of April, 1917, submitted by Commander Fullinwider, of the Bureau of Ordnance. He also stated that on receiving this memorandum the department immediately cabled me asking me to take up the northern mine barrage proposal with the British. This is a completely inaccurate statement of what happened. On the 15th of April, Commander Fullinwider submitted a memorandum to the Chief of the Bureau of Ordnance on the subject "Antisubmarine warfare." This was not a plan for a northern mine barrage, but was a general review of the whole military situation at that time, containing the personal ideas and recommendations of Commander Fullinwider as to a great variety of different things that he believed should have been done. About half the memorandum was a discussion of various methods of protecting merchant shipping; the other half was devoted to a discussion of various antisubmarine

methods. He suggested that there were three general lines of attack on submarines; that is (p. 3570) :

- (a) Destroy them at their home base.
- (b) Prevent their egress from or ingress to their home port.
- (c) Hunt them down and destroy them at sea.

Commander Fullinwider proposed, among other things, that the offensive efforts against submarines should take the form either of closing the German ports or channels or of establishing mine barriers to seal up the North Sea. He said (p. 3571) :

All measures for sealing ports or channels present the difficulty that the Germans have so extensively mined their waters and have such supervision and control thereof as to render such measures almost, if not entirely, impracticable.

Note that—

It is possible, however, to establish mine barriers in zones at a distance from the German coast, practically sealing up the North Sea. This will require between 500,000 and 1,000,000 mines.

After a further discussion of the question of barrages in the North Sea, Commander Fullinwider estimated (p. 3574) that 774,000 mines would be required.

The message which the Secretary of the Navy sent to me on the 16th of April, 1917, has already been quoted numerous times during these hearings. It made not the slightest reference to any proposal of a barrage in the North Sea. It merely desired to know whether any plans had been made to seal up the German bases and ports, and whether such a plan would be feasible. So that the statement made by the Secretary of the Navy is wholly and absolutely false in all respects, due undoubtedly to the fact that he has not looked into this testimony with sufficient care.

I replied to this at length by cable and by letter, pointing out the fact that such proposals had been made since the beginning of the war, had been carefully studied, and were considered impracticable. I have already read you in this statement Admiral Mayo's comment on one proposal to accomplish this, which was discussed at the naval conference in London. Admiral Mayo believed the scheme quite impracticable. The Navy Department, in their cable to me of October 21, 1917, similarly stated that, in the opinion of the department, this scheme was impracticable. No officer with any detailed knowledge of the situation has ever contended that the same matter was practicable, however bold and audacious and enchanting to the imagination it may seem. The Navy Department itself, after receiving my message of April 18th, never questioned the fact that the scheme proposed was impracticable.

THE DEPARTMENTAL MINE-BARRIER PROPOSAL OF MAY 11, 1917.

It might perhaps be well to mention the fact that a mine barrier and a mine barrage are quite different things, as you will see.

In the Bureau of Ordnance's official history of the mine barrage we find the following statement (p. 3358) :

On April 17, 1917, the department cabled Admiral W. S. Sims, in command of the United States naval forces in European waters, directing him to report on the practicability of blocking the German coast efficiently in order to make the ingress and egress of submarines practically impossible.

unreasonable. Failure to shut in the submarines by a coast blockade using mines, nets, and patrols in the bight and along the Flanders coast focused the attention of the department upon plans for the alternative of restricting the enemy to the North Sea by closing to him the exits through the channel and the northern end between Scotland and Norway. * * * These are outlined in a memorandum of the Office of Operations dated May 9, 1917. * * * This was proposed to be done by establishing a barrage of nets, anchored mines, and floating mines.

Which, of course, was the proposition originally carried out, as you will see.

Consequently, the department itself suggested no barrage until the cable which I received on May 11 and the kind of a barrage which they proposed at that time was clearly impracticable, in view of the amount of material that would have been required and the length of time necessary to have made it effective. The British had long before carefully considered similar plans, but had recognized that the quantities of material required and the length of time and the number of vessels necessary made the scheme entirely impracticable. As has been pointed out to you, the whole basis of the northern barrage, the one thing which made it possible, was the invention of a new type of mine which enormously reduced the amount of material required and the length of time necessary. The department themselves have at all times fully recognized this until the Secretary made his astonishing statement before you that the mine barrage could have been laid in 1917 and that I was myself personally responsible for the delay.

THE ANTENNA MINE ALONE MADE THE NORTHERN BARRAGE POSSIBLE.

In 1918, the Secretary of the Navy evidently had a very different opinion, for we find in his annual report submitted to the President in December of that year the following statement (p. 48):

The plan to close the North Sea and thereby deny enemy submarines free access to the Atlantic from German bases, had its inception in the Bureau of Ordnance in April, 1917, immediately following the entrance of the United States into the war. At this time there had not been developed anywhere a type of mine suitable for the Scotland-Norway line, whereon the depths of water are as great as 900 feet and where a prohibitive number of mines of the then existing type would have been required to mine this line from the surface to a depth of 250 to 300 feet.

That is in direct contradiction to the Secretary's statement in the statement he has made, and that is his own statement which contradicts his other statement.

The same opinion is contained in the Bureau of Ordnance's official history of the mine barrage, and has been repeated to you by a number of the witnesses who have appeared to testify. Thus, for example, Capt. Pratt said (p. 3350):

When the antenna mine became developed it (the northern mine barrage project) then became a feasible project and was taken up.

As a matter of fact, the first test of the new firing device which was to form the basis of the new mine, did not occur until the 18th of June, 1917, at New London. These tests were not altogether satisfactory,

and no action was taken by the Bureau of Ordnance to submit plans for a barrage based on the use of this mine until after further tests had been made on the 10th of July, 1917. At this time (p. 3368)—

Although the design of the complete mine had not yet been decided upon and could not be completed for several months, the mine section of the Bureau of Ordnance was sufficiently assured of the successful development of the mine to submit tentative plans to the chief of bureau.

This quotation is from the Bureau of Ordnance's official history of the mine barrage. It was not until July 30, 1917, that the Bureau of Ordnance addressed a communication to the Chief of Naval Operations, submitting complete information regarding the new firing device, and "proposing an American-British joint offensive operation in the form of a northern barrage."

The question of the possibility of a northern barrage is clearly and accurately discussed in the official history of the mine barrage, issued by the Bureau of Ordnance; for example (p. 3410):

The possibility of a northern barrage depended upon the successful design of a mine to a far greater extent than is usual in such matters. Had nothing better than the ordinary type of mine such as that used by the British (and also by the United States at that time) been available, the northern barrage project would have been utterly impossible of execution within the time allowed by reason of the enormous number of mines required for a barrage 280 miles long. The combined resources of the Allies, especially in the matter of high explosives, could not have produced the required number of mines, nor could the combined mining forces have planted them in a single year. * * * On November 1, 1917, after the barrage project had been finally and definitely adopted, the only parts * * * of the mine that had been completely designed were the firing mechanism and the mine case. However, the mine section of the Bureau of Ordnance, under the immediate direction of Commander Fullinwider, felt no doubt of its ability to complete a satisfactory development of the new mine, and to get it into production in due time.

Ordinarily it requires at least a year to prove out such a design before it is considered wise to put it into production. Judged by ordinary standards * * * the action of the bureau in bringing about the adoption of this grand project before there was any certainty of the efficiency of the new mine, thereby committing two Governments to very large expenditures was, to say the least, hazardous. The bureau accepted the hazard advisedly as the only thing to be done under the circumstances and yet knowing the odium that would attach in case of failure * * * (p. 3412). The problem confronting the bureau was to build a mine around an entirely new principle in mining and around a firing gear outlined but not perfected. The officers responsible for the mine freely admitted the certainty that the design would have to be modified more or less after service tests.

In another place we find the statement (p. 3388):

The tentative design of the mine had to be modified as a result of experiments and more mature study of the subject. * * * It was found, too, that the bureau had been too optimistic in its forecast relative to the early completion of the design and its early production.

In view of this official departmental statement of the real facts in the case, the Secretary's contention that I had anything to do with delaying the barrage needs no further comment. May I be allowed to express my extreme astonishment that statements so contradictory to the plain facts contained in official documents are made. They are hard to understand. The Secretary has attacked my previous testimony as to the impracticability of the department's proposals of April and May, 1917, because I did not base my objections on the ground that the antennæ mine had not yet been invented—of course,

I knew nothing of the antennæ mine at that time—but I did know that with the existing type of mine the plan was impracticable, as has been acknowledged by the department, as every informed person now admits, and that was all I said in 1917.

If the United States in going to war had had as its only object the laying of a mine barrage—if it had entirely dismissed from its consideration the desirability of winning the war, or the consequences of losing it, the country, by concentrating on the production of mines, might have produced the 750,000 mines of the old type, which the Bureau of Ordnance in April, 1917, estimated would be necessary for the barrage. If they had entirely disregarded the necessity of maintaining the allied lines of communication and had allowed England and France to be starved into submission by the success of the submarine campaign, they might very well have carried out the Secretary's contention and laid the mine barrage, or at least produced the material for the mine barrage, though in all probability this material could never have been transported to the North Sea and laid there. It is as impossible as it is absurd to contend, therefore, that in the light of the situation as it existed in 1917 the plan was at that time either practicable or desirable.

I may further state in this connection, that as is shown in the official reports on file in the Navy Department, and as has been formally acknowledged by the Navy Department itself, the mine that existed in 1917, called the Ely mine, had been condemned by the British and had been condemned by us as an unsatisfactory mine, so that even if at the expense of every other naval activity the Navy Department had been able to build 750,000 mines, and even to plant them in the North Sea, it would not have done any good because they would not have stayed there, and they would not have been effective if they had stayed there, all of which was thoroughly proven by the fact that they did not stay and prove effective in the narrow Strait of Dover and had to be abandoned in favor of an entirely new mine.

ROBBING THE NAVY OF CREDIT FOR THE BARRAGE.

In this connection the Secretary has accused me of trying to rob the United States of credit for "inventing" the idea of a mine barrage. Do I understand the Secretary to imply that it is a patriotic duty to claim credit for everything creditable done in the war and to deny responsibility for all mistakes and failures? Is it treason to give credit where credit belongs? As a Nation, must we have our self-complacency bolstered up by false claims? As a matter of fact, in the case of the northern barrage, the Admiralty had had proposals nearly two years before we entered the war for laying a barrage of mines across the North Sea. To any amateur looking at a school book map of the North Sea, this scheme seemed an absurdly obvious answer to the submarine campaign. But careful examination, in the light of all previous experience, showed that, with the mines available previous to November, 1917, the barrage was absolutely impracticable in view of the time and material required. The proposal of the department on May 11 was not a plan for laying a barrage.

It was a mere request to be informed whether such a barrage was at that time considered practicable.

Similarly, Admiral Mayo brought no plan for the northern barrage. The memorandum he furnished the Admiralty dealt only with various suggestions and proposals as to what the barrage should be. The first detailed plan for this northern barrage, of which I have any knowledge, was the one prepared in London in September, 1917, by the Admiralty plans division, in consultation with our own and other allied officers. It was this plan which Admiral Mayo took back with him to Washington. It had written upon it the request that the Admiralty be informed whether the Navy Department accepted the proposal or not. No decision was reached by the department until the end of the month. Then on November 1, I was informed that the department had approved the proposals contained in this plan. This same plan continued to serve as the basis on which the barrage was laid, though it was, of course, frequently modified in accordance with the lessons of subsequent experience.

Since these were the facts of the matter, I submitted them as such, believing it was my duty to tell you the simple truth, and not to claim credit for things our Navy did not do. On the other hand, I have fully and completely explained that the northern barrage was made possible only by the invention by the Bureau of Ordnance of the new type of mine. The development of this mine during the war was a magnificent achievement. To it alone was the barrage in reality due. Hence, although the suggestion for a barrage had been made years before, when the department proposed it (although the detailed plan followed was not drawn up by the department, for they did not have the data necessary for any such plan) the credit for making possible the barrage rests altogether with the officers in the Bureau of Ordnance who developed the mine, and with the department for realizing its possibilities and supplying the quantity of mines, the mine layers, and other material needed for the barrage.

But the laying of the barrage was not in any sense the single bold stroke that ended submarine warfare. The submarine had already been defeated in its mission of forcing the Allies to peace long before the barrage was laid, or even before it had been begun. The very possibility of laying the barrage depended indeed upon first mastering to a great extent the submarine. Only thus was it possible to transport the material needed overseas.

THE EFFECTIVENESS OF THE ALLIED ANTISUBMARINE POLICY.

It was, indeed, the time for bold and offensive action when we entered the war in April, 1917; it was, indeed, a time when motives of timid prudence and purely defensive considerations should have been subordinated to our principal mission of winning the war by striking the enemy on the sea as quickly and effectively as possible, in the way which the experience of the war showed would produce the greatest results. The Allies had a complete and consistent policy, or at least developed one, in 1917, which proved successful. It met the issue of overcoming the submarines; it made possible the victory. That plan was twofold; it consisted in the protection of merchant shipping by

the use of convoys and in offensive action against the submarines by the light craft assigned to convoy escort in the danger zone, and by the hunting flotillas built up as rapidly as possible and used in watching the narrow passages. These became increasingly more effective against the submarine as additional craft became available and listening devices and other apparatus became more effective.

The inability shown by the department to understand the situation and to take the action required did have, as its result, unnecessary losses. In so far as the department resisted the adoption of the policy which it ultimately accepted and carried into effect throughout the war (because of the desire for some royal road to victory), the department was wrong and misguided. But, as Admiral Benson, Admiral McKean, and Capt. Pratt have told you, they fully realized at the time that the only way to meet the submarine was by the methods which were actually used. Once they came to this decision the co-operation of the Navy Department with the Allies gradually became effective.

The mine barrage could not have been laid sooner than it actually was, because the mine which made it possible had not been invented at the time. And it was only natural, in view of the situation so clearly explained in the Bureau of Ordnance's official summary, that every professional expert should hesitate to place his whole hope on defeating the submarine in a measure which was, even in November, 1917, when the northern barrage project was adopted, as yet only experimental.

ADMIRAL BENSON'S ATTITUDE TOWARD THE NORTHERN BARRAGE.

This is probably the explanation, for example, of the attitude which Admiral Benson himself took toward the mine barrage. Admiral Mayo had brought over from the department in the early part of October the definite plan for the northern mine barrage. It was upon this plan and not upon any earlier memorandum or suggestion that the barrage was ultimately laid. On November 1, while Admiral Benson was on the high seas en route to England, I received the message from the Navy Department informing me that the northern barrage project had been officially approved. Admiral Benson, on arriving in England and learning of it, sent the following message to the department:

[Cablegram sent Nov. 8, 1917. Opanav Washington. Serial No. 1341. Bal. Very secret.]

1341. Your 925. From Benson. My understanding with Secretary and Operations was that no decision on mine barrier project would be made until after I had arrived here and discussed subject with Admiral Jellicoe and Admiral Sims. Operations' action in sending 925—

The number of the cable—

has embarrassed me very decidedly. During remainder my absence send all departmental decisions involving policy to me before sending them for transmittal to Admiralty. Consider that 925 should not have been sent until after I had arrived here and been informed 19208.

SIMS.

I just want to call attention to the fact that the cablegram is from Benson, signed Sims. They went through my office.

On the following day, he sent another message to the department, in which he said:

NOVEMBER 9, 1917.

1342. From Admiral Benson. Called on Geddes. Had long conference with Jellicoe. All fully convinced practicability and desirable to lay North Sea barrier if shipping for handling material can be spared. Have assured them we will do our part.

Thus the whole of the Secretary's contentions concerning the bold and audacious policy which he favored reduces itself to this: That the department, in the early months of the war, knowing little or nothing of the war experience of the Allies, were obsessed by a desire to astonish the world by doing some new and unheard of thing, by discovering the "royal road to victory;" in the desire to do this, they proposed two plans in April and May, 1917, both of which were impracticable and both of which the department itself later admitted to be impracticable; and in thus concentrating upon an endeavor to find the end of the rainbow, they postponed the effective intervention of our Navy in the war for a number of months, and thus contributed to the postponement of the ultimate victory.

It therefore seems clear that this is one of those cases of misrepresentations of fact into which the Secretary, as a civilian, has fallen, because of his failure to understand certain very simple technical considerations. It is hardly a defense of the department's delays in 1917 to say that they did not do what they could have done because they hoped that they might ultimately be able to do very much better. It is not enough to declare one's allegiance to a bold and audacious policy. It is necessary also to meet the crisis of a war in such a way as to make possible victory. No war policy is of any value unless means are available for carrying it out immediately and effectively.

PERSONAL ATTACKS AND REFLECTIONS BY THE SECRETARY OF THE NAVY.

The questions of personalities:

I have endeavored, as far as possible, to eliminate all personalities from my testimony. I regret that the Secretary considered it necessary, in attempting to refute my official criticisms, to enter upon a general attack against my personal character, my ability and credibility as an officer, and my loyalty to my country. I have no intention of attempting to answer the numerous reflections made upon me throughout the Secretary's testimony. I desire merely to invite your attention to the nature of these attacks, as recorded in the Secretary's testimony, and to compare the opinions he now expresses with the opinions he expressed about one year ago concerning my character and services.

A review of these personal attacks shows that they can be divided into three parts:

First. Purely personal attacks.

Second. Criticisms and reflections upon my official actions.

Third. Attacks upon my motives and a questioning of my loyalty to my country, combined with charges that amount to little less than treason.

The Secretary's opinion of my personal character:

In dealing with my personal character, the Secretary has accused me, directly or by unmistakable implication, of being indiscreet, of being actuated by all kinds of ulterior motives, of being insubordi-

nate, consciously and deliberately, of having endeavored to deceive the department and the President, and, finally, of being at least an accessory to a forgery.

On page 4738, the Secretary of the Navy referred to my criticisms made a number of years ago of the design of battleships we were then building, as "the scandalous charges spread broadcast at the time."

On page 4789, the Secretary testified that he regarded me as actuated by "rather a love of glitter and foreign recognition and honor than anything else." On page 4792, he speaks with regret of having, in 1917, forgotten my previous indiscreet speeches and actions. He states that in this investigation I have (p. 4793) "erected a towering structure of exaggeration and misrepresentation." He referred (p. 4794) to the "wantonness" of my charges, and states that he was "shocked at the idea that a naval officer could be guilty of such a breach of confidence" as my letter revealed.

In commenting upon my refusal in December, 1917, to declare that the Navy Department had done everything they could do, the Secretary accuses me of deliberately attempting to deceive the department. I had replied that, in answer to my requests for forces, personnel, etc., the department had always replied that they were sending everything available. The Secretary implies that this was a deception and that because I failed at the time, in the stress of war, to state the actual circumstances concerning the situation, because I felt that it was my duty as an officer to accept during the war, in all loyalty, the decisions of the department, the Secretary says that I now "propound a new doctrine of deception"; that I consider it justifiable and proper to deceive my superior officers. The Secretary adds, "He certainly did this" (p. 4830).

Similarly, the Secretary, in referring to my reply to the President's message, in July, 1917, said:

This is the most remarkable of the abundant evidence that Admiral Sims was so hypnotized by British influences that he was willing to try to lure the President of the United States into the feeling that, "regardless of any future developments, we could always count upon the support of the British Navy." * * * It is to be hoped that if Admiral Sims has such assurance, he will send a copy of the pledge in writing with the name of the important Government official appended thereto, to be filed in the archives "of sops for the simple."

The Secretary has similarly stated that I had "a mind that genuflected to British views."

He stated also (p. 5092) that I have "a spirit of pride in continued insubordination to authority," with which he was unfamiliar when I was sent to London. He then said: "If I had fully understood and properly assessed his past attitude and conduct with respect to the highest spirit of loyalty, he would not have been sent."

THE IMPLIED CHARGE OF ALTERING A SIGNATURE OF AN OFFICIAL MESSAGE.

Not content with accusing me of merely moral turpitude, the Secretary implied that I was guilty of, or responsible for, a forgery. Thus he stated:

Somebody was guilty of signing my name to an original dispatch which the original here shows I had never signed, or of altering a dispatch by erasing a

real signature and substituting "Daniels." You can imagine my indignation when this false signature was spread broadcast over the country in the sensational press stories of the hearings. * * * The perpetrator of this attempt to fix upon the civilian Secretary of the Navy a telegram signed by another official ought to be produced by Admiral Sims, who produced the altered telegram, and who owes an apology to me and to the country for the impression undertaken to be made by his testimony based upon a false signature.

As I have already informed the chairman of this committee, the circumstances are as follows, being contained in a letter which I wrote to the chairman of the committee on May 14.

The CHAIRMAN. Admiral Sims, you will recall that on receipt of this letter I called you up on the telephone and asked if you wanted to have the letter introduced in the record at that point or whether you would not rather wait and bring the matter out when you came to the committee, and you replied that the second course was the one you preferred.

Admiral Sims. Yes; I understood it that way.

MAY 14, 1920.

MY DEAR SENATOR HALE: I have noted by the press of last night and this morning that Secretary Daniels states in his testimony that the telegram which I quoted in my testimony as follows:

"In regard to convoys, I consider that American vessels having armed guards are safer when sailing independently," was transmitted through the British Embassy in Washington and signed "Opnav" (Office of Naval Operations), "A. F. Carter, by direction of Chief of Naval Operations."

In regard to this incident, I can only say that at the time of the receipt of this telegram I was at Queenstown, and the message came to me from the Admiralty, over their own wires and in their own code, and was signed "Daniels." I have a copy of this telegram, which was made by the historical section of the London headquarters, and I quote below exactly the text as it was transcribed. These historical files have been in the Navy Department for about a year and must contain the original, of which the following telegram is a carbon copy:

11-1-1

3

C

1

No. 498

20/6/17

TELEGRAM.

From: Admiralty.

To: Commander in chief (of the Irish station).

498. Following for Admiral Sims: There will be no additional movements before August of troops. You will be furnished fully with information as to sailing of Army supply ships as far as possible in advance, and the actual sailing, intended route, and probable dates of arrival will be reported. We hope to sail four Army supply ships, now fitting out, in about 10 days' time. The 32 destroyers, which are all that there are available, have sailed. One hundred and ten-foot chasers which are to be sent to France should begin to deliver in August. Fishing vessels, 12 in number, will sail in August for France. There are no other small craft available at present, although work on yachts is being pushed, probably ready 15th July. In regard to convoy, I consider that American vessels having armed guards are safer when sailing independently.

DANIELS.

Continuing the letter:

I have no means of verifying the signatures of the numerous official messages signed "Daniels" submitted to the committee. They are all authentic copies from the official archive of my organization abroad during the war, and which are probably now in the department's historical files. From an examination of such records as are now in my possession, it appears that the

majority of the messages received by me during the early months of the war were similarly signed "Daniels."

The Secretary has apparently wholly misinterpreted my testimony, as I had no other thought in mind than to convey that the dispatches submitted as evidence originated with an organization, and not from any particular individual of that organization.

I took particular pains to explain this fact very carefully in my testimony. See pages 647-648 of my testimony of March 18, 1920, as follows:

"In no part of my testimony have I charged the responsibility for any of the failures enumerated against any person, but I have tried to make it clear that the responsibility for these failures rests, in my opinion, upon the Navy Department as an organization rather than upon any individual. If any individual was responsible, wholly or in part, for the failures I have pointed out, the fact would necessarily have to be developed by persons who were in a position to know the inner workings of the department during the period in question."

"My official knowledge extends only to the doors of the department and not beyond them. The fact that numerous letters and cable dispatches which I have submitted in evidence bear the signature of this or that person is not to be taken as an indication that I believe the signer personally responsible for the action indicated. They merely indicate that the letter of dispatch was official and written with the authority of the Navy Department as an organization."

It should be particularly noted that in many other important instances the Secretary is glad to claim authorship for messages similarly signed "Daniels," although they did not originate with him, but in one of the offices of the department.

This point illustrates the necessity for my recommendations as to new legislation in order to avoid in the future any confusion or vagueness as to responsibility in connection with questions of a strictly military nature.

Very sincerely, yours,

WM. S. SIMS.

Rear Admiral, United States Navy.

Senator FREDERICK HALE,

1001 Sixteenth Street NW., Washington, D. C.

I do not know in that letter where I said that most of the messages that reached me were signed "Daniels." In that period of the war almost all messages of a confidential nature came to me through the British Admiralty because at that time we had developed no naval codes in which we had reliance. We were afraid that they had gotten out, and therefore all the messages were sent through the British code and the British Admiralty.

CHARGE OF DISLOYALTY TO THE DEPARTMENT.

In his testimony the Secretary has also implied that I was guilty of disloyalty to the department. In illustration of this he produced a letter from my personal files, written by me to Admiral Bayly on September 24, 1918. Let me say in this connection that at the time the department directed the establishment of a historical section in the forces overseas, I permitted the historical section to go through my personal files and to make copies of such letters as bore upon naval operations.

I also permitted those letters to be sent in, and I never looked them over at all, simply trusting that they would pick out the right ones. As I have already stated before this committee, many of these letters were purely personal communications with my friends in the American service and in allied services. Many of them contained the kind of personal comments and remarks on the situation which one very often makes to friends, and which have not the slightest official char-

acter or significance. It was my understanding at the time that these documents were to be considered confidential and used only by the historical section as the basis for future investigations into the history of the war. It seems to me hardly necessary to invite attention to the misuse of this personal correspondence, and the violation of my confidence in the department by the publication of many of my personal letters to foreign officers in the testimony of the Secretary of the Navy and other witnesses before this committee. Not only is it unfair to me, but it is extremely unfair to the foreign officers.

In referring to one statement that I made in this letter of September 24, 1918, to Admiral Bayly, Secretary Daniels quoted the following paragraph from my letter:

There is no doubt at all that the principal dignitaries at home are very nervous lest some of our troop transports be torpedoed. Of course, you understand that this nervousness is largely of a political kind.

The Secretary then commented:

An attack upon the American Government in a letter to the British admiral that because we wanted to protect the lives of our 2,000,000 soldiers, it was political. If I had seen that letter, gentlemen, I should have ordered him home by wire and put him under court-martial.

Of course, it is unnecessary for me to add here that, as I have told you so many times, my chief anxiety while in Europe was the responsibility which rested upon me for the safeguarding of these American troops in transit through the submarine zone. The fact that the forces under my command did succeed in escorting most of our 2,000,000 troops to France without the loss of a single man is a sufficient answer, I think, to any comment or criticism to the effect that I did not provide adequate protection for them. Certainly a personal comment which I might have made to a friend in a personal letter with regard to the cause of the nervousness of certain officials in Washington was not in any sense of the word an attack upon the American Government or, in fact, an attack upon anybody at all.

REFLECTION UPON MY OFFICIAL ACTS AND SERVICES.

In addition to these more or less personal criticisms by the Secretary he has presented what, if his charge be true, constitutes a formidable indictment against my ability as an officer and against my services abroad. But in doing this he necessarily makes a still more formidable indictment against himself, that of permitting an officer of the kind that he represents me to be to retain for a year and a half after he himself had knowledge of my alleged character (which he admits in his testimony) to retain the command of our naval forces on the fighting front and continue responsible for the safeguarding of the transport of our army overseas.

In substance the Secretary says that I was continuously hypnotized and obsessed by British influences; that I opposed the department's policies consistently and favored the British merely because they were British and not American; that I was practically insubordinate and disobedient in refusing to carry out the department's instructions; that on one occasion Admiral Mayo had to be sent abroad after I had failed, upon being given explicit orders by the department, to discuss certain proposals with the British Ad-

niralty. On another occasion he accused me, by making use of only a partial quotation from one of my letters, of wanting to turn over our Navy to the British Navy. He has declared that I failed to realize the necessity for the protection of troops, and placed a higher value on merchandise than on lives. He has implied that I was more interested in the administration of our naval forces abroad by a desire for foreign honors and recognitions of various kinds than I was for the efficient discharge of my duties as a commander of the American forces at the front. He has declared that I not only opposed all policies originated by the department but that I originated none of my own.

For example, in beginning his statement, the Secretary of the Navy said (pp. 4784-4788):

In the face of a great job greatly done, it is a matter of national regret that any naval officer should, for any reason or any motive, seek either to minimize it or to cast aspersions upon the splendid work done by brother officers in or out of the department. I confess to surprise and regret when Admiral Sims made public the letter which was the occasion of your hearings. During the conduct of the war, in several important particulars, I felt he did not wholly measure up to expectations in certain particular ways, of which six may be mentioned:

1. He lacked the vision to see that a great and new project to bar the submarines from their hunting grounds should be promptly adopted and carried out, no matter what the cost or how radical the departure from what ultra prudent men regarded as impracticable.

2. He seemed to accept the views of the British Admiralty as superior to anything that could come from America, and urged those views even when the Navy Department proposed plans that proved more effective.

3. In public speeches and other ways, he gave a maximum of credit to British efforts and minimized what his country was doing.

4. He coveted British decorations and seemed to place a higher value on honors given abroad than by honors that could be conferred by the American Government.

5. He aspired to become a member of the British Admiralty and wrote complainingly when the American Government declined to permit him to accept such tender by the King of England.

6. He placed protection of merchant shipping, with concentration of destroyers at Queenstown, as the main operation of our forces abroad, failing to appreciate that the protection of transports carrying troops to France was the paramount—and, I wish to emphasize, that was the paramount—naval duty until I felt impelled to cable him peremptorily that such was our main mission.

The first of these points I have already dealt with in discussing the policy followed by the Allies and the particular plans recommended by the department referred to by the Secretary of the Navy.

With regard to the second point, it is only necessary to say that in those cases where I accepted the views of the British Admiralty, those were views arrived at, or agreed upon, by the responsible allied officers in the war zone who had extended experience in the kind of warfare that we had to wage. The Navy Department has failed to reveal any plans which they put forward which were more effective than the plans and policies which were carried out by the Allies which succeeded in winning the war.

With regard to the third point, I have already stated repeatedly that in my speeches and writings I have merely given a correct account of what happened. During the war, the part played by the British Navy was vastly greater than that of any other allied navy. It was the British Grand Fleet which contained the German High Seas Fleet. It was the British Navy which provided the greater portion of all convoy escorts and all antisubmarine forces in the

war zone. The number of our own forces abroad was very small in comparison.

Does the Secretary, then, regard a mere statement of truth a desire to minimize what my own country was doing? Does he believe that a mere statement of the proportion of the allied naval effort contributed by the British Navy is a reflection upon our own efforts? I can not otherwise understand his criticism. No one has disputed, or can dispute, the essential facts in the case. All have agreed that our efforts were not as great as those of the British. That is all I have ever said. I have not considered it necessary, in order to praise our own service, to condemn nor criticize another; and if that be my fault, I shall make no apologies for it.

With regard to the fourth point, and in spite of the fact that I am on official record as opposed to all decorations, the Secretary stated that he regarded my desire for British decorations and honors as due to a love of glitter and foreign recognition more than anything else, and consequently tolerantly passed over the matter. In this connection, let me say that, in the Secretary's testimony, his charge that I desired British honors, etc., is based upon three things:

First. Upon my recommendation that our own officers serving in the war zone who destroyed submarines or performed other meritorious services should be allowed to receive the same decorations from the foreign countries with whose navies they were serving, as would be given to the officers of these foreign services for the same creditable acts. At that time our own department had worked out no suitable recognition for distinguished and heroic service. Our officers and men were serving alongside of allied officers and men who were receiving decorations from their own Governments. It naturally did not contribute to the morale of our own men to see the foreign officers and men receiving recognition for achievements which were no more splendid than those of American personnel. I therefore recommended a policy which was ultimately followed by all the American military services, that is, that our officers and men serving in the war zone should be permitted to receive allied decorations for distinguished and heroic conduct.

It might be added that at no time did the department ever provide for the adequate recognition of the services of these men and when the medal awards were finally announced last December, the service discovered, to its consternation and indignation, that being sunk by a submarine was considered as splendid and heroic an act as sinking a submarine. Another interesting fact may also be related in this connection. Although the British Admiralty was not permitted by the department to recommend American officers for the same decorations which they were giving to their own officers in the same areas, still letters of commendation were sent by the British Admiralty through me to these officers, stating, in effect, that if the department had permitted it, these officers would have received the distinctions which they had earned. These letters were sent to Washington with a recommendation that they be attached to the official records of these officers. At a later period they were chagrined and dismayed by being informed by the Bureau of Navigation that, by departmental order, all foreign citations for distinguished service or heroic conduct were being removed from their records. The order created so much indignation in the service that the order was finally rescinded.

It therefore could hardly be said that in endeavoring to obtain suitable recognition for the gallant conduct of our own men in the war zone I was guilty of any desire for the glitter and glory or foreign recognition for myself.

The second point that the Secretary has raised was that I myself accepted a decoration from the King of England. The circumstances have been fully communicated to you in the documents the Secretary himself published. Congress, by legislation, provided in July, 1918, that American officers and men serving abroad in the war zone could accept foreign decorations. I was at once informed by the department that this legislation had been passed, and upon the occasion of the visit of the House Naval Committee to London, and of their reception by the King, I was summoned to Buckingham Palace without previous warning and the decoration was handed me personally by the King. I did not regard this as any personal recognition, as it has always been customary among great nations to bestow adequate official recognition upon representatives of other countries, and particularly of allied countries, within their borders, and I regarded this decoration as a form of international courtesy and as a compliment to the service to which I belonged.

In passing, let me invite attention to the fact that personal decorations mean so little to me that I have never worn the ribbons which indicate the receipt of any decoration, and I have officially stated my objection to any decorations whatever, and that is in official communications to the Navy Department.

The third point upon which the Secretary makes this assumption is that my dearest ambition was blasted when the department would not permit me to accept an honorary membership of the British Admiralty Board. In this connection let me refer briefly to the testimony of Admiral Benson before this committee. Admiral Benson said that when he went abroad in November, 1917, he found that I was not then attending the daily meetings of the officials of the British Admiralty. As this council reviewed daily the whole naval situation in the waters about the British Isles, and as our forces were becoming an ever greater contribution to the allied naval effort in those waters, it occurred to Admiral Benson that it would be a good thing for me to attend these meetings at the Admiralty. In his testimony he said (p. 4627):

I asked him [Admiral Sims] if he attended the daily meetings of the British Admiralty, and he said no, but he would like to do so. I arranged all those details for him.

In another place Admiral Benson said that while in London he discussed with the Admiralty the question of establishing a planning section to work in cooperation with the Admiralty section, and that he took up this actively (p. 4660)—

just as I did the question of allowing Admiral Sims to attend the daily meetings of the British Admiralty, which Admiral Sims said that he would very much like to do, and I immediately took it up with Admiral Jellicoe and Sir Eric Geddes, and they were not only willing but very glad, indeed, to have it done.

Subsequently, very much to my surprise, Sir Eric Geddes, the First Lord of the Admiralty, which corresponds to that of the Secre-

tary of the Navy in our country, informed me that the British Government wished to associate our Navy Department with the Admiralty by making our naval representative an honorary member of the Board of the Admiralty, and that he hoped that our Government would consent to this. The matter was discussed in the presence of the First Sea Lord, Admiral Wemyss; the Chief of the French Naval Staff, Admiral de Bon; and the Chief of the Italian Naval Staff, Admiral di Revel; and Admiral de Bon said that if the United States Government would approve, the French Ministry of Marine would doubtless make the same offer.

This offer, which was intended as a courtesy to the United States Government and its Navy, and as an expression of appreciation for the services of the latter, was duly transmitted to the Navy Department, and by the British Government to our Government, after the formal approval of the King had been obtained.

Doubtless the committee will realize the embarrassing position in which I was placed when our Government declined this courtesy. Subsequently the King expressed his regret to me; and, as a matter of official duty, this was reported to the Navy Department, with an explanation of the embarrassing position in which I had been placed and of the advantages in the way of cooperation of attending the meetings of the Admiralty Board.

The difference between the Admiralty Board and the other assemblies there is quite marked. The Admiralty Board consists of all of the Lords of the Admiralty, that meet on certain stated occasions to discuss plans and policies, etc. The board that I spoke of at first, the meetings of the Admiralty, were those held in the chief of staff, or the First Sea Lord, with all of his immediate Sea Lords.

If the Secretary interpreted this presentation of the case as an expression of a desire for the glitter and glory of foreign recognition and honors, I am perfectly willing to leave to you the decision as to whether his interpretation or mine is warranted by the facts.

MISREPRESENTATIONS WITH REGARD TO TRANSPORTATION AND PROTECTION OF TROOPS.

I would invite special attention to this. The statements and implications of the Secretary of the Navy with regard to my attitude toward the protection of troops in the danger zone are characteristic of the kind of misinterpretation and misrepresentation into which the Secretary has, unfortunately, so often fallen in his attempts to deal with technical military matters, which he does not understand. For example, in the sixth criticism of my services abroad, which has been quoted above, he declares that I failed to appreciate that the protection of troop transports was my paramount duty until he (the Secretary) had cabled me peremptorily that this was my main mission. I invite the committee to try and imagine an officer who was responsible for the safety of our troops failing to appreciate the necessity for protecting them.

Running throughout the Secretary's statement is the repetition of this assertion. For example, on page 4789, he refers to my "one idea, and controlling idea, of carrying on the war by putting all our destroyers at Queenstown, giving priority to protection of merchant

ships over that of troop transports." Again, on page 5079, the Secretary of the Navy, in referring to the question of transportation of troops, said:

The great machinery of troop transportation, the cruiser and transport force, was initiated by the Navy Department, built up, organized, and operated not by Admiral Sims, but by other officers not under his command. His duty in this connection consisted solely in arranging routes and providing escort vessels through the submarine zone, and in the performance of this latter and vitally important duty he had to be reminded time and again by the department.

Note the expression, "He had to be reminded"—

Bear this in mind now, gentlemen, with reference to the duty of protecting American troops in transport through the submarine zone, Admiral Sims had to be reminded time and again by the department that the paramount duty of our destroyers, with which nothing must interfere, was the fullest protection of ships carrying American troops.

In this same connection the Secretary also said (p. 5131):

The Navy Department, from the moment it was intrusted with this task, regarded the protection and successful operation of these troop ships as its highest duty. Regarding human life as more valuable than supplies, I do not share the view of Admiral Sims that the escort of cargo ships was quite as important as the protection of vessels carrying troops.

And on page 5133:

I found it necessary, soon after troop transportation began, to remind him sharply that the first duty of American destroyers in European waters was to protect ships carrying American troops. I could not conceive that an American admiral, charged with such high responsibility, could regard supplies as of more value than human life, and cargo vessels more important, for any reason, than ships carrying American troops.

Again, on page 5206, the Secretary said:

If I had believed, Mr. Chairman, that Admiral Sims cherished any such idea; that he valued supplies more than the lives of American soldiers; that he was willing to endanger troop transports in order to save cargo ships, he would have been instantly removed from command.

In my personal opinion the Secretary has overdone it. I will say, however, that the allegations, statements, and implications are without exception false to the last degree, as is shown by the record. It would be wholly impossible even to imagine any person in the condition of mind which he tries to depict me.

These instances that I have quoted are only a few of the many similar statements found throughout the testimony of the Secretary. There are certain considerations in this connection that should be made perfectly clear.

At the time I went abroad and our forces began to arrive in European waters, no troops were being sent from the United States to France, and the primary mission of the vessels in the early months, before the troop movements began, was necessarily the protection of merchant shipping and offensive operations against enemy submarines. As soon as I was informed that troop movements were about to begin, I made every effort to induce the department to draw up adequate plans to insure the protection of the transport of these troops. As I have already told you, the first troop convoy was sent to France on plans drawn up hastily in Washington, without con-

sultation or consideration of allied war experiences, and in consequence the first troop convoys narrowly escaped disaster. In my letters and cables at the time I pointed out to the department, in the strongest possible terms, the necessity and importance of adequately protecting American troops on the high seas. The department finally requested me to submit full plans for the handling, routing, and protecting of troop convoys through the war zone. These plans I drew up. They were accepted by the department, put into operation, and throughout the remainder of the war governed the whole of our troop transportation in the war zone. At no time were any of our troop transports, escorted by American forces, successfully attacked by submarines.

This shows that in no case was the protection afforded them inadequate. The disposition of our naval forces in European waters was made by me, and all our plans and arrangements for handling troops were made—note this particularly—before I received any of the admonitions which the Secretary said he had to send to me as peremptory orders. Not a single one of the plans that had been made, not a single detail in the disposition of forces, not a single detail in the convoy operations, was changed in the slightest degree as a result of or after these so-called peremptory orders were received from the Navy Department, and this for the simple reason that it was unnecessary that any such changes should be made. The arrangements that had been made were adequate, as was amply demonstrated by the results. Only four or five convoys were attacked, no torpedo ever touched a loaded transport, not a single soldier was lost under the protection I gave them.

I, of course, realized at the time that these messages were simply the usual result of nervousness in official quarters, the result of the inevitable misunderstandings and misconceptions of the naval situation at the "front."

In repeated letters to the Navy Department, which I have read you, and to officers in the department, in June and July, 1917, and at later dates, I called attention to the fact that my primary duty was the protection of American troops, and that the forces under my command had received instructions based upon this mission. Not only was there never at any time any question in the forces in Europe as to this primary mission, but you will find it clearly defined in my instructions to my subordinate commanders. The messages of the Secretary, inspired by a natural anxiety, due to a lack of knowledge of the situation and the dispositions which had been made, were therefore wholly unnecessary. No further action in any event could have been taken than the measures already in operation.

Throughout the war, and since the war, and during this testimony, I have never stated that I considered that merchandise was of more value than human lives, nor have I ever stated that I considered the protection of a merchant ship to be more important than the protection of a troopship.

As a matter of fact, the plans for the convoy and protection of troops in the war zone were all drawn up at my headquarters in London. The routing of all these troops were handled, either directly by my staff in London or by Admiral Wilson at Brest, acting under my general direction. The Secretary himself has told you

how successful were the efforts of the forces under my command and thereby refutes his contention that troops were not adequately protected. On page 5130 he said:

The carrying to Europe and the bringing home of 2,000,000 troops of the American Expeditionary Force has been justly termed the biggest transportation job in history. They had to be transported 3,000 miles through submarine-infested zones, facing the constant menace of an attack from an unseen foe, as well as the perils of war-time navigation. Yet not one troopship was sunk on the way to France, and not one soldier aboard a troopship manned by the United States Navy lost his life through enemy action. That achievement had never been equaled. It was not only the most important but the most successful operation of the war. The Germans never believed it could be done. * * * The sinking of our transports would have been the most telling blow the Germans could have dealt the Allies, the greatest victory of their submarine warfare.

That they failed to sink a single allied United States troopship and sank only three ships of other nationalities carrying American troops was not due to any lack of intention or effort, but to the fact that we gave our troopships such sufficient protection that it was almost impossible for the U-boats to sink them.

And that efficient protection was given by the disposition I made of the forces before the admonitions were received from the Secretary, and these dispositions were never in any degree changed. All people who have any historical knowledge of warfare know that you must make a separate file at the front for what you call neurasthenic telegrams, and you must be responsible for your actions in all cases.

This success was the result of the disposition of forces I made for the protection of our troops, and this disposition was not changed. With regard to the Secretary's statement that I had to be repeatedly reprimanded in a similar way throughout the war for failing to realize the necessity of protecting troops, let me say that the two nervous messages quoted by the Secretary, one in July, 1917, the other in May, 1918, were the only messages of this character that I ever received.

THE DEPARTMENT'S FAILURE TO RECOGNIZE NECESSITY OF PROTECTING MERCHANT TONNAGE.

There is another aspect to the situation which has been similarly misrepresented. Previous to the 1st of April, 1919, the number of troops sent from America to Europe had amounted in all to only about 300,000 in a year. It had taken nine months to get these 300,000 men to Europe. There were seldom more than two or three troop convoys each month on an average during these nine months. While it was always recognized that it was the paramount mission of the forces overseas to protect these troops while en route through the war zones, other considerations could not be neglected. These convoys during these nine months were always fully protected.

At least three times as many destroyers, per vessel escorted, were assigned to duty of escorting them then were ever assigned to any merchant convoys, although the merchant convoys usually had from 5 to 10 times as many ships as the troop convoys. No troop transport was sunk during this period while en route to France.

It should be unnecessary, however, to state again that the submarine campaign against merchant tonnage constituted, at this

time, the greatest threat to the allied cause. If sufficient merchant ships had been sunk by the submarines in 1917 the Allies would have been forced to make peace, and all of the American effort would have been in vain, so far as assisting the Allies was concerned. Therefore, while it was important—and all important to protect the American troops—it was also vitally important to protect the merchant shipping which was carrying supplies and war materials for these troops, for the troops of the allied armies, and for the civilian populations of the allied countries. My problem was not only to protect American troops but also to safeguard, so far as I could, the allied lines of communication.

The forces were consequently so located, in 1917, as to give the maximum possible protection of merchant convoys as well as to troops. Our destroyers escorted 10 merchant convoys for every troop convoy during these early nine months, before our troop movements really began. Without the assistance they gave it is very probable that the allied countries would have been forced into an unsatisfactory peace.

This was, throughout 1917, the Allies' greatest anxiety. The repeated statements that I received from the department indicated that they were considering, not the protection of the whole of the allied shipping, but were concentrating their efforts in protecting American shipping alone. They seemed constantly to fail to realize that our Army in France, and the cause for which we were fighting, was dependent upon the whole of the allied shipping. At this time, in 1917, the American shipping in the war zone was only a very small part of the whole of the allied shipping. Any protection to American ships, however adequate, would not therefore have saved the Allies, if the measures adopted had not protected also the whole of the allied shipping.

The criticisms of the Secretary of the Navy of my attitude in this regard are in reality a condemnation of the attitude which the department took at that time. I realized to the full, just as thoroughly as any official in Washington, the necessity of giving our troopships priority over all other vessels in the war zone in the matter of escort, and they were given this priority. I also realized, what the department seems to have failed to realize, and what the Secretary in his testimony completely ignored, and that was that we were not fighting the war alone, that our cause was inseparably bound up with the cause of the Allies, that the defeat of the Allies might very well have involved our defeat, and that the only means of insuring an allied victory was to maintain and protect their overseas communications, their supply lines, as well as our American troop transports. Consequently, the forces under my command, during the first nine months, were engaged most of the time in protecting these supply lines, not because they were neglecting the protection of troops, but because at this time our troop convoys were so few and far between that if our forces had been reserved for the protection of them alone, it is very probable that the Allies would have been defeated or forced into an unsatisfactory peace before the American effort on the western front could become effective. Too much stress can not be laid upon this point.

ATTACKS UPON MY LOYALTY TO MY OWN COUNTRY.

The Secretary has claimed that during the war I was so pro-British that I failed to safeguard American interests, belittled the activities of the American Navy, accepted everything British without question, was hypnotized by the British, had a mind which genuflected to British views, and failed in loyalty to my own country. Reflections of this sort appear so often that it would be useless to collect together the quotations. Curiously enough, the Secretary has not seen fit to point out the fact that during the war I was also pro-French and pro-Italian.

I may state that this is not the first time that I have been accused of being pro. I once served for four years as naval attaché in France, and it took me a long time after coming back to the American end of the Navy to overcome the idea that I was pro-French. An officer said to me, "If you go down the street the newsboys would come out and offer to sell you the *Petite Journal*, because you do not look like an American officer."

Why should he choose to emphasize my lack of neutrality during the war toward one of the Allies and fail to refer to my equal lack of neutrality for the other European Allies I fail to understand. Doubtless he has good and sufficient reasons for going to such lengths in his attacks upon me because of what he considers my pro-British activities.

No single instance has been brought out in which my so-called pro-British tendencies operated in any way to influence my judgment against the interests of the United States. As I have already shown you, the charge that troops were not adequately protected is baseless and absurd, as the Secretary's own words show. The fact that the British happened to have the greater part of the allied merchant tonnage under their flag and that our forces were engaged in protecting British merchant tonnage is of importance only because during the war this British merchant tonnage was in the allied service and formed the major part of the allied lines of communication. To have failed to protect it with all the means at our disposal would have been a treachery to the whole of the allied cause, and I think that no serious or honest American will question for a moment the policy which was followed throughout the war in this regard, not only by myself, but by the Navy Department as well. Most of the other charges of the consequences of my alleged pro-British feelings fall to the ground of their own weight when examined. For example, my desire for the glory and glitter of foreign decorations, my genuflection to British views, etc.

Inevitably, as the British Navy formed the greater part of the combined allied naval forces, they were the leaders of the allied navies. Their forces were so much larger in number in the war zone than those of any other nation that naturally their views and experiences were of more importance than were those of any other one of the Allies. The department itself recognized this in sending their representative to Great Britain, and at no time has there been any disposition to question the fact that in order to gain the full benefit of war experience it was necessary for us to work as closely as possible and in complete harmony with the British service.

This was all that I endeavored to do, and it seems strange to me that at this date the Secretary of the Navy should consider it necessary to attack me for what during the war he apparently considered one of my greatest virtues—that is, my ability to cooperate with the allied navies, and particularly the British Navy, in facing the problems presented by the war on the sea. For example, the Secretary of the Navy on the 22d of July, 1919, less than a year ago, addressing the House Committee on Naval Affairs, said—this is a strain upon one's modesty even to have to read it:

In the anxious days before duty led the United States to enter the World War, when it was decided to arm merchant ships, the President determined to send to Great Britain a naval officer of high rank and of approved ability to represent our country. He selected for what was then a delicate mission, as it was all during the succeeding months an assignment that called for a man of quickness of grasp, mastery of his profession, and ability to sit as the equal in any conference of the naval leaders of the free nations. The country approved the selection of Rear Admiral William Snowden Sims. He had already shown the qualities which made his mission not only of the greatest service to his own country, but which brought allied navies into warm fellowship, as well as in close cooperation. He was at once welcomed into the conferences of naval leaders, and during the whole war was recognized among our allies, as well as by his own countrymen, as one of the ablest and most brilliant naval officers in the cause that demanded initiative, understanding, and a comprehension, which included among others the hard duty to safeguard the carrying of millions of fighting men across the seas and to defeat the submarine menace.

It is a matter for national gratification that in Rear Admiral Sims America sent as commander of the United States naval forces operating in European waters an officer who served the world with such conspicuous ability as to win the confidence, the approval, and also the sincere admiration of the world. He has been given the highest honors by foreign countries which appreciated his rare accomplishments. He was promoted during the war because of his high merit successively to vice admiral and admiral, and it is just that this highest rank shall be conferred upon him by his countrymen, and that it shall be a decoration for life, of which his children may be proud.

If it would serve any useful purpose, it would be possible to collect a dozen similar quotations from the public addresses, annual reports, and various other papers of the present Secretary of the Navy. At no time were any of these criticisms which he has presented to you expressed or even implied in his public statements until he gave his testimony before this committee on the subject of medal awards last February.

VIEWS OF THE SECRETARY OF THE NAVY ON THE WAR SERVICES OF THE BRITISH NAVY.

I regard it as singularly unfortunate that in endeavoring to discredit me the Secretary of the Navy should have considered it necessary to reflect upon the war service of the British Navy, or to make a scarcely veiled attack upon Great Britain. I regret it, especially, in view of the fact that in his testimony he makes the rather astonishing statement that one of his chief criticisms against me is that *I* have endeavored to disturb the friendly relations with Great Britain. I have taken the privilege of putting that "*I*" in italic.

On page 4841 of his testimony, the Secretary of the Navy, under the heading, "Sims's attempt to disturb our friendly relations," states that it was my evident purpose to arouse prejudice against Great Britain or in Great Britain against the United States; that

In view of the evidence which the Secretary has introduced, it seems to me, at least, inconsistent on his part to charge me with endeavoring to disturb friendly relations with Great Britain.

As I have already said, if the charges made which I have just summarized, which the Secretary of the Navy made against me in his testimony were true, and if, as he intimates, he was aware of these things in 1917, it is plain that in retaining me in my position abroad, in leaving me in a position where I could betray my own country into the hands of another nation, in leaving me in command of the naval forces abroad and following in most cases all my recommendations, the Secretary of the Navy failed in his trust. If the Secretary was not of this opinion in 1917 or in 1918, it is rather strange that he should have changed his opinion so thoroughly and completely since these hearings began.

In conclusion, I think it would be interesting to refer to a public utterance of the Secretary of the Navy just over a year ago:

In my preliminary statement I have expressed the intention of avoiding all personal references, but it would seem advisable to point out that the assumption that an American citizen is pro-British, or pro-French, or pro-Italian does not necessarily imply that he is un-American, or that his judgment is not to be trusted in protecting the interests of his own country. It is true that I admire the British character and am grateful for the assistance I received from the British naval officers and many others in carrying out my duties during the war, and I have taken advantage of proper occasions to express my gratitude for and appreciation of these services, as well as for the friendship and assistance given by Great Britain to the United States in the past, but in doing so I have never quite reached the limit of admiration and brotherly love attained by the Secretary of the Navy, as expressed in a speech that he made in London in May, 1919, which was reported in the London press as follows:

Mr. Daniels began by recalling that it was just 21 years ago that day that Admiral Dewey sailed into Manila Bay and won the victory which made the day memorable in American history.

And in America they loved to remember that in the fateful days that followed, when the German admiral sought to embarrass Dewey, it was a great British sailor, Admiral Chichester, who balked him. The German admiral called upon Admiral Chichester and asked him, "What will you do if I move my ships over to where Admiral Dewey's flagship, the *Olympic*, is anchored?" The British admiral was a diplomat, as were most of the naval officers, and he replied to the German in two words, "Ask Dewey." It was a delphic answer to those who did not understand the significance of it, but if I might say so, it was very illuminating. They could never forget that Dewey's victory was secured by the cooperation and the fine spirit of the British admiral.

He did not know what we should call this war in history, but he trusted and believed that it would be called "the great war against war." The ships of the two navies had different flags, but they were united in everything, and they might as well have sailed under one flag.

Do not forget that this is the Secretary of the Navy who is telling you this.

They were united in sentiment and in valor, and their flag was that of the Anglo-Saxon people fighting for Anglo-Saxon liberty. Their men had brought

back a spirit of comradeship, and to the motto "Match the Navy" might be added to-day another, "Hands across the sea and brotherhood with Great Britain."

ADMIRAL SIMS'S WORK.

Ten years ago Admiral Sims, speaking at a banquet in London, made a speech in which he said that if the time ever came when the soil of Great Britain was threatened with invasion, the American people would fight with the English people, shoulder to shoulder. Nor did they forget that the admiral was rebuked for that speech, for the President, in pursuance of policy, sent him a formal reprimand. The reprimand in the light of this hour was a decoration of honor. He rejoiced that in this cooperation with the British Navy the Navy of the United States was represented by a courageous, a wise, and a brave man—

That is me—

who understood the very heart of the struggle, and who entered into it with sympathy and the heartiest feeling for his British comrades.

It was our pleasure, and we gladly embraced the opportunity shortly after the United States entered the war, to send over a portion of our fleet to be associated with your British Grand Fleet. Our fleet and yours acted together to lay mines in the North Sea, to convoy ships bringing troops, to fight the stilettoes of the sea, stilettoes of the seas in all zones of danger, and in every naval activity courage and skill were united. We kept all other ships of our Navy ready for sailing orders when the Allies felt a larger naval force might be needed, for from the day the United States entered the war there was no thought but readiness for the fullest and quickest cooperation and use of all our sea power where joint naval statesmanship felt it could be best employed.

The CHAIRMAN. Admiral, I think that the whole of that speech has been put in the record.

Admiral SIMS. It has? I did not know that.

The CHAIRMAN. It was in the last day of the Secretary's cross-examination, I believe.

Admiral SIMS. Oh, I did not know it. I will not read the balance of that, then.

The CHAIRMAN. There was a question whether the part which you read about yourself was contained in the speech or not; and if I remember rightly, I put in a quotation from the London Times of May 2, 1919, covering part of what you have read.

Admiral SIMS. I did not know that.

The CHAIRMAN. And also I put in a quotation from the Public Ledger, of Philadelphia, of May, 1920. As this seems to differ from what we have, can you put in the newspaper article to which this refers?

Admiral SIMS. This is copied from the newspaper article.

The CHAIRMAN. Can you give the committee the newspaper article?

Admiral SIMS. Yes; I can send you the newspaper article.

The CHAIRMAN. Very well.

(The remaining portion of the extract read by Admiral Sims is here printed in the record, as follows:)

It was a gratification to us at home to know that British experts regarded our fleet in home waters well disciplined and ready to come over at a moment's notice as an invaluable reserve, as, indeed, we always deemed it. Our fleet at home was kept busy in the invaluable work of training recruits, and especially in training armed crews for merchant ships. It was tedious, and, in a sense, work that brought no glory to the officers and men. It was well done, while our British brothers of the Grand Fleet waited in enforced inaction for the Germans and suffered a great tedium, and both were making ready for the expected crisis, but each in a different way.

Sometimes it is to be feared civilians of both countries never appreciate the essential power and use of these portions of our fleets not in the most interested areas, but removed from the area where we expected—nay, where we hoped—the decisive great naval engagement would give striking proof of the incomparable power of the Allied fleets. In America we hoped for that hour, for which all other hours were only preparations. Here your naval fighters, as ours, were kept for the day when, in fair combat in the open sea, the opposing forces might in battle give the seal and eternal proof that the sea power of our countries might win as notable a victory as Nelson's or Dewey's.

TRIUMPH OF INACTION.

That this opportunity was not given, because the Germans knew the fact in store if they dared win or lose all by the sea fight, it must be confessed, took away some of the anticipated satisfaction of the men of our navies. But we should remember that the victory was all the more complete. Though lacking the glory of a titanic conflict and denying the human satisfaction of demonstrating that the men of the British and American Navies of to-day are of the same stuff as in the days when neither wind nor rain nor guns nor any other power could withstand their naval supremacy.

It was the most humiliating spectacle in the annals of naval history—was the tame surrender of the much-vaunted fleet that was organized with the boasted purpose to conquer the seas, as the Prussian troops were to dominate the land. In truth, that inglorious, limping spectacle of defeat and disaster had a greater significance of complete undoing in the eyes of the world to-day and in history than could have come from a magnificent victory in a sea duel. It was not thrilling nor spectacular. It did not stir the blood—the thing navy men had made ready for and coveted as their heart's desire. But it did more; it wrote on sea and sky the imperishable doom, the "Thou art weighed in the balance and found wanting," and carried the same lasting message as when these fateful words were interpreted by the prophet of old. To Americans and British peoples in the vast expanse of both countries the call is, "Match the navy" of your country in mutual appreciation, in clear understanding, in full fellowship, and in that loving brotherhood and helpful comradeship which will forever unite the two countries in championship and sacrifice for democracy, liberty, and fraternity.

NORTH SEA BARRAGE.

Why match the navy? The most beautiful fruit of cooperative effort and sincere friendship the war has ripened for us is the spirit which characterized the intercourse of our men of the sea. They were privileged to know each other to the core, to plan together, and to test each others' knowledge of strategy and tactics, and weapons of war, to go down together to the sea in ships, unafraid when the perils of the deep called only for men of the best mettle.

Together they undertook the most gigantic task known to navies, the barrage of the North Sea, where a mistake or lack of skill meant instant death, and where the hardships were too great for any except the stoutest and strongest bodies. They and their equally brave Allies hunted the submarine to his jungle in the trackless sea, and together conquered the most insidious and the most evasive and most murderous foe, which, without humane instinct, lay in wait for ships bearing noncombatants, sending ruthlessly to watery graves women and children, in defiance of every law of the sea, except the common law of the days of piracy. They transported millions of soldiers with a safety which seems almost miraculous. We can never forget that British ships brought over a million American soldiers from our shores, and that the only limit of this invaluable contribution of the British was the limit of your large facilities. It was a service of such emergency and of such capital importance that American appreciation is beyond any expression in words.

AMERICAN LOVE FOR BRITISH NAVY.

We love to think in America, and always with deeper love for the British Navy and the British people, of the spirit of friendship displayed by your Admiral Chichester at Manila. Every American officer on duty in southern waters at Vera Cruz in 1914 felt the same grief which bowed down the British

Navy when the news came of the death of your Admiral Craddock, when superiority in gun powder gave victory to the Germans at Coronel.

Close association at that time gave us to see the wisdom and statesmanship of your admiral and to conceive for him genuine admiration and regard. His spirit hovers over us now, drawing the nations nearer together in imperishable friendship. May we not in confidence assert the peoples of both countries will "match the navy" in actual regard, interchange of ideas and closer fellowship which make the intercourse between the nations as noble and helpful as that which existed between the men of both navies?

NAVAL COOPERATION.

I believe I am the interpreter of American wishes from one end of our country to the other when I say that the spirit of comradeship which Chichester and Dewey sealed in Manila Bay is the spirit which the American people devoutly trust may prevail between us to the end of time. Americans want naval cooperation, not naval competition, with Great Britain—cooperation in the maintenance of human liberties the world over, such cooperation as they carried out in European waters during the Great War and such cooperation, under God's providence, as they will carry out again wherever and whenever freedom is assailed by the powers of evil and tyrannical aggression.

Admiral Sims. If any expression of admiration for the services of the British and the British Navy during the war, and before the war, is conclusive evidence that the person expressing such sentiments can not be trusted, what conclusion may we draw from the above speech?

The CHAIRMAN. Is that all?

Admiral Sims. Yes.

(The newspaper article referred to above by Admiral Sims is here printed in the record, as follows:)

SIMS AND BRITAIN'S NAVY ACCLAIMED BY DANIELS IN 1919. VILIFIED IN 1920.

SPEAKING IN LONDON, SECRETARY SAID THE PRESIDENT'S REPRIMAND OF ADMIRAL FOR PROBRITISH SENTIMENT "HAS BECOME A DECORATION OF HONOR"—REJOICED THAT UNITED STATES NAVY WAS REPRESENTED IN ENGLAND BY "COURAGEOUS, WISE, AND BRAVE MAN"—TOLD OF CHICHESTER'S BACKING UP OF DEWEY, OF BRITISH SHIPS TAKING OVER AMERICAN SOLDIERS, ONLY A YEAR LATER TO APPROVE WILSON'S TAUNT THAT THAT NAVY WAS PANIC-STRICKEN.

[By Frederic William Wile. Copyright, 1920, by Public Ledger Co.]

PUBLIC LEDGER BUREAU,
Washington, May 16.

Almost a year to the week before Josephus Daniels trained his 16-inch guns on Admiral William S. Sims and poured an equally ruthless broadside into the British Navy the Secretary of the Navy was in England lavishing unstinted praise on the achievements of Sims and of British sea power in the late war. Addressing the Anglo-American Society in London on May 1, 1919, Mr. Daniels singled out, in the case both of Admiral Sims and the British Admiralty, the very things which the naval Secretary and President Woodrow Wilson between them last week condemned in such brutal and amazing fashion.

Mr. Daniels acclaimed Admiral Sims's "pro-British sympathies"; said that the presidential reprimand Admiral Sims received in 1910 for voicing them "now had become a decoration of honor" and rejoiced that the United States Navy, during the war, "was represented in England by a courageous, wise, and brave man, who understood the very heart of the struggle and entered into it with sympathy and heartiest feelings toward his British comrades."

If that deadly parallel, as regards Admiral Sims, stultifies Josephus Daniels, North Carolina's leading naval expert is made even more ridiculous by his former views of British naval strategy. Last week Mr. Daniels made public with his own unmistakable approval President Wilson's remarkable taunt that "nothing ever happened" in the British Navy because it was "panic-stricken."

On May 1, 1919, Mr. Daniels was on his feet in London eloquently asserting that the final, bloodless triumph won by allied sea power "had a greater significance than could have come from a magnificent victory of a sea duel. He eulogized the valor and patience of "our British brothers of the Grand Fleet who waited in enforced inaction for the Germans."

SAID NAVIES WERE UNITED.

He proclaimed "that while ships of our two navies had different flags, they were united in everything and might as well have sailed under one flag." He said that America was "gratified" to have British experts look upon the United States Navy "as a reserve."

Nor did Mr. Daniels attempt while on British soil to "hog" credit for the North Sea mine barrage as he did before the Senate subcommittee last week for the American Navy. He said in London that "together the American and British navies undertook the most gigantic task known to fleets." And finally, perhaps in most glaring contrast to any of his statements at the Senate hearing, Mr. Daniels told his British audience that "we can never forget that British ships brought over a million American soldiers from our shores—a service of such emergency and capital importance that American appreciation is beyond any expression in words."

Mr. Daniels's speech by a happy coincidence was delivered on the twenty-first anniversary of the Battle of Manila, and he chose the celebrated Dewey-Chichester episode as his opening theme. Among those who heard his panegyric on the British navy were the Duke of Connaught and the American ambassador.

The following report of Mr. Daniels's remarks appeared in the London morning papers of May 2, 1919, and is virtually verbatim:

"Mr. Daniels began by recalling that it was just 21 years ago that day that Admiral Dewey sailed into Manila Bay and won the victory which made the day memorable in American history.

"And in America they loved to remember that in the fateful days that followed, when the German admiral sought to embarrass Dewey, it was a great British sailor, Admiral Chichester, who balked him. The German admiral called upon Admiral Chichester and asked him: 'What will you do if I move my ships over to where Admiral Dewey's flagship, the *Olympic*, is anchored?' The British admiral was a diplomat, as were most of the naval officers, and he replied to the German in two words, 'Ask Dewey.' It was a delphic answer to those who did not understand the significance of it, but if I might say so, it was very illuminating. They could never forget that Dewey's victory was secured by the cooperation and the fine spirit of the British admiral.

"He did not know what we should call this war in history, but he trusted and believed that it would be called 'the great war against war.' The ships of the two navies had different flags, but they were united in everything, and they might as well have sailed under one flag. They were united in sentiment and in valor, and their flag was that of the Anglo-Saxon people fighting for Anglo-Saxon liberty. Their men had brought back a spirit of comradeship, and to the motto 'Match the navy' might be added to-day another, 'Hands across the sea and brotherhood with Great Britain.'"

ADMIRAL SIMS'S WORK.

"Ten years ago Admiral Sims, speaking at a banquet in London, made a speech in which he said that if the time ever came when the soil of Great Britain was threatened with invasion, the American people would fight with the English people shoulder to shoulder. Nor did they forget that the admiral was rebuked for that speech, for the President, in pursuance of policy, sent him a formal reprimand. That reprimand, in the light of this hour, was a decoration of honor. He rejoiced that in this cooperation with the British Navy the Navy of the United States was represented here by a courageous, a wise, and a brave man, who understood the very heart of the struggle, and who entered into it with sympathy and the heartiest feeling for his British comrades.

"It was our pleasure, and we gladly embraced the opportunity shortly after the United States entered the war, to send over a portion of our fleet to be associated with your British grand fleet. Our fleet and yours acted together to lay mines in the North Sea, to convoy ships bringing troops to fight the

stilettoes of the seas, stilettoes of the seas in all zones of danger, and in every naval activity courage and skill were united. We kept all other ships of our Navy ready for sailing orders when the Allies felt a larger naval force might be needed, for from the day the United States entered the war there was no thought but readiness for the fullest and quickest cooperation and use of all our sea power where joint naval statesmanship felt it could be best employed.

"It was a gratification to us at home to know that British experts regarded our fleet in home waters well disciplined and ready to come over at a moment's notice, as an invaluable reserve, as indeed we always deemed it. The CHAIRMAN. The committee will stand adjourned until 2 o'clock this afternoon.

(Thereupon, at 1 o'clock p. m., the subcommittee took a recess until 2 o'clock p. m.)

AFTERNOON SESSION.

The subcommittee reconvened, pursuant to the taking of the recess, at 2 o'clock p. m., Senator Frederick Hale (chairman) presiding.

TESTIMONY OF ADMIRAL W. S. SIMS—Resumed.

The CHAIRMAN. Admiral Sims, was the North Sea barrage ever completed?

Admiral Sims. No, sir; it was not entirely completed. They had not laid down all of the fences, as they called the strips of mines that they intended to lay down; and as a matter of fact, it would never have been completed until the war was over, because we would have continued to lay fences.

In an article which appears in this month's issue of the *World's Work* on the mine barrage, I think I have explained that a mine barrage is never complete. Nobody ever thinks of laying down mines enough to make it entirely sure that any submarine crossing

it would hit a mine; but what we aim to do is to put down enough mines so that the chances of destruction are greater than the enemy would feel justified in taking. In discussing that thing with the people on the other side we estimated that if we had a barrage that made it sure that out of every five submarines that went across it and came back one got lost, it would probably stop them attempting to cross it at all; although of course we would have made it denser as time went on.

The mine barrage was laid in three pieces, three rectangles. We had the big rectangle in the middle and Great Britain had a rectangle on the Norwegian coast and a rectangle on the north side of the Orkney Islands. We assisted to a certain extent in each of those.

Between the northern end of the Orkney Islands and the Norwegian coast there was a gap that had not yet been filled in. The commander of the grand fleet felt that he had to have that hole to go through where there were no mines. They laid deep mines there and patrolled the area of that passage in order to force the submarines down into the mines; but nobody has complete confidence that the mechanism of a mine will do what you want it to do, and that some of them will not come up to the surface.

Besides all that, there was the Pentland Firth, which is one of the most extraordinary pieces of water in the world, due to the fact that the tide runs through there at times at 10 miles an hour. That was also left open so that the fleet could get out to the westward in case of necessity to chase German battle cruisers, without having to go all the way around the Orkney Islands; but it was a very dangerous passage, and one only used by the most expert submarine commanders.

The CHAIRMAN. Was the barrage ever closed to the extent that it was an effective barrage, before the armistice?

Admiral SIMS. No; it never at any time was an entirely effective barrage; but it had got to the position where it was so dangerous to cross it as to make the submarines very cautious and to interfere with their morale, I believe, to a considerable extent.

We knew that the German submarines had orders—when they were coming back, for example, we learned that they had orders—to cross the barrage in a certain place if the weather was smooth and it was daylight, and they came across that way sometimes successfully and sometimes they did not. Sometimes they were fearfully injured and were able to get back. I remember on one occasion one submarine came across and was going into the Skegerrak and she received a call for help from another submarine which was following her that exploded a mine, but the mine did not sink her, although it injured her. But never at any time was it an absolute barrier nor was it ever anticipated that it would ever be an absolute barrier, but it would have been a sufficient barrier to keep submarines from going across if the war had continued for a certain length of time more. But we were continually building the mines and sending them over. The flow had not stopped at all at the time of the armistice.

The CHAIRMAN. During how much of the war, if at any time, was it an effective barrage?

Admiral SIMS. That is a little difficult to say about an effective barrage. It depends on what you mean by effective. I think from

a certain date you might say that it had an effect on the morale of the Germans. Before any mines are laid at all we have to notify everybody, all nations, that a certain area is to be mined. I think you have got to give them three weeks' warning. At the end of that three weeks, of course, the enemy does not know where you have begun to lay mines. It begins from that time to have an effect upon the morale of his forces. After some submarine gets into trouble that effect is greater. We fixed the date for the beginning of the laying of the barrage about the 1st of April, 1918, but the mine layers—converted mine layers—had not been completed in this country and they did not begin until about the first week in June, 1918. Then they had trouble with the mines.

The CHAIRMAN. Why did we not begin the 1st of April?

Admiral SIMS. The mine layers were not ready, the ones that were transportable from over on this side; the work had not been completed in making them ready to drop mines—putting elevators in them, etc.—so that they did not begin until the first week in June to lay mines. Then this was a new mine that had not been experimented with except individual mines, and there had been no experiments in laying numbers of these mines before, and the firing mechanism is a very delicate thing, that depends upon a very, very small spark of electricity, and there were defects of some kind in there that we did not know about, so that when they would lay a bunch of mines from a ship you would find that perhaps 15 or 20 per cent of those mines would explode automatically, due to some defect of some kind; they did not know what; so that we had to arrest the mine laying for about six weeks and did not begin until nearly two months—did not begin again until the month of August, 1918, and by that time we did not have more than from 3 to 4 per cent of explosions.

Then they went ahead and laid all the mine fields with very considerable rapidity, interrupted only by the ordinary accidents of navigation and bad weather, and they continued until right up to the armistice.

The CHAIRMAN. In the testimony of the Secretary of the Navy, Admiral, I think he stated that you furnished escorts for convoys into St. Nazaire—escorts of destroyers—

Admiral SIMS. Yes.

The CHAIRMAN (continuing). And that after they had reached St. Nazaire you removed the destroyers and ordered them back to their base.

Admiral SIMS. Yes. The troop ships, etc., were met about 300 or 400 miles to the west of Ireland, according to the position that the submarines were operating in, and were taken from there up to the very harbor of St. Nazaire, or Brest, as the case might be, where they were met by any small vessel from the French port that would bring a pilot out with the latest information as to which channels were clear. Then the destroyers immediately went back to Queenstown, where they would stay three days and then go back for another convoy.

The CHAIRMAN. You did not escort vessels back from St. Nazaire, coming out?

Admiral SIMS. You mean empty vessels?

The CHAIRMAN. Yes.

Admiral SIMS. No; those vessels stayed in there until they got their troops out and got out what freight they carried, and then they were escorted off the coast by the French forces.

The CHAIRMAN. And your orders were for the destroyers to go back to the base immediately on leaving them at St. Nazaire?

Admiral SIMS. The destroyers had to go back there because they were working to the extreme limit then to bring in all the convoys that were coming in through the English Channel and through the south channel to the Irish Sea. The north channels were handled by destroyers that were stationed at Duncannon. Those destroyers were working at that time to the extreme limit to which we could push them. There were about four destroyers that were out of commission all the time, due either to boiler troubles—that is steaming too much without being able to properly overhaul—and accidents of navigation, and so forth, that would have driven any commander to put some of them out of commission; and the personnel could not stand much more than seven days out and three days in, in the duty that they had to perform; so that we had to take the risk of escorting empty transports off the coast with yachts, and so forth, on the French coast. It would have been better for those vessels if we could have given them destroyers, of course. Sometimes we were able to do it, but not very often, depending on the arrival of convoys that would coincide with the dates of convoys going out; but that did not often happen, because the instructions from the Navy Department, in accordance with the request of the War Department, were to make the turn around of transports as rapid as possible; so that when, say, six transports came in, instead of waiting until all six were discharged, we sent them out as they had to take their turns at the wharf; we would send out perhaps one or two or three of them only as quickly as they could be discharged, so that they could go back to make another turn around and another convoy. The whole business was a question of time in what they called the turn around.

The CHAIRMAN. Have you any questions, Senator Ball, to ask the witness?

Senator BALL. No, sir.

The CHAIRMAN. Have you any questions, Senator Pittman?

Senator PITTMAN. Admiral, what evidence did you have in your possession when you first came before this committee that you did not present, that you have presented this time?

Admiral SIMS. Is there any particular point that you have reference to?

Senator PITTMAN. No. If you do not understand my question I will repeat it.

Admiral SIMS. Yes; I understand the question, but it is a very comprehensive question. I was wondering if I could remember them all. Do you have reference, for instance, to the telegram that was sent to me by the President? That was one thing that I did not put before the committee at that time, and I think the reason is perfectly clear, from the telegram itself that was sent to me by the President, in which I was given to understand that I would keep this thing entirely confidential.

Senator PITTMAN. Is there any other evidence that you had in your possession when you first testified that you did not present to the com-

mittee, that you have presented on this occasion, other than that telegram you have just mentioned.

Admiral SIMS. There is one little piece of evidence there, about the establishing of a planning section in the Office of Operations, that I did not put in the last time, I believe; but that is not of any particular importance. It is in the testimony this time, with the telegrams that were sent over requesting advice or suggestions as to the composition of the planning section and what subjects it should take up and what its personnel should be, etc. There may be others that I can not recall right now.

There is a considerable amount of text that has been submitted this time that was not submitted last time, and as I remember I specifically invited the attention of the committee to the fact that I was supporting and substantiating certain statements of mine by extracts from cables and letters and that I had not included the whole of the letter or cable; but I suggested that the committee should ask the Navy Department to supply them with the full text of all letters from which I had made quotations. Whether the chairman applied for those letters, and if he did, whether he got them or not, I do not know. In certain parts of this testimony I have included the whole of a letter from which I had previously given quotations.

Senator PITTMAN. Yes.

Admiral SIMS. In a number of instances I have done that.

Senator PITTMAN. Is that the extent to which you have placed before this committee testimony now that you had in your possession on the former hearing that you did not present to the committee then?

Admiral SIMS. There were certain personal letters and certain extracts from personal letters that were not necessary to be put in then, but were necessary to put in now as a defense against certain allegations that were made against me by various witnesses.

The CHAIRMAN. And also certain newspaper extracts?

Admiral SIMS. Yes. I would have to go through the testimony pretty carefully to be sure that I could remember all those things now. I only included in my other statement and in this statement the documents and the evidence that I thought was necessary under the situation. There are a good many documents, of course, that I have knowledge of the existence of that I could have gotten from the Navy Department, I suppose, in further substantiation of certain ones of these statements; but I have put in the ones, all that I thought were necessary to bring out facts, and I have not kept back any documents of any kind that I know of that would have enlightened this committee in any way. I can assure you that I have made every effort to bring out the facts as they exist according to my estimation of what they mean, and have no other idea or no other intention at all.

Senator PITTMAN. My purpose in asking that was simply this, admiral, to ascertain whether or not there were any matters that I might consider the cross-examination would develop for the benefit of the committee, and I do not want to take up time in cross-examination unless it will further enlighten the committee; and as there seem to be very few new matters brought out that were not discussed in the former hearing quite fully, I—

Admiral SIMS. I should say, generally, that there is no new matter brought out that bears upon the object of the investigation. There

necessarily has been a good deal of matter brought out that was not at all necessary, too, in order to answer what I conceived to be misinterpretations and mistaken statements that have been made by certain of the witnesses; but most of those things have nothing to do with the real object of the investigation. I should say the bulk of them, you might say, were in justification of my actions and in defense of my personal character, that, of course, I did not bring in before. I did not think it would be necessary.

Senator PITTMAN. I do not desire to cross-examine, of course, in regard to opinions, and I am not denying that you have a right, you understand, in answering an attack on you, to make any argument you see fit, in the matter.

Admiral SIMS. Yes.

Senator PITTMAN. But I consider it a waste of time to cross-examine a witness as to his opinions based upon facts, when he has submitted the facts.

Admiral SIMS. It is my opinion that all of the evidence as far as I am able to introduce it, is in. It is quite true that in reference to certain subjects I have brought in other details which I did not consider necessary when I had my first hearing, and which I only came to consider necessary because those particular subjects were made the basis of really an attack against my judgment and to a certain extent against my personal character, and therefore I thought it necessary to bring in other facts which I did not think were necessary and which were not necessary before, and largely for the defense of my actions; but that is all. I do not think there is anything that bears on the case at all.

The CHAIRMAN. As a matter of fact, Admiral, your statement consists largely, does it not, of a marshalling of the testimony that has already been given by witnesses?

Admiral SIMS. Yes; by witnesses.

The CHAIRMAN. And those witnesses have all been examined and cross-examined?

Admiral SIMS. Yes. Those witnesses have all been examined and cross-examined; and in this statement I have presented now I have referred only incidentally, a couple of times, to certain of the witnesses that have been called here at the request of the committee, and have based the rebuttal statement nearly exclusively upon the testimony of witnesses called at the request of the Secretary of the Navy.

Senator PITTMAN. In view of this statement of the chairman and of your answer to it, I have no cross-examination.

The CHAIRMAN. I will not answer for everything, of course, that is in the testimony, for I can not recall everything, but that is my impression.

Senator PITTMAN. I do not want to examine the witness as to matters of argument and conclusions, but as to facts.

The CHAIRMAN. New facts?

Senator PITTMAN. New facts; yes.

The CHAIRMAN. This morning, Admiral, you stated to the committee that you had not had an opportunity to examine the last 600 or 800 pages of the testimony.

Admiral SIMS. In cross-examination, I think.

The CHAIRMAN. Which consisted principally of cross-examination?

Admiral SIMS. Yes.

The CHAIRMAN. Of the Secretary of the Navy. Have you had an opportunity to go over this testimony yet?

Admiral SIMS. No, sir; I have not.

The CHAIRMAN. You suggested this morning that you be allowed to put in a supplementary statement if you thought it was necessary, covering this matter, and I told you that—

Admiral SIMS. It would not be admissible.

The CHAIRMAN (continuing). We could not consent to it because it would hardly be fair, because it would not leave an opportunity for cross-examination.

Admiral SIMS. Yes.

The CHAIRMAN. Now, if the committee feels otherwise about it, I am entirely willing to have you do that.

Admiral SIMS. I do not know anything about the statements beyond the copies that were sent me, and I think that includes practically all of the cross-examination except the small squibs that I have seen in the press, which, of course, were not complete.

The CHAIRMAN. If you want to wait, you can take your time to examine these last pages of the testimony and appear again before the committee. What would you suggest, Senator Pittman?

Admiral SIMS. No; I would not like to do that; with all due respect to the committee, I am tired of appearing before the committee.

Senator PITTMAN. I think that is almost unanimous.

Admiral SIMS. Yes; I am quite sure of it.

The CHAIRMAN. What would you suggest, Senator Pittman? Would you have any objection to his putting in a supplementary statement? There has been very little examination on his statement so far, and there probably would not be much on this.

Senator PITTMAN. From the admiral's statement, I do not think that he has any hopes of finding anything new, but—

Admiral SIMS. You never can tell when the Secretary testifies. He has surprised us several times.

Senator PITTMAN. A person very frequently thinks of belated repartees; I have noticed that myself. I generally think of my repartees going home.

The CHAIRMAN. Have you any objection to the admiral making some additional statement?

Senator PITTMAN. The only objection I have, Mr. Chairman, is that we have all been buoyed up with hopes for two days that this was going to end, and I can conceive if we open the door to one side to put in a written statement the other side will then insist upon putting in another written statement, and it is really interminable argument. The facts are all in and argument should be left to the committee. If we do not agree on some things, we will argue them; but the facts are all before us.

Admiral SIMS. I will be entirely satisfied to abide by any decision the committee makes. If the committee wants a statement, I am perfectly willing to make it if I find I can carry it on. If they do not, I am perfectly willing to let it go.

Senator PITTMAN. Personally, I would like to start to work to examine this mass of evidence with the hope of being able to make a report in the near future, and we could not do that as long as there was a door open to the injection of something new.

The CHAIRMAN. When could you supply us with this supplementary statement? I do not know that you would have any to make.

Admiral SIMS. I do not, either.

The CHAIRMAN. We want to give you a fair opportunity, that is all.

Admiral SIMS. I think we had better drop the whole business, then. I do not think there could be anything of particular importance, and if the committee does not care to have it I do not care about it particularly. As a matter of fact, it is up to the committee. If they want it overhauled, I am willing to do it.

The CHAIRMAN. It simply covers the last three days of the cross-examination, does it not?

Admiral SIMS. It does; about. Really, I want to put this up to the committee: If they would like to have me overhaul that testimony and make any statement about it, I am willing to do it; if not, I will be glad to get out of it.

The CHAIRMAN. It is not the committee caring about it; it is simply giving you the opportunity. You do not care about it?

Admiral SIMS. No, sir; I do not care about it.

The CHAIRMAN. Then, Admiral Sims, you may be excused.

Admiral SIMS. I would like to express to the committee my appreciation for the courtesy with which I have been received and handled in this matter, and I also wish to say that if I have at times shown a little bit of temper, I am sorry, especially with reference to my friend Senator Pittman.

Senator PITTMAN. I assure you, Admiral, I have no hard feelings about it. I enjoyed it as much as you did.

Admiral SIMS. Thank you.

The CHAIRMAN. During the course of the testimony given by the Secretary of the Navy criticisms were made of Admiral Fiske and Admiral Wilson for what were characterized as attempts on their part to Prussianize the Navy. Both of these officers have written me, stating that they would like to answer these criticisms. I suggested that they should prepare statements for the committee instead, and they have done so, and these statements I now have before me, and I will read them to the committee if the committee thinks that that is the proper action to take in regard to these statements. Both of these officers are in the room at the present time. If the committee would rather have them go on in person, I suppose we can put them on the stand at the present time. However, I think it will be entirely satisfactory if the statements are read.

Senator PITTMAN. The only thing I suggest is this: That if the statements are put into the record the Secretary be given three or four days, if he wants to, in which to reply by written statement filed with the committee to any new matter that he may consider brought out in them. As a matter of fact, I doubt if there is anything brought out one way or the other.

The CHAIRMAN. I will ask Senator Pittman and the other members of the committee whether you would rather have these two admirals go on the stand, so that you can cross-question them yourselves, when they have gotten through, if you see fit to do so?

Senator PITTMAN. I do not think it would serve any purpose, if I understand the scope of their statements.

The CHAIRMAN. I have not read their statements. I do not know how much scope they cover. One statement is a fairly long statement.

Senator PITTMAN. How would it do to let me have a copy of those two statements and postpone this matter until 10 o'clock Monday morning, and by that time I can look them over and see whether or not it is bringing new matter in that would require recross-examination?

The CHAIRMAN. I would like very much to get over with the matter to-day, if I can. I think your first suggestion, that the Secretary be allowed to make a written statement and to put that in the record after he has read these statements, if he sees fit to do so, is all right.

Senator PITTMAN. I think that is sufficient.

Senator KEYES. Would his statement cover these particular matters?

Senator PITTMAN. Undoubtedly.

Senator BALL. No new matter?

Senator PITTMAN. Nothing new.

Senator BALL. I think that would be the most satisfactory.

Senator PITTMAN. It would be to me.

Senator BALL. It would to me.

The CHAIRMAN. If that is the sense of the committee, we will take that action.

I will read first the letter of Admiral Fiske.

Senator PITTMAN. Just put them in without reading them.

The CHAIRMAN. I think I would like to see what they have said. I would like to read them, if you do not mind. You are not going to cross-examine on them.

Senator PITTMAN. No; not at all. I dislike very much to separate myself from the committee, and I like to hear the chairman read as much as I like to hear the others. There will be nothing else done except this?

The CHAIRMAN. No; and after reading these statements I think the committee will adjourn, subject to the call of the chairman.

Senator PITTMAN. As I understand, after reading these statements there is no other evidence or anything else to be filed before this committee except the statement of the Secretary answering these statements.

Senator BALL. The statements made in these letters.

Senator PITTMAN. Undoubtedly.

The CHAIRMAN. Some new matters may come up that we may want to consider. I do not mean putting on any other witnesses, but some belated statement may come in. For instance, I have asked for plans from officers on the question of reorganization of the Navy, and some have replied and some have not, and there are undoubtedly other papers at different times that will come in.

Senator PITTMAN. Things that have been heretofore asked for; is that it?

The CHAIRMAN. Yes.

Senator PITTMAN. That is true; but I mean going to open up this hearing.

Senator FALL. That is letting in any additional evidence on the matter before us.

Senator PITTMAN. And we are not going to ask for any additional evidence besides what we have got before us, excepting the things we have asked for.

The CHAIRMAN. Now, one minute. The Secretary has explained that he wants to put in a certain matter that has come up about tables.

Senator PITTMAN. Well, that has been all agreed—that he shall put that in—has it not?

The CHAIRMAN. Oh, yes. I do not know whether he is going to put them in himself or another officer.

Senator PITTMAN. I do not object to other things going in so long as it stops somewhere.

The CHAIRMAN. We all want to stop; but I do not want to make any hard-and-fast rule whereby something will be objected to on a technicality.

Senator PITTMAN. You are going to adjourn after this to-day?

The CHAIRMAN. Yes; subject to the call of the chairman.

This is the statement from Admiral Fiske [reading]:

WASHINGTON, D. C., May 28, 1920.

TO THE SENATE SUBCOMMITTEE ON NAVAL AFFAIRS.

GENTLEMEN: (1) On May 24 and 25 Secretary Daniels, in his testimony before you, denounced certain acts of mine while aid for Operations and made statements that reflected adversely on my character, mentality, and professional ability.

(2) I do not think it necessary to defend myself against these statements because of the following facts:

(3) At your afternoon hearing on May 25 your chairman read into the record an official letter from the General Board to the Secretary of the Navy, dated August 1, 1914. At the same time your chairman read an official letter, signed by the Secretary, dated April 21, 1916, addressed to the Senate, in response to a resolution by the Senate, dated April 12, 1916. In this letter Secretary Daniels made the statement to the Senate "That the letter of August 1, 1914, does not refer to 'the necessity of bringing the Navy to a state of preparedness,' as stated in the resolution of your body." Yet the first paragraph of the letter of August 1, 1914, from the General Board, read:

"In view of the immediate danger of a great war in Europe, and in pursuance of its duties as laid down in paragraph R 167 (1) of the Navy Regulations, the General Board earnestly urges that the battleships be brought home, docked, and put in perfect readiness, with the exception of the ships actually necessary in Caribbean and Mexican waters."

The last two sentences of this letter read:

"* * * * * and if the end of the war should find Germany stronger than ever in her European position, and with her fleet practically unimpaired, the temptation will be great to seize the opportunity for obtaining the position which she covets on this side of the ocean. We should prepare now for the situation which would thus be created."

(4) On November 5, 1914, I handed to Secretary Daniels a letter I had written to him reporting that the Navy was unprepared for war, and specifying in what particulars. This letter was filed with the Navy Department under date of November 9, 1914. In his letter of April 21, 1916, just mentioned, Secretary Daniels, referring to my letter, said:

"I did not know of its existence until long after it was written."

(5) While I was aid for Operations I was the Secretary's senior aid and the officer specially charged by the regulations with advising him in matters of naval strategy, fleet operations, and the readiness of the Navy for war.

(6) I soon realized that even in peace the organization of the Navy Department was inefficient; in war it would have been inoperative. There was no adequate agency for making war plans, no means of expanding the personnel without depleting the trained crews of the battleships, no method for insuring prompt mobilization, no machinery for handling the necessary mail and telegraph service, no way of knowing the state of preparedness of the various bureaus, no system for coordinating their efforts.

(7) When the war broke out in Europe on August 1, 1914, I explained the situation to the Secretary, but was met with the assertion that there was no danger whatever that the United States would get into the war. Realizing the necessity for getting an operative organization, I persistently presented my views. On several occasions when I attempted to point out the forces that were dragging us toward war, I was told to "trust the President."

(8) You know the various acts which I performed in order to get the organization established which later handled the Navy throughout the war. These are the acts for which the Secretary denounced me. Had I not performed them, the Navy would have gone into the war without the two principal agencies which the Secretary and his supporters have declared to you were vital—I mean, the office of Chief of Naval Operations and the administrative plan.

(9) Had I not done what I did, the Secretary himself would surely have been disgraced soon after we got into the war, for the unpreparedness of the Navy would then have burst suddenly on the people, and he would have become the object of their wrath.

Instead of abusing me, I submit that the Secretary ought to thank me for saying not only the Navy but himself.

Respectfully,

BRADLEY A. FISKE,
Rear Admiral, United States Navy (Retired).

(The following communication was subsequently received from the Secretary of the Navy, and is here printed in the record, as follows:)

THE SECRETARY OF THE NAVY,
Washington, June 2, 1920.

DEAR MR. CHAIRMAN: I am told that at the last day of the hearings Rear Admiral Fiske, retired, who had been heard at length, airing his grievances earlier in the hearings, came forward again and presented a letter which was placed in the hearings purporting to be an answer to my testimony. It is far from my purpose to make any detailed answer to his nine absurd statements except to refer to my direct testimony and cross-examination and to add six brief observations.

First. Rear Admiral Fiske's plan of organization of the Navy Department was repudiated in the act of Congress, and therefore had nothing whatever to do with the operations of the Navy in peace or war. His Prussianized plan was as much like the plan proposed by me and adopted by Congress and operated successfully during the war as Von Tirpitz is a counterpart of Abraham Lincoln. The preparation under the administrative plan owed nothing to him in conception or execution. His egotism, as I told your committee, is monumental and his obsession that he was responsible for even a scintilla of naval efficiency is born of supervanity and has no basis to rest upon. He had nothing to do with any preparation for war, nothing to do with the splendid organization.

Second. Although nearly every other retired officer volunteered for service of any character in March or April, 1917, he wrote a letter either the latter part of March or early in April asking me not to call him into active service in the war, giving as his reason that he was working on a torpedo plane, and said: "We expect that it will be ready before June 1, 1917," and "expect to produce a large torpedo plane by September," and added, "I beg leave to express the hope that I shall be permitted to proceed with this work, as I believe I can do more good this way than in any other way." Other officers volunteer to come back and do what the department thought would help win the war. He chose his own field and experimentation and did not serve in the Navy in the days when other officers were donning the uniform. His request not to be called to duty was granted. Much later in the war he wrote, making application to be assigned to naval duty. His letter was as follows, written 14 months after war was declared:

128 WEST FIFTY-NINTH STREET, NEW YORK,
June 17, 1918.

From: Rear Admiral B. A. Fiske (retired).
To: The Secretary of the Navy (Bureau of Navigation).
Subject: Applying for duty.

1. I respectfully apply for whatever duty the department may assign me.
2. On account of the dangerous illness of my wife, who is practically helpless and dependent on me, I should prefer duty near New York.

B. A. FISKE,
Rear Admiral, United States Navy (Retired).

His services were not needed then, and he was not called. His egotism, his obsession of Prussian infallibility, and his visionary and impracticable ideas were such that he could have rendered no valuable service. He would only have been a hindrance.

In view of the fact that at the beginning of the war he definitely requested not to be called to active service, the following statement, on page 680 of his book, is one which it is difficult to reconcile with the facts:

* * * "On November 11 an armistice was signed, and the war virtually ended.

"This caused great rejoicing among all the allied nations; but it brought me face to face with the fact that I had not been officially employed during the entire war, though I had made official application for duty and many retired rear admirals older than I had been employed who had not had as complete and varied experience as I. No reason (I mean, of course, no good reason) for not employing me occurred to me."

Third. While Rear Admiral Fiske was called aid for Operations—his true title should have been "Obstacle to Operations"—he made my life a burden urging me to appoint him commander in chief of the Atlantic Fleet. This exhibition of self-seeking and lack of the proprieties was as reprehensible as it grew tiresome. If I had granted his request and inflicted him on the Atlantic Fleet the public would have heard none of his absurd criticisms and pretensions, but the efficiency of the fleet would have suffered. My sense of duty would not permit me to assign an officer so unfit for that duty as commander in chief of the Atlantic Fleet.

Fourth. Rear Admiral Fisks opposed my policy of giving enlisted men an opportunity for education, and grew furious over my wine-mess order. He went so far as to write me a letter which was a grave and unjust reflection upon the officers of the Navy, saying:

"Another effect would be the increased temptation to officers to secrete whisky in their rooms and to drink whisky (a most dangerous thing) instead of wine or beer. Another effect would be an increased temptation to use cocaine and other drugs."

The order has been in effect for more than six years, and nobody has ever heard of a single officer either "secreting whisky in their rooms and drinking whisky, instead of wine or beer, or using cocaine and other drugs."

Fifth. Rear Admiral Fiske has taken great credit to himself that he "resigned" as a protest against me in some way. He resigned verbally on April 1, 1915, a position which the act of March 4, 1915, had required to be abolished, and according to his own statement in his book, his written resignation was submitted on April 2, no reason being given in it, but his reason being that according to a newspaper the Secretary was considering the idea of appointing another officer to the new position of Chief of Naval Operations. Admiral Fiske says that when he heard this "I realized immediately that I had to act at once or be put in a very mortifying position." Such was the high motive behind his much-advertised resignation.

Sixth. I have never "denounced" Rear Admiral Fiske or "abused" him. On the contrary, I marvel at my standing him so long. I thought for a long time, though he worshipped Prussianism and sought vainly to convert me to it, that he was loyal to the Secretary of the Navy, for he was always preaching that loyalty was the first essential of a good naval officer. Indeed, I did not know the full extent of his disloyalty until I read in his book, his so-called diary, in which he relates his version of conversations, always making himself out a reincarnated Mahan. One extract alone from his diary shows that I should have dismissed him from a position in the department long before I interned him for the efficiency of the Navy.

Admiral Fiske, in a confidential position requiring peculiar loyalty to his superior, could have resigned at any time in protest against any policy or action which he considered detrimental to the Navy. He chose to cling to his office to the last minute and secretly and surreptitiously to "bore from within" in a most disloyal manner. The following quotation from his book is a complete demonstration of this:

"December 27. Sunday. Called on Hobson in p. m. and explained why a General Staff is absolutely essential if one is to have a Navy of maximum effectiveness, though it is not necessary if one is to have merely a Navy.

"January 3. Sunday. Had long interview in p. m. with Hobson at his residence in regard to General Staff, etc. I took many documents with me, and Hobson became thoroughly interested. We concluded that it might be better-

not to attempt to get through legislation for any modification of aid system, because Secretary would say present aid system is adequate and that it might be better to propose a new scheme whereby an addition would be made to present system and additional means be provided to accomplish preparation for war. So I asked Capts. H. S. Knapp, Hood, and Oliver, and Lieut. Commanders Cronan, Madison, and Knox to be at Hobson's at 8.30 p. m. We all met there in Hobson's study, and sat till after 11 p. m., when we adjourned. We agreed on program whereby Chief of Naval Operations is to be legislated for and to have 15 assistants.

"The entries under head of December 27 and January 3 give the outlines of a good deal of work that Hobson and I did on those days and in the intervening week. The plan which we drew up was drawn up in the light of my knowledge of strategical requirements and Hobson's knowledge of congressional requirements. When the six officers arrived that evening they came secretly, because they were engaged on an exceedingly dangerous mission."

It is needless to add more to show that his testimony deserves no consideration. This statement should appear in the hearings just after Rear Admiral Fiske's letter of May 28, 1920.

Sincerely, yours,

JOSEPHUS DANIELS.

HON. FREDERICK HALE,
Chairman of Naval Subcommittee,
United States Senate.

This is the statement from Admiral Fullam [reading]:

WASHINGTON, D. C., May 24, 1920.

From: Rear Admiral W. F. Fullam, United States Navy, retired.

To: The subcommittee of the United States Senate investigating the conduct of the war.

Subject: Charges and insinuations made by the Secretary of the Navy as to the acts and motives of Rear Admiral Fullam concerning the reorganization of the Navy Department, and the preparedness of the Navy for war.

1. It has come to my attention that the Secretary of the Navy in his written statement to this committee, under certain captions such as: "They wish to destroy the American policy of civilian control;" "Obsessed with ideas of Prussianizing the American Navy," etc., has linked my name with the names of Admiral Fiske and others and has charged, either directly or indirectly, that I am a "disciple of Von Tirpitz"; that I am by implication classed with those who "have frankly avowed their advocacy of Prussianizing the Navy"; that they seek to "camouflage their Prussian ideas," etc.

2. The seriousness of these charges is perfectly evident. They have been published in the press all over the country, and my name has appeared in the newspapers in connection with these published statements.

3. As a citizen of the United States, and as an officer of nearly 47 years service in the Navy, I conceive it to be my right, as well as duty, to most emphatically deny the justice and the truth of these charges, and to declare that these statements and insinuations as to my conduct and motives regarding the organization of the Navy Department and the preparedness of the Navy for war have not the shadow of a foundation in fact.

4. In order that I may justify myself before the Congress, the people, and the Navy, after serving them loyally since the day I entered the Naval Academy in 1873, I beg to submit as briefly as possible a true account of my work and the motives that have inspired all my acts and thoughts in connection with the two great subjects, organization and preparedness, the two problems which, if not properly solved, must inevitably leave the Navy in a state of unreadiness for war and thus imperil the safety of the country.

5. In the beginning, let me say that I deem it an honor to have my name linked with the names of Fiske and Sims, and the other officers who have testified as they have before this committee in favor of reorganization and preparedness, and in criticism of the organization and policies of the Navy Department, which, I affirm, sent the Navy and the fleet of the United States into the World War unprepared as a whole, in personnel and material, and in all other practical details that have a direct bearing upon the instant readiness of the Navy for battle—the one condition above all others which every naval officer should constantly advocate, in that this condition of readiness:

constitutes the only return the people can get for the annual expenditure of hundreds of millions of dollars in the maintenance of a Navy.

6. In this connection I beg to emphasize the fact that naval officers are educated at great expense to the Government of the United States and for but one purpose—to prepare and maintain themselves and the Navy in a condition that will most surely and effectively defend their country in war. If they fail in this they fail to faithfully and properly perform the one duty that justifies their existence. They have no right to neglect this sacred duty, and then accept the salaries and emoluments which the Navy offers them and the ultimate benefit of the retired list. They should have the courage to stand squarely for this principle at all times, regardless of any personal discomfort or any personal disfavor or disadvantage which they may incur by such devotion to duty. The disfavor that results from a manly refusal to surrender a principle is a distinction, and the greater the disfavor the greater the distinction.

DEPARTMENTAL ORGANIZATION.

7. It will not be denied that departmental organization is the key to naval efficiency and naval preparedness. The officers and men of the Navy will find themselves powerless to prepare for war or to wage war with the maximum of success if the Navy is handicapped by a faulty organization of the Navy Department. The department deserves the severest possible censure if it neglects to coordinate all agencies, and if it falls by its acts and policies to inspire the constant effort, the constant zeal, and the constant enthusiasm of the Navy personnel in promoting real fighting efficiency. And the result may be still worse if officers are professionally discouraged, if their intelligence is not utilized, if their efforts and abilities are not rewarded, if their good will and respect are alienated and their confidence destroyed.

8. It was for patriotic reasons that Admirals Mahan, Luce, Taylor, and other distinguished officers of the Navy have unceasingly advocated a thorough reorganization of the Navy Department almost from the time of the Civil War to the day they died. In this they did not, nor did those who followed them, reflect upon nor deny the necessity for the bureaus and other agencies of the Navy Department. They fully recognized the need of, and the excellent work of these bureaus, as well as the efficiency of their chiefs. They sought to destroy nothing, and they did not advocate the abolition of any agency, but they simply sought to so group and coordinate these agencies that the whole machine might work as a unit. Still less did these distinguished men and their disciples advocate the slightest possible diminution in the authority, the necessary and supreme authority, of the Secretary of the Navy.

THE MAHAN-MOODY COMMISSION.

9. After many years of vain effort by these officers and by various Secretaries of the Navy to secure from time to time a reorganization of the Navy Department, President Roosevelt, in the fall of 1908, became actively interested in this important subject. He was urged by several naval officers, especially by his aide, Capt. (now Rear Admiral) Cameron McRae Winslow, and Lieut. (now Rear Admiral) William S. Sims, to appoint a commission to formulate a plan of departmental reorganization.

10. This commission was appointed early in 1909. It is interesting to note at that time Lieut. Sims was very active in this movement and worked unceasingly in the support of President Roosevelt's plan for naval reforms. I have many letters from him dating from October, 1908, until the commission was finally appointed. Among them is the following which I beg to insert as proof of his connection with this most important reform:

Confidential.

WASHINGTON, D. C., January 6, 1909.

MY DEAR FULLAM: Your letter of yesterday just received. I have been absolutely up to my eyes in work in reference to the famous commission.

If you will go and see Admiral Luce he will show you letters that I wrote to him yesterday and the day before and which make it appear that the commission is to be appointed. The consent of Justice Moody, Mr. Morton, and others has been obtained, and Admiral Luce, Capt. Mahan, Admiral Folger, and Admiral Evans have been ordered to be on the commission. The President insisted upon the latter name.

He sent an order this morning to the Navy Department that he wished you notified that you would act as secretary to the commission, but not as a member.

You will see by the letters I wrote to the admiral, that the commission is now recommended by the Secretary, so that there seems hardly any possibility of the thing falling through again.

In view of the above information I think you may reasonably conclude to cheer up!

Very sincerely, yours,

WM. S. SIMS.

11. In compliance with orders from President Roosevelt the commission met at the Navy Department and took up its work. As stated in my previous testimony I personally furnished each member of the commission with files and data showing the details of organization of the navies of Great Britain, Germany, France, and Japan.

12. There being but a few weeks before the end of President Roosevelt's administration, the commission wishing to submit a report before March 4, 1909, confined itself to a mere outline of an organization and asked Admiral Mahan to formulate a declaration of principles which in his opinion should form a basis for departmental organization. It is not necessary to file at this time all the subject matter in the work of the commission. It will suffice to read and insert the statement of principles prepared by Admiral Mahan, which was enthusiastically approved, signed by all members of the commission and forwarded with their report to the President, who approved of the whole and sent the following letter of appreciation to Justice Moody, the president of the commission:

THE WHITE HOUSE,

Washington, D. C., February 26, 1909.

SIR: I have received the three reports transmitted by the commission. I can not too highly thank the commission for the work it has performed, and I appreciate to the full the personal sacrifice involved in such performance. I regret that it is not in my power to do no more than to thank you in behalf of the public for a great public service. In accordance with your request the military members of the commission will be relieved from further duty and the civilians are hereby excused.

Again most heartily thanking you, believe me,

Sincerely, yours,

THEODORE ROOSEVELT.

HON. WILLIAM H. MOODY,

Associate Justice, Supreme Court of the United States.

NOTE.—This was written by Admiral Mahan, and approved by the commission:

WASHINGTON, D. C., February 20, 1909.

GENERAL PRINCIPLES GOVERNING NAVAL ORGANIZATIONS.

To the PRESIDENT:

(1) The office of the Secretary of the Navy being executive in character, nothing should be admitted into an organization of the department which would qualify his authority or diminish his ultimate responsibility. He has been in the past, and in the future, should be a civilian. He is the representative of the President, the constitutional Commander in Chief of the Army and Navy, under whose direction his authority is exercised.

(2) The duties in charge of the Secretary divide under two principal heads, closely related but generically distinct, civil and military.

The civil duties embrace the provision or preparation of all the material of war. This is the function of the present bureaus.

The military duties concern the use of that material, whether in war or in such exercises as conduce to fitness for operations of war.

For the direction of these military duties no subordinate provision corresponding to the bureau on the civil side exists in the present organization established by statute.

(3) The discharge of both these classes of duty involves a multitude of activities, quite beyond the immediate personal knowledge and supervision of a single man. This necessitates a subdivision of the duties by which means the supervision of the Secretary is exerted through the medium of responsible

subordinates. In this subdivision the principle of undivided responsibility, within the appointed field of subordinate supervision, should obtain, as it does in the superior office of the Secretary.

The bureau system, as now established by law for the civil activities of the department, insures for each bureau this undivided responsibility, qualified only by the authority of the Secretary, which, if exerted, does not divide the responsibility but transfers it to the Secretary himself. Independent authority with undivided responsibility, though in principle proper, suffers historically from intrinsic inability to cooperate where a number of such independent units are present. The marshals of the First Napoleon—especially in Spain—in the absence of the emperor, offer a familiar illustration. The bureau system, as at present constituted by law, contains no remedy for this inherent defect.

(4) The coordinating power is in the Secretary's authority; but, owing to the shortness of tenure in office, and to the inevitable unfamiliarity with naval conditions with which an incumbent begins, authority, though adequate in principle, is not so in effect. This inadequacy consists in lack of personal familiarity with the subjects before him, not merely severally, but in their collective relations; in short, lack of specific knowledge and experience. The organization should provide him with such knowledge and experience, digested formally, so as to facilitate his personal acquirement. In short, an advisory body, equipped not with advice merely, but with reasons. In order to avoid the interruption of continuity attending each new administration, entailing the recurrent temporary unfamiliarity of each new Secretary, it is expedient that this advisory board be composed of several persons; but while this provision would insure the continuity which inheres in a corporate body (in this case continuity of knowledge and of progress), the principle of undivided responsibility would dictate that one only of them should be responsible for the advice given to the common superior—the Secretary.

(5) As regards the composition of the advisory body, the principles to be regarded are two: (A) The end dictates the means; (B) responsibility must be individual, in advice as well as in executive action.

A. The end is efficiency for war. The agents in war are the military naval officers. Their profession qualifies them best to pronounce upon the character of the preparations for war of every kind, including not only schemes of campaign and tactical systems but the classes, sizes, qualities, and armaments of ships of war.

What the Secretary needs, specifically and above all, is a clear understanding and firm grasp of leading military considerations. Possessed of these, he may without great difficulty weigh the recommendations of his technical assistants, decide for himself, and depend upon them for technical execution of that which he approves.

However constituted in detail, the advisory body should be taken entirely from the class to which belongs the conduct of war, and upon whom will fall in war, the responsibility for the use of the instruments and for the results of the measures which they recommend.

B. As regards individual responsibility for advice, it is suggested that the Secretary of the Navy nominate to the President the officer whom he deems best fitted to command the great fleet in case of war arising; and that this officer, irrespective of his seniority, should be head of the advisory body. He alone should be the responsible adviser of the Secretary.

The provision of a responsible adviser does not compel the Secretary to accept his advice, nor prevent his consulting whosoever else he will. The provision suggested does not limit the authority of the Secretary; but it does provide him with the weightiest and most instructed counsel, and it lays upon the prospective commander in chief the solemn charge that in all he recommends he is sowing for a future which he himself may have to reap.

An essential principle in the constitution of such an advisory body is that the majority of the members should be on the active list and should go afloat at not infrequent intervals; and, specifically, the head of the body, the prospective commander in chief, should during the summer months take command of the concentrated battleship force for maneuvers, target firing, and practice of every kind. This will insure also his sustained familiarity with administrative routine of the fleet and other practical matters.

(6) In the two principal classes into which the duties of the Secretary of the Navy divide, civil and military, as enunciated in section 2 above, the word "civil" corresponds largely to the activities known as technical, and there is no reason apparent why the same principle of undivided immediate responsibility

should not be realized in the Navy Department in two chief subordinates, responsible the one for military supervision, the other for technical supervision, and for all information and advice given to the Secretary under these two heads. It is, of course, apparent that a perfectly suitable Secretary may come to his office with as little previous knowledge of the kind called technical as he has of military; nay, he may be perfectly efficient and yet not acquire in his four years of office either the technical or military knowledge presumable in men whose lives have been given to the two professions. Under the most favorable conditions every superior must take decisions largely on advice, which means not accepting another's opinion blindly, but accepting statements of facts and weighing reasons.

The principle of the Secretary's ultimate individual responsibility dictates that he be at liberty to consult as many advisers as he thinks necessary, but the principle of the individual responsibility of two chief advisers, for the advice given, tends to insure the most exhaustive consideration on the part of men selected for their special competency. Careful consideration with special competency gives the best guaranties for advice, and a Secretary overruling it would do so under the weightiest sense of personal responsibility.

As a matter of detail, but yet so broad in bearing as to amount to a principle, it may be noted that while the adjective "military" is somewhat narrow in application, "technical" is extensive in scope. Naval construction, ordnance, and steam engineering are all technical professions. The selection of a chief assistant to the Secretary might, therefore, be made from the responsible technical experts of the Navy, under any of the three heads named, or a competent civilian engineer and naval architect may be appointed as Second Assistant Secretary of the Navy, under whom the four technical bureaus may be coordinated.

(7) In conclusion, it should be distinctly laid down as a cardinal principle that no scheme of naval organization can possibly be effective which does not recognize that the requirement of war is the true standard of efficiency in an administrative military system; that success in war and victory in battle can be assured only by that constant preparedness and that superior fighting efficiency which logically result from placing the control and responsibility in time of peace upon the same individuals and the same agencies that must control in time of war. There should be no shock or change of method in expanding from a state of peace to a state of war. This is not militarism; it is a simple business principle based upon the fact that success in war is the only return the people and the Nation can get from the investment of many millions in the building and maintenance of a great navy.

We have the honor to be, very respectfully,

William H. Moody, associate justice, Supreme Court of the United States; Alston G. Dayton, judge of superior court, State of West Virginia; Paul Morton; S. B. Luce, rear admiral, United States Navy, retired; A. T. Mahan, rear admiral, United States Navy, commanding North Atlantic Fleet; William M. Folger, rear admiral, United States Navy, retired; William S. Cowles, rear admiral, United States Navy; William F. Fullam, commander, United States Navy, secretary.

13. Special attention is invited to the first and the last paragraphs of this remarkable and dignified statement of governing principles. In the first paragraph the greatest possible care is taken to emphasize the supreme authority of the Secretary, namely, "Nothing should be admitted into an organization of the department which would qualify his (the Secretary's) authority or diminish his ultimate responsibility." The supremacy of the civil power was thus clearly emphasized, and it always has been emphasized and always will be by the most determined advocates of departmental reorganization. Any insinuations to the contrary are absolutely groundless and reflect upon the loyalty of those who wish to see the Navy so organized that it may pass from a state of peace to a state of war without a jar in its machinery.

THE SWIFT BOARD—THE AID SYSTEM OF SECRETARY MEYER.

14. Inasmuch as the Mahan-Moody commission submitted a mere outline of organization, Secretary Meyer appointed a board, of which Admiral Swift was president, to complete the details and submit a report. This resulted in the aid

system adopted by Secretary Meyer. Although this system was not legalized by Congress, it served to coordinate the bureaus under the aids and thus secure many of the benefits of good organization. This system was in great measure abolished by Secretary Daniels in the spring of 1915. He appeared to disapprove of it, and in an article published in Hearst's Magazine in 1917, during the war, he stated that when he entered the department he found it "encumbered" by a system of aids. In effect, this was a condemnation of the work of Admiral Mahan, the greatest authority on naval organization in this or any other country. That the Navy Department should find itself "encumbered" by the principles of Mahan may well be viewed with astonishment.

15. Previous testimony before this committee describes the legislation initiated by Admiral Fiske and Capt. Hobson resulting in the present Office of Operations. It has been shown that by the insistence of the Secretary the word "responsibility" was stricken from the bill as originally framed by Admiral Fiske and Capt. Hobson, although it had been unanimously approved by the Naval Committee of the House. In omitting the word "responsibility" the Chief of Operations was left with no real or direct authority over the bureaus in his work of preparing for war and in directing the operations of the fleet. In other words, this left the Office of Operations somewhat in the condition of Hamlet, with Hamlet left out. As a matter of fact, owing to this unfortunate change in the law, there was, in many respects, less coordination than under the old aid system of Secretary Meyer. In other respects there was an improvement. But in any case the Office of Operations appears to owe its existence to Admiral Fiske and Capt. Hobson.

THE CHARGE OF PRUSSIANIZING THE NAVY.

16. Referring to the charge that Admiral Fiske and myself sought to Prussianize the Navy in our advocacy of such reorganization as would put back the important provision cut out by Secretary Daniels, a remarkable situation now presents itself in the testimony before this committee. It appears that Admirals Fletcher, Benson, Wilson, Rodman, Strauss, McKean, and Capt. Pratt in this year, 1920, after the World War, are found strongly insisting that the Chief of Operations shall have "responsibility" and "authority" over all bureaus and other departmental agencies. In other words, they now favor the principles originally advocated in the Fiske-Hobson bill, which was stricken out by Secretary Daniels. In this stand, therefore, all of these seven officers, who are highly praised by Secretary Daniels, and who testified in behalf of the Navy Department, are now found in the ranks with Admiral Fiske. Admiral Sims, and myself, favoring an organization which Secretary Daniels condemns. They, too, appear to be in the category of "disciples of Von Tirpitz," who seek to "Prussianize the Navy of the United States." There is, of course, one difference—Fiske, Sims, and I ventured to advocate this principle before the war, while these distinguished officers advocate it after the war. We are the ante mortem and they the post-mortem advocates of this principle. They are advocating in 1920 what Admiral Sims sought to secure in 1908. Thus they are 12 years behind Admiral Sims and several years behind Admiral Fiske, unless, perchance, they may have silently and secretly advocated this principle in previous years, unknown to the Navy.

17. We can only surmise as to the reason for the opposition to Secretary Daniels on the part of these officers at this time, after they have testified so strongly as to the efficient working of the Navy Department organization during the World War. The situation is somewhat bewildering and demands explanation on their part. If the Navy Department prepared us for war and carried us through the World War with unqualified success, why change its organization? Why should we gild pure gold?

ADMIRAL BENSON AND CAPT. PRATT ON DEPARTMENTAL ORGANIZATION.

18. In further investigation of this subject we find in the testimony of Capt. Pratt (Part 1, p. 4), the following remarkable statement: "Nor was the organization or administration of the department at home such that it lent itself to the most efficient handling of a great war at the beginning."

19. And again on page 8, of Part 1, we find this illuminating declaration: "The reorganization and expansion of the Office of Operations and of the bureaus had to be undertaken. The coordination of the bureaus with this

office had to be developed; the methods of administration had to be divested of their prewar conservatism, the red tape abolished, and more authority given to subordinates in matters of detail," etc. There would appear to be little doubt as to the meaning of these words. Capt. Pratt was Admiral Benson's assistant in the Office of Operations. In this one statement he has admitted that we were practically forced to reorganize the Office of Operations and the whole Navy Department after we entered the World War. His reasons for joining the "disciples of Von Tirpitz" are thus clearly given, and must be recognized as quite sufficient. Capt. Pratt clinches the evidence of departmental inefficiency in the following pathetic review found on pages 14 and 15, of Part 5:

20. "You have by law appointed a head, but have not definitely fixed degrees of responsibility. As the head of an organization there is the perfectly natural inclination to perform such acts as in his judgment he deems wise, but upon these acts depends the entire present and future of our Naval Establishment, its development, maintenance, and operation. To efficiently effect this requires the most intimate knowledge of the Navy and the power to coordinate its many activities. As its development, maintenance, and operation is conducted, so fares the fate of the country's first line of defense.

"To administer the duties of chief executive of this department there is called a civilian. Gentlemen, please do not misunderstand me. Under no circumstances should the supervisory head be other than a civilian, who in this capacity is best able to coordinate the Navy's activities with Congress, and who in his person is the strongest connecting link between us and the people. He comes to the office as an individual, a splendid man, able, efficient, highly trained in some subjects, but not technically trained in the activities of the Navy, nor a student of the art of war. This system functions after a fashion in peace, but it does not function when preparation for war becomes necessary, nor does it function in war. It is necessary that at the outbreak of hostilities the military head should assume the direction of and responsibility for the conduct of military operations, for whose preparation he has had, by law, no direct control nor authority to coordinate in peace. Such is the system we work under to-day, and did at the outbreak of war. Thanks to the voluntary cooperation of every distinct departmental organization, including the Secretary, the Navy was able to pull itself together and to work exceedingly well in war.

"If any lack of preparation existed within the Naval Service prior to our entry into the war, if any lack of harmony existed then or exists now within our Navy, it can be laid more justly to the system or organization the department labors under than upon the shoulders of any individual."

This frank and manly admission by Capt. Pratt drives the last nail into the casket of a defunct administrative system which violated Mahan's principle that "there should be no shock or change of methods in expanding from a state of peace to a state of war."

21. But the discussion of this important subject would not be complete without the testimony of Admiral Benson, who served as Chief of Operations during the World War. When asked what the Navy Department would have done without the Office of Operations the admiral replies, "The good Lord only knows."

22. In reply to further questions regarding the status of the Chief of Operations, Admiral Benson declared as follows:

"The CHAIRMAN. But he (the Chief of Operations) should have the authority?

"Admiral BENSON. He should have the authority to coordinate all of the technical activities of the Navy Department, and he should be held responsible for their efficient coordination and cooperation.

"The CHAIRMAN. And, having that authority and that responsibility, he should be free to give his views to Congress, should he not?

"Admiral BENSON. He should, in that position; and there should be some arrangement by which he should be kept fully informed as to the policies of the Government—I mean the political policies of the Government; what international problems were pending, what the international policy of the administration is at the time, and changes that might involve the distribution of forces. But he should be particularly held responsible for the proper and efficient coordination of all the naval activities. But he should have the authority and it should be understood. For instance, he should be able to give directions to all the bureau chiefs. In addition to material and operations, he should particularly have directly under him the question of personnel. I think he should have a voice in the selection, and be almost responsible for the selection, of

all officers for prominent positions, both in the Navy Department and in the fleet.

"The CHAIRMAN. How do you mean, almost?"

"Admiral BENSON. Of course, I do not want to sidetrack the Secretary. He, as the head of the department, of course is held responsible to the country for the department. But it should be so well established that he be the Chief of Operations, has the right that the Secretary would not go counter to it unless there were most excellent reasons. You might possibly get a Chief of Naval Operations that was not efficient, or he might have prejudices, and he might have all kinds of things, and there should be some check on him, and the Secretary should have that authority, because in the last analysis the Secretary is responsible.

"But I do think that in order to have the organization what it ought to be that change should be made. I think I can illustrate my point. If you will remember, the administration came into power on the 4th of March, 1917, and we went to war on the 6th of April. If you had had an entirely new Secretary come in on the 4th of March, with the old organization before the Office of Operations was established, you would practically have had nothing to coordinate the technical activities of the department except a new Secretary of the Navy.

"The CHAIRMAN. And is that true of your organization you now have?"

"Admiral BENSON. It is not true now, but we have not gone far enough, in my opinion. I think we saved the day—I dislike to refer to it, as I happened to hold the position, but I have a firm conviction in my own mind that what saved the day in this whole war, certainly so far as we are concerned, was the establishment of the Office of Operations in the work it did during the war; but I think it ought to go further and along the lines that I have stated.

"The CHAIRMAN. You say that the Chief of Operations should have practically the power of appointing his subordinates in Operations?"

"Admiral BENSON. For instance, the chiefs of bureaus. I think he should have a decided say in who should be chiefs of bureaus.

"The CHAIRMAN. But always subject to the approval of the Secretary?"

"Admiral BENSON. Always subject to the approval of the Secretary; yes."

23. In answer to the final questions as to the desired knowledge of the Chief of Operations concerning the policies of the administration, Admiral Benson testified as follows, on pages 4547 and 4548:

"The CHAIRMAN. We would like your ideas on the matter, concretely put, so that there can not be any mistake about them.

"Senator BALL. May I ask a question here?"

"The CHAIRMAN. Yes."

"Senator BALL. He—the Chief of Operations—would be a part of the administration?"

"Admiral BENSON. Yes; but as he is now, I understand he is not necessarily kept informed of all the different policies.

"The CHAIRMAN. Is the Secretary?"

"Admiral BENSON. I assume, of course, being a member of the Cabinet, that he is.

"The CHAIRMAN. Is not that sufficient, then, if the Secretary of the Navy is kept informed?"

"Admiral BENSON. If the Secretary always keeps the Chief of Naval Operations fully informed, however he may get it. That is a detail, as to how he should get it; but it should certainly be understood that the Chief of Naval Operations is kept informed.

"The CHAIRMAN. If the President has private plans about foreign policies, and he does communicate them to the Secretary of the Navy, do you think that he should also be required to communicate them to the Chief of Operations, or through the Secretary to the Chief of Operations?"

"Admiral BENSON. I think if there is any question at all, sir, that the Chief of Naval Operations is not being kept fully informed, he should have the privilege of being informed by the President of the United States, if necessary, and he should attend Cabinet meetings where policies of that kind are discussed."

24. It is important to note and analyze this testimony of Admiral Benson after his experience of four years as Chief of Operations. It must be clear that he has out-Elsked Admiral Fiske in his recommendations concerning the responsibilities, the authority, and the general status of the Chief of Operations, in that he makes the suggestion that the Chief of Operations shall have

the right to sit at Cabinet meetings. It can only be surmised that his experience in attempting to run the Office of Operations in its present condition, with no real power to coordinate departmental agencies, has forced him to place himself at the head of the "disciples of Von Tirpitz." Has not Admiral Benson completely deserted the Secretary of the Navy in this campaign for reorganization? I forbear to comment further than to submit that the officers who humbly and conscientiously sought to reorganize the Navy Department before the war are not more subject to condemnation in the eyes of the people than those who advocate the same policy after the war. It would appear that these gallant officers, headed by Admiral Benson, in a tardy desire to "Prussianize the American Navy," are each of them subject to the charge of condemning the Navy Department in this matter. The words of sorrowful reproach, "and you, too, Brutus," might be appropriately used by the Secretary of the Navy in their cases.

25. In concluding the defense of my acts in connection with the respectful advocacy of departmental reorganization, I beg once more to declare my hatred of anything that savors even remotely of Prussianism and a desire on my part to see the United States Navy so organized and so ready at all times that it can smash Prussianism wherever and whenever it appears with the least possible delay.

It is respectfully submitted that this is true Americanism. If not, what is Americanism?

PREPAREDNESS FOR WAR.

26. In his testimony the Secretary states that "Admiral Fullam told how the officers in the Pacific worked to get armored cruisers ready for war." This is quite true. But this is not all that I said. I also stated that the officers succeeded in getting these ships away from the docks not by reason of assistance from the Navy Department but in spite of the policy of the department. I stated that the department initiated no means to provide personnel and failed to coordinate with the bureaus for 11 long months as regards the work of getting these ships materially ready for war. I gave conclusive evidence of these facts. Why did the Secretary fail to quote me fully in this respect?

27. I can not permit my name to be used in apparent defense of the Navy Department's acts and policies between 1915 and 1917, nor in support of the astounding claim that the Navy and the fleet were ready for war in 1917. On the contrary, I affirm that the Navy was unprepared for war in every possible respect—personnel, matériel, aviation, organization, and as to the conditions in the fleet taken as a whole. It is my opinion that any naval officer who comes before this committee and states that the Navy was prepared for war in the spring of 1917 is contributing to a propaganda which is calculated to deceive the good loyal people of this country, and I base this statement upon the facts brought out in the testimony of Admiral Benson, Capt. Pratt, and others who testified for the Navy Department and ignoring the testimony of those officers who have supported Admiral Sims.

28. It is true that the officers did work most unrelentingly to get the armored cruisers and other vessels away from the docks; but they could not get these ships completely ready for war, or for battle, because there was a fatal shortage of personnel, officers, and men. And as a result of this shortage right up to the declaration of war, I can personally and solemnly swear that not less than 15 armored and other cruisers left the Pacific or passed through the Pacific from the Asiatic station in a criminal condition of unpreparedness for battle. They were either not fully officers or manned or their crews were so largely composed of recruits and officers of little experience that they could not have met a fully manned enemy vessel of the same class with any reasonable hope of success in battle; and this, too, notwithstanding the fact that the officers and men in our Navy have no equal in bravery, ability, and devotion to duty. There are certain things that are impossible in connection with readiness for battle. Both Admiral Badger and Capt. Pratt have told you that it would take from three to six months to prepare a half-manned ship for battle against a fully manned ship. This was exactly the case with these ships. Is this condition of preparedness, considering that the world had been on fire for three years, satisfactory to the red-blooded people of this country or to the officers of our Navy? I can not believe it, and I will not believe that the people will condemn an officer for telling the whole truth. I believe the people wish to know the truth.

VITAL IMPORTANCE OF PERSONNEL.

29. The personnel is the key to preparedness for battle. Strictly speaking, the fleet is the Navy. The Navy Department is not the Navy. We may say that in war the Navy is the part that fights. And the part that fights is the part that floats.

The fleet and the ships are the only parts of the Naval Establishment that float and do the fighting. And they can not fight without officers and men. And officers of the Navy can not unaided manufacture personnel after war begins—personnel that is prepared to go into battle. Here is where the Navy Department comes in. The Navy Department alone can adopt the policy and insist upon the means that will secure the officers and men necessary to enable our ships to fight. If the Navy Department fails to do its duty, the fleet will not be manned and it can not fight—not with certainty of success, not as the people of this country want it to fight. Right here we must remember that there were no fleet actions and no battles between our ships and German ships in this war.

30. I will briefly cover the question of personnel shortage. In November, 1914, the General Board informed the Navy Department that we needed 19,600 men to man our fleet, and it stated the invulnerable principle that ships without men were mere "masses of steel," "useless for purposes of war," and that such a condition would lead to a "false sense of security." In the spring of 1915 the commander in chief of the Atlantic Fleet, the most important unit in our whole Navy, stated that he needed 5,000 men to properly man his force. In the same year Capt. Taussig states that we had—

(a) Forty-two ships with only three-tenths of a peace complement.

(b) Sixteen ships with only one-tenth of a peace complement.

(c) Thirty-eight ships out of commission with no personnel on board. And that there was no personnel available for these ships.

It is recorded that Capt. Taussig wrote an article in 1915 on the needs of the Navy as to personnel and the Secretary of the Navy forbade its publication.

31. On March 6, 1916, after working for six months to get the armored cruisers away from the docks in the Pacific, I received the following letter from Capt. J. A. Dayton, Acting Chief of Personnel:

NAVY DEPARTMENT,
BUREAU OF NAVIGATION,
Washington, D. C., March 6, 1916.

DEAR ADMIRAL: Your letter of February 24 has been received. Rear Admiral Blue is on leave; therefore, I am answering it.

I regret we can not give you the officers and men necessary to put your excellent scheme into effect. There are no officers of the rank of commander available, and the only way to get officers below the rank for commander would be to take them from the battleships of the Atlantic Fleet, which, of course, would not be practicable. In regard to the men, we have got to provide crews for the *Nevada*, *Pennsylvania*, *Oklahoma*, *Wainwright*, *Porter*, *Tucker*, *Maumee*, *Sampson*, *Rowan*, *Davis*, and about 12 submarines within the next six months; and, in addition, the Naval Academy practice squadron will have to be filled up, so the situation is rather hopeless from our point of view. However, we will do the best we can.

With kind regards, I am,

Very sincerely, yours,

J. H. DAYTON.

Admiral WILLIAM F. FULLAM,

United States Navy, United States Pacific Reserve Fleet,

San Francisco, Calif.

32. On July 5, 1916, after repeated requests for officers for the armored cruisers, I received the following letter from Rear Admiral Blue, Chief of the Office of Personnel:

NAVY DEPARTMENT,
BUREAU OF NAVIGATION,
Washington, D. C., July 5, 1916.

MY DEAR ADMIRAL: Replying to your letter of June 20. I regret that it is impracticable to send any additional officers to the reserve ships unless mobilization takes places and retired officers are ordered to duty and officers from shore are ordered to sea.

Sincerely, yours,

VICTOR BLUE.

Rear Admiral WILLIAM F. FULLAM, U. S. N.,

Commander Reserve Force, Pacific Fleet.

33. On March 24, 1917, two weeks before war was declared, I sent the following telegram to the Navy Department:

MARCH 24, 1917.

From Flag *Pueblo* to Secretary of the Navy via MPG.:

In view of the need of men in the Reserve Force will the department authorize me to stimulate recruiting on this coast by stating to the press over my signature the number needed to fully man ships? I am advised that the result may be excellent. Request telegraphic reply.

MARCH 25, 1917.

From *Bunra* to commander Reserve Force via NPG.:

You are authorized to publish the fact that the President has signed an Executive order calling for an emergency increase to 87,000 enlisted men. Give widest publicity. You are authorized to state number of men needed in your force and to enlist and retain on board men to fill vacancies.

35. In response to these instructions, I at once appealed to Pacific Coast States for from 3,000 to 5,000 men immediately needed to man reserve ships, including the armored and other cruisers—the best cruisers in our Navy, ships that should have been with the fleet in a condition of instant readiness for war. I repeat that these ships were not ready for battle. They were only half manned. In the words of the General Board, they were in great measure “masses of steel” approximately “useless for purposes of war,” and so far as their readiness for battle was concerned their condition could only give a “false sense of security.” This is only a small part of the evidence, but it will suffice to prove beyond cavil that we were fatally short of personnel in 1917. Is such a Navy ready for war?

READINESS OF THE BATTLESHIP FORCE.

36. Admiral Mayo, Admiral Wilson, Admiral Rodman, and Admiral Plunkett have testified and have been quoted to the effect that the battleships when they came north from Cuba in the spring of 1917 were in a high state of efficiency, and that their record at target practice was remarkable. Grant all this. But how long did they remain in this high state of battle efficiency? Why was the testimony on this point omitted or clouded? It is known that many trained men and nearly half the trained and experienced officers of the battleship force of the Navy were taken off to man merchant vessels, destroyers, and other ships, leaving this force—the backbone of the Navy—in a condition of unreadiness for battle. Of what avail is it that these ships were ready for battle in February if they were not ready in April? This condition reminds us of the sorrowful wall of a chief of bureau who once said: “I had my bureau in perfect working order, with everything running smoothly, when along came the Spanish War and smashed up everything.” Admiral Plunkett, the director of target practice, stated that “It takes years to train new officers and men to conduct the gunnery of a modern battleship in battle.” Even supposing that it can be done in a few months, we were not ready for battle after these men and officers were taken off our battleships. If it is claimed that we were ready at that time, we can safely abolish the Naval Academy and waste less time and ammunition in target practice.

GENERAL UNREADINESS FOR WAR.

37. To substantiate the statement that the Navy was completely unready for war in the spring of 1917 the fatal deficiency in personnel has been demonstrated. To complete the proof it is necessary to quote only from the testimony of Admiral Benson and Capt. Pratt of the Office of Operations, the two chief advisers of the Secretary of the Navy.

38. From the testimony of these two officers it had already been shown that the Navy Department was not properly organized for conducting a war. Speaking of our failure to get ships quickly into the war zone, Capt. Pratt says, on page 4, Part 1: “Owing to our previous lack of preparedness in material, it was not possible to place them at the front and ready to operate as soon as desired.” And further he says: “The failure to get into the war immediately and in full force upon the declaration of war is not the fault of Operations or the failure to recognize the character of the war and where it was being waged, but were for the most part due to natural causes and to causes which antedated our entry into the war,” etc. Of course, it is admitted that the causes antedated the war—the causes were unpreparedness, no effort to prepare, no

of unrestricted sinkings in February, 1917. As though the sinking of the Lusitania with 1,200 helpless men, women, and children was not a sufficiently "unrestricted" sinking, a sufficiently unrestricted act of piratical brutality to justify a red-blooded American—especial a naval officer—to advocate preparedness. This theory would be an appropriate epitaph to mark the last resting place of pusillanimous pacifism. It is believed that those officers who have permitted themselves to entertain such ideas as this will be busy explaining their reasons therefor during the rest of their lives in the Navy.

44. There were several examples of harsh personalities and thinly veiled insults to Admiral Sims in the course of the testimony before this committee. It is regrettable that Admiral McKean should have felt it incumbent upon him to take Admiral Sims to task for saying that naval officers would not again permit our Navy to go into a war as unprepared as we were in 1917. In condemning this statement of Admiral Sims, Admiral McKean said that naval officers would take no such attitude; that they would "obey orders"; that they were "neither Prussian Militarists nor Russian Bolsheviks." It is true that naval officers will obey orders; it is true that they are not Prussian Militarists; it is true that they are not Russian Bolsheviks. But it is also true that Russian Bolsheviks, effeminate pacifists, anarchists, extreme socialists and all people of that ilk will be found lined up shoulder to shoulder against preparedness and proper organization for war and in enthusiastic support of all pacifistic movements necessary to prevent this country from defending its life and its honor. It is believed that officers of the Navy will be found on the right side of this question for all time, and it may be assured that while doing their duty in advocating preparedness before rather than after war begins, they will never fail to recognize that the civil power is supreme in the United States. They will have, and should have, opinions and duties concerning measures that are absolutely necessary to defend their country; and the best citizens of the United States will be the first to condemn naval officers for surrendering their independence of thought and for subserviently assuming a pacifistic attitude in a matter that demands courageous conduct.

THE HUMILIATION OF UNPREPAREDNESS.

45. In the truthful story of our naval unpreparedness we will find that facts may or should prevent the humiliation of this country in the near future. It is admitted that sea power exercised a determining influence in the war. It is admitted that but for the control of the sea by the British fleet in the beginning, the Central Powers would have won the war within the first few months. It is of importance for us to note that Capt. Pratt, in his testimony, states that the German fleet being "contained" or completely blockaded by the grand fleet, the United States was free to leisurely and safely prepare its Navy for war! He doubtless knew that our battle fleet was practically interned for some months after its personnel had been decimated in order to man other vessels! And in this somewhat humiliating admission Capt. Pratt finds himself supported in some measure by the following extract from the testimony of Admiral Wilson (p. 2247). Referring to our naval strength in 1917, the following testimony is in evidence:

(45) "Admiral WILSON. But I think we would have had no fear of any other navy besides the British Navy.

"Senator PITTMAN. That is very wise, in regard to the use of that word 'ample,' because we have other appropriation bills coming.

"The CHAIRMAN. Do you think that would have been true in April, 1917, if the British Navy had not cooped up the German fleet?

"Admiral WILSON. Mr. Senator, we never gave that one thought, because I knew that after the German fleet had made an attempt to get through the British fleet it would not have taken much to fix it.

"The CHAIRMAN. So that you depended on the English fleet as the real safeguard—and our fleet was not prepared to meet the German fleet at that time if it had had a free exit and could have gotten over here?

"Admiral WILSON. I never stopped to think about that, because I knew that was never going to happen."

47. From this it would appear that Admiral Wilson, while testifying against Admiral Sims, was forced to admit with Capt. Pratt that we depended upon the British fleet "as the real safeguard" and he guessed that "everybody did"! Thus we see, through the thick haze of irrelevant talk, extravagant self-praise and violent denunciation, and behind the awful protecting barricade of departmental papers, reports, so-called plans, etc., which have nothing whatever to do with the case, the bald and simple truth that our Navy was so unprepared for war that Admiral Wilson "guessed that everybody" thought or recognized that we depended upon the English fleet as a "safeguard" against the Germans! Do the people of the United States wish to perpetuate the policies and the kind of naval preparedness that brought us to this condition in 1917? I believe not.

WILD EXTRAVAGANCE OF UNPREPAREDNESS.

48. In his great work, the "Military Policy of the United States," Gen. Upton gives convincing proof of the great waste of life and treasure and the resulting burden of taxation that ultimately results from unpreparedness. He declares that "Twenty thousand Regular troops at Bull Run would have routed the insurgents, settled the question of military resistance, and relieved us from the suspense of four years of war." This is a very remarkable statement, much more remarkable than any statement of Admiral Sims; and it has never been held up as an insult to the United States Army, but, rather, proof as to what an army can do if it exists and is ready.

49. It is probable that our naval unpreparedness resulted ultimately in great waste of money and a heavy burden of taxation for our people. We economized in little things before the war, built ships without providing men to man them—provided "mere masses of steel useless for purposes of war," and then when war was declared we opened the doors of the National Treasury and wildly expended billions in a vain attempt to recover from our condition of unpreparedness. It would be impossible to compute the probable waste. Two small items will suffice, however, to give some idea. We expended, according to Capt. McKean, "something more" than \$500,000,000 for new torpedo destroyers. Not more than a pitiful eight of these new craft got into the war. So far as these boats influenced the war, therefore, they cost us about \$60,000,000 a piece. We built a large number of so-called Eagle boats. Not one of these really got into the war, not one. And so it appears that in these two items alone we expended nearly \$600,000,000 to get eight small craft into the war zone. Further comment is unnecessary, and we may turn sorrowfully to contemplation of Mahan's principles upon which the old system of organization was built and read the concluding sentence: "There should be no shock or change of method in expanding from a state of peace to a state of war. This is not militarism; it is a simple business principle based upon the fact that success in war is the only return the people and the Nation can get from the investment of many millions in the building and maintenance of a great Navy."

50. It would appear that Admiral Mahan was a pretty wise business man. He never ceased to emphasize that organization and preparedness were true measures of economy, as well as a protection to a nation's life and honor. It is time that all intelligent citizens of this country, and especially all naval officers, began to realize that Mahan and Upton were wise men whose teachings we should follow.

51. In concluding this statement concerning the preparedness of the Navy for war as regards both personnel and material, it is only proper to state that the officers and men of the Navy were and always have been individually ready for war; that the unpreparedness of the Navy for war in 1917 was not primarily the fault of any officer or officers, but that it was due to the fact that the Navy Department as a whole declined or failed to adopt policies which demanded or even permitted officers to prepare the Navy for its duty as a fighting machine.

52. That the officers and men of the Navy, both regular and reserve, did their whole duty with great gallantry and devotion is admitted by everybody, and that they contributed loyally to the winning of the war is also beyond question. That the bureau chiefs were in no sense responsible for the lack of preparedness of the Navy Department and that they accomplished wonders as soon as their hands were free can not be denied.

53. That we escaped disaster was plainly due to the fact that the enemy's fleet, with the exception of submarines, had been driven from the sea before we declared war against Germany. Furthermore, it is important to recognize

our destroyers, armed merchant ships, and small craft, and noting the gallant little fight made by our sub chasers at Durazzo. It was a war without naval battles.

54. In other words, there was, strictly speaking, less sea fighting than in the war with Spain, and the Navy of the United States was not fully tested as to its readiness for battle nor as to the adequacy of all its units to meet the emergency of war had Germany's fleet been free to take the sea against us.

55. Escaping as we did by our great good fortune in that the German fleet never appeared after the battle of Jutland in June, 1916, it is the duty of every naval officer, who realized the actual conditions of our unpreparedness, to tell the truth upon the occasion of the investigation of the conduct of the war by a coordinate branch of the United States Government in order that the people of this country may no longer be deceived and the United States may not again be threatened by the inexcusable failure of the Navy Department to prepare the fleet in all respects for sudden war at any time in the future.

56. The time has come to face the facts and to ask this question: Was the fleet of the United States, with all its units and auxiliaries; with its available supply of ammunition, torpedoes, mines, and submarines; with no battle cruisers, no scout cruisers, and with a pitifully inadequate force of scouts and destroyers; with an air service composed of only 45 trained aviators; with its ships largely manned with green untrained men and reserve officers of little naval experience; was this fleet so constituted, even though its officers and personnel were unexcelled in the world for bravery and devotion to duty; was this fleet in all respects in readiness in the spring of 1917, or at any time during the World War, to line up for battle against the German fleet with a fair chance of victory, taking into account the cold facts, as shown when the British fleet met the Germans at the battle of Jutland? The commanders in chief of our fleets must gravely consider the facts and answer this question with a solemn regard for the consequences. If we were in all respects ready to defeat the German fleet, as it existed at Jutland, in June, 1919, the Navy Department may claim the credit for our preparedness; if we were not in condition to beat the German fleet in April, 1917, the Navy Department alone is responsible for neglect to prepare for that battle during the four preceding years.

57. The articles for the Government of the United States Navy, found in the Revised Statutes—laws passed by Congress to fix the duties and responsibilities of officers of the Navy—contain the following provision:

"That a commissioned officer of the Navy being in command of a fleet, squadron, or vessel acting singly, who neglects when an engagement is probable, or when an armed vessel of an enemy or rebel is in sight to prepare his ship for action; or does not afford all practicable relief and assistance to vessels of the United States or their allies when engaged in battle, shall suffer death or such other punishment as a court-martial may adjudge."

58. But a naval officer's duty does not, or should not begin and end in battle, nor in time of war. He has duties and responsibilities before the war and before the battles begin. And it should be clearly understood that any officer of the Navy who sits supinely or subserviently idle and indifferent when an armed enemy nation with an efficient fighting navy is in plain sight (and has been for years), and fails with energy to prepare and to urge other to prepare his country's Navy for war, when he knows or should know that it is unprepared in every respect, is unworthy of his cloth; that he is neglecting his first duty, fails to measure up to the standards of the American Navy, and is deserving of more severe punishment than a captain who fails to prepare a ship for battle. The neglect in time of peace to prepare the great navy of a great nation for battle imperils the whole country, and for this reason the offense is the more reprehensible.

59. The experience of the past demonstrates clearly, if we probe for the facts, that in throttling and ignoring officers of high rank who are seeking zealously and patriotically to prepare the Navy for war, the real truth concerning the Navy may be suppressed, the public may be deceived, and as an inevitable result the Navy may be placed in a condition of unreadiness involving danger of humiliating and disastrous defeat, or that it may fail to put forth

its best efforts in affording "all practicable relief and assistance to our allies" when engaged in war.

60. The Navy of the United States was not properly prepared for war in April, 1917. The question is, Shall such a condition be permitted to exist again in the future.

(The following communication was subsequently received from the Secretary of the Navy, and is here inserted in the record, as follows:)

THE SECRETARY OF THE NAVY.
Washington, May 29, 1920.

Hon. FREDERICK HALE,
*Chairman Naval Subcommittee,
United States Senate, Washington.*

DEAR MR. CHAIRMAN: News comes to me that at the last hearing of your subcommittee, Rear Admiral Fullam, retired, who had testified at length earlier in the hearings, filed a 42-page letter which has been placed in the hearings. It is far from my purpose to make answer to his advocacy of a Prussianized naval organization or his charge of naval lack of efficiency. Every statement he makes has been fully and completely answered in my direct testimony or in my cross-examination. I content myself with the following statement:

WHY ADMIRAL FULLAM (RETIRED) WAS CALLED FROM INTERNMENT TO TRY TO BACK UP SIMS.

No man who faithfully performs his duty as Secretary of the Navy can hope to escape the hostility of officers who are removed from positions in which they have fallen down. You have heard the testimony of some of these who came from retirement to air their criticisms born out of personal grievance. In fact, the hearings have been interluded with testimony of officers who had either been removed by me from a certain duty, denied a particularly coveted assignment, given orders that were not agreeable, or not granted permission to accept foreign honors contrary to the spirit of the American Republic. If you will cut out all the testimony from those with a grievance or a disappointment, your committee could save enough paper in printing the hearings to please the Senate committee on retrenchment in the use of paper.

Of course, you will attach no importance to testimony based on grievances, real or imagined. Let me be specific. You heard a long plaint from Rear Admiral Fullam, retired. You may not have known his animus. When I became Secretary of the Navy he belonged to that useless appendage known as the aid system, organized without authority of law. He busied himself during the first few months trying to convince me that the marines had no proper place on a ship in the Navy, retailing and detalling again and again his ancient opposition to this important and valuable service rendered by our incomparable marines. As a result of his long talks I became thoroughly convinced not only that his attitude was wholly wrong, but that it would improve the morale of the whole Navy to give even greater recognition to the marines. Therefore, after consultation with Admiral Dewey, I issued an order making the major general commandant of the Marine Corps an ex-officio member of the General Board where, as representative of the Marine Corps, he would have a voice in all actions taken on matters affecting the service of the marines ashore and afloat as well as of all policies affecting the Navy considered by the General Board.

FULLAM FELL DOWN AT ANNAPOLIS.

Upon the recommendation of naval advisors in Washington, Rear Admiral Fullam was sent to Annapolis as superintendent of the Naval Academy, and given all possible support in that important post. He was such a failure in that position that I was compelled to detach him and upon his detachment he was interned as the admiral in charge of the reserve fleet in the Pacific. It was then a duty of small importance. When war came on and Operations ordered the ships in the Pacific Fleet to become an active and efficient force in the patrol service on the coast of South America, the President, on my recommendation, made Rear Admiral Caperton the admiral of the Pacific Fleet, though Fullam aspired to be admiral of that fleet. Fullam's testimony should be read in connection with his evident animus, for all his long talk about the inactive Pacific

reserve before the country entered the war and his talk about personnel was but the prelude for his closing tirade against the Secretary of the Navy, who had contributed to naval efficiency by removing Fullam from the Naval Academy and declining to gratify his often expressed wish to be commander in chief of the active Pacific Fleet.

SIMS PREDICTED THE HEARINGS DURING THE WAR.

This hearing has made some things clear which I never suspected while the war was in progress, for Sims begins the attack and Fullam ends it. In his letter to Laning, written in August, 1918, Sims virtually announced that a hearing such as this which he precipitated and which has been going on for weeks would be held, for in his letter in 1918 to Laning (referring to the department's carrying its own rather than the policies he recommended) Admiral Sims said:

"If hearings are held on the conduct of the war a number of rather disagreeable facts must inevitably be brought out."

SIMS WANTED FULLAM IN PLACE OF WILSON.

Evidently Sims was preparing to secure an ally in the person of Admiral Fullam in the American admiral on duty in France. On the 17th of August, 1918, in the same month he wrote to Laning about the hearing, which brought about his January 7 letter, Admiral Sims telegraphed to Admiral Benson as follows:

[Translation.]

From: Vice Admiral Sims.

To: Admiral Benson.

I have heard unofficially that Wilson is likely to relieve Coffman in the battleship fleet. If this change is to be made or if Wilson is to leave his present duty for any other reason, I very earnestly request that Fullam be detailed as his relief. There is no other flag officer in the service at all likely to be considered available who would, in my opinion, be as suitable for the position as Fullam, and I strongly urge that any opposition to this detail which might be overcome if possible on the grounds that his services are needed in France in the interests of efficiency. Failing to secure Fullam, my next choice would be Knapp and my next C. S. Williams, who will soon be a permanent rear admiral. In an open official cable at this date I am asking for Bullard for duty at Malta as suggested in my personal letter to you of July 28. Please refer to my letter for the reasons why I should be allowed to recommend officers who are in sympathy with me and in whose ability and loyalty I have complete confidence. 01117, 2.05 a. m. 8-17-18.

Nobody on this side of the water had even thought that Admiral Wilson would be relieved from the important duty he was performing so well in France. While Sims, in London, was putting all American naval ships under British command, Wilson, in Brest, was keeping all naval ships under his direction in American command. Wilson was so efficient that the French, the officers and men of the American Army and of the Navy would have protested against any change in France, for Wilson's safeguarding the soldiers and performing other important duties in connection with American soldiers arriving in France meant more to American parents and American soldiers than anything that Sims meant in London.

WAS THE WISH FATHER TO THE THOUGHT?

Was not the wish for Wilson to leave Brest evidently father to the thought, for later in January, 1919, before he left London, Admiral Sims wrote me that "it was rumored that it is the intention of the department to assign Admiral Wilson to the command of the fleet," and declared "It would be a very grave mistake." His objection to Wilson, as given in his letter, was a wholly unjustifiable attack upon a brother officer. He said Wilson's trouble (nobody found any trouble with Wilson except Sims) was a "defect of both temper and character." That Wilson had "criticized not only the organization but me personally," and complained with characteristic egotism that "the department promoted Admiral Wilson to a rank equal to mine." Think of it! Jealousy added to egotism was apparent in every line of the letter which made me

indignant when I first read it. But about that time I received a cable from Sims asking to be appointed to the War College and ordered home, saying he was very weary and very tired. At that time I did not know of his attitude toward Wilson and that his letter was the result of his feeling against Wilson.

I therefore laid the letter aside and never let anybody see it until Admiral Sims compelled its production by his wholesale denunciation because certain of his staff had not been given the distinguished-service medal, though he had been guilty of the injustice of failing to recommend Wilson for any award, though Wilson's services had been valued so highly in France and in his own country that the President promoted him successively to be vice admiral and later to be admiral, the first a rank "equal to mine" and the second or higher rank than Sims holds, against which Sims sought vainly to prevent.

Do you not see, gentlemen, why Sims wished Fullam to supersede Wilson at Brest—a man "in sympathy with me, and in whose ability and loyalty I have complete confidence"? Sims and Fullam both are ready writers, and their evidence before your committee in their attacks upon the naval administration showed that Fullam is "in sympathy with me" [Sims]. Is it not clear what Sims meant when he wrote to Laning about the "hearing"—this hearing—and his earnest appeal for Fullam? He did not secure Fullam to replace Wilson in France, but Fullam did before your committee join in the attack, evidently planned by Sims in August, 1918, as the letter to Laning foreshadowed; and Fullam did write a long letter on the last day of the hearing. It was devoted largely to advocating ousting civilian control and Prussianizing the American Navy. Of course, the triplets, Fiske, Fullam, and Sims—

"Blanche, Tray, and Sweetheart,
They all do bark at me."

deny they wish to run the Navy on the Von Tirpitz plan, but that is the logical result of the policy they all advocate. They declare for a civilian Secretary, but what they want is a rubber-stamp civilian Secretary, who will "sign here" when the American Von Tirpitz fixes the policy. Before the war Fiske was frank in advocating that the Navy be organized on the German plan. They all still want a plan that will give military control, but since German so-called efficiency fell down they call it by some other name.

Sincerely, yours,

JOSEPHUS DANIELS.

The CHAIRMAN. The committee will stand adjourned, subject to the call of the chairman.

(Thereupon, at 3.45 o'clock p. m., the committee adjourned, subject to the call of the chairman.)

APPENDIX.

During the course of the testimony which was given in the naval investigation frequent suggestions were made by witnesses in regard to changes which might be advantageously made in the organization of the Navy Department. Toward the close of the hearings the chairman of the subcommittee wrote to the Assistant Secretary of the Navy and to various naval officers requesting that they submit for the consideration of the subcommittee any suggestions for changes which they thought desirable. These replies, with suggestions in some cases, are printed below.

Other officers have been and will be communicated with, and their replies will be published in the corrected record of the hearings.

HON. FRANKLIN D. ROOSEVELT, ASSISTANT SECRETARY OF THE NAVY.

NAVY DEPARTMENT,
Washington, June 4, 1920.

MY DEAR SENATOR: You ask in your letter of May 7 that I give you any suggestions that occur to me about changes in the organization of the Navy Department which would, in my opinion, be desirable. Will you allow me, with great respect, to be entirely frank?

From newspaper accounts of the hearings before the subcommittee, I gather that the great bulk of the evidence given has related to operations during the late war and to the conduct of individual officers and officials, and that, therefore, the questions relating to the actual organization of the Navy Department have been either entirely passed by or have been brought out as mere incidentals to other matters. With entire respect, I do not see how any committee could make helpful recommendations in regard to the organization of the Navy Department without a full and complete investigation of the whole subject.

I have devoted more than seven years to the Navy of the United States, and during that time have necessarily come in contact with it in all of its various phases. Yet I myself would hesitate to approach the subject of changes in the administrative, executive, or operating functions of the Navy without a further very complete and exhaustive study.

It is perfectly true that because of my experience here and a personal study of many schemes for reorganization I am of the distinct belief that improvements can be made in the existing organization. I like to think that every department of the Government, legislative and executive, can be improved; but to be influenced by snap judgments or broad statements of individuals, as brought out in some of the questions asked by your committee and the answers thereto, would be the height of folly, and if acted on would seriously injure the future of the Navy.

I have seen it suggested by several people that the authority of the Chief of Naval Operations should be increased. This statement is so broad as to be wholly valueless. It must be remembered that Congress, in its wisdom, has from the earliest days of the Republic established the principle of civilian control at the head of the Naval Establishment. During only one period of our history has this been altered. That was in the period after the War of 1812, when a board of three Navy commissioners, all of them high ranking officers, was given great power, thereby taking away much of the authority of the civilian Secretary of the Navy. That particular system fell by its own weight, the naval service itself being thoroughly dissatisfied with what might be called

the dual control. I feel perfectly confident that to-day, also, the service sees the folly of any suggestion placing an officer at the head of the Navy as Secretary. A little thought would convince anyone that it would be equally ridiculous to have a civilian Secretary of the Navy, but to give him no authority and to give all the authority to a Chief of Operations. In other words, the question is simply this: Shall civilian responsibility and authority continue at the head of the service, or shall it be superseded by purely naval control? Therefore, any broad statement about "giving more authority to the Chief of Naval Operations" means nothing unless its meaning is defined.

It is my opinion that very great strides have been taken during the past few years in improving the administration of the Navy as a whole. The establishment of the Office of Operations was the most important step taken in several generations. In many other particulars, also, such as the coordinating of the different material bureaus under the Assistant Secretary, modern business practices were firmly established.

But, as I have said before, I do not regard the system as perfect, and I am convinced that from time to time steps should be taken to improve the existing organization and to have it keep pace with the times. For example, I believe that the time has come when, in accordance with the best business practice, an Office of Inspections should be created which would be independent of any of the bureaus. The present system of having the same people who are doing the work do also their own inspecting of that work is incorrect in principle.

So, also, I believe that two additional Assistant Secretaries should be authorized, one to have immediate supervision over the personnel bureaus, the other to have immediate supervision over the material bureaus. These Assistant Secretaries should act as the connecting link between the Office of Operations and the bureaus. Almost every other important department of the Government has three or more Assistant Secretaries. It must be remembered, however, that the present scale of pay for Assistant Secretaries will mean in the future that it will be necessary for any administration to appoint either independently wealthy citizens to these posts or to accept the services of second or third rate men.

I have given the two examples above merely as illustrations of many personal suggestions which I might make, but they ought not, in my judgment, to be considered by your subcommittee in view of the many limitations of the investigation which has been conducted. In other words, they are merely the snap judgments of an individual, similar to those you have heard from several officers who have testified before you, and merely scratch the surface of the broad subject.

As a matter of fact, there are many other questions of organization and of administration which are constantly brought up in the management of a great department of this kind; for instance, the present status of the General Board; the existing control of the navy yards; the present tendency to build up a "holier-than-thou" small organization or aggregation of officers at Newport and the imperative need of tying the War College into more close touch with the actual life of the Navy. It would be useless for me to discuss these matters at this time.

Frankly, what is the most serious trouble with the Navy now, as it has been in the past, is Congress. The system of making legislation and appropriations is not only archaic, but would put any private business firm into bankruptcy in a month. The method of dealing with any one of the naval appropriation bills will, I am sure, convince you of this. The Navy has in the past been treated altogether too much, as the tariff used to be, as a local issue. Allow me to cite as an example the amendments made by the Senate Naval Affairs Committee to the present appropriations bill. I am convinced after seven years' association here that the legislative and appropriating methods of Congress have compelled far too many of our naval officers to resort to similar political methods, because it has been the only way to accomplish results. This is, of course, entirely wrong. The Navy has always had to lead a hand-to-mouth existence, interspersed with investigations, hastily gotten up plans, makeshift policies, and a general spirit of time-serving to meet the political conditions of the hour. Two great steps have been taken in the past few years: First, the partial recognition of the continuing existence of the Navy by the passage of the three-year building program in 1915; secondly, by the creation of the office of Operation, with the responsibility for actual operations in the Chief of Naval Operations. If we are to build up broadly, we must build along these lines and do it slowly. We must build

up a continuing policy, but above all there must be a recognition of that policy by Congress and not the present system of haphazard changes and shots in the dark.

That is why I am absolutely opposed to any action by your subcommittee looking to changes in the existing organization. Such changes, hastily arrived at, would only muddy the waters and would accomplish no good in the long run.

I do not believe the time has yet come for a careful examination of the broad subject. We are altogether too close to the war to understand its lessons. We are in the middle of a partisan campaign. We have not yet wholly completed the work of demobilization. In other words, we are still greatly occupied with the work arising from the war itself. It seems to me that by next winter or next spring it would be possible and entirely right to have an examination and careful study made, but such an examination should be conducted only by experts.

Very sincerely, yours,

FRANKLIN D. ROOSEVELT.

Hon. FREDERICK HALE, *United States Senate.*

ADMIRAL R. E. COONTZ, CHIEF OF NAVAL OPERATIONS.

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, June 2, 1920.

MY DEAR SENATOR HALE: Referring to your letter of May 7, 1920, and subsequent correspondence connected therewith, I would state that I have finally found an opportunity to write you regarding the preparation of any suggestions that have occurred to me about changes in the organization of the Navy Department that would, in my opinion, be desirable.

The need for some such adjustment of the Navy Department organization appears to have been felt in a greater or less degree by all who have come in contact with it during a great number of years, including the civilian heads of the Navy as well as officers of experience. The various Secretaries have met this need in their own characteristic ways, sometimes using a civilian assistant of extensive knowledge in marine matters, at other times organizing boards or councils to furnish the advice needed in technical matters, and occasionally depending largely upon personally chosen officer aids for the advice required for the proper exercise of coordinating authority in purely professional naval matters. The civilian heads of the Navy have been able to make the Navy function as efficiently as it has, although openly or tacitly acknowledging the lack of a properly informed coordinating power in the department, by their successive endeavors to provide for this lack through the acceptance of expedients inherited from previous régimes or devised as a result of their own experience.

These expedients have filled in part the need which practically all familiar with the Navy Department organization admit exists. They have, however, been expedients; and, while accommodating themselves to the particular Secretary who may have devised or retained them, they have been subject to frequent modifications, sometimes amounting to the abolition of one system of procedure and the substitution of another. These frequent modifications have been detrimental to the general naval efficiency. There is still an absence of a coordinating head for the various technical naval activities carried on by the bureaus and offices of the department as now constituted.

The legislation establishing the Office of Naval Operations was a long step toward the remedying of the defect in question, but it failed in its purpose in so far as it restricted the responsibility of the Chief of Naval Operations to the preparation and readiness of plans for the use of the fleet in war, instead of charging him with the preparation and readiness of the fleet itself for use in war, as well as for its operations, for in the final summing up the fleet is the Navy.

The soundest of reasons exist for civilian control of the Naval Establishment, and it is unnecessary to discuss them here. The purpose of this letter is to suggest a means for supplying the deficiency in the department organization, universally recognized by successive civilian heads, which provides no person or body, under the Secretary, definitely charged with the responsibility of coordinating the technical work of the department as carried on by separate bu-

reaus, each bureau having equal authority in the administration of the activities under its cognizance. It is considered important to reiterate the point that the various Secretaries of the Navy over a long period of years have indicated the need they individually have felt of supplying this deficiency. They have supplied the deficiency by various methods, all of which lacked permanency, that would have characterized a method provided for by legislative enactment.

In the development, therefore, of the suggestion upon which this letter is based, it is proposed that the Secretary, in place of a body of aids, a board, or a council to advise him in the technical details of the naval profession, which has been established by himself and which hence is without legal responsibility, be provided with an assistant, subordinate to the Secretary, who is definitely charged by law with the preparation and readiness of the fleet for use in war or any emergency in accordance with policy dictated by the Secretary. Legislation with this end in view should be framed particularly to safeguard all of the present powers of the Secretary, which should in no way be compromised in supplying the existing defect in the department organization. Decision should rest with the civilian head in the same degree and in equal measure as at present. The Secretary should continue to dictate the policy of the Navy and should be responsible, in the same manner as at present, for the state of readiness and the employment of the Navy, so far as he may be considered answerable, through the President, to the legislative bodies and the country at large.

It is inevitable in an organization whose varied activities are closely interlocked that differences of opinion should arise. If these differences of opinion are shared by persons of equal authority in the organization and concern professional matters in which each party to the difference has an active and legitimate interest, a decision along the lines of approved policy is required. If the policy should be absent, the Secretary would dictate it. The decision could reasonably be left to his professional assistant, from whom an appeal to the Secretary by any one of the principals would still be possible.

What might be called the supreme expression of naval organization is that found in our major fighting ships. It is a form of organization which, in its essentials, is the result of generations of naval experience. It is familiar to all naval officers. It lends itself readily to the carrying on of naval activities other than those on shipboard, and fits naturally into the thought habits of the vast majority of officers. It is the type organization, with minor modifications, of practically all of the shore establishments of the Navy, except the Navy Department establishment itself. This typical ship organization of the Navy has been examined by civilian experts and has been pronounced a highly efficient one. It is believed, if the Navy Department is organized along the lines suggested by the usual ship organization in such a manner that the Secretary stands in the organization in the relation of the commanding officer of the ship, with a professional assistant and adviser in the relation of the executive officer of the ship, that the present defect in the department organization will be overcome, and that the chain of authority and responsibility will be such as to insure a more efficient and economical naval establishment than is possible under the present organization. The Secretary will not be restricted in his powers, but in the Chief of Naval Operations he will have a professional adviser responsible for the carrying out of his policies and authorized to coordinate the activities of the various bureaus and offices of the department in such a manner as will insure the fleet being in a state of readiness for any emergency and prepared to carry on governmental policies both in peace and war.

The analogy between the Secretary and the commanding officer of a ship in the proposed organization of the Navy Department is necessarily not perfect, on account of the lack of strictly professional knowledge of the Navy on the part of the former as compared with the latter. This department from an exact analogy, however, is not material, if the legislation covering the duties of the Secretary's professional adviser is so drawn as to make the latter responsible for the preparation and execution of all plans for the development and use of the Navy under the predetermined and guiding policies of the Secretary. The relation between the Secretary and his leading professional adviser would, in this particular, be similar to that between the president of an industrial organization and the executive manager of the organization.

The defect in the present organization of the Navy Department, in which the only common superior of a number of coordinate technical administrative bu-

live activities, which must be depended upon to provide personnel for and to supply and maintain the fleet in any given theater of operations.

If, then, the Chief of Naval Operations is given by law the status of leading professional adviser to the Secretary, and, under the Secretary as the supreme authority in the Navy, is charged with the operations of the fleet, with the preparation and readiness of plans for its development in peace, as well as its use in war, and is invested with the necessary authority over all of the technical administrative activities of the Navy to insure that approved plans and policies are carried out, there will result an organization, analogous in its essentials to that which has been found most efficient in all military establishments, and which will present a logical chain of command and responsibility, and will remedy at once the essential defects of the present organization.

There are some important details to be developed and decided upon in connection with the above suggested plan of organization. In this connection I am of the opinion that in the interests of economy, efficiency, and lack of friction the Pay Corps, the Construction Corps, and the Civil Engineer Corps should be amalgamated with the line of the Navy along the same lines that the old Engineer Corps was amalgamated by the act of March 3, 1899. All troubles over bureau coordination, industrial management, etc., will then fade away. The remaining two corps—the Medical Corps and the Chaplain Corps—can be given rank and title along the same lines as these matters are handled by the Army. The question as to the future of the General Board can be handled by its amalgamation with the plans committee of Operations and then making of it the permanent policy and plan section of Operations. All estimates of naval appropriations, from whatever source, should be based on approved plans for the development and use of the Navy. These plans would indicate the relative importance of the various features entering into the plans, and estimates of appropriations for carrying them out should be coordinated by the Chief of Naval Operations and approved by the Secretary of the Navy. There is, under the present organization, no coordinating branch in connection with personnel activities, and the matériel division of Operations is without proper powers effective to aid in the material development of the fleet and the shore establishment as a whole. These difficulties readily lend themselves to a solution within the limits of elasticity which should be accorded to the organization of the Navy Department as a whole. The really essential feature which will enable the Navy to function as an effective fighting machine is to provide the Secretary by law with a professional adviser charged with the responsibilities as outlined herein and invested with adequate authority to discharge such responsibilities.

The Navy has functioned in the past and will continue to function in the future, but to assure economy and efficiency I will roughly summarize the foregoing desirable needs as follows:

- (a) Amalgamate the Supply Corps, the Construction Corps, and the Civil Engineer Corps with the line of the Navy.
 - (b) Establish the budget system.
 - (c) Clothe the Chief of Naval Operations with the responsibility and authority heretofore mentioned, under the direction of the Secretary of the Navy.
 - (d) Amalgamate the General Board with the Plans Division of Operations.
- Very respectfully,

R. E. COONTZ,
Admiral, United States Navy,
Chief of Naval Operations.

HON. FREDERICK HALE,
Chairman Subcommittee Senate Committee on Naval Affairs,
United States Senate.

REAR ADMIRAL CHARLES J. BADGER, PRESIDENT, GENERAL BOARD.

DEPARTMENT OF THE NAVY, GENERAL BOARD,
Washington, May 11, 1920.

Senator FREDERICK HALE,

Chairman Subcommittee, Senate Committee on Naval Affairs.

MY DEAR SENATOR HALE: I am in receipt of your letter of the 7th instant, requesting me to furnish the subcommittee of which you are chairman suggestions in regard to changes that may be advantageously made in the organization of the Navy Department.

2. After giving careful consideration to the subject I feel that I am not prepared to make any suggestions for a reorganization of the Navy Department that would be of value to the committee or to the service. I have not given it the detailed study which its importance merits.

3. The present organization of the Navy Department is based upon a bureau system, with a civilian Secretary of the Navy at its head, originally adopted in 1842 and extended and modified in succeeding years as progress in the Navy has rendered advisable. Through many trials, and at times against much opposition within the service, it has maintained itself because upon broad investigation nothing better suited to our methods of business and form of Government has as yet found to replace it.

4. It adjusted itself efficiently to the demands of the World War. Without substantial modification it stood the strain of enormous expansion and subsequently of speedy and orderly contraction to normal conditions with the minimum of friction or confusion. This fact should cause suggestions for any radical change to be examined with thoroughness and conservatism.

Very sincerely, yours,

CHAS. J. BADGER,
Rear Admiral, United States Navy (Retired).

REAR ADMIRAL HENRY T. MAYO, MEMBER, GENERAL BOARD.

DEPARTMENT OF THE NAVY, GENERAL BOARD,
Washington, May 10, 1920.

Hon. FREDERICK HALE,

United States Senate.

MY DEAR SENATOR: In compliance with your letter of May 7, 1920, I inclose herewith additional statement which I had prepared in accordance with your verbal request that I prepare a further statement in regard to what I had said in my hearing as to the relations of national policy to the work of the Navy Department and also in regard to organization of the Navy Department.

I assume that it will not be desired that I appear in person again before the subcommittee.

Very respectfully,

H. T. MAYO,
Rear Admiral, United States Navy.

STATEMENT OF REAR ADMIRAL H. T. MAYO, UNITED STATES NAVY.

1. In complying with the request of the chairman of this committee, to elaborate on my previous statement about foreign policies of the country as applied to the Navy, I find that I can not deal with the subject in a proper manner without going into it at some length. I have, however, endeavored to condense what I have to say as much as is practicable and consistent with clearness.

2. In addition to the indisputable rights inherent in the conception of a country as free, independent, and "sovereign" in its own right, every country has certain policies or interests (which may well grow to become policies) which are considered vital to its honor, its welfare or its existence. These policies and interests (such as those growing out of foreign trade) are, from their very nature, frequently bound to conflict with the similar policies and interests of other countries, who are entitled to their own views as to territorial

possession and expansion, political rights and obligations, and commercial and industrial markets. The interchange of views and negotiations as to such policies and interests is embraced in the field of foreign affairs, or international relations, and is conducted chiefly through the agency of diplomatic intercourse.

3. The ordinary processes for the conduct of foreign affairs are the exchange of notes, the making of treaties, the framing of covenants and other similar communications or agreements for the purpose of promoting orderly relations, the composing of differences, or the adjustment of other matters where there may be a conflict of interests. Human nature being what it is, as well with regard to nations as to individuals, diplomatic intercourse depends for its efficiency not alone upon international courtesy and good will but, in those matters where a nation may deem the satisfactory solution of the question at issue vital to its welfare or to its existence, upon the driving power behind the presentation of its case to the equally independent and interested country with whom negotiations are in progress. This driving power may be moral or economic or military and at the same time actual or potential.

4. It should be noted that not alone is consideration required of our own policies and interests but also of such policies and interests of other nations as may be detrimental to our national welfare or existence. The policies that we may have cause to initiate constitute but one side of the matter; there is another side, where other countries initiate policies or support interests which this country can not afford to overlook. This interaction leads to complications which in the final analysis may depend upon potential strength for peaceful solution and for the use of force when peaceful measures fail.

5. As concrete instances of national policies I will mention two which are so well known as to be generally accepted and should give no cause for unfavorable comment as to their mention—the Monroe doctrine and the open door. I think it best to leave you to consider without specific comment the bearings of these well-known policies, the one chiefly political and the other chiefly commercial, on our relations with other countries. Again, we are, of course, satisfied as to our control of the Panama Canal, but we could not be expected to permit any other country to bring that control into question.

6. Frequently a solution to international difficulties is found by means of compromise; frequently, also, by one nation or the other abandoning a certain policy, chiefly through lack of driving power; arbitration is often resorted to with satisfactory results where minor issues are involved. But where certain vital matters are in consideration no government and no nation calling itself a free, independent, and sovereign country can yield, not even if the arbitration of friendly and disinterested countries should so decree. In such a case a deadlock ensues, and the usual result is war. War, then, may be somewhat paradoxically viewed as the continuation of international intercourse when all diplomatic measures have been found inadequate to settle or adjust differences.

7. War, the use of force, can not be separated from national policy, and, therefore, such policy is the determining factor in the decision as to what state of preparation of the armed forces is necessary or advisable for the support or for the defense of interests which may be deemed vital. War is but the continuation of policy; policy must contemplate the eventuality of war when foreign relations come into play.

8. While all the armed forces and military resources of a country must conform to the requirements of national policy, the Navy is peculiarly the instrument of international or foreign affairs by reason of the fact that it operates on the sea, which is the common international highway and the principal medium of international intercourse, whether for peace or for war. The Navy should, in order to be of the maximum efficiency and at the same time as economical as practicable, be of such size, characteristics, and composition as the requirements of our international affairs, present or prospective, may necessitate for the support or for the defense of the national welfare or existence. It is to be noted that the support or the defense of national interests may well be, and in fact usually is, effected by passive or potential considerations rather than by action.

9. It is not the function of the Navy to decide upon national policies, nor to determine what interests shall be supported and what left to shift for themselves. The Navy is but a military instrument to be brought into play by the Civil Government to support and, if need be, to enforce or to defend such

policies and interests. The Navy, upon being informed, can say what it can adequately support or what it can defend with existing facilities; upon being informed of policies, it can say what it will require in order to support or to defend them; and, should the time for support or defense arrive, it can be expected to "make good" according to how well or ill the means furnished it are suited to the task in hand.

10. It is hoped that the foregoing elaboration of the interrelation of the armed forces, particularly the Navy, and the national foreign policies and interests, indicates why it was stated in the previous testimony that "until the Navy is provided with a definite ideal in the form of a definite statement of the foreign policies which it is to be prepared to enforce, the management of the Navy can not formulate building programs and war plans except on hypotheses as to the foreign policies of the United States." At present these hypotheses have to be made by naval officers. If hypotheses have to be made it would be better if they were made by those responsible for our foreign relations.

11. At present this lack of definite knowledge of our national policies prevents a logical analysis and decision as to the naval strength we require, other than the very general one, that of "A Navy incomparably greater than that of any other country." The continuation of the present and past indefiniteness is virtually a "policy of no policy." Reasonable, ordinary safety demands that, not knowing what we may be called upon to do, we must ask for a Navy large enough to prepare for any eventuality. We have a Navy of a certain size, good—what there is of it—but if it is not large enough for the needs of our international affairs we are leaning on a broken reed. If it is too large it is just so far extravagant, and an unfair charge on the country. It is for the Government to decide from time to time upon the foreign policies and interests that it is deemed necessary to carry through, and to keep the Navy (and the Army) duly informed; then to require from the War and Navy Departments a statement of their capacity to support and defend such policies and interests; and then to take the necessary steps to increase or decrease that support or that defense accordingly. It is obvious that a Navy can not be improvised; it must be made ready before hand.

12. The means of coordinating the national policies with readiness to support and defend them is thus outlined. The Navy (and the Army) furnished with the knowledge as to what they are to be ready for are thus put in a position to make definite and specific studies for the war plans that will enable them to support or defend our national foreign policies. The studies will include examination of the probable areas of operation, the strength and weaknesses of the probable enemies, and of our own strength and weaknesses, and will result in carefully considered plans on which the country may depend. It is thus that building programs should be decided upon; it is only on such firm bases that the numbers and types of ships and bases required by the Navy, can be logically determined. Only in this manner will we have a Navy that is adequate to the needs of the national policies and interests, because then the national policies and the measures necessary to support or to defend them will be coordinated.

13. It may be said that it would be unwise to give publicity to the considerations which would determine what national policies and interests are deemed vital; what ones are reckoned desirable; and what are considered unimportant; as such information would obviously be of interest and of value to other countries. As a means for dealing with this situation it is suggested that there might be established a council of national preparedness similar in composition and function to bodies which most great countries utilize for the same purpose (as indicated in an appendix hereto). Such a body could well be composed of suitable and responsible representatives of the executive and legislative branches of the Government, such as—

From the executive branch: The Secretary of State, the Secretary of War, the Secretary of the Navy, and the Secretary of the Treasury.

From the legislative branch: Chairmen of the Senate and House Committees on Foreign Relations, chairmen of the Senate and House Committees on Military Affairs, chairmen of the Senate and House Committees on Naval Affairs, and chairmen of the Senate and House Committees on Appropriations.

From the military and naval branches: The Chief of Staff of the Army and the Chief of Naval Operations.

Such a body could meet periodically or at the call of the President, and would, preferably, always meet in confidential sessions. The scope of their considera-

tions would not be executive, but rather analytical and summarizing, as to the facts in regard to policies and the measures necessary to support or to defend them. This body would report to the President in full, and to Congress so much as may be necessary to insure that recommended measures shall have due consideration. The ex officio composition and responsible membership of such a council should insure a harmonious coordination of views and aims and an efficient cooperation of effort in preparation of the national needs.

14. In complying with that part of the request to elaborate on my previous statement about the defects in the organization of the Navy Department, I also find that I must go into the matter at some length, but I have again endeavored to condense what I have to say by dealing with general principles and omitting nonessential details.

15. I shall consider the general subject of Navy Department organization first, and later indicate the particular faults in the present organization and my opinion of how they may be corrected.

16. It must be understood that I am expressing only my personal views, and those in general terms. For the details of changes in the organization, I consider that the Navy Department should be consulted.

17. *Organization.*—There are two main classes of naval activities: (a) Administrative: That is, the activities comprised in the design, production, and maintenance of the naval forces. (b) Operational: That is, the operations of the naval forces.

18. Maintenance as used in (a) above is limited to repairs and alterations to vessels of such nature as require work to be done at a navy yard; to the procurement, preliminary training, and transportation of personnel, and to the procurement and transportation of stores and supplies, until placed on board vessels attached to the operating forces.

19. The activities of class (a) are, to a large extent, controlled by the various bureaus of the Navy Department, and to facilitate the control of the bureaus over such activities the law provides that all orders issued by a chief of bureau shall be considered as having been issued by the Secretary of the Navy. There is no superior to the chiefs of bureaus in the organization of the Navy Department, except the Secretary of the Navy, and the Assistant Secretary in certain activities assigned to him by the Secretary.

20. Repairs and alterations to vessels, as well as design and production of new vessels, and any extensive operation of our naval forces usually involve activities of two or more bureaus and, unless by voluntary adjustment of differences the bureaus can arrive at decisions satisfactory to all concerned, the final decisions must be made by the Secretary of the Navy. It should hardly be necessary to say that a civilian Secretary is not likely to have the technical knowledge or training necessary to settle differences between bureaus, and as a consequence such differences are usually settled, if settled at all, by the assistants of the Chief of Naval Operations but, in order to comply with the law, the order directing the execution of such decisions must be signed by the Secretary of the Navy.

21. The necessity for the coordination of the material bureaus was recognized in the Meyer plan of Navy Department organization, in which there was an aid for material to advise the Secretary in such matters. In the Meyer plan the aid for material had no authority and consequently his position was merely that of an adviser to the Secretary. The chiefs of bureaus each have certain responsibilities under the law and they probably resented the establishment of an adviser to the Secretary in material matters, when such adviser had no legal standing or responsibility.

22. In the Meyer plan there were four aids, one each for material, personnel, operations, and inspections. These aids had no authority except to transmit orders of the Secretary, and were of approximately equal status in the organization.

23. This plan, although excellent in general, was faulty in two important particulars, namely:

(1) That it failed to give adequate consideration to the fact that the object of the Navy is accomplished by the operating forces and that the activities of all the bureaus and offices of the Navy Department must be in accord with and subordinate to the demands of the operating forces and with plans for the employment of such forces.

(2) That the aids were advisers only and consequently had no authority and no responsibility except that to the Secretary with respect to the advice they gave him.

24. This last paragraph indicates the ideas which must govern any organization of the Navy Department if the maximum efficiency is to be obtained.

25. The primary function of the Navy is to defeat the naval forces of any enemy with a view to gaining and maintaining the control of vital lines of communication on the sea. All phases of naval activity must be governed by this function, and therefore the policies and general plans governing the activities of the bureaus must have the same origin as the policies and plans governing the operations of the naval forces; and authority to exercise, through the bureaus and offices of the Navy Department, the commandants of naval districts, navy yards, or stations, and the commanders of naval forces, such supervision over all naval activities as may be required to secure coordinated and efficient execution must be given to the office charged with the operations of the naval forces. This supervision should under no circumstances be extended to interfere in the administrative work of the bureaus.

26. The second class of naval activities, as indicated in paragraph 17, is the operations of the naval forces.

27. The operations which the naval forces can undertake is dependent upon their strength and characteristics, the location of naval bases, and the location and capacities of the various naval establishments, such as navy yards.

28. It should be apparent from the above that the separation of the operations of the naval forces from the activities of the bureaus is impossible. Each is dependent upon the other, and the maximum efficiency can not be attained unless all activities of the bureaus and offices of the Navy Department are based upon policies and plans which are consistent with the plans and policies governing operations.

29. The principle that material activities and the operating activities must be coordinated in one office has been recognized by most of the large industrial corporations which operate as well as produce material. This principle is recognized in the present organization of the Pennsylvania Railroad Co., the American Telephone & Telegraph Co., and others of equal prominence.

30. *Naval policies and plans.*—Naval policies and plans are to a large extent dependent upon national policies, as has been pointed out. Efficiency demands that the Navy be governed by its own well-considered policies and plans in accord with national policies. There must be centralized control of the professional and technical questions by a professional and technical officer in the development of these policies and general plans. The Chief of Naval Operations should be the principal adviser of the Secretary of the Navy with regard to these and must be provided with the necessary personnel to assist him in their preparation. In order that the importance of planning in the preparation and training of the Navy and in the conduct of war may be thoroughly appreciated, it will be discussed at some length.

31. *Planning.*—Planning is necessary for three purposes:

- (a) To prepare in advance for what is to be done;
- (b) To coordinate all lines of activity so that they work together to achieve a common purpose; and
- (c) To concentrate all available forces upon the work at hand or to be undertaken.

32. Enlarging upon these phases as they apply to the Navy, they appear as follows:

The comparison of our foreign policies with those of other nations, indicates:

- (a) Our most probable enemies.
- (b) The probability of war.
- (c) The nature of such war if it is forced upon us.
- (d) Probable theaters of war as indicated by the objects of the war, locations of important possessions, etc.

Information as to (a) and (b) should be received from time to time from those charged with the responsibility for our foreign relations.

We must know the naval, military, and economic strength of each nation, and from this and (a), (b), (c), and (d) above, we must determine:

- (e) The strength and characteristics of naval forces which may oppose us.
- (f) From (d) and (e) the strength and characteristics of the Navy we need, including ships, bases, and industrial establishments.

33. It must be stated again for emphasis that the Navy does not and should not concern itself with determining the policies which dictate what the Navy is to be prepared to do. The Secretary of the Navy is, however, responsible for advice to the President and to the Congress as to the strength and

characteristics of the Navy, and until he is instructed as to at least the general policies of the Government his advice can be based only on hypotheses.

34. There is no desire on the part of naval officers to influence Government policy, but the efficient performance of naval officers' duties, those duties for which they exist is impossible without knowledge of the policies which actuate the Government. Naval officers must advise the Secretary of the Navy and Congress as to the number and types of ships required; of the location and capacity of required naval bases, etc. These and many other items are based on our foreign policies.

35. To coordinate all lines of activity so that they work together to achieve a common purpose, and to concentrate all available forces upon the work at hand, or to be undertaken, it is necessary to prepare war plans:

36. War plans consist in general terms of:

(a) Mobilization plans indicating the rendezvous for ships in commission, the sequence of commissioning ships in reserve and out of commission; plans for commandeering, manning and arming such private vessels as may be necessary and suitable as combatant vessels, and for the utilization of all available naval personnel.

(b) Strategic plans indicating the character and the theater of the operations to be undertaken.

(c) Logistic plans indicating the means to be taken to supply and maintain the operating forces, including such as: Plans for commandeering necessary and suitable merchant vessels for the supply of the operating forces; the procurement of personnel, stores and supplies, and their transportation to desired points; the expansion of naval establishments, and the provision of floating repair facilities, such as floating dry docks and repair ships.

(d) Programs—if the study of war conditions indicate that additional forces, bases, or establishments will be required in the conduct of war, programs for such additions should be made. Such details of plans and projects as concern the bureaus would be assigned to them for preparation.

Such programs are of two classes:

(a) Those which should be undertaken in peace to prepare the Navy for possible operations.

(b) Those to be undertaken at the outbreak of the war.

37. Economy and efficiency demand that the appropriations for the Navy be spent in accordance with well-considered plans for national defense. Such plans can be best prepared under the general direction of the Chief of Naval Operations by assistants set apart as far as practicable from distracting routine administrative duties.

38. All particular phases of naval technical activity, both in personnel and material, must be represented somewhere in the planning personnel by officers highly skilled in respective activities such as strategy, tactics, gunnery, engineering, naval construction, supplies, public works, etc.

39. The personnel assigned to planning form a type of research department in which naval experts reach out into the field of knowledge and bring to the responsible head of the organization the results of their study bearing upon the main features of naval activities; studies which are made with a closeness of attention which it would be impossible for those charged with administrative duties to give.

40. This research is not the same as the technical research with regard to material carried on by the bureaus. It is research into the knowledge of the conduct of war; to formulate instructions for the conduct of war; to study the changes in the conduct of war which may result from the development of new weapons or types of vessels, or aircraft; to predict the nature of future wars and to study new conditions with a view to pointing out desirable characteristics of weapons, vessels, etc., toward which the material bureaus should proceed in the development of materials.

41. It is evident that any failure to accomplish any of the three purposes of planning above stated (paragraph 31) must lead to a loss of efficiency. Work can not go on unless some one decides what is to be done; likewise, coordination of activities and the concentration of all forces on the work at hand can result only from orders based on well-considered plans.

42. Planning is the exercise of foresight, including the continuous revision of more distant foresight by later, closer, and clearer vision. Plans need to be made and then be constantly under revision; but to insure their existence there should be certain times when, as a matter of routine, plans and projects are made covering a period as far ahead as practicable foresight will allow.

43. For the Navy, such plans and projects should be made annually, previous to the date on which the estimates of appropriations are to be submitted to Congress, and these estimates should be based on these plans and projects. In no other way can economy be obtained and the returns from the money expended be a maximum.

44. These plans and projects should be presented to Congress with the estimates of appropriations in order that the Congress (which is responsible for the appropriations) may have a clear conception of exactly what the Navy intends to accomplish with the money appropriated.

45. As the Chief of Naval Operations is charged with the operations of the fleet, he must, if efficiency is to be attained, be charged with the preparation and readiness of all plans pertaining to the operation of the naval forces; plans for their maintenance and plans for their development, including the determination of the characteristics of weapons, vessels, and shore establishments as they apply to the effective employment of the naval force.

46. As the Chief of Naval Operations is charged with the operations of the the naval forces and consequently should be prepared under a common head. The efficient coordination of all plans to the one aim of the Navy will secure the maximum results for the minimum expenditure of money.

47. The Chief of Naval Operations, should, therefore, be responsible to the Secretary of the Navy, for the preparation, readiness, completeness, effectiveness, and execution of plans of the Navy for national defense, including plans for the development of the Navy, plans for its maintenance, plans for its use, and plans and recommendations for cooperation with other Government departments.

48. The Chief of Naval Operations should have authority to assign for preparation such portions of these plans as he may deem appropriate to any bureau, board, or office of the Navy Department, or to commanders of naval forces, naval districts, or naval bases.

49. All policies or general plans so prepared, or prepared by his assistants, should be forwarded to the Secretary of the Navy, the Chief of Naval Operations advising the Secretary of the Navy in writing in regard thereto.

50. Important policies and general plans should, before being passed upon by the Chief of Naval Operations, be referred to a board composed of officers of long service and great experience.

51. The General Board of the Navy, although not constituted by law, has for some 20 years acted as above indicated and has had the confidence of the Congress, the Secretary of the Navy, and the bureaus of the department. It is believed that the value of and reliance upon its opinions have been increased by the fact that it is an independent body, having no administrative duties, and reporting directly to the Secretary. Whether under any reorganization of the department this board should remain a body of independent advisors to the department on such matters as are referred to it, as is the case at present, or whether it should be furnished with the necessary assistants and be legally charged with the preparation of important general policies and general plans, is a question regarding which there are different opinions and upon which department opinion and recommendation should be obtained.

52. After the approval of policies and plans by the Secretary of the Navy, the Chief of Naval Operations should be responsible to the Secretary for their execution, acting as the executive of the Secretary in carrying the plans into effect, and should be authorized to exercise, through the bureaus and offices of the Navy Department and the commanders of naval forces, districts, or bases, such supervision over all activities of the Navy afloat and ashore as may be required to secure coordinated and efficient execution.

53. There is no suggestion to limit the authority of the Secretary of the Navy by the above provisions. The governing idea is to provide an experienced technical subordinate to the Secretary who can be held responsible for the making of plans, and, when policies and plans are approved by the Secretary, be responsible for their efficient execution. The relation between the Secretary of the Navy and the Chief of Naval Operations should be the same as that between the president of an industrial corporation and its general manager. The Secretary of the Navy should be responsible to the Government for the policies and general plans which he approves, but after approval should hold the Chief of Naval Operations responsible for their efficient execution. Control of policies and plans is effective control over all activities only when responsibility for their execution can be definitely fixed. Operations and administration are so inti-

mately related that the control over both types of activities must be centralized under one professional head.

53. It will no doubt be remembered that one of the criticisms of the organization previously made was that coordination of 13 bureaus, boards, and offices was required of the Secretary. The result of the above suggested change would throw nearly the same burden on the Chief of Naval Operations. The only improvements would be:

(a) The coordination would be accomplished by a man of technical knowledge and professional experience; and

(b) Such officer is by law allowed two principal assistants, one for operations and one for material and consequently would be relieved of much of the routine duties.

54. The exercise of such supervision would in no way restrict the administrative activities of the bureaus. Interference in the administrative work of and in the internal relations of the bureaus would be contrary to the principle of subdivision of labor and responsibility. The exercise of such supervision as is indicated would lead to all bureaus, other shore activities, and operating forces, working toward the accomplishment of definite plans.

55. The chiefs of bureaus would have access to the Secretary of the Navy just as at present, but the activities of the Navy through this centralization of policies and plans would be coordinated to a degree not possible at present.

56. This above-suggested modification of the present organization would no doubt increase efficiency, but the organization would still be faulty in two respects:

(a) Practical experience has demonstrated that efficiency is reduced when the activities of more than a maximum of, say, eight subordinates are coordinated by one superior; preferably this number should not exceed five or six.

(b) The effect of the above organization would be that the assistants to the Chief of Naval Operations, usually junior to the chiefs of bureaus, would, acting under instructions from the Chief of Naval Operations, be the actual coordinating authorities.

57. The present organization is deficient in that authority and responsibility for administrative activities are not definitely placed except in the Secretary of the Navy and in the chiefs of bureaus. A "chain of command" is just as necessary in these activities as it is in the fleet. The necessity for a definite line of authority and responsibility, or, as it is commonly called, "chain of command," is recognized in modern industrial organization as well as in military organization.

58. Proper organization demands:

(a) A responsible head invested with commensurate authority.

(b) A limited number of officers immediately subordinate to the head, who alone deal directly with him.

(c) Other officers subordinate to these, and others subordinate to them, in a definite graduation of authority.

The responsible head should deal with his immediate subordinates. Also, that is his proper limit.

59. With the previously explained necessity for the coordination of the material bureaus in mind, and in conformity with the paragraph above, it appears that to obtain the maximum efficiency there must be a chief of material who would occupy a definite place in the "chain of command" between the Chief of Naval Operations and the material bureaus. Likewise, there should be a chief of personnel, who would occupy a like position in relation to the bureaus and offices which deal primarily with personnel. The commanders in chief of the fleets and commanders of naval districts occupy similar positions with regard to the operations of naval forces.

60. Such an organization will limit the number of subordinates with whom any one authority will deal and will also permit the proper decentralization of authority and responsibility through a definite "chain of command."

61. In this suggested organization:

(a) The Chief of Naval Operations would be responsible to the Secretary of the Navy for the preparation, readiness, completeness, and effectiveness of plans for the Navy for national defense, including plans for the development of the Navy, plans for its maintenance, plans for its use, and plans and recommendations for cooperation with other Government departments.

(b) The Chief of Naval Operations would have authority to assign for preparation such portion of these plans as he may deem appropriate to any

bureau, board, or office of the Navy Department, or to commanders of naval forces, naval districts, or naval bases.

(c) After the approval of policies and general plans by the Secretary of the Navy, the Chief of Naval Operations would be responsible to the Secretary for their execution, acting as the executive of the Secretary in carrying them into effect, and would be authorized to exercise, through the bureaus and offices of the Navy Department and the commanders of naval forces, districts, or bases, such supervision over all activities of the Navy afloat and ashore as may be required to secure coordinated and efficient execution.

(d) There would be two divisions controlling the administrative activities—a division of material and a division of personnel. The present bureaus would be divided under these two divisions.

(e) The Chief of Naval Operations would be responsible for the operations of the naval forces, exercising this authority through the commanders in chief and commandants of naval districts and bases.

(f) The activities of all navy yards and stations pertaining to maintenance and supply would be under the supervision of the chief of material.

62. The primary differences between this suggested organization and the Meyer plan are as follows:

(a) The Chief of Naval Operations is, under the Secretary, charged with the responsibility for the preparation, readiness, completeness, and effectiveness of plans and for the efficient execution of approved plans.

(b) The chiefs of material and personnel are given definite responsibility and authority to coordinate the activities of the bureaus, the chiefs of material and personnel being subordinates of the Chief of Naval Operations and the common superior of the bureaus comprising their respective divisions.

(c) The aid for inspections is not provided because the function of inspection as to efficiency of operation and training legitimately belongs to each superior. There should be no inspection of this nature by persons not charged with responsibility. Inspection of material manufactured for other bureaus or work done on board ship must logically be inspected by those for whom the work is done.

(d) The Marine Corps would be considered as a separate division.

63. *Appropriations.*—In the above discussion no mention has been made of appropriations. The Navy must be prepared to do its best with that which is provided. It is only fair to Congress that the Navy's plans and projects, except where in rare cases secrecy may be essential to the public interest, should be presented with all requests for legislation or for appropriations.

64. The Navy Department should be required to submit each year a general naval project. Such project should indicate the Navy's plans for the employment of existing forces and the projected construction of vessels, industrial establishments or bases, together with the reasons therefor, and the estimates of the appropriations required to execute the plans and projects.

65. The congressional committees in their consideration of such plans and projects should have the advice, not only of the Secretary and the Chief of Naval Operations, but also of the experts who prepared the plans and projects.

66. The Congress should appropriate the money to the Navy Department in a lump-sum appropriation for the purpose of executing the plans and projects. If certain parts of the plans or projects are not approved by Congress, they must perforce be eliminated, but ordinarily if the appropriation to be granted is less than that requested, the Navy Department should be permitted to indicate the priority in its plans or projects, and after the appropriation is made should be permitted to allocate funds to the various bureaus and offices of the Navy Department as may be necessary to execute the approved plans and projects.

67. There is little doubt but that such a system will result in much greater economy and efficiency than the present system in which each bureau makes up its estimate of appropriations without reference to any general plan or project adopted for the Navy as a whole.

68. If the system of a lump-sum appropriation to carry out definite plans and projects can not be established, the following system will add perceptibly to efficiency and economy.

69. All estimates from whatever sources within the Navy Department should be based on the approved plans and projects for the Navy. Such plans and projects should indicate the priority of the activities comprising the plan or project, and all estimates of appropriations should be coordinated with these plans and projects by the Chief of Naval Operations and returned to the bureaus or offices for comment before being submitted to the Secretary.

70. As each bureau or office to which funds are appropriated is held accountable by law for the expenditure of such funds, and according to the plans and projects should be required to accomplish certain results with the money, the comments of each bureau or office concerned, upon the estimates as approved by the Chief of Naval Operations, should accompany the final estimates when submitted to the Secretary.

71. Likewise, the comments of the Chief of Naval Operations and of the bureaus or offices on the final estimates should accompany these estimates when submitted to Congress. It is believed that these would largely replace the long hearings now found necessary by the Naval Committees.

72. In accordance with the request of the chairman, I shall now point out the particular faults which exist in the present organization of the Navy Department as I see them, the results of such faulty organization, and how it is corrected in the proposals I have made.

73. (a) No centralized professional responsibility for the preparation of policies and plans.

Result.—General Board, Chief of Naval Operations, and bureaus each submit to the Secretary various policies and plans for approval. This results in lack of coordination, reduced efficiency, and extravagance.

How corrected.—Policies and plans would be formulated under the direction of the Secretary by the Chief of Naval Operations. The Chief of Naval Operations would be assisted in preparation of details by planning officers and the bureaus and officers of the Navy Department and would have the final comment upon all plans and policies recommended to the Secretary. This would insure that all policies and plans would be properly coordinated.

(b) No centralized authority, except the civilian Secretary to supervise the execution of policies and general plans.

Result.—The Secretary is overburdened with administrative duties and forced to assume the direct responsibility for many technical and professional decisions in which, due to a civilian's lack of technical and professional training, he must depend upon subordinates not recognized in the organization.

How corrected.—The Chief of Naval Operations, under the Secretary of the Navy, would be authorized to exercise such general supervision as necessary to secure coordinated action.

(c) No centralized control over estimates of appropriations except by the civilian Assistant Secretary and the Secretary.

Result.—Estimates of appropriations are not based on an approved general plan or project, and priority is seldom indicated. This results sometimes in requests for appropriations not absolutely required, and at other times in the omission of necessary items. The appropriations requested by various bureaus are not sufficiently considered in relation to each other and to the Navy as a whole.

How corrected.—If the Navy Department is required to submit its plans and projects annually, all appropriations will be in accord with such plans and projects. Congress will be able to obtain sufficient knowledge of the Navy's plans and projects and of the relation which the appropriations bear to the execution of the projects.

(d) Too much centralization over the execution of detailed plans.

Result.—Neglect of the principle of "due subdivision of labor and decentralization of authority and responsibility." This results in overburdening the higher authorities with unnecessary routine duties and prevents subordinates from executing their proper parts of the plans with initiative and enthusiasm.

How corrected.—Proper organization and proper plans will allocate duties and responsibilities, and avoid overcentralization in the execution of detailed plans. Overcentralization in execution is most often the result of inadequate plans but it is also due to reluctance to share responsibilities with subordinates. The proper system of command is indicated by the following:

In giving an order the superior has two problems:

First. To set clearly before the subordinate the result to be obtained and limits outside of which the subordinate has no discretion; and,

Second. To allow the subordinate full discretion within those limits.

The second problem is of no less importance than the first, and is equally necessary to efficient performance.

(e) Too much routine duty required of the Secretary.

Result.—Inadequate time for study of policies and general plans.

How corrected.—Chief of Naval Operations would act as his executive officer. The Secretary should be relieved of as much routine work as possible, such as the signing of orders to officers, for one instance.

(f) Inadequate personnel for preparation of plans.

Results.—Confusion and delay to some extent.

How corrected.—Provision of proper personnel and centralization of professional responsibility for the preparation of policies and general plans. Necessity for annual plans and projects.

(g) Inadequate inspection of shore stations and naval districts.

Results.—Dissimilar organizations and methods.

How corrected.—Chief of Naval Operations has supervision over all activities, and may direct inspections and recommend to the Secretary the necessary changes.

74. Several attempts have been made in the past to reorganize the Navy Department, but only such reorganizations as are made by law are effective.

75. The Navy Department has reached a stage of development and expansion which makes economy and efficiency of the utmost importance. There are probably many desirable minor changes in the organization which I have not mentioned.

76. The changes that I have suggested are, in my opinion, the important ones. Having taken this step, the later minor steps will be taken practically automatically.

77. In the interests of economy and efficiency it is desirable that the first steps in reorganization be taken promptly.

APPENDIX TO STATEMENT OF ADMIRAL MAYO.

Council of national defense as constituted by the nations named.

FRANCE.

PARIS, April 3, 1906.

ARTICLE 1. A supreme board of national defense is instituted for the examination of all questions requiring the cooperation of two or more ministerial departments.

* * * * *

ART. 5. The supreme board of national defense shall be composed of the president of the board of ministers, presiding; the minister of foreign affairs; the minister of finance; the minister of war; the minister of marine; the minister for the colonies.

ART. 6. The chief of staff of the army, the chief of staff of the navy, and the president of the consultative committee for colonial defense shall be present at meetings of the supreme board, with deliberative voice.

ITALY.

By a decree of the 16th of July, 1897, the supreme mixed commission for the defense of the Empire was organized. This is charged with the duty of giving advice on all important questions concerning the defense of Italy. The Duke of Genoa is president; the members are: The admiral president of the superior council of the navy, the generals designated to command the various armies in case of war, the admirals designated to command the fleets, and the chief of the general staff of the army and of the navy. The generals, the commanders of army corps, the inspectors general and admirals, when it appears that their presence will be useful, may be invited to attend the meetings of the commission for consultation only. (*L'Etat Militaire des Principales Puissances Etrangères en 1902*, Lauth.)

JAPAN.

The Japanese have what is known as the supreme military council, composed of the minister of foreign affairs, representing the diplomatic side, four general officers and two flag officers. This was created in 1898.

The supreme council of war, which was created in 1904, is an addition to the supreme military council. This supreme council of war may be regarded as the Emperor's advisers and staff officers on all important matters pertaining to war. It consists of the personnel of the supreme military council, the ministers of war and of the navy, the chiefs of the general staff of the army, and the naval staff board. (Taken from *Japan Year Book*, 1907.)

GREAT BRITAIN.

Matters of naval and military policy are considered by a committee of the cabinet called the defense committee. It is presided over by the prime minister, and always includes the secretary of state for war, the first lord of the admiralty, the secretary of state for foreign affairs and for India, the chancellor of the exchequer, the chief of the general staff, the director of naval intelligence, the first sea lord of the admiralty, and the director of naval operations. Other naval and military officers of rank and experience are asked to attend from time to time.

REAR ADMIRAL WILLIAM S. SIMS, PRESIDENT, NAVAL WAR COLLEGE.

NAVAL WAR COLLEGE,
Newport, R. I., May 13, 1920.

MY DEAR SENATOR HALE: I beg to acknowledge the receipt of your letter of May 7, requesting me to give you any suggestions that may occur to me about desirable changes in the organization of the Navy Department.

In compliance with your request, I inclose herewith a brief suggestion of the principles which I think should be included in any sound organization.

Very sincerely, yours,

WM. S. SIMS,
Rear Admiral, United States Navy.

Senator FREDERICK HALE,
1001 Sixteenth Street NW., Washington, D. C.

COMMENTS OF REAR ADMIRAL WILLIAM S. SIMS, UNITED STATES NAVY, CONCERNING LEGISLATION RELATIVE TO ORGANIZATION OF NAVY DEPARTMENT.

MAJOR OBJECTIVE.

In keeping with the "check and balance" doctrine of our form of government to insure to the Congress the maximum efficiency of the Navy—to insure the maximum return to the country for Government funds allotted by Congress for the Navy.

IMPORTANT CONSIDERATIONS NOT AT PRESENT ADEQUATELY PROVIDED FOR.

Congress provides the means of creating a body of expert professional personnel to handle the Navy.

Purely from a standpoint of business efficiency and of insuring return on money invested, it is evident that Congress should require the maximum utilization of the expert knowledge which it creates.

Experience has shown the necessity of specifically requiring by legislation the method by which the above expert knowledge should be utilized.

The above-mentioned expert knowledge refers solely to subjects commonly termed "military" or to "the profession of arms." In the Navy military questions concern those of the following types:

- (a) Determining military characteristics of men-of-war and their equipment.
- (b) Methods of inspection and supply of the above.
- (c) Providing and training of personnel of the Navy.
- (d) Disposition and employment of ships and men.
- (e) Preparation and execution of military plans.
- (f) Internal organization and management of the Navy and of its ships and supporting shore establishments.
- (g) Discipline of the Navy, etc.

All of the above and kindred questions must be based upon national policy; but once that policy is determined and laid down the Congress should see to it that it is carried out in accordance with the responsible advice of trained military (naval) experts.

Acceptance of such military measures, of course, rests with the President or his authorized representative, but Congress is entitled to know upon what grounds such decisions are based.

The present laws go into too much detail as regards the various essential but subordinate parts of the Navy Department organization without providing for the coordination of those parts and without insuring accomplishment of some of the principal considerations above set forth.

From the standpoint of the Congress, the following should be laid down by legislation:

(1) A Cabinet officer (civilian, appointed by and with the advice and consent of the Senate) should act as the direct representative of the President in charge of the Naval Establishment, charged with insuring that the Navy is prepared and conducted in accordance with national policy.

(2) This Cabinet officer should have but two principal subordinates:

(a) A civilian Assistant Secretary, to whom should be delegated all civil questions connected with the Navy, such as detailed dealings with Congress, labor, contracts, appropriations, etc.

(b) Military assistant, to whom should be delegated all questions of a strictly military nature.

(3) In order to relieve the above assistants of undue burden of details, the law should recognize certain other subordinates, such as the present chiefs of bureaus, who should be empowered to expend and be accountable for expenditure of funds; but the activities of these subordinates must be entirely controlled and directed by the above two principal assistants of the Secretary. The coordination of their individual activities is of far greater importance than any of the activities themselves, which activities are in a large degree futile and inefficient unless properly coordinated. It is to the lack of this coordination that is due the inefficiency of the Navy Department.

(4) Experience has shown the necessity of further congressional action in order to insure the accomplishment of the considerations set forth above. The following are suggested:

(a) The military assistant shall be held strictly accountable, subject to the supervision of the Secretary as regards national policy, for the military efficiency of the Navy, its preparation for war, and its conduct in war.

(b) All measures of a strictly military nature must, of course, be in accordance with general political policies laid down by the Secretary, but the law should specifically require that the responsibility as regards military consequences shall rest entirely with the military assistant, unless he is clearly and definitely overruled by higher authority. Having the responsibility for military results placed squarely upon him the military assistant must have the necessary authority to enable him to insure that such results will be satisfactory.

In other words, the Congress should require by law that when the expert advice and assistance, which it provides, are overruled or disregarded, the fact can in no wise be obscured as a matter of official record; and when such occurs the fact should always be known to the Congress when acting in the discharge of its constitutional duty of supervision over the Navy. The present system allows great chances for obscurity of responsibility. Witness the present senatorial efforts to fix responsibility.

It is submitted that the above provisions are all that should be recognized by law. Any attempt to go further may do more harm than good.

The only possible addition that might be suggested is for Congress to require, with all estimates for appropriations, the military plans upon which they are based. This would of necessity require measures of secrecy.

REAR ADMIRAL FRANK F. FLETCHER (RETIRED).

WAGNER INN,
Poughkeepsie, N. Y., May 16, 1920.

Senator FREDERICK HALE,

Chairman Subcommittee on the Naval Investigation.

MY DEAR SENATOR HALE: In reply to your letter regarding suggestions as to desirable changes in the organization of the Navy Department I am of the following opinion.

First. The assistant for material now in the office of the Chief of Operations should be made chief of material acting directly under the Secretary of the Navy.

third. The General Board should be established legally by act of Congress as an advisory body of experienced officers to the Secretary of the Navy. In addition to its present duties it should be intrusted with the preparation of war plans. The war plans are founded upon a continuity of policy and study and should not vary according to the ideas of each changing executive. No executive officer of the Navy Department should be a member of the General Board.

Fourth. Create the office of chief inspector who would act in an advisory capacity to the Secretary of the Navy as to the condition and efficiency of the various parts of the naval establishment. This officer should also be a member of the General Board.

The present organization of the Navy Department is founded upon the so-called Meyer plan of organization in so far as the establishment of the Office of Chief of Operations. It is much superior to any previous plan of organization the department ever had and has stood the test of a war that called for large expansion of the Navy. The slight modifications which I have suggested will be believed to be in accordance with sounder principles of organization and will tend to greater stability.

Very respectfully,

F. F. FLETCHER,
Rear Admiral Retired.

REAR ADMIRAL AUSTIN M. KNIGHT, PRESIDENT, BOARD OF AWARDS.

BOARD OF AWARDS, NAVY DEPARTMENT,
Washington, D. C., June 10, 1920.

DR. FREDERICK HALE,
United States Senate.

MY DEAR SENATOR: Replying to your letter of May 7 requesting recommendations as to a reorganization of the Navy Department.

After very careful consideration of the subject, I find myself unable to suggest any plan of reorganization which, in my opinion, gives promise of material improvement. The present organization of the department is not perfect, but is far from being inefficient, and I confess that if I were given authority to reform it I should not know where to begin. It is easy to say that the Chief of Operations should have more power. But I do not see how he could be given any power which would remove him from the authority of the President, who is the Commander in Chief of the Navy, or from that of the Secretary of the Navy, who is the President's representative and deputy.

It has been suggested that the Chief of Operations be appointed by Congress and made answerable to Congress alone, but it appears to me that this would be a direct violation of the Constitution and of the whole theory of our Government, and even if this were not the case, the plan would have the vital faults of constituting many authorities for one, of dissipating instead of concentrating authority, and of making it wholly impossible to place responsibility for errors. The lack of preparedness for war in the spring of 1917 could not have been corrected by the Chief of Operations by virtue of any additional powers which might have been attributed to him on the statute books. The obstacles which prevented the effective preparation of such forces as were theoretically subject to his control were not such as could be reached by legislation. The only hope of preventing similar obstacles from arising in the future, with similar results, is in the development of a public sentiment which shall recognize that the Navy exists for national defense, and for no other purpose whatsoever, and that it is not to be maintained in a condition of efficiency for that purpose if it might better be abolished.

In January, 1915, I received a telegram from the Secretary of the Navy inquiring what the Naval War College considered should be the principal effort of the fleet. I replied:

"The War College considers that every effort of the fleet and every effort of every department in connection with the fleet should have for its sole aim the war efficiency of the fleet. Every effort which does not directly contribute to this is in itself a wasteful expenditure of energy, and so far as it is a diversion from this end, is distinctly harmful."

When a public sentiment shall have been developed which recognizes the above as the mission of the Navy and when this sentiment shall have found concrete expression in all those branches of the Government which provide for and direct the activities of the Navy, then and not until then, will the Navy be brought to a state of adequate preparedness and maintained in such a state. And legislation does not create public sentiment, but follows it.

Preparedness for war is one thing. The conduct of war is quite another. Here there will be no necessity for creating public sentiment in support of the Navy. Every facility that can be made available when war is actually on will be placed at the disposition of the controlling authority. But here again there can be no question as to where the controlling authority is lodged. In war, as in peace, the President is the Commander in Chief and the Secretary of the Navy is his representative. If they recognize their own inevitable limitations in matters purely technical, and if they have confidence in the Chief of Operations, they will leave to him the direction of the fleet, subject only to considerations of large policy such as sometimes necessarily transcend policies strictly military. If they fail to recognize their own limitations, or lack confidence in the Chief of Operations, they may and probably will, obstruct and thwart him. And no laws that can be passed will prevent this. And just here I desire to say that I am one of those who believe that after the United States declared war in April, 1917, the administration of the Navy was, upon the whole, surprisingly effective, and the record of the Navy one of which every American has reason to be proud—all the prouder perhaps because what was accomplished was accomplished with very inadequate facilities. I have no sympathy whatever with criticism which selects a few failures and errors here and there and holds them up to the country as if they were typical of the Navy's record as a whole. I believe the recent controversy has given the country an entirely false impression of the work accomplished by the Navy in the war and that it has done the Navy infinite harm. Some day the world will recognize the facts and while judging correctly the lamentable lack of preparedness with which we entered the war, will judge correctly also the splendid successes attained.

To sum up. I think that the present organization of the Navy Department, while probably not the best that could be devised, is adequate for successful administration both in peace and in war; but that, like all other organizations, it depends for its efficient working upon the personalities and the temperament of those who direct it, and—a consideration of vastly greater importance—upon the sentiment which lies back of all executive authority in the hearts and minds of the people of the country and their representatives in Congress.

AUSTIN M. KNIGHT,

Rear Admiral, United States Navy, Retired.

REAR ADMIRAL BRADLEY A. FISKE, RETIRED.

NEW YORK CITY, May 11, 1920.

MY DEAR SENATOR HALE: In reply to your letter of May 9, 1920, my only suggestions are:

1. That the provision establishing the Office of Chief of Naval Operations that was recommended unanimously by the House Naval Committee in January and February 1915, be enacted into law. If this be done the Secretary of the Navy and the Chief of Naval Operations can then map out the details needed to carry it into effect, and modify them from time to time as needed. If the attempt be made by Navy officers and Congressmen not familiar with the duties of the Chief of Naval Operations to arrange details in advance, I fear that important mistakes may be made. If such mistakes are prescribed by law, great injury may be done.

2. That the selection of an officer to fill the Office of Chief of Naval Operations be made in accordance with the recommendation of a board of flag officers, as is now done in making regular promotions. Of this board the retiring Chief of Naval Operations it would seem should be the chairman. Clearly it is as wrong to vest the appointment of a Chief of Naval Operations in an official not professionally qualified to select the best man as it would be to so vest the selection of officers for ordinary promotion.

Respectfully,

BRADLEY A. FISKE,

Rear Admiral, United States Navy, Retired.

**REAR ADMIRAL JOSIAH S. MCKEAN, COMMANDING BATTLESHIP
DIVISION 6, UNITED STATES PACIFIC FLEET.**

UNITED STATES PACIFIC FLEET,
BATTLESHIP DIVISION 6, U. S. S. "WYOMING," FLAGSHIP,
San Diego, Calif., May 29, 1920.

HON. FREDERICK HALE,
*Chairman Subcommittee Committee on Naval Affairs,
United States Senate.*

MY DEAR SENATOR: I have no recommendations to make for any change in the Navy Department organization other than those already submitted in my testimony before the Senate Committee on Naval Affairs.

Very sincerely,

J. S. MCKEAN,
Rear Admiral, United States Navy.

**REAR ADMIRAL NATHAN C. TWINING, UNITED STATES PACIFIC
FLEET.**

UNITED STATES PACIFIC FLEET,
U. S. S. "NEW MEXICO,"
San Pedro, Calif., May 22, 1920.

HON. FREDERICK HALE,
United States Senate, Washington, D. C.

MY DEAR SENATOR: Agreeably to promise in my letter of May 17, I forward herewith inclosed a statement of my views with respect to desirable changes in the organization of the Navy Department.

Trusting that this paper may be received in time to be made use of and that it will be of some assistance to the committee in reaching their conclusions, I am,

Very sincerely, yours,

N. C. TWINING,
Rear Admiral, United States Navy.

NAVY DEPARTMENT ORGANIZATION.

I. GENERAL PRINCIPLES DETERMINING ORGANIZATION.

1. The general principle determining the organization of any body for the transaction of business or the accomplishment of an object is that the organization shall admit of the activities of the concern being carried on with a maximum of efficiency.

2. Efficiency, whether of a machine, a business corporation, or an office is the ratio of output to input—of result to expenditure. The efficiency of a machine is easily calculated; the efficiency of a commercial business is ascertainable in a relative way and may be measured by the rate of interest earned on the capital invested. The efficiency of a navy is less easily ascertained since its activities produce nothing tangible and of a value directly estimable in terms of money. Its product is protection to the nation and this may take either the form of prevention of war or that of success in war. An important factor in the prevention of war is securing and maintaining respect for the country on the part of other countries; a navy notoriously inefficient or unready can not do this. Another element of great weight in preventing war is strength which depends both on numbers and types of ships, and on quantity, quality, and degree of training of personnel, both commissioned and enlisted.

3. The Navy Department as an executive department of the Government has no reason for existence other than the maintenance and operation of an efficient Navy. Its primary purpose must be the execution of the wishes of the country as expressed in the laws of Congress with respect to the maintenance of a navy as an efficient military arm of the Government for the purposes of affording protection to its citizens when needful; of commanding respect for the Nation; of minimizing the probability of war; and, in the last analysis, of waging successful war with a minimum expenditure of lives and money.

4. If a navy is to fulfill its purpose efficiently its activities in peace as well as in war must be so directed as to support the national policies. All policies must be formulated and the means of furthering them decided by the Government, the civilian representatives of the people in legislative and executive authority. War is but one of the instruments of the Government wherewith to enforce the Nation's policies. It is, therefore, obvious that the head of the Navy Department, the executive agent of the President, must be a civilian and that there must be no official or agency admitted into the organization to reduce his authority or responsibility as the immediate agent of the Chief Executive and Commander in Chief.

5. While the determination of policy and the decision to make war are essentially civil functions of the Government, the prosecution of war is essentially a military function; it is the practice of a military profession and can be safely entrusted to the military agents of the Government only. As success in the prosecution of war depends to a great extent on the adequacy of the preparation therefor and the efficiency of the forces employed, it is obvious that, in the matters of preparation and training, the advice of military agents must be given great weight.

6. The difficulty, indeed the impossibility, of evaluating exactly the efficiency of a navy is obvious; it should be equally obvious that the naval profession, like any other profession, is best understood by those trained in it, and that such professionally trained men are best qualified to judge of the efficiency of a navy and of the methods best suited to enhance efficiency.

7. Preparation for war (which is also preparation against war) involves, so far as a navy is concerned, the determination of the numbers and types of ships to be built, methods of training and governing personnel, character of peace-time employment of the forces, preparation of war plans, and selection and equipment of naval bases. In all these matters those who will be called upon to prosecute a war must have a voice, strongly advisory if not decisive.

8. The considerations just set forth make it obvious that the Secretary of the Navy must be provided by law with assistants professionally competent to advise him and invested with authority, under the Secretary, to carry on the multifarious duties involved in the maintenance and operation of an efficient Navy.

9. It is, further, obvious that the Congress, in which reside authority to provide and maintain a navy and power to make war, is entitled to and must have the opinions of professionally competent persons to guide it in exercising these functions.

II. PRESENT ORGANIZATION.

10. The existing organization of the Navy Department is one of division into bureaus and offices, with no superior or coordinating authority except the Secretary of the Navy himself.

11. The Secretary of the Navy occupies a position recognized by the Constitution as the head of an executive department; legislation, judicial decisions, precedents, and custom have invested him with all the powers needful to the exercise of his office.

12. The great bulk of the business of the department is transacted by seven bureaus and the Division of Operations. The position and, in a measure, the powers and duties of chiefs of bureaus are prescribed by law, but all orders issued by them are considered as emanating from the Secretary of the Navy. (Sec. 420, R. S.) Of these bureaus, five are mainly concerned with matériel and two with personnel; they are coequal in powers and authority, and there is no coordinating authority placed over them except the Secretary of the Navy himself. No one of them is concerned with the preparation of war plans, training of the fleets (as distinguished from education and training of personnel), or the prosecution of a war.

13. The Chief of Naval Operations, provided for by law, is charged, under the direction of the Secretary of the Navy, with the operations of the fleet and with the preparation and readiness of plans for its use in war. His duties are performed under the authority of the Secretary of the Navy, and his orders are considered as emanating from the Secretary, as in the case of the chiefs of bureaus.

14. The civilian Assistant Secretary of the Navy performs such duties as may be assigned him by the Secretary or by law; he also derives his authority from the Secretary of the Navy.

- (b) The lack of a legally responsible Chief of Operations.
 - (c) The lack of an inspection branch.
16. The Secretary himself, the only coordinating authority provided by law, can not effectively exercise such authority for two principal reasons:
- (a) Lack of technical and professional knowledge and training.
 - (b) Volume and variety of work involved being beyond the capacity of any one person.

17. For these reasons the absence from the organization of a professionally competent coordinating authority impairs the mutual support among the several component parts of the department and prevents the maximum effort being efficiently brought to bear to defeat an enemy in time of war and to secure adequate return for money expended in time of peace.

18. The Chief of Naval Operations, under the present law, is charged with certain duties, but is not legally responsible for their discharge. He has no authority or responsibility for the execution of war plans and can not, therefore, require the several coordinate bureaus to direct their activities along the lines that will most effectively further the plan. During the late war, by common consent or by the Secretary's order, the bureaus subordinated many of their major activities to the authority of the Chief of Naval Operations, but this had its origin in the necessities of war, and reversion to the former conditions has already begun.

19. Many Secretaries have sought to provide themselves with agencies through which they might secure the technical advice they felt they required in the discharge of their duties; such agencies have been the Board on Construction, the General Board, the aids for personnel, material, inspection, and operations of the fleet, the advisory council. Some Secretaries have, as was well known, adopted some one bureau chief as principal adviser. None of these agencies had the prime requisite of responsibility, i. e., no one of them was responsible for executing plans based on its advice.

20. The departmental organization provides no agency for inspecting the work of the several bureaus and offices and the field activities under the control of the department. Reference is not made to the matériel products of the bureaus and offices, but to their activities in general. In commercial life the public—the consumer—is the inspector; in the Navy numerous inspecting agencies are employed, but there is no branch or division of the department having the duty of keeping the head of the organization informed as to the efficiency of the activities carried on under his authority nor of the extent to which efforts are being directed toward the common end of securing an efficient Navy.

IV. SUGGESTED CHANGES IN ORGANIZATION.

21. The prime requirement in amending the organization of the department is that the Chief of Naval Operations be given authority as coordinator of the activities of those bureaus and offices of the department that are directly concerned with the building, equipping, supplying, and operating the vessels of the Navy, equipping and operating naval bases, navy yards, and naval stations, and with providing, training, and governing the personnel.

22. The existing bureaus and offices included in this category are:

- (a) The Bureau of Navigation.
- (b) The Bureau of Medicine and Surgery.
- (c) The Office of the Judge Advocate General.
- (d) The Office of Naval Intelligence.
- (e) The Office of Naval Communications.
- (f) The Bureau of Construction and Repair.
- (g) The Bureau of Steam Engineering.
- (h) The Bureau of Ordnance.
- (i) The Bureau of Yards and Docks.
- (j) The supply branch of the Bureau of Supplies and Accounts.
- (k) The Naval Overseas Transportation Service.
- (l) The Hydrographic Office.
- (m) The Marine Corps.
- (n) The Office of Gunnery Exercises and Engineering Performances.

23. To the above should be added:

(a) A bureau of aeronautics.

(p) An office of director of navy yards and naval districts.

24. Unless and until an inspection division is established, the Board of Inspection and Survey should be under the Chief of Naval Operations.

25. The portions of the Navy Department which need not be subject to the coordinating authority of the Chief of Naval Operations are the following:

(a) Secretariat of the department (chief clerk's office).

(b) Financial and accounting branch of the Bureau of Supplies and Accounts.

(c) Office of the Solicitor.

26. The second requirement is that the Chief of Naval Operations be invested by law with power and authority concurrent with that of the Secretary of the Navy in execution of plans approved by the Secretary. The design of this provision is not to curtail the authority of the Secretary of the Navy nor would it have that effect. Its purpose is to make the Chief of Naval Operations legally responsible for executing the plans prepared by him or under his direction; under its terms the Chief of Naval Operations could not carry out any policies or designs contrary to the desires of the Secretary, because he would always be subject to the Secretary's orders and would be removable. The possession of such authority by the Chief of Naval Operations would make it incumbent on him to resign his office when overruled by the Secretary in any vital matters.

27. No general reorganization of the Navy Department should be undertaken except after thorough study of the subject by a commission authorized by Congress; the composition of such a commission should be so prescribed by Congress as to insure its including in its membership:

(a) Naval officers of rank and experience.

(b) Civilians of recognized standing and ability as organizers of business enterprises.

Such commissions have been appointed in the past and their reports have been published, but conditions have changed in recent years and the subject is worthy of the careful study of the most competent persons available.

CAPT. WILLIAM V. PRATT, COMMANDING U. S. S. "NEW YORK."

U. S. S. "NEW YORK,"

Navy Yard, Puget Sound, Wash., May 17, 1920.

Senator FREDERICK HALE,

Chairman Subcommittee Senate Committee on Naval Affairs.

MY DEAR SENATOR HALE: I beg to acknowledge your letter of May 7, 1920, just received by me at Puget Sound Navy Yard.

The suggestions you ask for I inclose as a separate paper. That paper is merely a statement of the present laws governing the organization of the Navy Department, with the changes I should like to see made in order to give the Navy what, to my mind, would be a sound organization.

In this paragraph I will attempt to briefly outline the reasons why such a change is necessary:

(a) In the first place, the mass of evidence submitted in the recent investigation shows in point of fact that at the declaration of war the Navy was not as fully prepared in material or personnel as it should be.

(b) That while this lack of foresightedness in the matter of adequate preparation made no special difference in this particular war, owing to the peculiar character the war assumed, and, above all, owing to the fact that our Navy was given time to prepare—our enemy being contained and held by the throat by a superior navy—yet for a future war such a state of affairs would be a source of danger to our country.

(c) That the present law does not definitely place the responsibility for military preparedness before war is declared, nor of military operations after war is declared, upon the proper military head, nor does it give the requisite power to the proper military head to efficiently administer the purely military functions of the Navy during the two periods aforesaid.

(d) That the present system permits of a complete change in the approved plan for military preparedness and operation of our Navy, even on the brink of or during a war, due to a change in the civilian head.

(e) That under the present system there can be no continuous approved plan for military preparedness or operation which is not subject to the personal views of the civilian head, who of necessity approaches this task untrained in naval matters and unschooled in the art of war.

(f) That there is nothing in the law which prevents the civilian head from exercising direct military authority in war if he so chooses to do, regardless of his competency in this technical subject, or of the results which may follow.

(g) That the law does not provide for one chief naval adviser, from whom the civilian head may receive his advice, the result being that there may be as many military advisers as there are persons to consult with, any one of whom may be competent or incompetent. The outcome of this system is that there can always be found a naval adviser who will advocate a plan, be it good or bad, and the responsibility can never be definitely fixed. The civilian head acts upon the advice of a naval adviser, but the adviser assumes no responsibility for his advice.

(h) That there is no military head definitely appointed by law to coordinate the various technical operations of the Navy, according to approved continuous plans for preparation and operation.

(i) That the responsibility for the proper choice of a competent chief naval adviser is not definitely fixed upon the civilian head. The result of the present system is not necessarily to choose the best men, but such men as will lend themselves most readily to the views of the civilian head, be they sound or unsound.

(j) That the General Board is a creation of Naval Regulations and not of law, and that its functions, instead of being purely advisory, are a combination of the advisory and administrative, in that the board is made responsible for detailed war plans. The board shares this responsibility with the Chief of Naval Operations, thus dividing it and making it impossible to fix it. The functions of this board should be purely advisory. It should be the balance wheel of the Naval Establishment and its reports should go through the Secretary to Congress.

(k) Finally there is not fixed by law any definite method of procedure whereby in case of a clash of opinions between the civilian and military heads of our Navy in regard to the adequateness of the existing plans in vogue for safeguarding the naval preparedness of our country, the matter can in a proper manner be laid openly and honestly before the public, whose interests are the interests at stake.

I am forced to the above conclusions from the experience gained in the past war, while serving in the office of Operations as assistant for Operations and as Assistant Chief of Naval Operations, and to some extent responsible for the operations conducted by that office, and for its expansion and reorganization during the war. The above statements are made without any personal feeling or animus in the matter, but so strongly am I impressed with the necessity for a change, that I voluntarily state that, with the experience of the war behind me, I would decline to be honored with an appointment as Chief of Naval Operations, though it be the highest appointment in our Navy, unless I felt that I could by law, honestly and efficiently perform the duties which I believe that officer owes to his country, and assume the attendant responsibilities.

Very sincerely and respectfully, yours,

W. V. PRATT,
Captain, United States Navy.

[Taken from United States Naval Regulations.]

NAVY DEPARTMENT—ORGANIZATION.

PRESENT LAWS GOVERNING SAME.

ART. 101. There shall be at the seat of government an executive department to be known as the Department of the Navy and a Secretary of the Navy, who shall be the head thereof. (Sec. 415, R. S.)

ART. 102. (1) An Assistant Secretary of the Navy is authorized by law, who shall perform such duties as may be prescribed by the Secretary of the Navy or required by law. (Acts of July 11, 1890, and Mar. 3, 1891.) All orders issued by the Assistant Secretary of the Navy in conducting the duties assigned him

shall be considered as emanating from the Secretary and shall have full force and effect as such.

(2) In case of the absence of the Secretary of the Navy his duties shall be performed by the Assistant Secretary of the Navy. (Sec. 177, R. S.)

ART. 103. (1) There shall be a Chief of Naval Operations, who shall be an officer on the active list of the Navy appointed by the President, by and with the advice and consent of the Senate, from among the officers of the line of the Navy, not below the grade of captain, for a period of four years, who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation and readiness of plans for its use in war. (Act Mar. 3, 1915.)

(2) Hereafter the Chief of Naval Operations, while so serving as such Chief of Naval Operations, shall have the rank and title of admiral, to take rank next after the Admiral of the Navy, and shall, while so serving as Chief of Naval Operations, receive the pay of \$10,000 per annum and no allowances. All orders issued by the Chief of Naval Operations in performing the duties assigned him shall be performed under the authority of the Secretary of the Navy, and his orders shall be considered as emanating from the Secretary and shall have full force and effect as such. To assist the Chief of Naval Operations in performing the duties of his office, there shall be assigned for this exclusive duty not less than 15 officers of and above the rank of lieutenant commander of the Navy or major of the Marine Corps: *Provided*, That if an officer of the grade of captain be appointed Chief of Naval Operations, he shall have the rank and title of admiral, as above provided, while holding that position: *Provided further*, That should an officer, while serving as Chief of Naval Operations, be retired from active service, he shall be retired with the lineal rank and the retired pay to which he would be entitled had he not been serving as Chief of Naval Operations. (Act Aug. 29, 1916.)

(3) During the temporary absence of the Secretary and the Assistant Secretary of the Navy the Chief of Naval Operations shall be next in succession to act as Secretary of the Navy. (Act Mar. 3, 1915.)

ART. 104. (1) The business of the Department of the Navy shall be distributed in such manner as the Secretary of the Navy shall judge to be expedient and proper among the following bureaus:

First, a Bureau of Yards and Docks.

Second, a Bureau of Equipment.

Third, a Bureau of Navigation.

Fourth, a Bureau of Ordnance.

Fifth, a Bureau of Construction and Repair.

Sixth, a Bureau of Steam Engineering.

Seventh, a Bureau of Supplies and Accounts.

Eighth, a Bureau of Medicine and Surgery. (Sec. 419, R. S.)

(2) The several bureaus shall retain the charge and custody of the books of records and accounts pertaining to their respective duties, and all of the duties of the bureaus shall be performed under the authority of the Secretary of the Navy, and their orders shall be considered as emanating from him and shall have full force and effect as such. (Sec. 420, R. S.)

(3) The Judge Advocate General of the Navy shall perform such duties as may be lawfully required. (Act June 8, 1880.)

NEW LEGISLATION.

Repeal:

103. (1) There shall be a Chief of Naval Operations, who shall be an officer on the active list of the Navy appointed by the President, by and with the advice and consent of the Senate, from among the officers of the line of the Navy not below the grade of captain for a period of four years, who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation and readiness of plans for its use in war. (Act Mar. 3, 1915.)

(2) Hereafter the Chief of Naval Operations, while so serving as such Chief of Naval Operations, shall have the rank and title of admiral to take rank next after the admiral of the Navy and shall, while so serving as Chief of Naval Operations, receive the pay of \$10,000 per annum and no allowances. All orders issued by the Chief of Naval Operations in performing the duties assigned him shall be performed under the authority of the Secretary of the Navy, and shall have full force and effect as such. To assist the Chief of Naval Operations in performing the duties of his office there shall be assigned for this exclusive duty

retired from active service, he shall be retired with the lineal rank and the retired pay to which he would be entitled had he not been serving as Chief of Naval Operations. (Act Aug. 29, 1917.)

And substitute:

"There shall be a Chief of Naval Operations who shall be an officer on the active list of the Navy appointed by the President, by and with the consent of the Senate, from among the officers of the line of the Navy not below the grade of rear admiral for a period of four years, who shall, under the direction of the President, or of the Secretary of the Navy under the direction of the President, be charged with the development, maintenance, and operation of the fleet and shore stations and with the preparedness and readiness of plans for the operation of the above in war. To assist the Chief of Naval Operations in performing the duties of his office there shall be assigned for this exclusive duty an Assistant Chief of Naval Operations, an assistant for personnel, an assistant for material, an assistant for inspection, and such other officers as the Chief of Naval Operations may deem necessary. The Chief of Naval Operations shall perform such additional naval duties (not otherwise assigned by law) as may be assigned to him by the President.

"The Chief of Naval Operations while serving as Chief of Naval Operations shall have the rank and title of admiral, and shall while so serving as Chief of Naval Operations receive the pay of \$13,500 per annum and allowances. The Assistant Chief of Naval Operations, the assistant for personnel, the assistant for material, and the assistant for inspection, shall while so serving, hold the rank of rear admiral of the upper half and by virtue of their office be senior to the chiefs of bureaus. In the absence of the Chief of Naval Operations they will perform his duties in the order named.

"All orders issued by the Chief of Naval Operations in performing the duties assigned him shall be performed under the direction of the President, or of the Secretary of the Navy under the direction of the President, and his orders shall be considered as emanating from the President or the Secretary of the Navy, under the direction of the President, and shall have full force and effect as such.

"Should an officer while serving as Chief of Naval Operations be retired from active service, he shall be retired with the lineal rank and the retired pay of a rear admiral of the upper nine."

Change 104 (1) The business of the Department of the Navy shall be distributed in such manner as the Secretary of the Navy shall judge to be expedient and proper among the following bureaus:

First, a Bureau of Yards and Docks.

Second, a Bureau of Equipment.

Third, a Bureau of Navigation.

Fourth, a Bureau of Ordnance.

Fifth, a Bureau of Construction and Repair.

Sixth, a Bureau of Steam Engineering.

Seventh, a Bureau of Supplies and Accounts.

Eighth, a Bureau of Medicine and Surgery. (Sec. 419, R. S.)

as follows:

"The business of the Department of the Navy shall be distributed in such manner as the Chief of Naval Operations under the direction of the Secretary of the Navy shall judge to be expedient and proper among the following bureaus:

"First, a Bureau of Yards and Docks.

"Second, a Bureau of Equipment.

"Third, a Bureau of Navigation.

"Fourth, a Bureau of Ordnance.

"Fifth, a Bureau of Construction and Repair.

"Sixth, a Bureau of Steam Engineering.

"Seventh, a Bureau of Supplies and Accounts.

"Eighth, a Bureau of Medicine and Surgery. (Sec. 419, R. S.)

Change 104. (2) That several bureaus shall retain the charge and custody of the books and records and accounts pertaining to their respective duties,

and all of the duties of the bureaus shall be performed under the authority of the Secretary of the Navy, and their orders shall be considered as emanating from him and shall have full force and effect as such (sec. 420 R. S.).

as follows:

Change the words "under the authority of the Secretary of the Navy" to read "under the authority of the Chief of Naval Operations under the direction of the Secretary of the Navy."

Change 104. (5) The General Board of the Navy shall, under the direction of the Secretary of the Navy, perform such duties as are set forth in section 13 of this chapter and such additional duties as may be prescribed from time to time by competent authority.

as follows:

Change from regulation and make law.

"The General Board of the Navy shall, under the direction of the Chief of Naval Operations under the direction of the Secretary of the Navy, perform the general duties set forth in the following paragraphs:

(a) "The General Board shall be composed of Chief of Naval Operations, the Assistant Chief of Naval Operations; the major general commandant, United States Marine Corps; the assistant for personnel; the assistant for material; the assistant for inspection; and the directors of naval intelligence, communications, plans and districts, the chief of bureaus, and, such other officers as the Chief of Naval Operations, under the direction of the Secretary of the Navy, may designate.

"The functions of this board shall be purely advisory. It shall be within their province to consider any subject presented in due form at any meeting. Executive meetings will be held at least once a week, at which either the Chief of Naval Operations, Assistant Chief of Naval Operations, the assistant for personnel, assistant for material, or assistant for inspections shall preside.

"The annual report of the General Board, building program, and the base and personnel program shall be made a part of the Secretary's annual report and be forwarded to the Congress with such comment and recommendations as the Secretary may wish to make.

"All other articles and paragraphs of articles under Chapter II, section 1, not otherwise changed by above law, shall stand as at present."

CAPT. HARRIS LANING, CHIEF OF STAFF, DESTROYER SQUADRONS, UNITED STATES ATLANTIC FLEET.

DESTROYER SQUADRON,
UNITED STATES ATLANTIC FLEET,
U. S. S. "ROCHESTER," FLAGSHIP,
North River, N. Y., May 12, 1920.

MY DEAR SENATOR: Your letter of May 7 asking for such suggestions as I have to make as to changes that might advantageously be made in the organization of the Navy Department has reached me.

For some time I have been making a study of naval organization, both ashore and afloat, with a view to establishing, at least in my own mind, what the organization should be to insure the maximum efficiency at all times. Without going into the arguments for and against I will indicate to you what my decisions are as to the organization of the Navy Department:

First. Abolish the General Board, transferring all the work now performed by the board to the Plans Division of the Office of the Chief of Naval Operations.

Second. Make the Chief of Naval Operations, under the direction of the Secretary, fully responsible to Congress (1) for the plans or recommendations submitted to Congress for the development of the Navy for war, (2) for the maintenance of the Navy in a state of readiness for war, both as to condition of material and as to training of personnel, and (3) for the development of plans for war and the operation of the Navy in peace or war.

Third. Give the Chief of Naval Operations an assistant, to have the rank of vice admiral, who will be designated the Assistant Chief of Naval Operations, who will succeed to the duties of the Chief of Naval Operations in the absence

Fourth. Make it the duty of the Plans Division to prepare for the Chief of Naval Operations (1) the detailed recommendation to Congress that will enable Congress to provide properly for the upbuilding and maintenance of the Navy along the lines called for by the Nation's policies, (2) the general plans for maintaining and training such a Navy as is provided by Congress, and (3) the plans for war and the operation of the Navy in peace or war.

Fifth. As a part of the Office of the Chief of Naval Operations, establish four aids to be designated, respectively, as (1) the aid for operations, (2) the aid for inspections, (3) the aid for personnel, and (4) the aid for material, these aids to take precedence in the order named and to have the rank of rear admiral senior to all other rear admirals, including bureau chiefs.

Sixth. Make the aid for operations the head of the Operating Division of the Office of the Chief of Naval Operations, and make it the duty of the Operating Division to direct the carrying out of all approved operating plans prepared by the Plans Division. Under the aid for operations establish the offices of the director of communications and the director of naval districts.

Make the director of communications responsible for the establishment and operation of the systems of communication.

Make the director of naval districts responsible for proper organization of the naval districts and for the coordination of the work of the districts.

Seventh. Make the aid for inspections the head of an Inspection Division charged with the duty of ascertaining and keeping the Chief of Operations informed of the efficiency of every part of the Navy, including the fleets as a whole and the various subdivisions thereof.

Eighth. Make the Chief of Bureau of Navigation ex officio aid for personnel and make him responsible for obtaining, training, and distributing the personnel in accordance with the approved plans prepared by the Plans Division.

Ninth. Make the aid for material the head of the Material Division and charge him with the coordination of the material bureaus (Ordnance, Steam Engineering, Construction and Repair, Supplies and Accounts, Yards and Docks) in providing the material appropriated for by Congress and in maintaining material in the efficient operating condition required to carry out the approved plans.

That the aid for material may have under his jurisdiction some means of ascertaining the condition of the material of the Navy, make the board of inspection and survey a subdivision of the Material Division.

Tenth. That the Plans Division may at all times have control of all information available, make the Office of Naval Intelligence a subdivision of the Plans Division.

Eleventh. Make the Bureau of Medicine and Surgery responsible for coordination with the aids in carrying out its duties in connection with all approved plans.

Twelfth. In the absence of the Secretary of the Navy and the Assistant Secretary make succession to the duties of Secretary as follows: Chief of Naval Operations, Assistant Chief of Naval Operations, Aid for Operations, Aid for Inspections, Aid for Personnel, Aid for Material; then other bureau chiefs in the present order.

Thirteenth. Make it mandatory that plans or recommendations as prepared under the direction of the Chief of Naval Operations by the various subdivisions of the Navy Department for the upbuilding and maintenance of the Navy be presented to Congress in full, accompanied, if desired, by the studies leading up to the decisions on which the recommendations are based. This is essential in order that Congress may have before it all the expert advice that may be necessary to enable it to reach its decisions. It will not deprive a Secretary of the Navy of his right to approve or disapprove the recommendations submitted, but it will insure Congress having the full and complete information necessary for a full understanding of the situation.

Sincerely, yours,

HARRIS LANING,
Captain, United States Navy.

Senator FREDERICK HALE,
United States Senate, Washington, D. C.

NAVAL INVESTIGATION.

BER W. S. PYE, OFFICE OF NAVAL OPERATIONS, NAVY
DEPARTMENT.

NAVY DEPARTMENT,
OFFICE OF NAVAL OPERATIONS,
Washington, June 3, 1920.

MY DEAR SENATOR: In accordance with your request of June 1, 1920. I am submitting herewith a statement regarding the desirability of reorganization of the Navy Department and some comments on conditions now existing in the organization and administration which are capable of improvement.

Very sincerely,

W. S. PYE.

Commander, United States Navy.

Senator FREDERICK HALE.

Chairman Subcommittee on Naval Affairs.

STATEMENT OF COMMANDER W. S. PYE, UNITED STATES NAVY, CONCERNING DESIRABILITY OF REORGANIZATION OF THE NAVY DEPARTMENT.

WHAT AND WHY IS WAR.

War is the supreme type of international competition. So long as individuals compete in business, so long as nations compete for the world's trade, just so long will war be upon this earth. The history of our national development is a history of war. Since the greater proportion of the world has been under the dominion, protection, or influence of a few great nations war has been of less frequency, because of the enormous exertion involved in defeating the larger and more powerful nations whose dominions or spheres of influence now cover practically all of the world.

Such wars as have taken place in modern times have caused a sacrifice of life and treasure that is appalling and, consequently, the recourse to war is less frequent than in the past. Perhaps the World War has left an impression of the seriousness of international conflict which will have a restraining influence in the future, but the amount of fighting that is still in progress in Europe and Asia indicates that human nature is weak and human memory short.

The predominant position of the United States at the end of the World War in industry and finance, our new merchant marine policy, and our relative wealth and prosperity compared to European nations, will make us the rival of the greatest nations of the world and will create that international competition which in the past history of the world has always resulted, sooner or later, in war.

It has often been said that "Experience is the best teacher," and our experience in the conduct of war has taught us many lessons, most of which, however, will be forgotten with the lapse of time if our impressions are allowed to grow dim without some action having been taken to correct our deficiencies.

FOREIGN POLICIES.

The Army and Navy are the instruments which the Government provides for its use in enforcing its foreign policies against such nations as may oppose them. Foreign policies are not necessarily aggressive or offensive in their nature, but even purely defensive policies must frequently be enforced by the potential or dynamic force of the Army and Navy.

Policies appear aggressive or defensive, depending largely on the point of view. China considered her policy defensive in 1894; Russia considered her policy defensive in 1904; Spain probably considered her policy defensive in 1898; and Great Britain, France, and Russia each considered its policy defensive in 1914. Defensive policies do not, therefore, necessarily prevent war.

The characteristics which lead to success in international trade competition are energy, vitality, and intelligence. Trade competition is war under the rules of peace, and until human nature changes materially such competition will often assume its supreme type—war.

Every nation, therefore, provides an insurance against defeat in this supreme competition according to its probable needs under the existing conditions. Each sovereign State must be its own judge of its needs in this respect, but the

income.

The responsibility for the decision as to the strength of the Army and Navy to be maintained and their state of preparation for war lie in a large measure in the executive and legislative branches of the Government.

RESPONSIBILITIES OF EXECUTIVE AND LEGISLATIVE BRANCHES.

The President and Congress have responsibilities regarding the Army and the Navy which have been inadequately recognized in the past. The efficiency with which the Army and Navy are prepared for war whenever war is thrust upon us is largely determined by the extent to which the executive and legislative branches of the Government have fulfilled their responsibilities.

There is, of course, an immense responsibility within the Navy Department and within the naval forces and naval establishments, but this responsibility is definitely and generally recognized, whereas the higher responsibility of the executive and legislative branches is not so definitely distinguished.

In order that my conception of the responsibilities of the executive and legislative branches with regard to the preparation of the Navy for war and its conduct of war may be definitely understood, they are enumerated below:

The President.—During peace (foreign policy): Notification to the Navy of the foreign policy or policies which the Navy should be prepared to support or to enforce; responsibility for the policy of the Nation being such that it can be enforced by the military, naval, financial, and industrial resources of the Nation; assuring himself, as Commander in Chief of the Army and Navy, that the plans of the Army and Navy are consistent with our foreign policy; responsibility for recommending to Congress the legislation necessary to develop the Army and Navy to the strength required to enforce our foreign policies, present or prospective; notification to the executive departments of the probability of war when such exists; selection of the Secretary of War; selection and appointment of the Chief of Naval Operations; selection and appointment of the commanders in chief of the fleets; approval or disapproval of naval policy recommended by the Navy Department; approval or disapproval of the estimates, appropriations, and other important legislation asked for by the Navy Department. After war is declared: The object of the war; the approval of general plans of operations, indicating naval objectives.

The Congress.—Responsibility for the efficiency of the laws regulating the Navy; responsibility for the adequacy of the appropriations and efficiency of other legislation affecting the Navy; the declaration of war.

The Senate.—The approval of presidential appointments of the Secretary of the Navy, the Chief of Naval Operations, and the chiefs of bureaus.

The executive departments immediately concerned in preparation for war are the State Department, War Department, and Navy Department. The Secretaries of these departments should keep the President informed of the effect of our own and other nations' foreign policies on the peace and safety of the country.

This duty is as important during peace as during war, for most national defeats in war are due to the policy of the government not corresponding to the military and naval forces available. This statement really should be reversed—the military and naval forces available, not corresponding to the policy; but, as a matter of fact, policy may change rapidly, while the preparation of the military and naval forces required to enforce the policy may take years.

In order that our Army and Navy may be prepared to support and enforce our foreign policies, those responsible for the recommendations as to the strength and state of preparation of the Navy must be informed as to the policies which guide the actions of the Government. Also, before deciding upon policies, the Government should be informed as to whether or not the Army and Navy are of adequate strength and in an effective state of preparation to enforce such policies.

Congress is likewise intimately concerned with the policy of the Nation and with the authorization of the money necessary to develop and maintain the Navy in the desired state of preparation for war.

There should be in the organization of the Government a board or committee, in which the State Department, the Congress, and the War and Navy Departments would be represented, to consider the effect of our own and other nations' policies on the probability of war, and to advise the President and Congress as to general policies concerning the strength of the armed forces and their state of preparation for war. The Army and Navy should be represented not only by the Secretary of War and Secretary of the Navy, but also by the Chief of Staff of the Army and the Chief of Naval Operations. Such committees exist in most foreign Governments, in Republics as well as in monarchies.

THE NAVY'S OBJECTIVE.

Every efficient organization determines for itself a definite objective and makes plans to attain that objective efficiently and economically. The Navy is an organization spending hundreds of millions of dollars a year. In a general sense, its objective may be said to be "in cooperation with the Army, to support and enforce the foreign policies of the United States." Its immediate objective is indefinite.

Until the general objective is qualified by a statement as to the foreign policies which the Army and Navy are to be prepared to enforce (i. e., the policies which are vital to the interests of the Nation), the Army and Navy must base their plans for war on their own assumptions as to what such policies are.

If these assumptions are incorrect, the recommendations of the War and Navy Departments may lead to extravagance, or possibly to forces inadequate and unsuited to their task.

In efficient government, therefore, the representatives of the legislative, military, and naval branches of the Government should be kept informed of the Government policies which are of such vital importance as to justify war for their enforcement. As preparation for war may require years, it is important that statesmen study the possible future effect of our policies and possible changes in other nations' foreign policies.

Having been informed of the policies which the Army and Navy should be prepared to enforce, the Secretary of War and Secretary of the Navy are responsible for advising the Government as to the requirements of the Army and Navy to fit them to enforce such policies in case force is required; and in case of threatened war, to advise the Government as to what steps toward an efficient state of preparation should be taken.

PEACE STRATEGY.

The formulation of general plans of operations against such nations as the consideration of our own and other nations' foreign policy indicates as probable enemies; the determination of the forces required to execute these plans; the construction of such vessels, base, and naval industrial establishments as may be required; the procurement and training of sufficient personnel; and the organization, distribution, and training of the naval forces has very aptly been called "peace strategy." Very frequently past wars have been won more by the excellence of the peace strategy than by the excellence of strategy of forces in the field.

The aim of peace strategy is effective preparation for war. Successful peace strategy may prevent a war, but if it does not accomplish this, it will at least assure our entry into war prepared to execute the war on a definite plan, with vigor and efficiency.

EFFICIENT PREPARATION OF THE NAVY FOR WAR.

Efficient preparation of the Navy for war consists of many factors. It may be defined as that state of preparation which will insure the Navy's ability to gain and maintain control of all vital lines of communication upon the sea with rapidity and economy.

The analysis of such a state of preparation is necessary in order that in the discussion of the organization and administration of the Navy the responsibility for each factor may be definitely placed. Such an analysis follows:

own conclusions and should inform the Executive when, in its opinion, there is need for an advanced state of preparation.

2. Suitable and effective plans for the preparation, operation, and maintenance of the naval forces and shore establishments: (a) War organization; (b) mobilization plans; (c) operating plans; (d) logistic plans; (e) building program.

3. Naval strength sufficient to control vital lines of communication by sea: (a) Sufficient numbers of suitable types of vessels efficiently designed, constructed, and maintained in readiness. (b) Sufficient personnel, officers and men. (c) Sufficient training of personnel to insure effective employment of weapons, vessels, forces, and fleets, and for the efficient management of the Navy.

4. Well located and sufficiently extensive naval bases and shore establishments to insure efficient maintenance and supply of the operating forces in the theater of operations: (a) Bases and shore establishments of adequate capacity, well situated with relation to probable theaters of operations. (b) Adequate, well-trained, industrial personnel. (c) Adequate stores and material for maintenance, repairs, and new construction.

5. Suitable vessels and floating repair facilities to maintain the fleet in such temporary bases outside the continental limits of the United States as may be required for probable operations: (a) Repair ships, supply ships, salvage ships, tugs, etc. (b) Aircraft, destroyers, submarines, tenders. (c) Dredges and harbor craft. (d) Floating dry docks. (e) Surveying and lighthouse vessels.

Of the five major items of preparation for war, the last three are relative, and their efficiency is due in a large measure to the efficiency of the second item. The second item can be accomplished efficiently only when the first item is efficiently accomplished.

RELATION OF PLANS TO NAVAL DEVELOPMENT.

Policy is the basis of plans. Plans for such wars as are indicated by policy as far as possible should be the basis of all naval development. Plans bear the same relation to the development of a Navy as they do to a factory. Few people in building a factory would be so foolish as to go ahead with the construction without a definite idea of why the factory is to be built; what it is to produce; and without plans, made by experts and approved by the responsible authorities, indicating the size and nature of the building, the type and arrangement of its machinery, etc.; yet the idea that the Navy must be developed and maintained in accordance with definite plans seems to be abhorrent to many people.

This reluctance to make and follow plans has been the cause of endless waste and extravagance, especially in building or continuing the development of Naval Establishments in places where they are not required; in the failure to build, in time of peace, the vessels which were required for future wars; and in delays, loss of efficiency, and extravagance in prosecuting war.

COMPOSITION OF THE NAVY.

The Navy is composed of three main elements: (a) The Navy Department; (b) the naval forces; (c) the shore establishments.

The Navy Department is the main office, the central management, the creative and directive force, the center of power and responsibility, the first link in the chain of command which reaches to each individual in the naval service.

The naval forces are the instruments wielded by the Navy Department to attain the aims of the Government—instruments designed, constructed, and used by direction of the central authority.

The shore establishments are the tools with which the instruments are made and maintained in efficient condition.

MANAGEMENT.

The activities within the Navy Department are primarily those of management. Most types of business require the practice of two arts—that of making its product and that of managing its affairs. In the Navy there is a third art, that of using its product. The manufacture and use of its product are activities of the shore establishments and the naval forces, respectively.

small plant operated by a management that is both technically skilled and financially interested is often very efficient. The Navy began as a small plant, but unfortunately with its growth there has been the usual tendency to ignore and even despise the problems of management.

As a business develops the problems of management grow in more than direct ratio. By and by it begins to be realized that the business is no longer as efficient as it was, although in its technical processes it may be as good as ever or better. Finally it will probably be realized that it is in management that the losses are occurring.

The Navy has reached this stage. The war accentuated the need for efficient management, and it was primarily in this field that the Navy was found wanting. The great size and complexity of the Navy demands, if efficiency and economy are to be obtained, a new system of management.

Knowledge of theory and practical experience are necessary on the management side as well as the technical side of business. Ability in both lines are not apt to be found in the highest degree in one person. Either technique or management is so absorbing that it is a rare individual who has the capacity to master both. This necessity for dual personality in management must be solved by organization.

Management is judicious use of means to accomplish an end. In the case of the Navy this end is the enforcement of our foreign policies. Efficient management determines upon definite aims and seeks to attain them with resolution and courage. Management can not succeed by dealing with events as they occur, but must foresee and forestall events.

As indicated in the requirements of "Efficient preparation for war" (pp. —), the statement of or conclusions in regard to policies outlines the aim of the management of the Navy.

Subparagraph 2 of the enumeration is the exercise of foresight, and subparagraphs 3, 4, and 5 indicate the means of forestalling events.

The World War developed the armies and navies of many nations to a point of expansion and complexity of operations beyond the capabilities of their respective managements as then organized. Great Britain and France have already reorganized the management of their navies, and Admiral Von Tirpitz's memoirs show plainly that the German system was far from perfect.

It is not strange that after years of peace the organizations should have been found inefficient for war. Unless conditions which will exist in war are kept constantly in mind during peace organization is most apt to be modified to suit the conditions of peace rather than those of war, for which such organizations are created.

REORGANIZATION BRITISH NAVAL MANAGEMENT.

A statement of the first lord of the Admiralty recently presented to both Houses of Parliament frankly admits the defects which existed in the organization of the Admiralty and indicates the new policy of the Admiralty to correct the defects. Various quotations from this statement will be made at appropriate places to indicate how these proposed changes coincide with the changes which must be made in the organization of our Navy Department if the maximum efficiency is to be attained.

The primary changes in management accentuate the element of foresight. That part of the organization charged with this duty being called, in the British Admiralty, the war staff. The following is quoted from the statement of the first lord of the admiralty:

"As it exists to-day, the war staff at the Admiralty, it is correct to say, is largely a war product. Before the war the staff consisted of the intelligence division, operations division, and mobilization division. No 'policy' or 'planning' division had then come into being, and no division of the staff dealt with the tactical side of naval war, types of ships, and use of weapons. The exigencies of war brought about an expansion of the Admiralty, including the divisions dealing with the operations and requirements of war, and emphasized the need for separating operational work on the one side from the work of administration and supply on the other. The reforms were carried out by the Admiralty under war conditions, and as a consequence certain logical divisions of duty in the naval staff organization could not be effected.

"The main consideration on which we have worked in improving the Admiralty staff organization has been to strengthen that side of the staff which

staff view on these matters must be kept in the forefront, otherwise there is the danger that requirements of design and supply will dictate the principles relative to use and employment, resulting in the weapon becoming the master and not the servant of the tactician.

"The war has enabled us to test the weapons forged during a century of peace, and has shown that some of them were unsuitable and inadequate. It is clear that the reason they were so was not so much the fault of the design or manufacture, as that the designers are now shown to have been incorrectly or incompletely advised as to the fighting requirements of the moment.

"In order that progress in naval material may be steady, consistent, and well judged, and not impulsive and jerky, it must be based on continuous study and coordination of the lessons of war, and of experience and progress of our scattered fleets in their peace exercises and practices. The design of our ships must not and should not depend on the impulse of an individual nor merely on the mechanical possibilities of the moment, though the latter must necessarily limit the immediate accomplishment of our whole aim. Design must primarily depend on closely reasoned 'requirements,' based on evidence continuously and steadily accumulated from the lessons of our fleets, for whose use the ships and weapons are to be supplied. The aim must, and necessarily will, be always in advance of what can be provided by the science of the day.

"The work thus indicated is the work of the staff, and certain divisions of the staff are therefore being grouped under the assistant chief of the naval staff to deal with questions relating to the use of weapons, types, and designs to meet future developments, cooperation of aircraft and their employment in naval war, weapon technique, and the introduction of new weapons. In fact, the assistant chief of the naval staff will be responsible under the chief of the naval staff to the first lord for dealing with all staff questions affecting battle tactics and fighting efficiency.

"The divisions of the naval staff dealing with operations, policy, intelligence, and training have been similarly placed under the deputy chief of the naval staff, the accepted principle of organization that current work and future work shall not be dealt with by the same division being closely adhered to. Under the operations division will come all those matters of current importance affecting the movements of ships and defense of ports, whilst the policy division will investigate future strategical questions, strengths of fleets, and development of dockyard and other facilities to meet future requirements, in accordance with the policy laid down by His Majesty's Government.

"Briefly, then, the organization of the naval staff to meet peace requirements is as follows: At the head of the naval staff is the chief of the naval staff, responsible to the first lord for the fighting efficiency of the fleet and the strategic and operational instructions to carry out policy. Under the chief of the naval staff the deputy chief of the naval staff on the one side is responsible for operations, policy, intelligence, and training, and the assistant chief of the naval staff on the other side is responsible from the staff's side for the development and use of material, including types of vessels, weapons, and tactics.

"Under this organization war experience will be fully laid to heart and the lessons applied to naval training and naval progress. Further, by these means the staff is reduced to the minimum numbers compatible with efficiency, whilst at the same time rapid expansion on sound lines is allowed for in the event of emergency. From an organization consisting of 10 divisions with a personnel of 340, the new organization will shortly consist of 8 divisions with a personnel of about a quarter of that number. They should supply a sufficient personnel to study and apply the results of our experience, and by neglect of that experience there would be a real danger of embarking on expenditure on wrong lines, the building of wrong types of vessels, incorrect tactics, and a faulty training of the personnel."

REORGANIZATION OF FRENCH NAVAL MANAGEMENT.

The French Navy, too, has been reorganized in its management branch, there called the naval general staff. The following quotation is from the *Moniteur de la Flotte*, March 6, 1920:

"The essential principle on which this necessary rearrangement is based is that the general staff should be concerned only with the duties of conception

"It is not at all doubtful that constant liaison is indispensable between the general staff thus restored to its real functions, which are the quest for and utilization of the correct means of preparing for and conducting naval warfare, and the services of execution charged with the putting into operation the plans elaborated by the general staff. From the existence of this liaison there arises no idea of grasping. Each individual, in the new organization, retains his place, and the clearly defined distribution of duties prohibits those deplorable jumbles or conflicts of authority so prejudicial to the efficiency of a system as a whole.

"This same care, to thus define clearly the different rôles, predominates to the same degree in the interior organization of the new service. It was not necessary that the subhead of the general staff and those of the officers placed under his orders, who are charged with studies of preparation and directions, should be at each instant diverted by the necessities of current service and by continuous relations with the executive services. This is the reason why the ministerial decision anticipates, with a view to aiding the chief of the general staff, two subchiefs, the first of which is charged with the direction of all questions relating to general service, while the second directs the plans undertaken by different bureaux conformably to the instructions given by the chief of the general staff.

"The general staff is subdivided into four bureaux, viz.:

"The first bureau (organization) is charged with the consideration of all general questions interesting the personnel (recruiting, formation, utilization, etc.) and the matériel (naval and aeronautic programs, coast defense, etc.); it includes also a section charged with the consideration of inventions.

"The second bureau (Intelligence) has for its mission that of gathering and combining all information appropriate to be utilized by the first and third bureaux.

"The third bureau (operations) is charged with all that concerns the training of naval forces, the preparatory work and the execution of the same.

"Concerning the fourth bureau (transportation, bases, supplies, communications), its very title sufficiently defines its prerogatives.

"Finally, three dependent services are attached to the bureaux of the general staff: (1) The aeronautic service (aerostation, aviation, motors); (2) the historical service recently created; (3) the hydrographic service.

"Thus conceived, based on simple, rational, and recognized underlying principles, freed of all the side issues which formerly served as a pretence to increase its importance and only resulted in hampering its operation, the new general staff of the Navy approaches much more nearly that of the Army, the logical and well-founded organization of which has withstood all tests imposed.

"Whatever may be the special conditions obtaining in the Navy, it was none the less essential in this arm of the service than in the Army that there should be a directive agency where, while an enlightened doctrine always abreast of the times is being developed, the appropriate means for immediately putting into effect this doctrine are studied and prepared in all their details."

NAVY MANAGEMENT ORGANIZATION.

What organization for the management of the Navy did we possess in 1917?

We had for the determination of naval policies and general plans: (a) A civilian Secretary of the Navy; (b) the Chief of Naval Operations; (c) the General Board.

By law, the Secretary of the Navy is the supreme authority in the Navy. The founders of the United States desired to maintain the control of the Government and of the armed forces in the hands of civilians. The heads of the military departments are civilians, and this provision is no doubt wise, provided the civilian secretaries do not use their power in a manner detrimental to the efficiency of the military services.

The necessity for coordination with other Government departments and Congress can be achieved perhaps better by a civilian than by an Army or Naval officer, but the most advantageous feature of the present law is that officers of the Army and Navy are not so closely identified with politics as they would be if the Secretaries of War and of the Navy were officers.

The impracticability of placing the entire management of military and naval affairs in the hands of civilians unaided by professional advice is so apparent that it need hardly be considered, yet the case is hardly less serious if such advice can be freely disregarded. It should be apparent from the above that the management of the Navy must be in the nature of dual management. In view of the legal responsibility the Secretary of the Navy must be able to exercise supreme authority, but practically his authority over purely naval matters, both as to operations and administration, should be exercised by the determination of guiding policies in line with the policies of the Government, the actual management of naval activities within the limits of such policies being delegated to the Chief of Naval Operations, a naval officer specially selected, appointed by the President and confirmed by the Senate.

As has been pointed out before, the Navy is an instrument available for use in the support or enforcement of our foreign policies. It should be the primary duty of the Secretary of the Navy to keep in intimate touch with all developments in international relations with a view to determining their effect on the possibility of war and to determine naval policies consistent with the existing or prospective situations.

The Secretary of the Navy should be held responsible for informing the President as to the ability of the Navy to do its part in enforcing our foreign policies in case force should be required, and for recommendations to the President as to the necessary development, and as to the state of preparation for war to be maintained by the Navy.

He should maintain close relations with other executive departments of the Government in order to establish the necessary cooperation and coordination required in the conduct of war.

There are activities under the Secretary of the Navy which are auxiliary to the naval activities and are purely staff functions, as such terms have been generally understood. These activities are legal, political, and financial (audit and cost accounting).

All of these activities, except such political activities as the Secretary may desire to direct, should be placed under the Assistant Secretary.

The relation of the Secretary of the Navy to the Navy should be much the same as a president of an industrial corporation to such corporation; that is, the consideration of the relation of the Navy to outside interests which affect its policies, and the determination of internal policies to insure its ability to accomplish the end for which it exists. The Chief of Naval Operations should be the general manager.

PROPOSED LAW OF 1915 TO CREATE A CHIEF OF NAVAL OPERATIONS.

In 1915 the necessity for a responsible naval adviser and assistant to the Secretary in managing the naval activities was recognized, but the law creating this office differed so much from the proposed law that much of the value of the original idea was lost.

The provisions of the bill as reported from the Naval Affairs Committee are indicated in the following quotation from the report to the Committee of the Whole House (63d Cong., 3d sess., Rept. No. 1344):

"The bill provides for the creation of a new office in the Navy Department to be known as the Chief of Naval Operations. This office is to be filled by an officer of the Navy on the active list not below the grade of rear admiral, and appointed for a term of four years by the President, by and with the advice and consent of the Senate. This officer, under the Secretary of the Navy, is to be held responsible for the readiness of the Navy for war and in charge of its general direction. He is to perform only such duties as shall be assigned to him by the Secretary of the Navy, and such duties shall be performed under the authority of the Secretary of the Navy, and is given the same authority regarding orders issued by him as is now given under existing law to the chiefs of bureaus of the Navy Department.

"To assist this officer in preparing general and detail plans of war 15 officers, of and above the rank of lieutenant commander of the Navy or major of the Marine Corps, are to be assigned for this exclusive duty.

"At present there exists a General Board and Naval War College, neither of which seems to be equipped for adequately performing this duty, nor have they sufficient officers under their jurisdiction to do this fundamental work for preparation of the plans of war. The demands upon the staff of the War Col-

lege and the members of the General Board for other questions involving the efficiency of the personnel and matériel of the Navy are such that they have not had time and opportunity to fully prepare in detail and perfect this work. It is the opinion of the committee that the necessity for such an office exists in the Naval Establishment.

"It will be noted that the Secretary of the Navy retains absolute control over the office and the Chief of Operations performs only such duties as are assigned by the Secretary, and the orders are issued under the authority of the Secretary of the Navy. The principal or civilian control of the Navy Department is in no way affected by the provision recommended. The tentative duties of the proposed Chief of Naval Operations and his assistants will be such that the work may be conveniently divided among nine committees or sections. The sections would probably be as follows:

"The historical section, which covers the study and analysis of past campaigns.

"The policy section, which studies the inherent interests of all nations and the policies which logically follows.

"The strategic section studies the theaters of possible wars from every aspect and the sources and means of supply for the military and naval forces.

"The tactical section studies tactics, particularly in relation to strategy; determines and endeavors to insure that the tactics of the fleet are kept constantly up to date and conform to the character of the ships and weapons that will be used.

"The logistic section studies the logistic aspects of the strategical and tactical plans involving the requirements as to supplies at the beginning of the war, during the war, and the organization of transportation, and many other things incident to the auxiliary service, including the inspection of merchant vessels.

"The organization section studies and devises plans of organization for war, in order to secure the most efficient flow of authority, the best administrative and tactical grouping of the forces, detail of personnel for command, and the orders necessary for the execution of the various plans.

"The mobilization section prepares and keeps always up to date plans for mobilizing for each of the various stations arising from conflict with possible enemies.

"The training section studies methods for the training of the naval forces and devises strategical problems and tactical exercises involving combined maneuvers of battleships, auxiliaries, submarines, aircraft, and mining vessels.

"The executive section sees that the plans devised are executed."

Before this bill was passed it was amended in such a manner as to remove many of its valuable provisions. In the original bill it was provided that the Chief of Naval Operations, under the Secretary of the Navy, is to be held responsible for readiness of the Navy for war and in charge of its general direction. The actual law reads:

"There shall be a Chief of Naval Operations, who shall be an officer on the active list of the Navy, appointed by the President, by and with the advice and consent of the Senate, from among the officers of the line of the Navy not below the grade of captain, for a period of four years, who shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet, and with the preparation and readiness of plans for its use in war: * * * To assist the Chief of Naval Operations in performing the duties of his office there shall be assigned for this exclusive duty not less than 15 officers of and above the rank of lieutenant commander of the Navy or major of the Marine Corps * * *"

It will be seen that the law failed to charge the Chief of Naval Operations with anything except the preparation and readiness of plans for the use of the fleet in war and for its operation in war. It thus removed the bureaus and shore establishments from his jurisdiction and left the responsibility for the readiness of the Navy for war entirely with the civilian secretary.

The original law also provided for 15 officers to be engaged in the exclusive duty of plan making; the law changed this to 15 officers to assist the Chief of Naval Operations in the performance of his duties and as a consequence, no planning division was formed.

There is no doubt but that the intent of the original bill was to substitute the Planning Division of the Office of Naval Operations for the General Board as the plan making body, but the law was changed and a compromise adopted with the usual result of divided responsibility for plans with its natural consequence.

PRESENT REGULATIONS GOVERNING CHIEF OF NAVAL OPERATIONS AND GENERAL BOARD COMPARED.

To indicate this divided responsibility the Navy Regulations governing the duties of the Chief of Naval Operations and the General Board, so far as they conflict, are quoted side by side:

THE CHIEF OF NAVAL OPERATIONS.

The Chief of Naval Operations shall, under the direction of the Secretary of the Navy, be charged with the operations of the fleet and with the preparation and readiness of plans for its use in war.

He shall advise the Secretary concerning the movements and operations of vessels of the Navy.

He shall advise the Secretary in regard to the military features of all new ships and as to any proposed extensive alterations of a ship which will affect her military value, and all features which affect the military value of dry docks, including their location; also, as to matters pertaining to fuel reservations and depots, the location of radio stations, reserves of ordnance and ammunition, fuel, stores, and other supplies of whatever nature, with a view to meeting effectively the demands of the fleet.

The Chief of Naval Operations' duties shall include the direction of the Naval War College, the Office of Naval Intelligence, the Office of Gunnery Exercises and Engineering Performances, the operation of the Communication Service, the operations of the aeronautic service, of mines and mining, of the naval districts, Naval Militia, and of the Coast Guard when operating with the Navy; the direction of all strategic and tactical matters, organization, maneuvers, gunnery exercises, drills and exercises, and of the training of the fleet for war; and the preparation and revision and enforcement of all drill books, signal codes and cipher codes.

He shall advise the Secretary of the Navy on all business of the department in regard to foreign relations, and all correspondence in regard to these matters shall be presented for the department's action through his office.

When designs are to be prepared for a new ship, the Chief of Naval Operations, in conjunction with the General Board, shall submit to the Secretary of the

THE GENERAL BOARD.

The General Board shall devise measures and plans for the effective preparation and maintenance of the fleet for war and shall advise the Secretary of the Navy as to the disposition and distribution of the fleet and of reinforcements of ships, officers, and men.

It shall prepare and submit to the Secretary of the Navy, plans of campaign, including cooperation with the Army.

It shall advise the Secretary of the Navy concerning the location, capacity, and protection of fuel depots and supplies of fuel, and of navy yards and naval stations; also in regard to the establishment and maintenance of reserves of ordnance and ammunition and depots of supplies; and shall advise as to the delivery of provisions and stores of every kind required by the fleet.

It shall consider and report upon naval operations, maneuvers, tactics, organization, training, and such other subjects as the Secretary of the Navy may lay before it.

It shall consider the number and types of ships proper to constitute the fleet, the number and ratings of enlisted men required to man them, and shall advise the Secretary of the Navy respecting the estimates therefor (including such increase as may be requisite) to be submitted annually to Congress.

ment, but shall not, except in special cases, be so restrictive as to prevent various arrangements being developed in order to obtain the benefit arising from the consideration of several possible solutions. These military characteristics shall be prepared by the General Board sufficiently early to permit the preliminary design referred to below to be prepared and the approximate cost determined before the estimates for the yearly building program are submitted.

The General Board was created by Executive order about 20 years ago and the duties assigned constituted it a professional board of advisers to the Secretary of the Navy. Its duties required it to make plans for war and the board as originally organized was divided into sections. The members of the board were assisted by officers assigned to duty in connection with the board.

The effect of the law creating the Chief of Naval Operations was to substitute him for the General Board as the adviser of the Secretary in certain definite activities of the fleet. The intent of the proposed law was to centralize the responsibility for plans and preparation for war and the authority to execute approved plans, in the Chief of Naval Operations. The Navy Regulations created a divided responsibility for plans and restricted the plans to be made by the Chief of Naval Operations to a point inconsistent with efficiency.

Upon the outbreak of war in April, 1917, many of the officers then assigned to the General Board were detached and ordered to sea duty, others were assigned to duty on various other boards such as the War Industries Board. Perhaps this was just as well, for the fact that the General Board had insufficient personnel permitted the assumption of most of its previous functions by the Chief of Naval Operations. The inefficiency which then existed and still exists in the organization was then, and if the present organization continues, will in the next war, be partially overcome, necessarily, by the Chief of Naval Operations assuming many of the functions assigned by regulations, to the General Board.

The reasons for existence of the General Board may be stated thus—it is desirable to have officers of age and experience pass upon the general plans and policies of the Navy in order that such plans and policies may be influenced by the conservatism of age and experience. But under the present organization the General Board is charged with initiation and preparation of plans and characteristics of ships, detail work which is essentially in the field of experts and of youth. As a consequence there has been a failure to produce the plans and a dragging in the determination of military characteristics of vessels and weapons and a tendency for the board to act as a supreme court, deciding such questions as are referred to it.

There is no intention to imply that age and experience are not required in naval councils, they are, but the present organization places these officers in a position requiring, if they carried out the regulations, the most careful study of details and minor material matters with which they are not familiar, and an amount of detail work to which they should not be subjected.

Age and experience are required in making decisions on the work of subordinates and not in performing the actual work. This is the idea which the General Board now fills as a Supreme Court, but this arrangement is not satisfactory because the decisions are not restricted to major policies and general plans; are not rendered at the proper time to be of the greatest service, and in many instances the decisions can be more correctly made by experts than by age and experience. Age and youth should work together. It is bad policy to permit any plan to reach a final stage and then have it disapproved. Fault finding is detrimental to efficiency; constant association and instruction as the work progresses will prove far more valuable.

From a comparison of the regulations governing the activities of the Chief of Naval Operations and the General Board, it will be apparent that there is divided responsibility for plans, building programs, and other matters which can not but create inefficiency. Board control is notably inefficient, due to absence of definite personal responsibility.

and distribution of ships and personnel and for plans of campaign.

How can efficiency exist with such a conflict of responsibilities?

The General Board charged with making plans can not be held responsible if such plans fail, for the board has no part in the execution of the plans. The Chief of Naval Operations can not reasonably be held responsible as he, if the regulations were followed, would be required to commence war with a distribution of forces and state of preparation planned by the General Board over which he has no control. Plans of campaign would be made by the General Board and executed by the naval forces under direction of the Chief of Naval Operations.

Further criticism of this part of the present organization appears unnecessary and an attempt will now be made to indicate the changes which are required to make this phase of management efficient.

It has been pointed out above that by law the responsibility for the management of the Navy rests unquestionably with the Secretary of the Navy. It has also been pointed out that he should have one chief naval adviser to whom, after policies and plans are approved, he should delegate authority to insure the execution of so much as relates to naval activities. This same assistant being his chief adviser should be responsible for presenting to the Secretary for approval such naval policies, plans, and decisions as may be required for the efficient accomplishment of the Navy's task.

Manifestly the Chief of Naval Operations can not by himself perform the work of drawing up plans, studying the characteristics of vessels and weapons, continuing the study of war with a view to developing strategical and tactical conceptions. He must have many assistants, specially trained, and must in many instances accept the decisions of such assistants as his own.

In reality, therefore, there should be in the Navy Department a management office, and similarly, in other place in the organization where the decisions to be made are so complex or technical that the responsible head requires expert advice such offices should exist.

For many years the members of these management groups have, in armies, been known as general staff officers. This name does not imply in English its real meaning in the language from which it was derived. Its real meaning is generalship staff officers. Even in industrial organizations the word "staff" is becoming more and more general in the designation of assistants in management.

In the Navy Department organization this management office is called the Office of Naval Operations, but by regulations its functions have been seriously curtailed by restricting its authority to manage and by many of its real duties being assigned to the General Board.

In general terms, this office should be responsible for the following:

- (a) Obtaining the necessary information upon which to base plans.
- (b) Planning what is to be done and the nature of the preparation required for the task.
- (c) Planning the characteristics of the things to be prepared.
- (d) Planning the methods of using the things prepared.
- (e) Dispatching the activities in accordance with the plans, and recording progress in the execution of plans.
- (f) Coordinating all lines of activity so that they work together to achieve a common aim.

Management must provide the administrative services, the bureaus, with standards of preparation relating to characteristics and quantities, and as responsibility for such plans must be accompanied by authority to enforce this execution, when approved by the Secretary, the administrative services must be under the authority who should be responsible for the management of the naval activities, the Chief of Naval Operations.

The first step in the reorganization of the Navy Department should, therefore, be the centralization of the function of management of all naval activities in the Chief of Naval Operations, acting under policies approved by the Secretary of the Navy.

In order to accomplish the desired end, the Chief of Naval Operations should be held responsible to the Secretary of the Navy for the preparation of all

plans for the development of the Navy, for its maintenance, and for its use; and for plans for cooperation with the War Department in joint preparation for war and for joint operations during war. He should be held responsible for the completeness and effectiveness of all such plans, and when they are approved by the Secretary of the Navy he should act as the executive of the Secretary in carrying the plans into effect, and for this purpose should be authorized to exercise such supervision over all naval activities as may be required to obtain their effective execution.

The two main functions of management are: (a) Planning; (b) supervising execution.

The Office of Naval Operations should therefore be divided into two main divisions—a planning division and an executive division.

The following description of the organization of this office indicates what it should be, not what it is. As plans should logically precede execution, the planning division will be considered first.

The first function of the management office is to obtain the information upon which to base plans. The information to be obtained should not, however, be limited only to that required for making plans. This section is identified more closely with plans than with execution, so it is incorporated into the planning division. This section is called the Intelligence Section (present Office of Naval Intelligence). Its duties are:

First. The collection, sifting, arrangement, and analysis of all information required by the naval authorities to enable them to take such measures in peace as will insure the rapid commencement and vigorous prosecution of any probable war.

Second. The dissemination of such information to its proper destinations during peace and war.

The second, third, and fourth functions of this office require that there shall be adequate provision for planning. These functions are:

(a) Planning what is to be done and the nature of the preparation required for the task.

(b) Planning the characteristics of the things to be prepared.

(c) Planning the methods of using the things prepared.

In carrying out the planning functions, it is found that a distinction must be made between the plans to carry on the current activities and the plans relating to future activities.

These planning activities are of different characters. Planning for current activities requires complete information regarding current activities: it deals entirely with existing conditions of personnel, matériel and training; it is most efficiently accomplished when there is a general plan with which its decisions may be coordinated; planning for future activities requires study and deliberation, vision, and imagination; it determines future objectives and by foresight prepares the plans to guide future development and activities toward the accomplishment of such objectives.

The current plans section is logically a part of the Executive Division. These officers are the staff of the officer charged with supervision over current activities. The planning group assigned to planning for the future is independent of the current activities and is called the Planning Division.

Upon the threat of war certain officers who as members of the War Plans Division have been engaged in preparing the plans for war should be transferred to the section engaged in making current plans and also to other sections of the Executive Division.

WAR PLANS DIVISION.

Policy, our own and that of other nations, determines the possibility and probability of war. A careful study of policy is necessary to determine with what nations we are most apt to have war. This study should be made by the State Department, confirmed by the President, and the Navy Department informed, but under the existing conditions the Navy is forced to make its own assumptions as to our foreign policy and to determine its own conclusions. It is, therefore, necessary to have a section of the War Plans Division to study policy.

When the policy branch has determined upon the nations with whom war is possible or probable, its conclusions should be given to an operating plans section. The operating plans section would then prepare a tentative war

plan, indicating the probable theaters of operations, the strength of the forces required, the most suitable types of vessels, and the general plan of operations.

This tentative plan is then referred to the administrative plans section, whose duty would be to determine whether the plan is practicable from the point of view of logistics, which means can we supply and maintain the forces required in the theater of operations indicated by the plan.

If the strategic plan is practicable, the administrative plans section then draws up the plan for the supply and maintenance of the forces required. If the plan is impractical from the point of view of logistics, it must be modified.

There is one other necessary section of the War Plans Division—the education and training section.

The education and training branch would determine the policies regarding the education and training of naval personnel; supervise the gunnery exercises and engineering competitions; prepare and issue drill books, manuals, etc.

This conclusion is tabulated below for easier reference:

WAR PLANS DIVISION.

(a) *Intelligence section.*—The collection, sifting, arrangement, analysis, and dissemination of information. Subsections: (1) International relations; (2) operational—foreign strategy, tactics, organization, etc.; (3) administrative—foreign matériel and personnel, basis, sources of supply, etc.; (4) technical research—foreign activities; (5) education and training—foreign navies, armies, civilian institutions; (6) historical.

(b) *Policy section.*—To study the inherent interests of all nations and the policies which logically follow. To study our own and other nations' policies, known or assumed, with a view to determining the nature of possible wars, and the probability of war.

(c) *Operating plans section.*—To study the nature of the operations which may be required in the event of war; to plan such operations and the numbers and types of vessels required. To study the use and employment of vessels and weapons; the tactical questions dependant upon changes of weapons; and all questions affecting battle tactics and fighting efficiency. This section would have three subsections: (1) Strategy section, (2) tactics section, (3) military characteristics section. (The military characteristics subsection would study and determine upon the military characteristics of ships and weapons.)

(d) *Administrative plans section.*—To study the capabilities of the existing means of maintenance and supply of the fleet in theaters of operations indicated by the plans prepared by the operating section: To make plans; to develop the necessary administrative requirements to meet the operating plans.

(e) *The education and training section.*—To study the requirements of and determine the means and methods of, education of naval personnel, to supervise the training of naval forces, including gunnery exercises, engineering competition, etc., to prepare and issue drill books, manuals, etc.

EXECUTIVE DIVISION.

The second function of management is supervision over execution of approved plans. This necessitates an executive division.

The activities which management supervises are of two main classes:

(a) Administrative; that is, the activities comprised in the design, production, and maintenance of the naval forces.

(b) Operational; that is, the operations of the naval forces.

Current plans apply to both classes, but execution is obtained through different agencies. The administrative activities are performed by the various shore establishments largely under the direction of the bureaus of the Navy Department. The operational activities are performed by the naval forces under the commanders in chiefs of the fleets or other naval commanders.

The executive division would be under the principal assistant of the Chief of Naval Operations, who would be called the Assistant Chief of Naval Operations. The executive division would be divided into two main sections—administrative section and operations section, and this division should have a planning section to assist in preparing current plans. The current plans sections would be directly under the Assistant Chief of Naval Operations.

The difficulties of the executive division are greatest in supervising the details of aviation, submarines, communications, and naval districts in

which the number of subordinates is large and the complexity of the activities are very great. As a consequence of this difficulty there must be in the executive division certain sections which deal only with these special matters. These sections are concerned with both administration and operations and must operate under joint control of the two main sections.

The organization of the Office of Naval Operations under the above proposed plan would appear as indicated in the diagram attached marked "A."

THE ADMINISTRATIVE ACTIVITIES.

The administrative activities are carried on by the various shore establishments under the supervision of the bureaus of the Navy Department, shore establishments performing work for more than one bureau of the Navy Department have no common superior in the Navy Department except the Secretary of the Navy.

The bureaus and offices now supervising administrative activities are:

Bureau of Construction and Repair.	} Matériel.
Bureau of Steam Engineering.	
Bureau of Ordnance.	
Bureau of Yards and Docks.	
Bureau of Supplies and Accounts.	
Bureau of Navigation.	} Personnel.
Bureau of Medicine and Surgery.	
Office of the Judge Advocate General.	
Marine Headquarters.	

There is no common superior to the bureaus in the organization of the Navy Department, except the Secretary of the Navy.

The operations of naval forces are absolutely dependent on the ability of the administrative services to provide personnel and to supply and maintain the fleet in the theater of operations. It is essential, therefore, that the administrative activities be controlled by the same plans and policies which control the operations of the naval forces. Responsibility for the success of naval operations must carry with it commensurate authority, and this authority must extend to the administrative activities as well as to the operational activities.

The Chief of Naval Operations should, therefore, have authority to exercise through the chiefs of bureaus, commandants of naval districts, and naval commanders, such supervision over all naval activities afloat and ashore as may be required to secure efficient execution of approved plans and policies.

Under the present organization the Chief of Naval Operations has no authority over the administrative activities on shore. He is directed by regulations, after any particular war plan is approved, to assign to the bureaus, boards, and offices such parts thereof, as may be needed for the intelligent carrying out of their respective duties in regard to such plans, but he has no authority to insure effective execution or coordination of the work of the bureaus.

The repair ships and supply ships which are by nature a part of the administrative agencies, operate under the Chief of Naval Operations or subordinate naval commanders, but similar activities on shore are not within his jurisdiction.

As the bureaus have no common superior except the Secretary, technical questions referring to two bureaus are frequently referred to him. Unless a special technical staff is to be assigned to the Secretary's office, he must use some other agency to make the decision for him. Most often such questions are referred to the matériel section of the Office of Naval Operations, but the answer prepared there is sent to the Secretary for signature.

This system leads the Secretary to the exercise of control over technical matters and results in taking up his time which could be better employed in study and determination of suitable naval policies.

This tendency, a Secretary to deal with details of technique and administration, is fostered by the Naval Committees of Congress who, through similar tendencies of their own, ask questions of the Secretary to which he should not even be expected to know the answer. If it is necessary for the Naval Committees to go into the details of the Navy, technical and administrative, they should confine their questions to the officers charged with the specific responsibility for such details.

Under the present organization the Chief of Naval Operations has no authority over the administrative activities on shore, the bureaus have no coordi-

nating head, except the civilian Secretary, and the same thing is true of all navy yards and stations except a few shore establishments which perform limited activities for certain particular bureaus. The repair ships and supply ships, which are by nature nothing but floating navy yards, operate under the Chief of Naval Operations or his subordinate commanders. It is not logical that he should have no control over repair and supply facilities on shore.

The consequence of such organization is that proper coordination of the bureaus is lacking. Differences constantly arise between bureaus due to the difficulty of determining which bureau has cognizance over the question at issue, and often delays in design are caused by two bureaus having cognizance over different parts of the same system. As the bureaus have no common head, except the Secretary, questions of a technical nature are constantly referred to him, which should never reach the supreme head of the Navy.

Although the bureaus have no executive control over the activities of navy yards their control over decisions relating to designs and repairs of matériel falling under their cognizance, results in many officers assigned to duty in navy yards, considering themselves representatives of one or another bureau. The present system of corps in the Navy tends to accentuate this feeling. Each officer belonging to a special corps feels that he owes loyalty to a special bureau composed of members of his corps.

The remedy for this situation is to reduce the number of bureaus to two, dividing their activities on the lines of matériel and personnel, and to make the chiefs of these two bureaus subordinates of the Chief of Naval Operations; the present bureaus becoming divisions in the new bureaus. The amalgamation of the Construction, Pay, and Civil Engineer Corps with the line of the Navy would greatly assist proper organization in attaining efficiency.

Logically, perhaps, the division of the control over the administrative activities between two bureaus is an error. It might be better centralized into one. If so centralized it would be divided into two main branches, and, therefore, the only difference would be that an additional link would be formed in the chain of command. As long as the number of subordinates with whom any one authority has to deal is not excessive, and the duties assigned to the subordinates are not conflicting or overlapping, reduction in the links of the chain of command is desirable. It is, therefore, considered advisable to have two bureaus—a bureau of personnel and a bureau of matériel.

THE BUREAU OF PERSONNEL.

The bureau of personnel would combine the duties of the present Bureaus of Navigation and Medicine and Surgery, the Office of the Judge Advocate General, and the Marine Headquarters.

The Bureau of Medicine and Surgery is placed under the chief of personnel, as its duties are primarily for the upkeep and maintenance of the personnel.

Some features of personnel have in the past been given inadequate consideration, namely—

(a) Education and training of official personnel.

(b) Study of the records of service and personal characteristics of officers with a view to their assignment to duty.

The bureau of personnel should be so organized as to insure the maximum efficiency from the personnel and should be organized in divisions approximately as indicated: (a) Officer personnel division, (b) enlisted personnel division, (c) Naval Reserve division, (d) discipline division, (e) morale division, (f) health division, (g) Marine Corps Headquarters.

THE BUREAU OF MATÉRIEL.

Nothing will facilitate cooperation and coordination of the administrative services dealing with matériel to such a great extent as amalgamation with the line. The experience obtained in the amalgamation of the Engineer Corps is proof that amalgamation can be made effective. This subject will be discussed later at greater length.

The next most important step in attaining efficiency is the combining of the present matériel bureaus under a common professional head.

A chain of command is just as necessary in the administrative services as it is in the operating forces. The necessity of a chain of command with definite responsibility and authority is becoming more and more recognized each day in industrial organization.

Navy has assigned to him once a technical staff qualified to make decisions concerning the work of the bureaus or uses, as is done at present, the Matériel Division of the Office of Naval Operations, to prepare such decisions for his signature.

The effect of this necessity for the Secretary to sign orders concerning purely naval activities is to draw his attention from the big problems of policy to the minor details of administration.

Another important feature of the bureau of matériel is that in connection with the navy yards and stations. At present there is no common superior to the commandants of navy yards, except the Secretary of the Navy.

Navy yards are primarily portions of the administrative services. In measure they are concerned with operations, but mostly in connection with their own defense.

The operations phase of their activities is performed under the direction of the commandant of the naval district, who receives his orders from the Chief of Naval Operations so far as concerns operational activities.

There is no administrative office charged with the responsibility for the efficiency of the administrative activities carried on at navy yards. As a result there are different organizations, different methods, lack of inspection, and, worst of all, little or no consideration of the relative value of the various navy yards in order that priority may be assigned in the matter of expenditures.

Instead of determining the necessities of navy-yard development from plans for the use of the fleet in war, there have been various boards appointed by the Navy Department and by Congress to study and report on locations, capacities, etc. Such studies and reports unless based on war plans are of little value. Unless the needs of the Navy are based on our plans for war the development of navy yards is most apt to be not only inefficient but extravagant.

The bureau of matériel should have a division in charge of a director of navy yards. The duties of this division would be:

(a) To standardize navy yard industrial organization, management, and methods.

(b) To determine the development of navy yards and naval bases with a view to the efficient execution of the administrative section of the War Plans.

(c) To schedule the major items of work to be undertaken at navy yards in accordance with policies and operating plans.

(d) To supervise, as may be necessary, all industrial naval activities on shore except those performed by or under the supervision of some other division of the matériel bureau or other specifically designated agency.

The present Bureaus of Construction and Repair, Steam Engineering, Ordnance, Yards and Docks, and Supplies and Accounts would retain their present designation except the change in title from bureau to division.

The above organization could be modified to advantage by the amalgamation of the Construction and Repair Division with the Steam Engineering Division but such combination can not be efficiently accomplished until the construction corps is amalgamated with the line.

The chief of matériel should have a technical staff and administrative staff to assist him in his duties. In this way the matériel administrative activities will be coordinated, duplication of activities will be avoided, and the maximum efficiency be attained.

The proposed organization is outlined in diagram B.

APPROPRIATIONS.

By its control over appropriations, limited as such appropriations oftentimes are to specific items, Congress not only limits the strength of the Navy, but governs its development both as to types of vessels and shore establishments.

The present system of appropriations is faulty for many reasons, among which are the following:

(1) The Congress and the Navy Department do not have a common conception of our foreign policies nor the possibility or probability of war. Consequently a difference of opinion exists as to the amount of insurance the Government should pay for the protection of a Navy. This common conclusion should be furnished by the executive branch of the Government or determined by a board, as suggested in the first part of this paper.

(2) The Navy Department has not in the past based its estimates on well-considered plans for the development of the Navy in accordance with war plans. Efficiency and economy can not be attained unless the estimates are based on plans. In view of the responsibility of Congress for the appropriations to maintain a Navy suitable to the needs of the country, the estimates of appropriations sent to Congress should be accompanied by a statement of the political situation upon which the Navy's plans are based and the general plan for naval development.

The plans should indicate the use to which present matériel and personnel would be put in the event of possible wars; the development required as to naval shore establishments, naval bases, and new construction; and the requirements as to naval personnel, together with reasons therefor.

The Naval Committees should so far as possible decide on the amount of the appropriations to be made without specifying in detail the items for which the money is to be expended.

This would be a budget system for the Navy. It would materially reduce the time required for the consideration of the naval appropriation bill and would give the Navy Department greater initiative in spending the money to attain the maximum efficiency with the money expended. The present system has inadequate flexibility. The estimates are made nearly a year before the funds are available. A year more passes before new funds are available. This delay, caused by Congress fixing in detail the amount to be spent, often causes delay in making desirable modifications and often restricts certain desirable activities for which appropriations have not been adequate. At the same time money saved under a different appropriation can not be used and is turned back to the Treasury. This inflexibility also causes extravagance in case the money appropriated for one item is greater than required, for this money is very apt to be unprofitably spent if it can not be used for more pressing needs.

If a budget system for the Navy can not be provided, the next best plan is to limit the number of items under which appropriations are made to the smallest possible number and to allow an adjustment in these appropriations without action of Congress so long—

(a) As the total appropriation is not exceeded.

(b) As long as the excess by adjustment does not exceed 15 per cent of the total appropriation for any particular item.

Under the present regulations "Each bureau shall estimate for and defray from its own funds the cost necessary to carry out its duties," etc.

These estimates made by the bureaus are not coordinated except by the office of the Assistant Secretary and the Secretary. These estimates are based on the bureaus' ideas of what its expenses will be and are not based on approved plans for the development of the Navy as a whole.

All estimates of appropriations from whatever sources within the Navy should be based on approved plans for the development and use of the Navy. Such plans should indicate the priority of the activities comprising the plans, and all estimates of appropriations should be coordinated by the Chief of Naval Operations and returned to the bureaus for comment before being submitted to the Secretary.

If the bureaus are reduced to two, as suggested above, the coordination of the various divisions of the bureau would be accomplished by the chief of bureau.

The comments of the Chief of Naval Operations and of the chiefs of bureaus should accompany the estimates when finally presented to Congress.

CONSTITUTION OF THE GENERAL BOARD.

As has been pointed out above, the General Board at present is composed of officers of age and experience. Their duties as stated by regulations require them to initiate many plans. This function is no longer filled, yet the regulations have not been changed. As a consequence there is continual friction between the General Board and the Plans Division of Operations due to the overlapping and conflicting duties assigned to the General Board and Chief of Naval Operations.

It has been also pointed out that age and experience are necessary to pass on the work of youth, but that in order to attain the best results age and experience should be combined with youth in the preparation of plans, in order that

the value of their conservatism may be obtained during the formulation of plans and not critically applied to completed plans.

Another objection to the present organization of the General Board is that the majority of the board is not identified with the execution of the plan after it is passed upon, consequently responsibility for the success of the plan is divided. Again, the General Board is directly under the Secretary of the Navy, and the opinions expressed by the board are transmitted to the Secretary without the comments of the Chief of Naval Operations.

Conditions of war exposed the ineffectiveness of this organization. Necessity demanded the execution of plans without waiting for them to be referred to the General Board. Most of the members of the General Board were ordered to sea or to duty in connection with various other boards, such as the War Industries Board.

The solution of the problem appears to be as follows:

Place a rear admiral or captain in charge of each of the major sections of the War Plans Division and constitute the General Board of the following officers:

- Assistant Chief of Naval Operations.
- Director of War Plans Division.
- Chief of Intelligence Section.
- Chief of Operating Plans Section.
- Chief of Administrative Plans Section.
- Chief of Education and Training Section.
- Chief of Matériel.
- Chief of Personnel.

This board's duties would be to express an opinion on such major questions as may be referred to it by the Chief of Naval Operations.

With this organization, the General Board would be constituted of officers in close touch with current activities and war plans; each one would be thoroughly familiar with the work and ideas of a particular section or branch. This organization would form a proper advisory committee each member of which has certain definite responsibilities in connection with the policy or plan under consideration.

EDUCATION AND TRAINING OF NAVAL OFFICERS.

In a speech on education, President Hadley, of Yale, made the following statement:

"In the old-fashioned view of life, each human being went through a period of preparation, which was followed by a distinct and separate period of life work. When such a person left school or college, he was thought to have finished his education and to have begun serious business. I think we have all come to see how artificial was this distinction and how evil were many of the results which followed from it. We now understand that well-developed men and women should allow their education to cease only when their life ceases. We no longer attempt to separate our years into two periods, one of training and the other of work. We hold, rather, that work should begin in the period of training and that training should continue throughout the period of active work."

The Navy has unfortunately in the past clung more closely to the old-fashioned view of life than to the modern one. Instruction of line officers, other than a few matériel specialists, has been confined to the Naval Academy course of preparation, and in some instances officers have attended the Naval War College.

The assignment to instruction at the War College has often been made because officers happened to be available rather than because of an officer's special qualification for such additional education and training.

As a rule, attendance at the War College has been postponed too long. Also, because of the difference in age, rank, and experience of the members of each class, it is necessary to begin with the elementary principles.

The reasons for instruction of commissioned officers are set forth in the following quotation from the report of a recent board convened to study and report on the necessity for additional instruction and training of line officers:

REASONS FOR INSTRUCTION OF COMMISSIONED OFFICERS.

"The present advanced state of civilization includes great development in every branch of the arts, industry, and science, so great that keeping abreast of developments in one branch of art, industry, or science is practically a

life work. Development is proceeding at an ever-accelerating rate, and the complication of activities is increasing continuously.

"The requirements of the naval profession have an even broader scope than indicated above. The naval officer must be prepared to combine all these technical elements into an organized and unified force in such a way as to have a maximum effect when exerted against an enemy. The Navy as a whole must be operated as a unit, which required high proficiency in such matters as organization, administration, and management.

"The intimate dependence of efficiency of matériel upon efficiency of personnel imposes a further major requirement upon the officer. He should be an expert in the art of leading men, which necessitates a high degree of knowledge of the underlying principles if effective and united action is to be obtained in the face of the difficulties confronting naval forces in war.

"The opinion has been generally held in the Navy that the only way to learn things is to do them. This opinion has had much truth and fact to justify it, but this idea has been undergoing a marked transformation in recent years. It is becoming realized more and more that, although one can not learn to do a thing by merely being told how it is done, such previous knowledge greatly facilitates learning how to do it when practical work is started. This knowledge affords its possessor a strong foundation, barren and useless in itself, but a firm basis upon which to build the structure of practical experience. Book learning, abstract knowledge, is like fertilizer; it does not of itself produce anything, but it stimulates growth and advance when the live seed, practical experience, is instilled into the soil.

PERIODIC INSTRUCTION INDISPENSABLE TO EFFICIENCY.

"The naval profession is the most varied in the world; leadership, matériel, skill, judgment, operations—all are needed. The term 'officer' is synonymous with 'leader,' which establishes the primary reason for existence of officers. In the earlier years of an officer's career he is concerned with the exercise of his profession in employments of limited scope. As he advances in rank and experience the performance of details becomes less important. In the higher grades 'operations' becomes of paramount importance, while material and its manipulations, though essential, are viewed as the means to the end and not, as earlier, the end itself.

"The naval officer requires a working knowledge of many branches of human endeavor. At present he is 'educated' only in preparation for the lowest commissioned grade. In order to be of most benefit to the service and the country, in these days, he must not only be expected to interest himself of his own volition in the progress of matters which have a bearing on naval warfare, but the time must be set aside and the opportunity must be made for him to acquire up-to-date knowledge along professional lines. It is also the case that the education preparatory to initial commission does not, nor can it be expected to, prepare the naval officer thoroughly for other than the duties he will be called upon to perform as a junior officer. It is an introduction to the profession but is not, and can not be, complete in itself, even were still more time allotted to instruction at this initial stage.

"Not only does progress in knowledge and in other matters affecting the naval profession take place, but even in the extreme case in which those matters might conceivably be considered stationery, the Government should, at recurring periods in a career of 40 years' commissioned service, provide the time and opportunity for officers to be instructed along the lines with which their increasing rank and consequent responsibility call them to be thoroughly familiar. The extreme case appears to be: Instruction for 4 years at the Naval Academy and then none for 40 years of commissioned service. The board considers recurring instruction periods (later defined and specified) as indispensable to efficiency.

"Successive periods of instruction and training occurring at intervals between periods of practical experience is the best means to develop judgment, which, in positions of great responsibility, is an attribute which is hardly of inferior importance to the ability to reason to a logical conclusion.

"The length of time and the point in the service at which the instruction periods should take place are found to be:

"Naval Academy, four years, preliminary and preparatory to commission, in readiness for first phase of usefulness; i. e., inferior subordinate.

"General-line course, one year, between 5 and 10 years after commissioning (preferably after five years' general service), in readiness for second phase of usefulness; i. e., superior subordinate.

"Junior War College course, one year, between tenth and twentieth years of commissioned service (preferably while in the grade of lieutenant commander), in readiness for third phase of usefulness; i. e., commanding officer.

"Senior War College course, one year, after twentieth year of commissioned service (preferably while in the grade of captain), in readiness for final phase of career; i. e., flag officer.

The necessity for instruction at recurring periods is recognized in most military services. The following quotations from the statement of the first lord of the Admiralty indicates:

"There remains to be considered the higher education of the officers of His Majesty's service. Before the war this education was almost entirely professional and technical. Officers in their sublieutenant's examination were required to pass examinations in various technical subjects. Later they specialized in gunnery, torpedo, or navigation and went to special schools for this purpose, where their higher technical education was completed.

"The whole of this question of higher education has been carefully reviewed in the light of war experience, and it appears that though the former system gave a type of officer of high professional attainments, yet in many respects it has left considerable room for improvement, the nature of the courses being rather too strictly professional and technical. Consequently, in certain respects the naval officer was at a disadvantage as compared with his contemporaries in other walks of life, who had had the advantage of a more general education and had come into contact with all shades of thought up to a comparatively late age.

"The effect of the war was, in the case of the younger officers, seriously to interfere with their actual general education at the Osborne and Dartmouth Colleges prior to coming to sea, nor was it possible, in the case of a large number of officers, to arrange for the special courses prior to their becoming lieutenants. At the close of the war, therefore, these officers found themselves at a serious disadvantage; first, from the interruption of their general education, and, secondly, from the fact that they had been unable as sublieutenants to pass through the courses at Greenwich College and the various naval schools.

"To remedy this state of affairs, the authorities at Cambridge University were approached. The university authorities showed the greatest sympathy and gave us the most generous assistance, and as a result all those officers who had their studies interrupted by the war are being given a special course at Cambridge University. This course is designed to broaden the outlook on life and to bring officers into contact at an impressionable age with university thought and university ideas. It will not be until 1922 that all officers who had their studies interrupted will have been through Cambridge; meanwhile, we are convinced of the enormous benefit which has already resulted to those officers who have been through the course. We are grateful in the extreme for the help which has been given; it has shown the value to the Navy of this contact with the university, and it would be a profound mistake if this contact ceased so soon as the officers concerned have passed through their courses.

"It is in contemplation to frame a scheme subject to the concurrence of the university authorities, under which in the future a university course will be an integral part of training for about 25 per cent of the sublieutenants in each year. It is considered that about this percentage will gain real and lasting benefit from the course.

"The full details of this scheme of training will be worked out during the coming months. Broadly, the proposals are that all sublieutenants shall undergo, in addition to the technical courses of gunnery, torpedo, pilotage, and navigation, a special course of mathematics and physics, and an elementary war course at Greenwich. In this elementary war course, to which great importance is attached, sublieutenants will be given an introduction to strategy, tactics, and the study of war. After Greenwich 25 per cent will be selected for the special university course, the remainder passing to seagoing ships prior to promotion to lieutenant.

"In the interests of the future of the service, great importance attaches to the selection and training of officers for the war staff. A body of officers is required who have made special study of the lessons of history and of the war, and who are capable of sifting and applying the mass of evidence available.

"Reduction of the navy to the utmost limit in ships and material makes it the more important that the efficiency of the war staff shall be of the highest order.

and that during the forthcoming years there shall be passed through the staff college a number of young officers whose training in staff work will insure a common doctrine on strategical and tactical questions, the right application of the lessons of the past, and the ability to foresee the requirements of the future.

"With this end in view a naval staff college has been set up at Greenwich. The first course commenced in June last and will be completed in June of the present year. In the next course, commencing in September, the number of officers will be increased and will, it is hoped, include representatives from the dominions.

"We must aim at training at least 40 naval officers a year, so that in 10 years 400 will have qualified for the naval staff and will be distributed through the various grades of the naval service. It is further highly desirable that the number of army, air force, and dominion representatives attending the naval staff college should be increased to insure close cooperation between the services and to build up the naval thought of the Empire on the common doctrine on which the navy must prepare itself. To carry this out it will be necessary to consider methods of increasing the staff college accommodation; this matter is receiving serious attention, and it is hoped that a decision will be reached in time to enable the staff course in 1921 to be of the dimensions proposed; the matter will be referred to in the naval estimates of 1921-22.

"For the benefit of senior officers who are unable to take advantage of the staff course, a war college has been opened at Greenwich and a special staff appointed for instructional purposes. Strategy, tactics, and command are the principal subjects dealt with. The course at the war college will be preceded by technical courses at Portsmouth dealing with the use of weapons and progress in weapon technique. The war college at Greenwich opened on March 1."

It will be seen from the above that the British Navy has adopted a system of education and training approximating very closely that recommended for the United States Navy by a board of United States naval officers, which report was made without knowledge of the British plan.

The necessity to develop trained officers for duty on the staffs of admirals at sea and in the management branch of the Navy should be apparent. This necessity is now recognized throughout the world. It is a common saying abroad that "the French general staff saved France."

AMALGAMATION OF CORPS.

At present there are several corps in the Navy which in order to increase cooperation and coordination should be amalgamated with the line. These are: The Construction Corps, the Pay Corps, the Civil Engineer Corps.

These corps are directly responsible for the efficiency of many activities upon which the ability of the fleet to carry out its mission, directly depends. It is essential that there be the heartiest and closest cooperation in all such activities.

For years there has been more or less discord among the officers of the Navy due to the existence of special corps. The most serious discord was due to the Engineer Corps, because the Engineer Corps and line were thrown together continually on board ship.

The amalgamation of the Engineer Corps and the line was a great step in advance. It was predicted that failure in engineering would result, but the contrary has been the case, engineering has really improved and the mechanical ability of those officers assigned to turrets, etc., has added to the entire efficiency of the Navy.

It is mostly in the shore establishments and in the Navy Department that the friction still existing between the line and the so-called staff corps, is found.

That it exists and is detrimental to efficiency is the conviction of many officers who have been on duty in the department and at navy yards. As long as special corps exist there will be corps loyalty which, because it puts the good of a few ahead of the good of the many, is detrimental to that feeling of unity which must inspire all naval officers if the maximum of efficiency is to be obtained.

The Construction Corps is composed almost entirely of honor graduates of the Naval Academy. These officers have had to decide upon their careers at the early age of 22-24 years with the result that some of these officers would probably have been better line officers than constructors, and visa versa some who because of the small number of vacancies in the Construction Corps have been forced to remain in the line would have made better constructors than line officers.

The Pay Corps and Civil Engineer Corps are composed largely of officers who entered the Navy from civil life. They have thus lost the four years' training at Annapolis, which is the foundation of naval training. If all of these officers were graduates of the Naval Academy the feeling of cooperation would be much stronger than it is at present.

The fact that there are three material bureaus of the Navy officered practically entirely by officers of three corps and two such bureaus officered by line officers has been, in my opinion, the principal reason why there has not been a combination of the matériel bureaus into one bureau of matériel.

Amalgamation has been discussed many times and has been opposed both by line and corps officers. Such opposition on the part of the line has been due in a large part to the feeling that staff officers desired to qualify for command. Such qualification is not necessary. We have confused ideas about line and staff. A chain of command is just as necessary in the administrative activities as it is in operations. The true distinction between line and staff is one of function. Those engaged in the production of results are line, the staff is auxiliary. Since the administrative services are not engaged in the actual fighting they have in the past been considered as staff, but such a distinction is more theoretical than real. The pure staff function is research, planning, analysis, specialized instruction, etc.

The so-called staff corps are now called by line titles and complete amalgamation is only a short step. With such amalgamation certain conditions must be recognized:

- (a) That all officers must be specialists in one or more types of naval activities.
- (b) That command of a ship is a type of naval activity.
- (c) That assignment to duty must be determined by an officer's qualification for the duty.
- (d) That when practicable, officers should be assigned to the type of duty they prefer.
- (e) That it is not necessary for all officers to be specialists in command of ships.

THE GENERAL STAFF.

The duties usually assigned to the General Staff must be accomplished whether there is a General Staff or not, if efficiency is to be attained. In order to indicate the officers who are qualified by experience and training to perform this duty it is necessary that they be specially designated. In order, however, to avoid the formation of a new corps in the Navy it is considered desirable to avoid the formation of a general staff.

Certain positions, however, require personnel specially trained in the duties normally assigned to the general staff, and it should be recognized that no officer should be assigned to these duties until he has the training, education, and experience necessary to qualify him for the work.

When the corps are amalgamated each officer should be designated by his qualifications and assigned to duty in accordance with such qualifications. Those who possess the necessary qualifications for duties normally assigned to general staff officers should be designated: "Qualified for war staff duties." This qualification should be determined by a board of rear admirals or captains already so qualified, by an examination, officer's records, and recommendations of commanding officers.

A general-line course and junior war college course as previously recommended would, in their curriculums, provide for the educational features necessary for qualification as war staff officers.

This necessity for special training of war staff officers has been recognized in the British Navy as a result of the war, as shown by the quotation under the heading: "Education and training of naval officers."

SCIENTIFIC RESEARCH AND TECHNICAL INITIATIVE.

The officers of the United States Navy were the first to use torpedoes, submarines, sea planes, airplane carriers, attack mines; the first to develop electric propulsion for naval vessels; the first to conceive the all big-gun ship and the torpedo plane, but in all these, except the electric propulsion and the sea-plane and mines we have been outdistanced by foreign navies.

As a Nation we have the ability to conceive new devices on a larger scale than any other nation, but we lack the initiative to progress with the development of our ideas. Technical initiative is vital to success in war, and our Navy must be provided with greater means of scientific research in order that all developments

of a scientific nature may be examined to determine their availability for naval use.

The officers detailed for this work should operate directly under the Chief of Matériel and in close liaison with the military characteristics subsection of the Planning Division.

The following quotation from the statement of the First Lord to Parliament indicates the development of this idea in the British Navy:

"The organization of scientific research within the Navy which has been set up so as to insure that the latest developments are understood by the naval service and that development both in types of vessels and in weapons will keep pace with scientific progress is given in Appendix II to this memorandum. Under the controller of the Navy there has been set up a department of scientific research and experiment. As the scientific adviser of the controller and in charge of this department there has been appointed a director of scientific research who is responsible for the general direction and organization of research work for naval purposes, keeping the Navy in touch with outside scientific establishments and insuring that the work at the various naval experimental establishments dealing with mining, sound signaling, and navigational appliances proceeds with full cognizance of scientific progress and methods. He will arrange for additional scientific assistance being given to these establishments as requisite. Further, the director of scientific research, by keeping in close association with the naval staff, will insure that we are kept fully aware of the possible practical application of scientific progress in relation to naval needs, thus enabling us to formulate requirements as to types and weapons with a knowledge of the latest scientific possibilities and to make ourselves better equipped for dealing with the vital problems of naval material development.

"Consultations with outside institutions will be resorted to so as to gain the benefit of their research and experiments, but there are some problems which it will not be possible to deal with in this manner owing to their secret or to their special naval aspect. Special naval problems will be dealt with by the naval establishments—gunnery, torpedo, mining, signaling, and antisubmarine—but for research work and secret development it is essential that the naval service should have a small central establishment of its own independent of the special experimental establishments. Such an establishment was formed during the war at Shandon, and has performed and is performing good service. But Shandon is expensive to the country in its upkeep, and suffers from disadvantage in position, both in regard to its distance from the naval ports and from the admiralty, with the consequent liability that owing to insufficient cooperation and contact with naval thought the research work may be conducted without the necessary consideration for practical requirements.

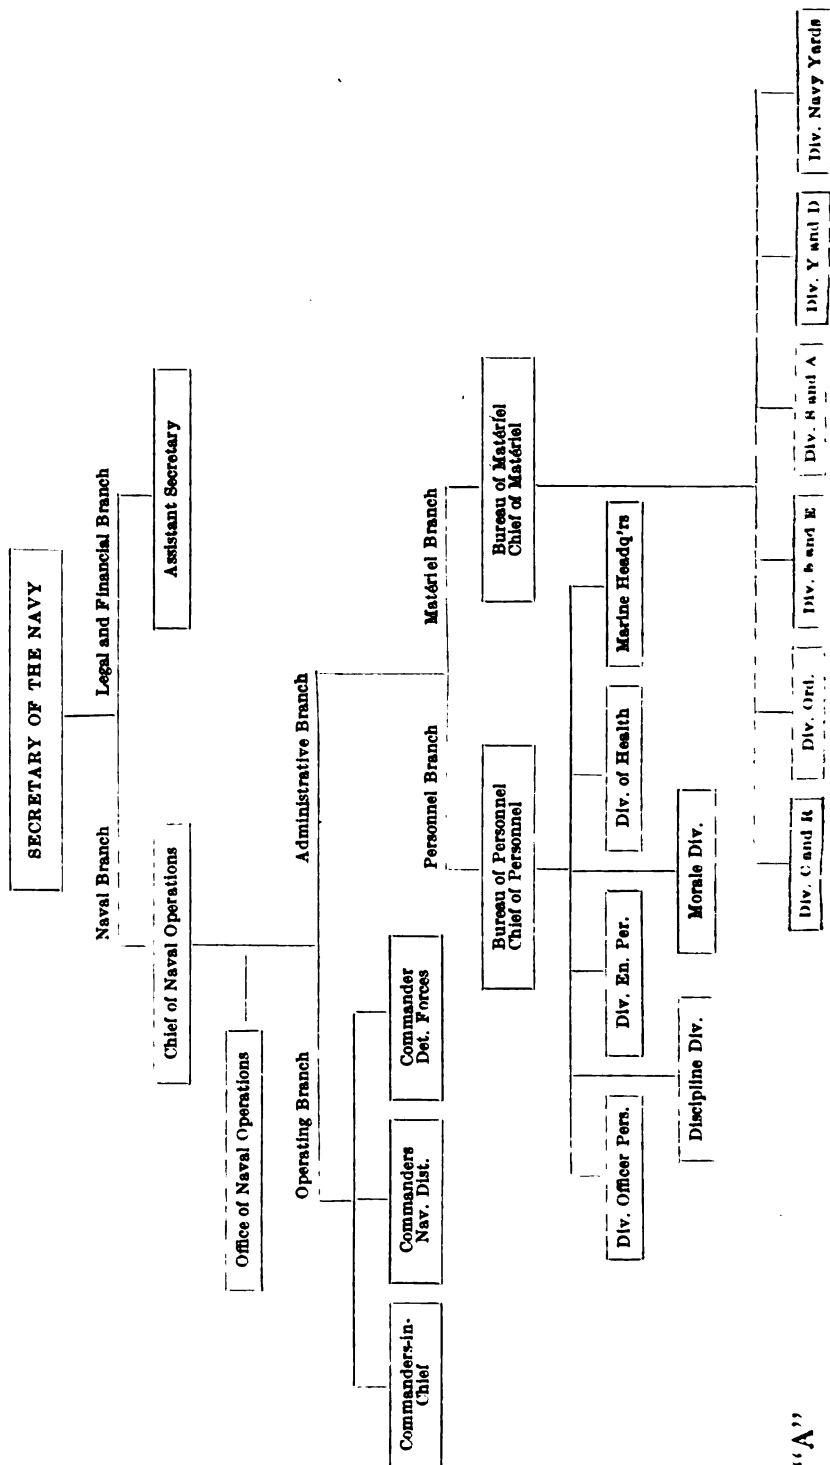

"It has been decided, therefore, to close Shandon as soon as suitable accommodation can be provided elsewhere. Such work at Shandon as requires sea environment will be removed to existing naval establishments. All pure research work now being carried out at Shandon will eventually be transferred to a small naval institute adjoining the national physical laboratory at Teddington. This institute, under the director of scientific research, will be entirely controlled by the admiralty, but its close association with the national physical laboratory will offer exceptional facilities for cooperation, and the scientific staff of the institute will have the advantage of personal acquaintance with the work being carried out in the laboratory. It is hoped to have this establishment ready at the end of the present year; meanwhile Shandon, on a reduced scale, is being kept going until the establishment at Teddington is ready. To stop pure research work altogether at this moment would be a retrograde step, and might conceivably have a serious effect ultimately on development of types of ships and weapons and on economy generally."

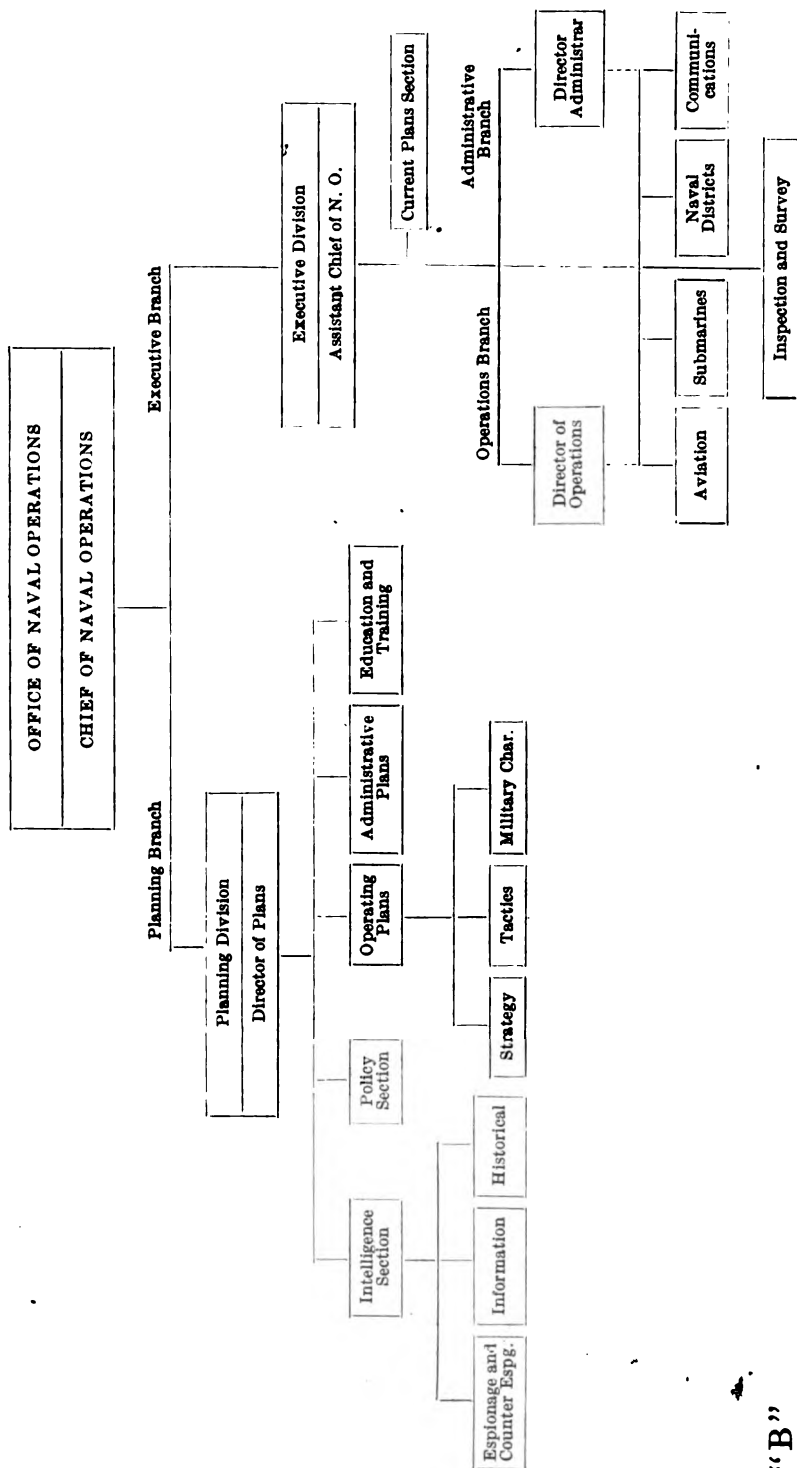

REORGANIZATION NECESSARY.

It is believed that the foregoing discussion indicates that reorganization of the Navy, especially reorganization of the management function, is absolutely necessary if efficiency is to be obtained.

Under the existing conditions economy is vital, but neither the maximum efficiency nor economy can be obtained with the divided responsibility for plans and execution which exists to-day.

The Navy Department has grown into its present form. Now, when the experience of war is fresh in the minds of all, is the time to place it on a firm basis of businesslike organization, to recognize its deficiencies, and to prepare it for future emergencies.
